Casper, Samuel, San Francisco, Calif. Magneto tester. 2,460,676, Feb. 1.

Castillo, Cirilo C., Los Angeles, Calif. Compression relief device for starting engines. 2,460,338, Feb. 1.

Catucci, Pliny, Kearny, N. J., assignor to William Crabb & Company, Newark, N. J. Grinding machine. 2,460,570, Feb. 1.

Celanese Corporation of America, assignee: *See*—
Caprio, Amerigo F., and Horback.

Certain-teed Products Corporation, assignee: *See*—
Soissa, John A.

Cervellone, Fred, New York, N. Y. Adjustable window casing. 2,460,677, Feb. 1.

Chaffee, Randolph W., Normandy, Mo. Apparatus and method for making a plastic composition and product. 2,460,571, Feb. 1.

Cheney Bigelow Wire Works, assignee: *See*—
Engart, George A.

Chiarizia, Robert L., Saxton, Pa. Needle and thimble holder. 2,460,678, Feb. 1.

Chicago Railway Equipment Company, assignee: *See*—
Barton, Donald E.
Busse, Edwin G.

Chornock, Francis W.: *See*—
Strumia, Max M., and Chornock.

Ciba Limited, assignee: *See*—
Bernasconi, Eduard.

Clarkson, John L., Nashville, Ill. Conveyer chain. 2,460,447, Feb. 1.

Clay, Marvin F., High Point, N. C. Watch movement holder. 2,460,679, Feb. 1.

Columbia Protektasite Company, Inc., assignee: *See*—
Brunetti, Joseph.

Collyer, Philip W.: *See*—
Lowber, David D., Reardon, and Collyer.

Combustion Control Corporation, assignee: *See*—
Thomson, E. Craig.

Commonwealth Engineering Company of Ohio, The, assignee: *See*—
Luaces, Enrique L.

Connor, Roger, assignor to The McBee Company, Athens, Ohio. Record card. 2,460,378, Feb. 1.

Consolidated Vultee Aircraft Corporation, assignee: *See*—
Carmichael, Edward P., and Radcliffe.

Continental Diamond Fibre Company, assignee: *See*—
Petho, John A.

Cook, Ernest P., Berlin, assignor to Improved Paper Machinery Corporation, Nashua, N. H. Rotary pump for thick fibrous suspensions. 2,460,278, Feb. 1.

Cook, John V., Wilmette, Ill. Machine for breaking fibrous materials. 2,460,448, Feb. 1.

Cook, Mark F., Mulberry, Ind., assignor to Aluminum Company of America, Pittsburgh, Pa. Tube working apparatus. 2,460,490, Feb. 1.

Cooke, Ernest A., assignor to Taylor, Taylor & Hobson Limited, Leicester, England. Copying machine with optical system. 2,460,491, Feb. 1.

Copeland, Robert J., Toronto, Ontario, Canada. Visible card index. 2,460,449, Feb. 1.

Corbat, Paul: *See*—
Premoli, Romualdo, and Corbat.

Cornell, Mead: *See*—
Bergman, Charles P., and Cornell.

Corning Glass Works, assignee: *See*—
Hyde, James F.
Warrick, Earl L.

Corren, Sidney A., assignor to Nassau Smelting & Refining Company, Incorporated, New York, N. Y. Article handling apparatus. 2,460,379, Feb. 1.

Courtney, Albert L., and C. E. Smith, assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich. Laundry souring composition. 2,460,680, Feb. 1.

Courtot, Louis B., assignor to The Weatherhead Company, Cleveland, Ohio. Tube coupling. 2,460,621, Feb. 1.

Crabb, William, & Company, assignee: *See*—
Catucci, Pliny.

Crandall, Roderic, assignee: *See*—
Kitto, Leicester F.

Crawley, Charles H., assignor to The Weatherhead Company, Cleveland, Ohio. Fitting. 2,460,622, Feb. 1.

Crompton & Knowles Loom Works, assignee: *See*—
Bergstrom, Carl P., and Herard, Jr.
Turner, Richard G.
Wakefield, Walter H.

Cumming, James M., Turtle Creek, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit interrupter. 2,460,450, Feb. 1.

Curd, Francis H. S.: *See*—
Basford, Frederick R. B., Curd, and Rose.

Cutler, Stanley, and N. Wiener, Los Angeles, Calif., assignors to Hoffman Radio Corporation. Loop inductance compensator. 2,460,492, Feb. 1.

Davis, Earl F.: *See*—
Erickson, Vernon T., and Davis.

Davis, Robert F., West Palm Beach, Fla. Storage box. 2,460,681, Feb. 1.

Dempsey, John T., administrator: *See*—
Lyons, Willard E.

Diamant, Fred J., New York, N. Y. Shoe with innersole providing arch supporting flap. 2,460,493, Feb. 1.

Diamantides, Diamond, Massillon, Ohio. Ship propulsion means. 2,460,339, Feb. 1.

Dickerman, Hubert E., Springfield, Mass. Feeding mechanism. 2,460,340, Feb. 1.

Disposable Bottle Corp., assignee: *See*—
Allen, Adda M., and Van Evera.

Di Zoppola, Mario, assignor, by mesne assignments, to Reconstruction Finance Corporation, New York, N. Y. Liquid cooler for air conditioning systems. 2,460,623, Feb. 1.

Dobell, Curzon, New York, N. Y., assignor to Preload Enterprises, Inc. Cofferdam. 2,460,624, Feb. 1.

Doughman, Ferman C., Darien, assignor to Electrolux Corporation, Old Greenwich, Conn. Mechanical mounting. 2,460,682, Feb. 1.

Douglass, Frank J., Pasadena, Calif. Apparatus for flame cutting. 2,460,412, Feb. 1.

Dow Chemical Company, The, assignee: *See*—
Le Fevre, Walter J., and Harding.

Doyle, Joseph C., Baltimore, Md., assignor to Kee Lox Manufacturing Company, Rochester, N. Y. Carbon paper holder for manifolding typewriters. 2,460,683, Feb. 1.

Drake, Russell P., Caledonia, assignor to Barber-Colman Company, Rockford, Ill. Lint removal means for bobbin winding machines. 2,460,736, Feb. 1.

Driver-Harris Company, assignee: *See*—
Lohr, James M.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Houtz, Ray C.
Hunt, Madison.
Robinson, John W.
Rogers, Arthur O.

Durant Manufacturing Co., assignee: *See*—
Hennessy, Mark M.

Eckey, Eddy W., Wyoming, assignor to The Procter and Gamble Company, Cincinnati, Ohio. Preparing carotenoid concentrates from palm oil. 2,460,796, Feb. 1.

Ecusta Paper Corporation, assignee: *See*—
Haswell, Henry L.

Edgar, David Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gun mount. 2,460,380, Feb. 1.

Edison, Thomas A., Incorporated, assignee: *See*—
Fritzinger, George H.

Effros, Milton, New York, and C. E. Mills, Floral Park, N. Y. Combined cabinet and drawer with compressing and signaling means. 2,460,572, Feb. 1.

Ehmann, Leslie G., assignor to Electric Steel Foundry, Portland, Oreg. Hammer for impact crushers with detachable and reversible hammer head. 2,460,279, Feb. 1.

Eisenberg, Ben, Larchmont, and O. B. Schwarz, New York, N. Y., assignors to Lektra Laboratories, Inc. Foot pedal control rheostat. 2,460,494, Feb. 1.

Ekco Products Company, assignee: *See*—
Zimmer, Myron J.

Electric and Musical Industries, Ltd., assignee: *See*—
Bowman-Manifold, Michael.

Electric Steel Foundry, assignee: *See*—
Ehmann, Leslie G.

Electrolux Corporation, assignee: *See*—
Doughman, Ferman C.

Ellis, William A., Portland, Oreg. Baseboard room heater. 2,460,625, Feb. 1.

Elrick, Charles E., Frostburg, Md. Releasable lever operated switch. 2,460,495, Feb. 1.

Emery Industries, Inc., assignee: *See*—
Stegemeyer, Lou A.

Engert, George A., Westfield, assignor to Cheney Bigelow Wire Works, Springfield, Mass. Mixing box. 2,460,626, Feb. 1.

Engineering and Research Corporation, assignee: *See*—
Berliner, Henry A.
Marchant, Lee L.

Erickson, Vernon T., and E. F. Davis, Jacksonville, Fla. Ice cube forming and dispensing machine. 2,460,341, Feb. 1.

Erkko, Eero O., Wilmington, Del., and R. T. Treifs, Kalamazoo, Mich., assignors to Hercules Powder Company, Wilmington, Del. Isolation of soybean protein. 2,460,627, Feb. 1.

Errett, Sanford J., Portland, Oreg. Welder's double mitt. 2,460,413, Feb. 1.

Euclid Road Machinery Co., The, assignee: *See*—
Armington, George E.

Evans, Gordon R.: *See*—
Guthrie, Thomas and Evans.

Ex-Cell-O Corporation, assignee: *See*—
Alden, Carroll R.
Seyferth, Harold N.
Wallman, Carl B.

Farhall, Inc., assignee: *See*—
Farrell, Joseph E.

Farrell, Joseph E., assignor to Farhall, Inc., Toms River, N. J. Gasifying fuel burner. 2,460,451, Feb. 1.

Farrow, Cecil, Bainbridge Township, Geauga County, assignor to Republic Steel Corporation, Cleveland, Ohio. Method and apparatus for demagnetizing tubing. 2,460,684, Feb. 1.

Fawick, Thomas L., Akron, Ohio. Flexible coupling. 2,460,628, Feb. 1.

Fawick, Thomas L., Akron, Ohio. Cushioned planetary gearing. 2,460,629, Feb. 1.

Fawick, Thomas L., Akron, Ohio. Multicushioned gear. 2,460,630, Feb. 1.

Fawick, Thomas L., Cleveland, Ohio. Shaft-fastening assembly. 2,460,631, Feb. 1.

Feaster, Allen F., Boulder, Colo. Tool post and tool for lathes. 2,460,342, Feb. 1.

Federal Machine and Welder Company, The, assignee: *See*—
Martin, George B., and Berger.

Federal Works Agency, The United States of America as represented by the Administrator, assignee: *See*—
Potts, Allen H.

Ferris Instrument Laboratories, assignee: *See*—
Tyzzer, Howard J.

Finney, John H. V., assignor to Mining Process and Patent Company, Denver, Colo. Filter disk segment. 2,460,280, Feb. 1.

Fletcher, John H.: *See*—
Nolan, Kenneth G., Morgan, and Fletcher.

Florence Stove Company, assignee: *See*—
Schneider, Frank H.

Flygare, Carl G.: *See*—
Belden, Albert G., and Flygare.

Flygare, Carl G., Worcester, Mass., and H. L. Swalney, Shaker Heights, Ohio, assignors to Norton Company, Worcester, Mass. Grinding wheel feeding mechanism. 2,460,737, Feb. 1.

Folda, Bert, Jr., Los Angeles, Calif., assignor to Socony-Vacuum Oil Company, Incorporated, New York, N. Y. Spark plug thread lubricant. 2,460,632, Feb. 1.

Folkers, Karl: *See*—
Mozingo, Ralph and Folkers.

Folt, Vernon L., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Interpolymers of vinylidene halides, dialkyl esters of maleic acid, and vinyl esters and making same. 2,460,573, Feb. 1.

Foote, Daniel J.: *See*—
Soref, Harry E., and Foote.

Ford, James L., Chicago, Ill. Dip pot for holding molten solder. 2,460,685, Feb. 1.

Forgue, Stanley V., Cranbury, N. J., assignor to Radio Corporation of America. Multiplier unit and supporting means. 2,460,381, Feb. 1.

Forse, Harry D., Anderson, Ind. Flatwork ironer. 2,460,496, Feb. 1.

Foster, John W., Ridgewood, N. J., assignor to Tingue, Brown & Co., New York, N. Y. Protective assembly for flatwork ironer rolls. 2,460,343, Feb. 1.

Foxboro Company, The, assignee: *See*—
Howe, Wilfred H.

Francis, Victor J., Wembley, England, assignor to General Electric Company. Electrode construction. 2,460,738, Feb. 1.

Francis, Victor J., Wembley, England, assignor to General Electric Company. Electrode construction. 2,460,739, Feb. 1.

Franck, George E., Riverside, assignor to The Imperial Brass Manufacturing Company, Chicago, Ill. Valve means. 2,460,633, Feb. 1.

Frei, Jakob R., Sidney, assignor to Bendix Aviation Corporation, New York, N. Y. Sealing means. 2,460,740, Feb. 1.

Freyermuth, Harlan B.: *See*—
Grimmel, Harry W., and Freyermuth.

Fres-O-Mat Corporation, assignee: *See*—
Rifkin, Milton.
Rifkin, Milton and Sutton.

Friedman, Arthur, Shaker Heights, assignor to Patrol Valve Company, Cleveland, Ohio. Range connector. 2,460,741, Feb. 1.

Frisk, Nils P. W., and A. G. W. Hernqvist, Stockholm, Sweden. Automatic regulating system. 2,460,497, Feb. 1.

Fritzinger, George H., assignor to Thomas A. Edison, Incorporated, West Orange, N. J. Electrical instrument. 2,460,686, Feb. 1.

Fuchs, Norbert E., assignor to Republic Steel Corporation, Cleveland, Ohio. Induction heater. 2,460,687, Feb. 1.

Fuller, Morell M., San Jacinto, Calif. Internal collet. 2,460,414, Feb. 1.

Fulton, Oliver H., Jr., Montclair N. J. assignor to Radio Corporation of America. Mount for electron discharge devices. 2,460,382, Feb. 1.

Gallal-Hatchard, Marcel, Cheam, England. Breaking up foamed blast furnace slag and other smelts. 2,460,742, Feb. 1.

Gambrill, Richard D., and C. E. Lewis, Baltimore, Md., assignors to Western Electric Company, Incorporated, New York, N. Y. Apparatus for locating faults in cables. 2,460,688, Feb. 1.

Garberding, Waldo L., Chicago, Ill. Making metal articles. 2,460,281, Feb. 1.

Gardner, Guy B., Fairhaven, assignor, by mesne assignments, to Aerovox Corporation, New Bedford, Mass. Regenerated cellulose dielectric material and producing the same. 2,460,282, Feb. 1.

Gaylord, James M., San Marino, and R. E. Ball, Long Beach, assignors to Byron Jackson Co., Vernon, Calif. Selective motor line connecting device. 2,460,415, Feb. 1.

Gaylord, Peter J., assignee: *See*—
Warden, Warren B.

General Aniline & Film Corporation, assignee: *See*—
Grimmel Harry W., and Freyermuth.
Johnston, Robert C.
Prentice, Russell E.

General Electric Company, assignee: *See*—
Atwood, Winfield A., and Boehne.
Baumann, Frederick W.
Callinan, Thomas D.
Francis, Victor J.
Hertel, Roland F.
Jacobsen, William E.
Lawson, Harold H.
Stimson, Allen G.

General Precision Laboratory Incorporated, assignee: *See*—
Gilbert, Clarke M.

Germanton, Charles E., Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Aircraft personnel trainer. 2,460,743, Feb. 1.

Gialdini, Bruno T., Larchmont, N. Y. Conveying means for shoe manufacture. 2,460,782, Feb. 1.

Giddings & Lewis Machine Tool Company, assignee: *See*—
Renier, William S.

Gilbert, Clarke M., Chappaqua, N. Y., assignor to General Precision Laboratory Incorporated. Servo follow-up control. 2,460,638, Feb. 1.

Gillette, Howard C., Gates, N. Y. Boring head. 2,460,689, Feb. 1.

Ginston, Edward L., Wantagh, N. Y., assignor to The Sperry Corporation. Modulation control apparatus. 2,460,498, Feb. 1.

Glass Fibers, Inc., assignee: *See*—
Stevens, Charles R.

Glass, Paul, Chicago, Ill., assignor to Askania Regulator Company. Modulator. 2,460,690, Feb. 1.

Godshall, George M., Leonardo, N. J. Hot-water heating unit. 2,460,691, Feb. 1.

Goldberg, Salomon, assignee: *See*—
Blampain, Henri.

Goldston, W. L., assignee: *See*—
Winkelmann, Samuel A.

Gooch, Fred P., Swarthmore, Pa., assignor to The Sharples Corporation. Lubricating system for motors. 2,460,283, Feb. 1.

Goodrich, B. F., Company, The, assignee: *See*—
Amacker, Thad M.
Browning, George L., Jr.
Folt, Vernon L.
Gresham, Thomas L.
Hunter, Willson H.
Jansen, Jacob E.
Japs, Archie B.
Miller, Arthur R., Jr.
Sarbach, Donald V.
Semon, Waldo L.
Stewart, William D.

Goodrich, Uriel E., Laramie, Wyo. Screen cleaner for pressure filters. 2,460,416, Feb. 1.

Goostrey, Robert F., Jackson, Mich. Mousetrap. 2,460,417, Feb. 1.

Gould, David F., Riverton, N. J., assignor to Allied Chemical & Dye Corporation, New York, N. Y. Polymerisation of resin oils with mixed clay and organic acid catalyst. 2,460,692, Feb. 1.

Grace, John F., Arlington, assignor to Worthington Pump and Machinery Corporation, Harrison, N. J. Reversible circulation condenser. 2,460,499, Feb. 1.

Green, Clarence J., assignor to Norton Company, Worcester, Mass. Camshaft grinding machine. 2,460,744, Feb. 1.

Gregor, Herbert H., Washington, D. C. Preparation of aluminum phosphates. 2,460,344, Feb. 1.

Gresham, Thomas L., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Vinyl chloride polymers plasticised with dialkyl chlorophthalates. 2,460,574, Feb. 1.

Griffiths, Albert E.: *See*—
Pabst, Arthur C., Griffiths, and Killingsworth.

Grimmel, Harry W., and H. B. Freyermuth, Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y. Preparing N-alkylated compounds of condensed arylpyrrols. 2,460,745, Feb. 1.

Grout, Martin B., Chicago, assignor to Jefferson Electric Company, Bellwood, Ill. Binding magnetic core structures. 2,460,639, Feb. 1.

Gruber, Francis E., assignor to Brown & Bigelow, St. Paul, Minn. Ball point pen. 2,460,345, Feb. 1.

Guthrie, Thomas, Albany, Calif., and G. R. Evans, Collingswood, N. J., assignors to Allied Chemical & Dye Corporation. Joint construction. 2,460,746, Feb. 1.

Haas, Otto R., Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J. Gun-loading mechanisms. 2,460,284, Feb. 1.

Haddon, Cuthbert L., Newark-on-Trent, England. Manufacture of plaster of Paris. 2,460,266, Feb. 1.

Haddon, Cuthbert L., Newark-on-Trent, England. Manufacture of plaster of Paris. 2,460,267, Feb. 1.

Hagner, Frederick H., San Antonio, Tex. Star matcher and sun compass. 2,460,846, Feb. 1.

Hahn, Frank J., Kansas City, Mo., assignor to United Aircraft Corporation, East Hartford, Conn. Fuel and ignition control. 2,460,283, Feb. 1.

Hale, William J., Midland, Mich., assignor to The National Agrol Company, Inc., Washington, D. C. Tobacco composition and making it. 2,460,284, Feb. 1.

Hale, William J., Midland, Mich., assignor to The National Agrol Company, Inc., Washington, D. C. Tobacco products and making them. 2,460,285, Feb. 1.

Hall, Edward L., Los Angeles, Calif., assignor to North American Aviation, Inc. Sequence control mechanism. 2,460,693, Feb. 1.

Hall, James R., Hammon, Okla. Lever handle. 2,460,500, Feb. 1.

Hallewell, George, assignor to Blackstone & Company Limited, Stamford, England. Speed control gear of prime movers. 2,460,501, Feb. 1.

Hamilton Watch Company, assignee: *See*—
Carlstrom, Elis F.

Hampton, Charlotte, Nashville, Tenn. Sanitary pillow covering. 2,460,452, Feb. 1.

Hanke, Gustav, assignee: *See*—
Larsen, Victor A.

Hansen, William W., and R. H. Varian, assignors to The Board of Trustees of The Leland Stanford Junior University, Stanford University, Calif. Radiating electromagnetic resonator. 2,460,286, Feb. 1.

Hansen, William W., Garden City, and R. H. Varian, Wantagh, N. Y., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford University, Calif. Radiating electromagnetic resonator. 2,460,287, Feb. 1.

Hansen, William W., and R. H. Varian, Garden City, N. Y., assignors to The Board of Trustees of The Leland Stanford Junior University, Stanford University, Calif. Resonator apparatus. 2,460,288, Feb. 1.

Hanson, Per R., Winchester, and H. W. Ulmer, Belmont, assignors to Raytheon Manufacturing Company, Newton, Mass. Electron discharge device seal. 2,460,575, Feb. 1.

Harcum, Harry H.: *See*—
Whitson, Mercer L., and Harcum.

Harding, Kenneth G.: *See*—
Le Fevre, Walter J., and Harding.

Harlow, Max B.: *See*—
Hoffman, Francis A., and Harlow.

Harris, George W., Mercer County, assignor of one-half to R. Miller, Mathersville, Ill. Safety hanger. 2,460,453, Feb. 1.

Hart, Edward, San Marino, Calif., assignor to A. O. Smith Corporation, Milwaukee, Wis. Electric motor. 2,460,418, Feb. 1.

Hartford National Bank and Trust Company, The, assignee, trustee: *See*—
La Riviere, Theodoor W.
Richards, Claude L.

Hastings Manufacturing Company, assignee: *See*—
Phillips, Harold P.

Harwell, Henry L., Brevard, assignor, by mesne assignments, to Ecusta Paper Corporation, Pisgah Forest, N. C. Web tensioning and pressure mechanism. 2,460,694, Feb. 1.

Hausman, Herbert H., Lakewood, Ohio. Bowling ball thumb or finger gripping means. 2,460,385, Feb. 1.

Hays Manufacturing Company, assignee: *See*—
Miller, Wesley G.

Heckmer, Raymond F. Sr., Youngstown, Ohio. Alarm clock. 2,460,634, Feb. 1.

Heinn Company, The, assignee: *See*—
Stevens, Clifford B.

Heintz, Ralph M., assignor to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio. Generator mounting flange. 2,460,502, Feb. 1.

Heller, William E., Yeadon, Pa. Protection of furnaces from slag. 2,460,347, Feb. 1.

Hennessy, Mark M., assignor to Durant Manufacturing Co., Milwaukee, Wis. Sensitive switch actuator. 2,460,695, Feb. 1.

Henry, Albert R., Salina, assignor to Henry Manufacturing Company, Inc., Topeka, Kans. Blade mounting for grading machines. 2,460,348, Feb. 1.

Henry Manufacturing Company, Inc., assignee: *See*—
Henry, Albert R.

Henze, Henry R., Austin, Tex., assignor to Parke, Davis & Company, Detroit, Mich. 5-alkoxy-alkyl, 5-cyclohexyl hydantoins. 2,460,747, Feb. 1.

Herard, Archibald J., Jr.: *See*—
Bergstrom, Carl P., and Herard, Jr.

Hercules Powder Company, assignee: *See*—
Erkko, Eero O., and Treifa.

Hernqvist, Anders G. W.: *See*—
Frisk, N. P. W., and Hernqvist.

Herold, Robert E., assignor to The Weatherhead Company, Cleveland, Ohio. Fitting. 2,460,635, Feb. 1.

Hersey, Donald S., East Hartford, and A. E. Brown, Manchester, assignors to United Aircraft Corporation, East Hartford, Conn. Automatic temperature control apparatus. 2,460,748, Feb. 1.

Hertel, Roland F., Fort Wayne, Ind., assignor to General Electric Company. Dynamoelectric machine. 2,460,749, Feb. 1.

Hertel, Roland F., Nutley, N. J., assignor to General Electric Company. Dynamoelectric machine. 2,460,750, Feb. 1.

Hessler, Reinhardt C., Pontiac, Mich. Fender skirt. 2,460,349, Feb. 1.

Hickman, Clarence N., Jackson Heights, N. Y., assignor to the United States of America as represented by the Secretary of War. Rocket projectile. 2,460,289, Feb. 1.

Hilliquist, Karl J., Seattle, Wash. Feed mechanism for stone cutting machines. 2,460,386, Feb. 1.

Hinman, Charlton, Washington, D. C. Alternate projection collating device. 2,460,350, Feb. 1.

Hobby, Harold E., assignor to Simplex Time Recorder Co., Gardner, Mass. Tape time recorder with differentiated records. 2,460,576, Feb. 1.

Hoffman, Francis A., Glendale, and M. B. Harlow, Pasadena, Calif., assignors to Rheem Manufacturing Company, New York, N. Y. Rotor blade. 2,460,351, Feb. 1.

Hoffman Radio Corporation, assignee: *See*—
Cutler, Stanley, and Wiener.

Hohwart, Ernest F.: *See*—
Hohwart, George and E. F.

Hohwart, George and E. F., Detroit, assignors to N. A. Woodworth Company, Ferndale, Mich. Diaphragm chuck. 2,460,577, Feb. 1.

Holcomb, Normand P., Warehouse Point, Conn., assignor to the United States of America as represented by the Secretary of War. Cartridge extractor testing machine. 2,460,290, Feb. 1.

Holloway, Charles M., Chicago, Ill. Self-sealing electric light socket for refrigerator panels. 2,460,636, Feb. 1.

Holmberg, Carl V.: *See*—
Schlatter, Carl, and Holmberg.

Horback, William: *See*—
Caprio, Amerigo F., and Horback.

Houtz, Ray C., Snyder, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Solutions of vinylidene chloride polymers in amide solvents. 2,460,578, Feb. 1.

Houtz, Ray C., Snyder, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Solutions of vinylidene chloride polymers in a solvent containing a sulfoxy group. 2,460,579, Feb. 1.

Hoyler, Cyril N.: *See*—
Brown, George H., and Hoyler.

Howe, Wilfred H., Sharon, assignor to The Foxboro Company, Foxboro, Mass. Apparatus for measuring liquid level or specific gravity. 2,460,503, Feb. 1.

Huber, Walter, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Method and device for fixing and sealing tubes in a partition wall by use of fluid pressure. 2,460,580, Feb. 1.

Huebner, William C., New York, N. Y. Printing apparatus. 2,460,504, Feb. 1.

Hugo, Henry M., assignor, by mesne assignments, to Lorain Products Corporation, Lorain, Ohio. Oscillation generator. 2,460,637, Feb. 1.

Hughes, Landrum L., Erick, Okla. Thief line for butane tanks. 2,460,454, Feb. 1.

Hunt, Madison, Claymont, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Preparation of terpene alcohols. 2,460,291, Feb. 1.

Hunter, Willson H., Lakewood, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Landing gear. 2,460,387, Feb. 1.

Hurley, Samuel C., Jr., deceased; W. L. Hurley, executrix, assignor to W. L. Hurley, Danville, Ill. Electronic circuit. 2,460,455, Feb. 1.

Hurley, Samuel C., Jr., deceased; W. L. Hurley, executrix, assignor to W. L. Hurley, Danville, Ill. Electronic circuit. 2,460,456, Feb. 1.

Hurley, Wilmina L., executrix, assignee: *See*—
Hurley, Samuel C., Jr.

Hyde, James F., assignor to Corning Glass Works, Corning, N. Y. Organo-substituted siloxane polymers. 2,460,457, Feb. 1.

Imperial Brass Manufacturing Company, The, assignee: *See*—
Franck, George E.

Imperial Chemical Industries Limited, assignee: *See*—
Basford, Frederick R., Curd, and Rose.
Bremner, John G. M., Reynolds, and Taylor.
Thomson, Robin H. K.
Whetstone, John.

Improved Paper Machinery Corporation, assignee: *See*—
Cook, Ernest P.

Inland Steel Company, assignee: *See*—
Thompson, Roy J.

Irvine, William L., Brooklyn, assignor to The American Sugar Refining Company, New York, N. Y. Bundle sealing machine. 2,460,751, Feb. 1.

Ivanovic, Nicholas, Philadelphia, Pa. Vibration insulating mounting. 2,460,292, Feb. 1.

Jack & Heintz Precision Industries, Inc., assignee: *See*—
Heintz, Ralph M.

Jackson, Byron, Co., assignee: *See*—
Gaylord, James M., and Ball.

Jacobs, Louis J.: *See*—
Kauffman, Theodore, Jr., and Jacobs.

Jacobs, Samuel S., San Mateo, and H. B. Peterson, San Francisco, Calif., assignors to American Can Company, New York, N. Y. Reforming machine. 2,460,293, Feb. 1.

Jacobsen, William E., Ballston Lake, N. Y., assignor to General Electric Company. Dynamoelectric machine. 2,460,752, Feb. 1

Jaboda, William J., Put in Bay, Ohio. Towel rack. 2,460,505, Feb. 1.

Jamison, Charles E., Morgantown, W. Va. Landing gear for airplanes. 2,460,506, Feb. 1.

Jansen, Jacob E., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Reaction products of thiuram disulfides alkylene imines. 2,460,581, Feb. 1.

Japs, Archie B., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Drying polymeric materials. 2,460,582, Feb. 1.

Jarvis, Charles W., Washington, D. C., assignor to the United States of America as represented by the Secretary of the Navy. Generator. 2,460,790, Feb. 1.

Jefferson Electric Company, assignee: *See*—
Grout, Martin B.
Rickmeyer, Ernst W.
Sliwiak, Walter.

Jensen, Howard M., Halesite, and R. W. Bridges, Farmingdale, N. Y. Clothesline tightener. 2,460,640, Feb. 1.

Jensen, James A., Haverford, assignor to Philadelphia Valve Company, Philadelphia, Pa. Coupling for hoses and the like. 2,460,352, Feb. 1.

Jessen, Le Roy S., Dayton, Ohio. Target exchanger. 2,460,294, Feb. 1.

Johnson, Everett A., Park Ridge, and S. B. Becker, assignor to Standard Oil Company, Chicago, Ill. Hydrocarbon synthesis. 2,460,508, Feb. 1.

Johnson, George T., assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Railway car truck side frame. 2,460,696, Feb. 1.

Johnston, Robert C., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Adjustable multicolored light filter. 2,460,507, Feb. 1.

Jones, Thomas F.: *See*—
Trent, Horace M., and Jones.

Kahn, George, Lawrence, and L. Schwartz, New York, N. Y., Adjustable fabric guiding attachment. 2,460,583, Feb. 1.

Kahn, George, Lawrence, and L. Schwartz, New York, N. Y. Fabric guiding device and method. 2,460,584, Feb. 1.

Kardos, Stephen J., Allentown, Pa. Spring equipped double cone tie. 2,460,753, Feb. 1.

Kauffman, Theodore, Jr., and L. J. Jacobs, assignors to The S. Obermayer Co., Chicago, Ill. Refractory composition and method of producing same. 2,460,268, Feb. 1.

Kawneer Company, The, assignee: *See*—
Miller, James T.

Keese, Beverly W., Oshkosh, Wis., assignor to The Timken-Detroit Axle Company, Detroit, Mich. Drive axle. 2,460,295, Feb. 1.

Keetch, William A., assignor to Lord Manufacturing Company, Erie, Pa. Engine mounting. 2,460,586, Feb. 1.

Keller, Donald E., Millersport, Ohio. Heated drinking vessel. 2,460,509, Feb. 1.

Kennelly, Jeremiah D., Oak Park, Ill. Warning light and searchlight combination. 2,460,585, Feb. 1.

Kerr, Earl G.: *See*—
Allen, Harry L., and Kerr.

Kidd, Earl H., assignor to Young Radiator Company, Racine, Wis. Heat exchanger. 2,460,754, Feb. 1.

Killingsworth, Joseph L., Des Moines, Iowa. Shingle. 2,460,353, Feb. 1.

Killingsworth, Robert B.: *See*—
Pabst, Arthur C., Griffiths, and Killingsworth.

Kincannon, Leo T., assignor to Metal Products Corporation, Milwaukee, Wis. Outboard motor. 2,460,419, Feb. 1.

Kincannon, Leo T., assignor to Metal Products Corporation, Milwaukee Wis. Starter mechanism for motors. 2,460,420, Feb. 1.

Kincannon, Leo T., assignor to Metal Products Corporation, Milwaukee, Wis. Flexible vane pump for outboard motors. 2,460,421, Feb. 1.

Kinney, William F., Maywood, Ill., assignor to American Can Company, New York, N. Y. Mechanism for forming vented can end seams. 2,460,296, Feb. 1.

Kitto, Leicester F. Glendale, Calif., assignor of one-half to R. Crandall, Roswell, N. Mex. Geophysical prospecting. 2,460,297, Feb. 1.

Kleiner, Joseph J., Woodmere, N. Y. Blood collecting apparatus. 2,460,641, Feb. 1.

Klyce, Battle H., Jr., Morristown, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Receiver protective circuit for pulse transmission systems. 2,460,755, Feb. 1.

Knauth, Walter T., and R. B. Briggs, Houston, Tex. Dip co-ordinator. 2,460,642, Feb. 1.

Kobler & Co., assignee: *See*—
Burkard, David.

Kobrin, Robert M., Chicago, Ill. Headband and holder for telephone receivers. 2,460,458, Feb. 1.

Konrad, William L., Pittsburgh, P. N. Bossart, Cheswick, and C. E. Leberknight, Emsworth, assignors to The Union Switch and Signal Company, Swissvale, Pa. Railway train communicating system. 2,460,354, Feb. 1.

Koppel, Ernst R., Chicago, Ill., assignor to A. O. Smith Corporation, Milwaukee, Wis. Clothes drier. 2,460,422, Feb. 1.

Koppel, Ernst R., assignor to Borg-Warner Corporation, Chicago, Ill. Liner and tap ring for steel barrels. 2,460,756, Feb. 1.

Kornemann, Henry C., Kenmore, N. Y., assignor to The Linde Air Products Company. Container for liquefied gases. 2,460,355, Feb. 1.

Kracklauer, Aloysius C., assignor, by mesne assignments, to Sparkler Mfg. Co., Mundelein, Ill. Filter. 2,460,423, Feb. 1.

Kraska, Reinhold M., Altadena, assignor, by mesne assignments, to A. R. Brooks, doing business as Aluminum Folding Crutch Company, Los Angeles, Calif. Folding article. 2,460,459, Feb. 1.

Kraus, Joseph, Chicago, Ill. Wheel lock and hydraulic release. 2,460,298, Feb. 1.

Krause, Charles A., Jr., assignee: *See*—
Lloyd, William R., and Schafer.

Kreger, Lawrence F., Chicago, Ill. Concrete block mold. 2,460,697, Feb. 1.

Kreidl, Ekkehard L., Boston, and J. L. Utter, North Easton, assignor to A. D. Little, Inc., Cambridge, Mass. Making ceramic bodies. 2,460,356, Feb. 1.

Kruck, Ralph E., Longmeadow, Mass. Lip rouge dispenser applicator. 2,460,299, Feb. 1.

Kurlash Company, Inc., The, assignee: *See*—
Tuttle, William R., and Beldue.

Kurz, William, assignor to Precision Scientific Co., Chicago, Ill. Liquid circulating apparatus. 2,460,757, Feb. 1.

Laesser, Emil, assignor to Maag-Zahnräder und Maschinen Aktiengesellschaft, Zurich, Switzerland. Flexible clamping sleeve. 2,460,510, Feb. 1.

Lancaster Processes, Inc., assignee: *See*—
Robinson, Thomas.

Lang, Gregor L., West Haven, Conn., assignor to Link Aviation, Inc. Automatic radio signaling means for aviation trainers. 2,460,511, Feb. 1.

Langer, Nicholas, New York, N. Y. Heatsealing and apparatus therefor. 2,460,460, Feb. 1.

Lans, Adolf, assignor to Baumwoll-Spinnerei & Weberei Wettingen, Wettingen, Switzerland. Variable warp tensioning means. 2,460,512, Feb. 1.

La Riviere, Theodoor W. Eindhoven, Netherlands, assignor, by mesne assignments, to Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Circuit arrangement for compensating the aerial effect of directional antennae. 2,460,357, Feb. 1.

Larkin, Cordelia R. O., St. Petersburg, Fla. Spring actuated telescoping periscope. 2,460,461, Feb. 1.

Larsen, Victor A., Altadena, Calif., assignor, by mesne assignments, to G. Hanke, Massapequa, N. Y. Airplane drive. 2,460,587, Feb. 1.

Lawson, Harold H., Philadelphia, Pa., assignor to General Electric Company. Lockout and alarm device for circuit breakers. 2,460,758, Feb. 1.

Lasar, John, West Allis, Wis. Adjustable lock wedge. 2,460,643, Feb. 1.

Leberknight, Charles E.: *See*—
Konrad, William L., Bossart, and Leberknight.

Lecher, Hans Z., Plainfield, and R. E. Brouillard, Bound Brook, N. J., and E. Baumgarten, Staten Island, assignors to American Cyanamid Company, New York, N. Y. Preparation of phthalocyanine pigments from ω-chlorine or ω-bromine substituted o-xylenes. 2,460,783, Feb. 1.

Le Fevre, Edward B., Warwick, assignor to Nicholson File Company, Providence, R. I. File. 2,460,513, Feb. 1.

Le Fevre, Walter J., and K. G. Harding, assignors to The Dow Chemical Company, Midland, Mich. Polmeric products derived from diolefins and vinyl aromatic compounds and making same. 2,460,300, Feb. 1.

Lektra Laboratories, Inc., assignee: *See*—
Eisenberg, Ben, and Schwarz.

Leland Stanford Junior University, The Board of Trustees of the, assignee: *See*—
Hansen, William W., and Varian.

Leo Corporation, assignee: *See*—
Lyons, Willard E.

Leslie, John F., Mishawaka, Ind. Buffing wheel. 2,460,588, Feb. 1.

Lewis, Ada V., Baltimore, Md. Arm support. 2,460,589, Feb. 1.

Lewis, Clay E.: *See*—
Gambrill, Richard D., and Lewis.

Lezanski, Albert M., Sacramento, Calif. Saw set. 2,460,388, Feb. 1.

Lincoln, Bert H., Ponca City, Okla., and G. D. Byrkit, Niagara Falls, N. Y., assignors, by mesne assignments, to Lubrizol Development Corporation. Lubricating oils. 2,460,301, Feb. 1.

Linde Air Products Company, The, assignee: *See*—
Kornemann, Henry C.
Seemann, Arthur K.

Lindhe, Eric G., Hastings on Hudson, assignor to Sweets Laboratories, Inc., New York, N. Y. Candy chewing gum. 2,460,698, Feb. 1.

Line Material Company, assignee: *See*—
Nelson, Rolland D., and Link.

Lingal, Harry J., Forest Hills, assignor to Westinghouse Electric Corporation, East Pittsburgh, Pa. Circuit controller. 2,460,462, Feb. 1.

Link Aviation, Inc., assignee: *See*—
Lang, Gregor L.

Link, Edwin A.: *See*—
Nelson, Rolland D., and Link.

Lloyd, William R., and G. H. Schafer, Chicago, Ill., assignors, by mesne assignments, to C. A. Krause, Jr., Milwaukee, Wis. Solvent extraction as step in milling process. 2,460,389, Feb. 1.

Lohr, James M., Morristown, assignor to Driver-Harris Company, Harrison, N. J. Electric resistance element and heat-treatment. 2,460,590, Feb. 1.

Long, Chester C., Los Angeles, Calif., assignor of one-half to Ballinger Mills, Jr., Galveston, Tex. Clothesline pole. 2,460,699, Feb. 1.

Longenecker, Levi S., Mount Lebanon, Pa. Glass melting furnace. 2,460,514, Feb. 1.

Lorain Products Corporation, assignee: *See*—
Huge, Henry M.

Lord Manufacturing Company, assignee: *See*—
Keetch, William A.
Roche, Paul C.

Lowber, David D., Snyder, J. D. Reardon, and P. W. Collyer, Buffalo, N. Y., assignors to American Optical Company, Southbridge, Mass. Calibrated retardation plate for measuring birefringence and making same. 2,460,515, Feb. 1.

Loy, John W., Bartlesville, Okla., assignor to Phillips Petroleum Company. Noncatalytic cracking of a hydrocarbon oil. 2,460,463, Feb. 1.

Luáces, Enrique L., assignor, by mesne assignments, to The Commonwealth Engineering Company of Ohio, Dayton, Ohio. Ion-exchange resin. 2,460,516, Feb. 1.

Lubrizol Development Corporation, The, assignee: *See*—
Lincoln, Bert H., and Byrkit.

Lufkin, Richard F., West Medford, Mass. Building unit for house construction. 2,460,464, Feb. 1.

Luker, Jackson M., Urbana, Ill. Wrapping tubular cake pans. 2,460,644, Feb. 1.

Lundsten, Milton S., United States Navy. Hand-piece chuck. 2,460,302, Feb. 1.

Lundstrom, Ida, St. Louis, Mo. Curtain fixture. 2,460,517, Feb. 1.

Lupanoff, John, assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich. Spring cushion construction. 2,460,424, Feb. 1.

Luzar, Thomas E., Chicago, Ill. Dental floss tooth cleaning apparatus. 2,460,591, Feb. 1.

Lyon, George A., Allenhurst, N. J. Wheel cover. 2,460,784, Feb. 1.

Lyons, Willard E., deceased, late of Chicago, Ill.; by J. T. Dempsey, administrator, assignor to Leo Corporation, Chicago, Ill. Operating an internal-combustion engine. 2,460,700, Feb. 1.

Maag-Zahnrader und Maschinen Aktiengesellschaft, assignee: *See*—
Laesser, Emil.

Mace, Charles E., Denver, Colo. Intermittent photographic print washer. 2,460,425, Feb. 1.

Machtinger, Abraham, New York, N. Y. Liquid dispenser. 2,460,518, Feb. 1.

MacKenzie, R. E., assignee, et al.: *See*—
Van Voorhis, Noble.

MacMicking, William P., Minneapolis, Minn. Safety razor cushion. 2,460,645, Feb. 1.

Maes, Robert E., Marshall, Mich. Pulsator for milking machines. 2,460,426, Feb. 1.

Malaspina, Celso L., Tuckahoe, N. Y.; now by judicial change of name to C. L. Marshall. Rod or pipe clamp. 2,460,701, Feb. 1.

Mallery, Paul, Murray Hill, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Registration system. 2,460,702, Feb. 1.

Marchant, Lee L., Takoma Park, assignor to Engineering and Research Corporation, Riverdale, Md. Working of high tensile sheet metal. 2,460,519, Feb. 1.

Markey, Roscoe I., Montclair, N. J., assignor, by mesne assignments, to Noma Electric Corporation, New York, N. Y. Channel type clamp for slip joints. 2,460,646, Feb. 1.

Marshall, Charles L., by change of name: *See*—
Malaspina, Celso L.

Martin, George B., Detroit, Mich., and B. D. Berger, assignors to The Federal Machine and Welder Company, Warren, Ohio. Electric resistance welders. 2,460,759, Feb. 1.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,460,520, Feb. 1.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,460,703, Feb. 1.

Mason, Warren P., West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Piezoelectric crystal apparatus. 2,460,704, Feb. 1.

Master Lock Company, assignee: *See*—
Soref, Harry E., and Foote.

Massa, Eric, Bronx, N. Y. Adjustable ventilator. 2,460,760, Feb. 1.

McAllister, Sumner H., Lafayette, J. Anderson, and W. H. Peterson, Berkeley, assignors to Shell Development Company, San Francisco, Calif. Gasoline manufacture. 2,460,303, Feb. 1.

McBee Company, The, assignee: *See*—
Connor, Roger.

McBee, Earl T., and O. R. Pierce, assignors to Purdue Research Foundation, La Fayette, Ind. Chlorinolysis. 2,460,705, Feb. 1.

McBryde, Milo T., Arkadelphia, Ark. Inside sidehead chip breaker. 2,460,465, Feb. 1.

McDermott, Henry J., Prospect Park, Pa., assignor to American Viscose Corporation, Wilmington, Del. Removing excess liquid from filamentary material. 2,460,390, Feb. 1.

McGee, Kenneth, Dayton, and H. D. Vanderpool, Springfield, Ohio, assignors to The United States of America as represented by the Secretary of War. Connector. 2,460,304, Feb. 1.

McKinney, Charles P.: *See*—
Abel, Logan F.

McMurtrie, Robert H., Huntingburg, Ind. Drawer guide. 2,460,521, Feb. 1.

Merck & Co., Inc., assignee: *See*—
Mozingo, Ralph and Folkers.
Pierson, Earl and Tishler.

Metal Products Corporation, assignee: *See*—
Kincannon, Leo T.

Metal and Thermit Corporation, assignee: *See*—
Rollason, Earnest C.

Metzner, Ernest K., Los Angeles, Calif. Rectification. 2,460,706, Feb. 1.

Millar, Roland R., Massillon, assignor to Republic Steel Corporation, Cleveland, Ohio. Universal joint for mill drives. 2,460,648, Feb. 1.

Miller, Anthony J., Freeman, S. Dak. Manicure set. 2,460,522, Feb. 1.

Miller, Arthur R., Jr., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Generation of monomeric formaldehyde gas from formaldehyde polymers. 2,460,592, Feb. 1.

Miller, James T., assignor to The Kawneer Company, Niles, Mich. Glass setting device. 2,460,391, Feb. 1.

Miller, John W. H., Bala-Cynwyd, Pa. Unfired bonded ceramic articles and producing same. 2,460,761, Feb. 1.

Miller, Rudolph, assignee: *See*—
Harris, George W.

Miller, Wesley G., assignor to Hays Manufacturing Company, Erie, Pa. Flow control device. 2,460,647, Feb. 1.

Mills, Ballinger, Jr.: *See*—
Long, Chester C.

Mills, Charles E.: *See*—
Effros, Milton, and Mills.

Mining Process and Patent Company, assignee: *See*—
Finney, John H. V.

Minnich, Stehman S., assignor to The Patrol Valve Company, Cleveland, Ohio. Thermostatic switch. 2,460,762, Feb. 1.

Model Brassiere Corp., assignee: *See*—
Schoebel, Henry.

Möller, Ragnar O. J., assignor to Svenska Turbinfabriks Aktiebolaget Ljungström, Finspong, Sweden. Combined gas turbocompressor and gas turbine. 2,460,523, Feb. 1.

Moloney, Raymond T., assignee: *See*—
Calvert, Sumter.

Moray, Thomas H., Salt Lake City, Utah. Electrotherapeutic apparatus. 2,460,707, Feb. 1.

Morgan, Russell L.: *See*—
Nolan, Kenneth G., Morgan, and Fletcher.

Morin, Louis H., Bronx, N. Y. Pintle chain. 2,460,524, Feb. 1.

Morin, Louis H., Bronx, N. Y. Universally united scoop for separable fasteners. 2,460,525, Feb. 1.

Mozingo, Ralph, Elizabeth, and K. Folkers, Plainfield, assignors to Merck & Co., Inc., Rahway, N. J. Making acetamido dimethylacrylic acid. 2,460,708, Feb. 1.

Muller, Carl W., Osborn, Ohio. Device for simulating automatic radio compass indications in ground trainers. 2,460,305, Feb. 1.

Muller, Gesa W., Bron, France; vested in the Attorney General of the United States. Gear pump with flow cushioning means. 2,460,649, Feb. 1.

Musselman, Henry E., and W. H. Buck, Kalamazoo, Mich. Combined cigarette case and lighter. 2,460,427, Feb. 1.

Myers, F. E., & Bro. Company, The, assignee: *See*—
Spreng, Warren M.

Nader Engineering Company, assignee: *See*—
Roys, Carl S.

Nassau Smelting & Refining Company, Incorporated, assignee: *See*—
Corren, Sidney A.

National Agrol Company, Inc., The, assignee: *See*—
Hale, William J.

Navarro, Eugene M., New York, N. Y. Lock mechanism. 2,460,709, Feb. 1.

Navy, United States of America as represented by the Secretary of, assignee: *See*—
Jarvis, Charles W.
Selvidge, Harner.

Nelson, Arthur E., University City, Mo. Support. 2,460,593, Feb. 1.

Nelson, Rolland D., Hales Corners, and E. A. Link, South Milwaukee, assignors to Line Material Company, Milwaukee, Wis. System of controlling electric lines. 2,460,467, Feb. 1.

Nemeth, Joseph J., New York, N. Y. Clip for paper. 2,460,650, Feb. 1.

New Wrinkle, Inc., assignee: *See*—
Beynon, Nathan T.

New York Air Brake Company, The, assignee: *See*—
Whittingham, David J.

Nicholson File Company, assignee: *See*—
Le Fevre, Edward B.

Niederhauser, Warren D.: *See*—
Bruson, Herman A., and Niederhauser.

Nogle, James E., Jacksonville Beach, Fla. Trailer dolly. 2,460,466, Feb. 1.

Nolan, Kenneth G., South Norwalk, R. L. Morgan, Old Greenwich, and J. H. Fletcher, Riverside, Conn., assignors to American Cyanamid Company, New York, N. Y. Fungicidal preparations. 2,460,710, Feb. 1.

Noma Electric Corporation, assignee: *See*—
Markey, Roscoe I.

Noned Corporation, The, assignee: *See*—
Vincent, James G.

North American Aviation, Inc., assignee: *See*—
Hall, Edward L.

Northwest Metal Products, Inc., assignee: *See*—
Reid, George A.

Norton Company, assignee: *See*—
Belden, Albert G., and Flygare.
Flygare, Carl G., and Swainey.
Green, Clarence J.

Oakhill, Frederic E., Wilmette, assignor to O-Cedar Corp'n, Chicago, Ill. Mop structure. 2,460,763, Feb. 1.

Obermayer, S., Co., The, assignee: *See*—
Kauffman, Theodore, Jr., and Jacobs.

Obernauer, William, and M. Schuster, New York, N. Y. Built-up post for wire baskets and the like. 2,460,594, Feb. 1.

O-Cedar Corp'n, assignee: *See*—
Oakhill, Frederic E.

O'Hare, Martin, Donora, Pa., assignor to The American Steel and Wire Company of New Jersey. Bottling apparatus. 2,460,711, Feb. 1.

Ohio Nut & Bolt Company, The, assignee: *See*—
Whelan, Roderick J., and Reich.

Oklejas, Eli, Monroe, Mich. Earth-moving machine. 2,460,764, Feb. 1.

O'Leary, Charles M., Los Angeles, Calif. Mechanical movement for slush pumps. 2,460,428, Feb. 1.

Oliver, Henry L., Durango, Colo., and M. B. Anderson, Albuquerque, N. Mex. Releasable casting weight. 2,460,526, Feb. 1.

Olliveros, Constant A., Houston, Tex. Wind pump for aerating bait containers. 2,460,527, Feb. 1.

Olson, Oscar R., Pittsburgh, Pa. Kettle furnace. 2,460,392, Feb. 1.

Oswald, Olaf, Honolulu, Territory of Hawaii. Carburetor. 2,460,528, Feb. 1.

Selvidge, Harner, Silver Spring, Md., assignor to the

Owens-Illinois Glass Company, assignee: *See*—
Buerger, Martin J., and Washken.
Oyler, Otto I., Canton, Ohio. Articulated vehicle. 2,460,429, Feb. 1.
Paasche, Jens A., Chicago, Ill. Airbrush. 2,460,529. Feb. 1.
Pabst, Arthur C., Douglaston, A. E. Griffiths, Port Washington, and E. B. Killingsworth, Douglaston, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated. Organic medium for the production of aerosols. 2,460,792, Feb. 1.
Packard, Charles A., Welaka, Fla., assignor to Struthers-Dunn, Inc., Philadelphia, Pa. Self-starting synchronous hysteresis motor. 2,460,358, Feb. 1.
Page, Herbert E., Alhambra, Calif. Slide projector and magazine therefor. 2,460,359, Feb. 1.
Palaith, Herbert E., Evanston, Ill. Refrigerating means for containers. 2,460,765, Feb. 1.
Paquin, Joseph N., Euclid, assignor to The Weatherhead Company, Cleveland, Ohio. Self-adjusting tappet. 2,460,651, Feb. 1.
Paradis, Kenneth H. J., Island Pond, Vt. Window shade and curtain fixture. 2,460,360, Feb. 1.
Parke, Davis & Company, assignee: *See*—
Hiense, Henry K.
Patrol Valve Company, The, assignee: *See*—
Friedman, Arthur.
Minnich, Stehman S.
Patterson, Herman W., Cleveland Heights, Ohio. Tissue dispensing container and tissue packs therefor. 2,460,306, Feb. 1.
Paul, Philip T., Naugatuck, Conn., assignor to United States Rubber Company, New York, N. Y. Vulcanization of rubber. 2,460,393, Feb. 1.
Peatross, Erin B., Washington, D. C. Fender protector. 2,460,394, Feb. 1.
Peterson, Frank C., Locona, C. Z. Spiral cam adjustable socket wrench. 2,460,766, Feb. 1.
Peterson, Harold P., Raritan Township, Middlesex County, N. J. Instrument for post-mortem fingerprinting. 2,460,652. Feb. 1.
Peterson, Howard B.: *See*—
Jacobs, Samuel S., and Peterson.
Peterson, Russell G., Minneapolis, Minn. Collapsible casket table for automobiles. 2,460,712, Feb. 1.
Peterson, Walter H.: *See*—
McAllister, Sumner H., Anderson, and Peterson.
Petho, John A., Perkiomenville, Pa., assignor to Continental-Diamond Fibre Company, Newark, Del. Slipper bearing. 2,460,361, Feb. 1.
Petre, John R.: *See*—
Brenner, Robert W., and Petre.
Petyak, Stephen, Fort Mitchell, Ky. Container carrier. 2,460,530, Feb. 1.
Philadelphia Valve Company, assignee: *See*—
Jensen, James A.
Philco Corporation, assignee: *See*—
Rodgers, Lionel M.
Phillips, Harold P., assignor to Hastings Manufacturing Company, Hastings, Mich. Inner ring or expander for pistons. 2,460,430, Feb. 1.
Phillips, Harold P., assignor to Hastings Manufacturing Company, Hastings, Mich. Piston ring. 2,460,431, Feb. 1.
Phillips Petroleum Company, assignee: *See*—
Loy, John W.
Photoswitch, Incorporated, assignee: *See*—
Cade, Phillip J.
Pierce, John B., Foundation, assignee: *See*—
Rapp, George M.
Pierce, John R.: *See*—

McBee, Earl T., and Pierce.
Pierson, Earl, Harrisonburg, Va., and M. Tishler, assignors to Merck & Co., Inc., Rahway, N. J. Preparing substituted propanoic acid. 2,460,785, Feb. 1.
Pigeon, Elmer F., Spiceland, Ind. Shade roller. 2,460,307, Feb. 1.
Pigman, George R., Ridgefield Park, N. J., assignor to American Telephone and Telegraph Company. Control circuit for switching telegraph facilities. 2,460,767, Feb. 1.
Plank, Charles J., and J. F. Socolofsky, Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Alkylation of phenol by alkyl halides catalyzed by finely divided gels of certain drying oils. 2,460,793, Feb. 1.
Plank, William C., Vallejo, Calif. Nonintermittent motion-picture projector. 2,460,432, Feb. 1.
Pommier, Henry, New York, N. Y. Jewelry clasp or the like. 2,460,531, Feb. 1.
Porter, Leslie R., Jr. Peabody, Mass. Mold for casting wall slabs. 2,460,532, Feb. 1.
Potts, Allen H., Chevy Chase, Md., assignor to the United States of America as represented by the Administrator, Federal Works Agency. Combined hinged tray and door fastener. 2,460,533, Feb. 1.
Precision Scientific Co., assignee: *See*—
Kurs, William.
Preload Enterprises, Inc., assignee: *See*—
Dobell, Curson.
Premoli, Romualdo and P. Corbat, Baden, Switzerland. Bridge plate type rail joint. 2,460,362, Feb. 1.
Prentice, Russell E., Dexter, Mich., assignor to General Aniline & Film Corporation, New York, N. Y. Carrying cord connecting means. 2,460,363, Feb. 1.
Pribil, Victor, Floral Park, N. Y. Device for supporting infants while bathing. 2,460,308, Feb. 1.
Procter and Gamble Company, The, assignee: *See*—
Eckey, Eddy W.
Proell, Wayne A.: *See*—
Shoemaker, Bernard H., Adams, and Proell.
Purdue Research Foundation, assignee: *See*—
McBee, Earl T., and Pierce.
Radcliffe, Charles W.: *See*—
Carmichael, Edward P., and Radcliffe.
Radio Corporation of America, assignee: *See*—
Brown, George H., and Hoyler.
Cantelo, Herbert B.
Forgue, Stanley V.
Fulton, Oliver H., Jr.
Schade, Otto H.
Schock, Robert E.
Shaw, Hubert R.
Sziklai, George C.
Thompson, Leland E.
Torsch, Charles E.
Rapp, George M., New Haven, Conn., assignor to John B. Pierce Foundation, New York, N. Y. Panel structural unit. 2,460,309, Feb. 1.
Rathman, Gilbert, Union, N. J., assignor to Roots-Connersville Blower Corporation, Connersville, Ind. Screw pump. 2,460,310, Feb. 1.
Rauland Corporation, The, assignee: *See*—
Ssegbo, Constantin S.
Raybould, Frank J., Lakewood, assignor to The Weatherhead Company, Cleveland, Ohio. Hose end. 2,460,653, Feb. 1.
Raytheon Manufacturing Company, assignee: *See*—
Hanson, Per Roland, and Ulmer.
Reardon, Joseph D.: *See*—
Lowber, David D., Reardon, and Collyer.
Reconstruction Finance Corporation, assignee: *See*—
Di Zoppola, Mario.
Regina Corporation, The, assignee: *See*—
Smith, Courtland N., Jr.
Reich, Joseph, Tel Aviv, Palestine. Dental metal alloys. 2,460,595, Feb. 1.
Reich, Robert A.: *See*—
Whelan, Roderick J., and Reich.
Reid, George A., assignor to Northwest Metal Products, Inc., Seattle, Wash. Child's scooter. 2,460,395, Feb. 1.
Reinad Novelty Co. Incorporated, assignee: *See*—
Reinstein, Harry.
Reinstein, Harry, Rye, assignor to Reinad Novelty Co. Incorporated, New York, N. Y. Flexible fabric composed of rigid interconnected links. 2,460,654, Feb. 1.
Renier, William S., assignor to Giddings & Lewis Machine Tool Company, Fond du Lac, Wis. Molding machine for plastic and other moldable materials. 2,460,468, Feb. 1.
Republic Steel Corporation, assignee: *See*—
Millar, Roland R.
Farrow, Cecil.
Fuchs, Norbert E.
Revere Camera Company, assignee: *See*—
Briskin, Jack.
Reynolds, Peter W.: *See*—
Bremner, John G. M., Reynolds, and Taylor.
Rheem Manufacturing Company, assignee: *See*—
Hoffman, Francis A., and Harlow.
Richards, Claude L., London, England, assignor to The Hartford National Bank and Trust Company, Hartford, Conn., as trustee. Electrical condenser. 2,460,534, Feb. 1.
Richardson, Ewell, Los Angeles, Calif. Geometrical measuring and drafting instrument. 2,460,713, Feb. 1.
Rickmeyer, Ernst W., Berkeley, assignor to Jefferson Electric Company, Bellwood, Ill. Apparatus for determining the permeability of materials. 2,460,655, Feb. 1.
Rifkin, Milton, Denver, Colo., assignor, by mesne assignments, to Frez-O-Mat Corporation. Frozen food dispenser. 2,460,396, Feb. 1.
Rifkin, Milton, Chicago, Ill., and Myer S. Sutton, Minneapolis, Minn., assignors to Frez-O-Mat Corporation. Refrigerator having a door heating device. 2,460,469, Feb. 1.
Riley, George A., assignor to H. O. Canfield Co., Bridgeport, Conn. Basin plug stopper or the like. 2,460,768, Feb. 1.
Riley, Neil J., Lyndhurst, N. J. Two-piece welding pipe flange. 2,460,311, Feb. 1.
Ripley, Edwin B., Los Angeles, Calif. Electric hood. 2,460,433, Feb. 1.
Robinson, John W., Brecksville, Ohio, assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Manufacture of trichloromethyl diaryl methanes. 2,460,535, Feb. 1.
Robinson, Thomas, assignor to Lancaster Processes, Inc., New York, N. Y. Method and apparatus for peening the inside of tubes and other hollow bodies. 2,460,657, Feb. 1.
Roche, Paul C., assignor to Lord Manufacturing Company, Erie, Pa. Cushion support. 2,460,596. Feb. 1.
Rockwell Manufacturing Company, assignee: *See*—
Bergman, Charles P., and Cornell.
Scherer, George F.

Rodgers, Lionel M., Springfield Township, Montgomery County, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Position indication and control system. 2,460,597, Feb. 1.
Roehrl, Carl, Chicago, Ill. Reciprocating and locking means for dies or the like. 2,460,658, Feb. 1.
Roesler, Layton S., Claflin, Kans. Mixing bowl guard. 2,460,364, Feb. 1.
Rogers, Arthur O., Lewiston, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Reaction between vinyl cyanide and reactive methylene compounds. 2,460,536, Feb. 1.
Rogers, Samuel P., El Paso, Tex. Holding tool. 2,460,470, Feb. 1.
Rohm & Haas Company, assignee: *See*—
Bruson, Herman A., and Niederhauser.
Spence, Le Roy U., and Sakal.
Rollason, Ernest C., Essex, England, assignor to Metal and Thermit Corporation, New York, N. Y. Coated weldrod. 2,460,537, Feb. 1.
Roots-Connersville Blower Corporation, assignee: *See*—
Rathmann, Gilbert.
Rose, Francis L.: *See*—
Basford, Frederick R., Curd, and Rose.
Ross Heater & Manufacturing Co., Inc., assignee: *See*—
Tinker, Townsend.
Rosvall, Frank D., Worcester, Mass. Magazine pistol safety and cocking mechanism. 2,460,598, Feb. 1.
Roth, Jay M., Euclid, Ohio, assignor, by mesne assignments, to Borg-Warner Corporation, Chicago, Ill. Pump, by-pass valve assembly. 2,460,397, Feb. 1.
Rowe, Raymond N., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Electric switch actuator. 2,460,599, Feb. 1.
Roys, Carl S., West Chicago, Ill., assignor, by mesne assignments, to Nader Engineering Company. Alternating current generator. 2,460,714, Feb. 1.
Sakal, Emile H.: *See*—
Spence, Le Roy U., and Sakal.
Salem, Philip G., Akron, Ohio. End protector for rolled strip material. 2,460,434, Feb. 1.
Sarbach, Donald V., Cuyahoga Falls, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Amino alcohols as softeners in butadiene-styrene copolymers. 2,460,600, Feb. 1.
Sargent & Company, assignee: *See*—
Stronach, Rupert G.
Schade, Otto H., West Caldwell, N. J., assignor to Radio Corporation of America. Mount for electron tubes. 2,460,398, Feb. 1.
Schade, Otto H., West Caldwell, N. J., assignor to Radio Corporation of America. Method and apparatus for measuring persistence screen characteristics. 2,460,471, Feb. 1.
Schade, Otto H., West Caldwell, N. J., assignor to Radio Corporation of America. Cathode-ray tube deflecting system. 2,460,601, Feb. 1.
Schafer, Glen H.: *See*—
Lloyd, William R., and Schafer.
Schaffer, Fred B., Kansas City, Mo. Golf club. 2,460,435, Feb. 1.
Schallis, Alvin, Jersey City, N. J., assignor to Stauffer Chemical Company. Production of insoluble sulfur. 2,460,365. Feb. 1.
Schassberger, Norman A., assignor to Willys-Overland Motors, Inc., Toledo, Ohio. Vehicle closure. 2,460,399, Feb. 1.
Scherer, George F., San Francisco, Calif., assignor to Rockwell Manufacturing Company, Pittsburgh, Pa. Method and apparatus for lapping valves. 2,460,312, Feb. 1.
Schlatter, Carl, Wilmington, Del., and C. V. Holmberg, Crossett, Ark. assignors to American Viscose Corporation, Wilmington, Del. Treatment of regenerated cellulose thread. 2,460,400, Feb. 1.
Schmidt, Arthur J., Milwaukee, Wis. Time recording apparatus. 2,460,659, Feb. 1.
Schneider, Frank H., assignor to Florence Stove Company, Gardner, Mass. Draft regulator. 2,460,538, Feb. 1.
Schock, Robert E., Riverhead, N. Y., assignor to Radio Corporation of America. Squelch circuit for suppressing noise components. 2,460,786, Feb. 1.
Schoebel, Henry, West Hempstead, assignor to Model Brassiere Corp., Brooklyn, N. Y. Brassiere. 2,460,715, Feb. 1.
Schuster, Max: *See*—
Obernauer, William, and Schuster.
Schwartz, Leo: *See*—
Kahn, George, and Schwartz.
Schwarz, Eugene A., Snyder, assignor to The Geo. L. Squier Mfg. Co., Buffalo, N. Y. Gate positioning mechanism for hulling machines. 2,460,769, Feb. 1.
Schwarz, Otto B.: *See*—
Eisenberg, Ben, and Schwarz.
Scott & Williams, Incorporated, assignee: *See*—
Bristow, Paul W.
Seedorf, Ralph F., assignor to Carthage Mills, Inc., Cincinnati, Ohio. Felt base material for adhesive attachment to surfaces and coating composition for same. 2,460,787, Feb. 1.
Seemann, Arthur K., Manhasset, N. Y., assignor to The Linde Air Products Company. Shock-resistant filament guide. 2,460,366, Feb. 1.
Selvidge, Harner, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Navy. Vacuum tube grid construction. 2,460,794, Feb. 1.
Semon, Waldo L., Silver Lake, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Apparatus for film-type distillations. 2,460,602, Feb. 1.
Semon, Waldo L., Silver Lake Village, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Preparation of alpha-cyano esters. 2,460,603, Feb. 1.
Seyferth, Harold N., East Detroit, assignor to Ex-Cell-O Corporation, Detroit, Mich. Improving the surface of form ground races. 2,460,472, Feb. 1.
Shank, Eldon C., Freeport, Ill. Centrifugal clutch. 2,460,539, Feb. 1.
Sharpe, Donald B., North Tonawanda, assignor to The Carborundum Company, Niagara Falls, N. Y. Making abrasive articles. 2,460,367, Feb. 1.
Sharpe, John S., Research Foundation of the Bryn Mawr Hospital, The, assignee: *See*—
Strumia, Max M., and Chornock.
Sharples Corporation, The, assignee: *See*—
Gooch, Fred P.
Shaw, Albert W., assignee: *See*—
Beverleigh, Elmar R.
Shaw, Hubert R., Drexel Hill, Pa., assignor to Radio Corporation of America. Control circuit. 2,460,540, Feb. 1.
Shell Development Company, assignee: *See*—
McAllister, Sumner H., Anderson, and Peterson.
Shirey, Charles H., Bridgeville, Pa. Artillery war game. 2,460,770, Feb. 1.
Shoemaker, Bernard H., Hammond, and C. E. Adams, Highland, Ind., and W. A. Proell, assignors to Standard Oil Company, Chicago, Ill. Mercapto alcohol esters. 2,460,436, Feb. 1.
Shurley, Robert G., Money, Miss. Bird call. 2,460,716, Feb. 1.
Siler, Thomas B., Atlanta, Ga. Football card game. 2,460,541, Feb. 1.
Simcox, Burton B., Knoxville, Tenn. Ventilator. 2,460,604, Feb. 1.
Simplex Time Recorder Co., assignee: *See*—
Hobby, Harold E.
Sliwiak, Walter, Chicago, assignor to Jefferson Electric Company, Bellwood, Ill. Adjustable magnetic shunt for laminated core structures. 2,460,656, Feb. 1.
Smith, A. O., Corporation, assignee: *See*—
Hart, Edward.
Koppel, Ernst E.
Smith, Charles J., Albany, N. Y. Hay loader. 2,460,544, Feb. 1.
Smith, Clifton E.: *See*—
Courtney, Albert L., and Smith.
Smith, Clyde C., Kokomo, Ind. Drinking tube and glass clamp. 2,460,542, Feb. 1.
Smith, Courtland N., Jr., Colonia, assignor to The Regina Corporation, Rahway, N. J. Can opener. 2,460,717, Feb. 1.
Smith, Minton L., Savannah, Ga. Catheter. 2,460,473, Feb. 1.
Snow, Floyd E., assignor to Technical Coatings, Inc., Pasadena, Calif. Vent construction for airplane fuel tanks. 2,460,368, Feb. 1.
Socolofsky, John F.: *See*—
Plank, Charles J., and Socolofsky.
Socony-Vacuum Oil Company, Incorporated, assignee: *See*—
Folda, Bert, Jr.
Pabst, Arthur C., Griffiths, and Killingsworth.
Plank, Charles J., and Socolofsky.
Stover, William A.
Soissa, John A., Winnetka, assignor to Certain-teed Products Corporation, Chicago, Ill. Apparatus for feeding flowable material from a plurality of containers. 2,460,605, Feb. 1.
Sonntag, Alfred, Greenwich, Conn., assignor, by mesne assignments, to The Baldwin Locomotive Works. Materials testing machine. 2,460,771, Feb. 1.
Soref, Harry E., and D. J. Foote, assignors to Master Lock Company, Milwaukee, Wis. Plug retaining plate for lock cylinders. 2,460,474, Feb. 1.
Southworth, George C., Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Directive microwave radio antenna. 2,460,401, Feb. 1.
Sparkler Mfg. Co., assignee: *See*—
Kracklauer, Aloysius C.
Spence, Le Roy U., Elkins Park, Pa., and E. H. Sakal, Brooklyn, N. Y., assignors to Röhm & Haas Company, Philadelphia, Pa. Production of methacrylonitrile and alpha-chloro isobutyronitrile. 2,460,788, Feb. 1.
Sperry Corporation, The, assignee: *See*—
Ginston, Edward L.
Spierer, Edward, Brooklyn, N. Y. Ultraviolet ray toilet seat. 2,460,543, Feb. 1.
Spreng, Warren M., assignor to The F. E. Myers & Bro. Company, Ashland, Ohio. Spray gun. 2,460,545, Feb. 1.
Squier, Geo. L., Mfg. Co., The, assignee: *See*—
Schwarz, Eugene A.
Standard Oil Company, assignee: *See*—
Johnson, Everett A., and Becker.
Shoemaker, Bernard H., Adams, and Proell.

Stauffer Chemical Company, assignee: *See*—
Schallis, Alvin.
Stauffer, Earl C., Lancaster Pa. Housing for oil burners. 2,460,370, Feb. 1.
Stegemeyer, Lou A., Cincinnati, Ohio, assignor to Emery Industries, Inc. Preparation of oleonitrile. 2,460,772, Feb. 1.
Stephanoff, Nicholas N., Elkton, Md., assignor, by mesne assignments, to C. H. Wheeler Manufacturing Company. Method and apparatus for treating materials. 2,460,546, Feb. 1.
Stevens, Charles R., Toledo, assignor, by mesne assignments, to Glass Fibers, Inc., Waterville, Ohio. Drawing crucible. 2,460,547, Feb. 1.
Stevens, Clifford B., assignor to The Heinn Company, Milwaukee, Wis. Loose-leaf binder. 2,460,718, Feb. 1.
Stewart, William D., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Creatine and creatinine as catalysts for polymerisation of butadiene. 2,460,606, Feb. 1.
Stewart, William L., Fitchburg, Mass. Comb. 2,460,548, Feb. 1.
Stiles, Earl, Lusk, Wyo. Device for recording grocery want lists. 2,460,549, Feb. 1.
Stimson, Allen G., Lynnfield, Mass., assignor to General Electric Company. Temperature sensitive variable inductance. 2,460,773, Feb. 1.
Stover, William A., Woodbury, N. J., assignor to Socony-Vacuum Oil Company, Incorporated. Alkylation in the presence of water as catalyst. 2,460,719, Feb. 1.
Stronach, Rupert G., Hamden, assignor to Sargent & Company, New Haven, Conn. Door check and closer. 2,460,369, Feb. 1.
Strumia, Max M., Penn Valley, and F. W. Chornock, Devon, Pa., assignor to The John S. Sharpe Research Foundation of the Bryn Mawr Hospital. Modified globin and its preparation. 2,460,550, Feb. 1.
Struthers-Dunn, Inc., assignee: *See*—
Packard, Charles A.
Studebaker Corporation, The, assignee: *See*—
Sullivan, Perry W.
Submarine Signal Company, assignee: *See*—
Benioff, Hugo.
Sullivan, Perry W., assignor to The Studebaker Corporation, South Bend, Ind. Push-button means. 2,460,607, Feb. 1.
Sulzer Frères, Société Anonyme, assignee: *See*—
Huber, Walter.
Traupel, Walter.
Sutton, Myer S.: *See*—
Rifkin, Milton, and Sutton.
Svenska Turbinfabrika Aktiebolaget Ljungström, assignee: *See*—
Moller, Ragnar O. J.
Swainey, Homer L.: *See*—
Flygare, Carl G., and Swainey.
Swanson, Gunnar E., New Britain, Conn. Unitary tumbler cylinder lock. 2,460,551, Feb. 1.
Sweets Laboratories, Inc., assignee: *See*—
Lindhe, Eric G.
Szegho, Constantin S., assignor to The Rauland Corporation, Chicago, Ill. Cathode-ray tube. 2,460,608, Feb. 1.
Sziklai, George C., Princeton, N. J., assignor to Radio Corporation of America. Electron discharge device. 2,460,402, Feb. 1.
Sawargulski, Alex N., assignor to Carter Carburator Corporation, St. Louis, Mo. Motor cooling means. 2,460,371, Feb. 1.
Tank Fertilizer, Inc., assignee: *See*—
Aycock, Walter F.
Tarapcsynski, Sigmund, Niagara Falls, N. Y. Knife sharpener. 2,460,552, Feb. 1.
Taylor, Arthur W. C.: *See*—
Bremner, John G. M., Reynolds, and Taylor.
Taylor, Moulton B., U. S. Navy. Clutch device. 2,460,313, Feb. 1.
Taylor, Taylor & Hobson Limited, assignee: *See*—
Cooke, Ernest A.
Teague, Maurice E., Cheney, Wash. Automatic dump body. 2,460,403, Feb. 1.
Technical Coatings, Inc., assignee: *See*—
Snow, Floyd H.
Thompson, Leland E., Merchantville, N. J., assignor to Radio Corporation of America. Fault indicator for radio relaying systems. 2,460,789, Feb. 1.
Thompson, Marvin R., Riverside, Conn. Sulfa drug compositions. 2,460,437, Feb. 1.
Thompson, Roy J., Gary, Ind., assignor to Inland Steel Company, Chicago, Ill. Threaded opening. 2,460,720, Feb. 1.
Thompson, Roy J., Gary, Ind., assignor to Inland Steel Company, Chicago, Ill. Forming bungs in metallic plates. 2,460,721, Feb. 1.
Thomson, E. Craig, Boston, assignor to Combustion Control Corporation, Cambridge, Mass. Apparatus for supervising heat generating means. 2,460,314, Feb. 1.
Thomson, Robin H. K., Kilwinning, Scotland, assignor to Imperial Chemical Industries Limited. Manufacture of artificial protein filaments. 2,460,372, Feb. 1.
Timken-Detroit Axle Company, The, assignee: *See*—
Keese, Beverly W.
Tingue, Brown & Co., assignee: *See*—
Foster, John W.
Tinker, Townsend, Orchard Park, assignor to Ross Heater & Manufacturing Co., Inc., Buffalo, N. Y. Heat exchanger. 2,460,660, Feb. 1.
Tintes, Hubert A., West Fargo, N. Dak. Portable grain elevator. 2,460,661, Feb. 1.
Tishler, Max: *See*—
Pierson, Earl, and Tishler.
Torrance, William, Calgary, Alberta, Canada. Tire pressure alarm. 2,460,315, Feb. 1.
Torsch, Charles E., Lancaster Township, Lancaster County, Pa., assignor to Radio Corporation of America. Beam aligning apparatus. 2,460,609, Feb. 1.
Traupel, Walter, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland. Gas turbine plant. 2,460,610, Feb. 1.
Trautman, Walter C., North Hollywood, Calif., assignor, by mesne assignments, to Bendix Aviation Corporation, South Bend, Ind. Valve. 2,460,774, Feb. 1.
Treiman, Morris, assignor to Allied Plastics Company, Los Angeles, Calif. Garment hanger. 2,460,438, Feb. 1.
Treifa, Richard T.: *See*—
Erkko, Eero O., and Treifa.
Trent, Horace M., and T. F. Jones, Alexandria, Va. Echo ranging and listening gear. 2,460,316, Feb. 1.
Trompeter, David, Sandy Hook, Conn. Electric current theft prevention means. 2,460,553, Feb. 1.
Trubenised Limited, assignee: *See*—
Bihaly, Lajos.
Trumbull Electric Manufacturing Company, The, assignee: *See*—
Rowe, Raymond N.
Tschumi, Otto, assignor to Autophon Aktiengesellschaft, Soleure, Switzerland. Arrangement for changing over the speaking direction in loud-speaker duplex systems. 2,460,475, Feb. 1.
Turner, Richard G., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Pneumatic thread holder for weft replenishing looms. 2,460,611, Feb. 1.
Tuttle, Robert E., Wilmington, Del. Button construction for garments and the like. 2,460,775, Feb. 1.
Tuttle, William R., and W. J. Beldue, assignors to The Kurlash Company, Inc., Rochester, N. Y. Eyelash curler. 2,460,317, Feb. 1.
Tyszer, Howard J., Caldwell, assignor to Ferris Instrument Laboratories, Boonton, N. J. High-frequency potential dividing termination. 2,460,476, Feb. 1.
Ulmer, Harold W.: *See*—
Hanson, Per Roland, and Ulmer.
Union Switch & Signal Company, The, assignee: *See*—
Cadman, Ira F.
Konrad, William L., Boesart, and Leberknight.
Young, Henry S.
United Aircraft Corporation, assignee: *See*—
Hahn, Frank J.
Hersey, Donald S., and Brown.
Willgoos, Andrew V. D.
United Shoe Machinery Corporation, assignee: *See*—
Edgar, David.

United States Rubber Company, assignee: *See*—
Paul, Philip T.
Universal Oil Products Company, assignee: *See*—
Ward, John W.
Utter, Joseph L.: *See*—
Kreidl, Ekkehard L., and Utter.
Vanderpool, Harold D.: *See*—
McGee, Kenneth, and Vanderpool.
Van Evera, Margaret L.: *See*—
Allen, Adda M., and Van Evera.
Van Voorhis, Noble, Canton, Ohio, assignor, by mesne assignments, of seventy-six and eighty-nine one-hundredths per cent to R. E. MacKenzie and twenty-three and eleven one-hundredths per cent to L. V. Bocklus. Building construction. 2,460,662, Feb. 1.
Varian, Russell H.: *See*—
Hansen, William W., and Varian.
Verson Allsteel Press Company, assignee: *See*—
Verson, David C.
Verson, David C., assignor to Verson Allsteel Press Company, Chicago, Ill. Press with hydraulically controlled blankholder. 2,460,612, Feb. 1.
Vincent, James G., Rochester, N. Y., assignor to The Noned Corporation. Bacteriostatic base for medicinal, cosmetic, and toilet preparation. 2,460,776, Feb. 1.
Vogel, William M., Montclair, N. J. Sprayer. 2,460,554, Feb. 1.
Von Voigtlander, Frederick, Ann Arbor, Mich. Tool assembly. 2,460,555, Feb. 1.
Waara, David H., Detroit, assignor to R. L. Brown, Ferndale, Mich. Fastener. 2,460,722, Feb. 1.
Wagar, Harold N., Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Coil arrangement for electromagnetic devices. 2,460,556, Feb. 1.
Wakefield, Walter H., assignor to Crompton & Knowles Loom Works, Worcester, Mass. Weft replenishing pick and pick loom. 2,460,318, Feb. 1.
Waldeyer, Carl, San Francisco, Calif. Motion-picture combination. 2,460,320, Feb. 1.
Waldman, Bernard, Springfield, Mass. Antiglare device. 2,460,373, Feb. 1.

Walker, Brooks, Piedmont, Calif. Apparatus for launching rockets from turrets. 2,460,321, Feb. 1.
Walker, Brooks, Piedmont, Calif. Mine exploder. 2,460,322, Feb. 2.
Walker, Theron H., Los Angeles, Calif. Reciprocating grater with removable toolplate. 2,460,663, Feb. 1.
Wallman, Carl B., Birmingham, assignor to Ex-Cell-O Corporation, Detroit, Mich. Indexing head. 2,460,477, Feb. 1.
Walls, Billy, Colonie, Italy; C. M. Walls administrator of said Billy Walls, deceased. Aircraft flight control system. 2,460,374, Feb. 1.
Walls, C. M., administrator: *See*—
Walls, Billy.
War, the United States of America as represented by the Secretary of, assignee: *See*—
Hickman, Clarence N.
Holcomb, Normand P.
McGee, Kenneth, and Vanderpool.
Ward, John W., assignor to Universal Oil Products Company, Chicago, Ill. Catalytic conversions of hydrocarbons. 2,460,404, Feb. 1.
Warden, Warren H., Bradford, Pa., assignor to P. J. Gaylord, Newark, N. J. Waterproofing cellulosic material with higher aliphatic acyl peroxides. 2,460,777, Feb. 1.
Warner, Milton W., Long Beach, Calif. Splice wrapper. 2,460,478, Feb. 1.
Warrick, Earl L., Pittsburgh, Pa., assignor to Corning Glass Works, Corning, N. Y. Making rubbery polymeric organo-siloxane compositions. 2,460,705, Feb. 1.
Washken, Edward: *See*—
Buerger, Martin J., and Washken.
Weatherhead Company, The, assignee: *See*—
Balogh, Roy O.
Courtot, Louis B.
Crawley, Charles H.
Herold, Robert E.
Paquin, Joseph N.
Raybould, Frank J.
Weaver, William H.: *See*—
Ashley, Donald S., and Weaver.
Weesner, Max, assignor to The Weesel Bait Company, Cincinnati, Ohio. Line measuring and reeling device. 2,460,723, Feb. 1.
Weesel Bait Company, The, assignee: *See*—
Weesner, Max.
Wehn, Charles E., Alameda, Calif. Mechanical pencil. 2,460,323, Feb. 1.
Western Electric Company, Incorporated, assignee: *See*—
Gambrill, Richard D., and Lewis.
Westinghouse Electric Corporation, assignee: *See*—
Cumming, James M.
Lingal, Harry J.
Wethly, Frans, Manhasset, N. Y., assignor to Allied Chemical & Dye Corporation. Combination vertical flued coke-oven battery adapted to coke swelling coals. 2,460,324, Feb. 1.
Wheeler, C. H., Manufacturing Company, assignee: *See*—
Stephanoff, Nicholas N.
Wheeler, William N., Paris, Ky. Child's vehicle. 2,460,479, Feb. 1.
Whelan, Roderick J., and R. A. Reich, assignors to The Ohio Nut & Bolt Company, Berea, Ohio. Captive screw assembly. 2,460,613, Feb. 1.
Whetstone, John, West Kilbride, Scotland, assignor to Imperial Chemical Industries Limited. Granular or powder explosives and their manufacture. 2,460,375, Feb. 1.
White, Florence, Bound Brook, N. J. Convertible child's seat and car. 2,460,557, Feb. 1.
Whiteside, Robert S., Scarsdale, N. Y., and C. H. Allen, Cincinnati, Ohio, assignors, by mesne assignments, to Winthrop-Stearns Inc., New York, N. Y. Benzoyl peroxide bleaching composition. 2,460,439, Feb. 1.
Whitson, Mercer L., Norfolk, and H. H. Harcum, Portsmouth, Va. Expansible mandrel. 2,460,325, Feb. 1.
Whittingham, David J., Watertown, N. Y., assignor to The New York Air Brake Company. Hydraulic pressure control means. 2,460,664, Feb. 1.
Wiberg, Oscar A., Finspong, Sweden. Slide rule. 2,460,558, Feb. 1.
Wiener, Norton: *See*—
Cutler, Stanley, and Wiener.
Wildhaber, Ernest, Brighton, N. Y. Blade pitch adjustment. 2,460,559, Feb. 1.
Willgoos, Andrew V. D., West Hartford, assignor to United Aircraft Corporation, East Hartford, Conn. Torque regulating device for compressors. 2,460,778, Feb. 1.
Williams, Horace, Alliance, Ohio. Hand snowplow. 2,460,560, Feb. 1.
Willys-Overland Motors, Inc., assignee: *See*—
Schasberger, Norman A.
Winkelmann, Samuel A., assignor of one-half to W. L. Goldston, Houston, Tex. Apparatus for cementing wells. 2,460,561, Feb. 1.
Winthrop-Stearns Inc., assignee: *See*—
Whiteside, Robert S., and Allen.
Wolff, Julius, Amsterdam, Netherlands; vested in the Attorney General of the United States. Method of and apparatus for producing artificial sausage skins. 2,460,480, Feb. 1.
Woodruff, Clarence M., Dayton, Ohio. Transmitter. 2,460,326, Feb. 1.
Woodworth, N. A., Company, assignee: *See*—
Hohwart, George and E. F.
Woolford, Custis S., South Orange, N. J., assignor to American Can Company, New York, N. Y. Solder wiper mechanism with shielding means. 2,460,327, Feb. 1.
Worrell, Ted H., Santa Paula, Calif. Bobby pin opener. 2,460,562, Feb. 1.
Worthington Pump and Machinery Corporation, assignee: *See*—
Grace, John F.
Wurzburger, Paul D., Cleveland Heights, Ohio. Solder fitting. 2,460,665, Feb. 1.
Wurzburger, Paul D., Cleveland Heights, Ohio. Fitting. 2,460,666, Feb. 1.
Wurzburger, Paul D., Cleveland Heights, Ohio. Fitting. 2,460,667, Feb. 1.
Wurzburger, Paul D., Cleveland Heights, Ohio. Fitting. 2,460,668, Feb. 1.
Wyandotte Chemicals Corporation, assignee: *See*—
Courtney, Albert L., and Smith.
Yale & Towne Manufacturing Company, The, assignee: *See*—
Andrew, John P.
Yardeny, Michel N., assignee: *See*—
Bernas, Robert.
Young, Graeme E., Hollywood, Calif. Miniature rotatable stage or exhibiting device. 2,460,328, Feb. 1.
Young, Henry S., Wilkinsburg, assignor to The Union Switch & Signal Company, Swissvale, Pa. Remote-control system. 2,460,327, Feb. 1.
Young, L. A. Spring & Wire Corporation, assignee: *See*—
Lupanoff, John.
Young Radiator Company, assignee: *See*—
Kidd, Earl H.
Zelvin, Arnold, New York, N. Y. Relatively movable membered puzzle. 2,460,563, Feb. 1.
Zimmer, Myron J., Wood Dale, assignor to Ekco Products Company, Chicago, Ill. Strainer. 2,460,614, Feb. 1.

LIST OF PLANT INVENTIONS

Peach tree. J. A. Wickersham. 821, Feb. 1.

Rose plant. T. J. Andre. 822, Feb. 1.

LIST OF DESIGN INVENTIONS

Badge. F. S. Land. 152,546, Feb. 1.
Bag, Motorcycle saddle. J. B. Hampel. 152,530, Feb. 1.
Blanket or similar fabric article. M. D. Cramer. 152,519, Feb. 1.
Bottle. J. Braun. 152,514–15, Feb. 1.
Bottle or similar container. M. A. MacLean. 152,553, Feb. 1.
Bottle, Perfume. D. Gibson. 152,527, Feb. 1.
Box or the like. J. L. Duncan and B. Martin. 152,523, Feb. 1.
Brooch or similar article. E. Deutsch. 152,522, Feb. 1.
Brooch or similar article. W. W. Hobé. 152,541, Feb. 1.
Cabinet for a bottled beverage cooling unit or similar article. A. C. Wesche. 152,579, Feb. 1.
Cabinet or the like, Radiator. J. Israel. 152,545, Feb. 1.
Cap and latch for screen holder, Combined. J. T. Heck, L. J. Du Mais, and C. O. Talbot. 152,535, Feb. 1.
Case and perfume vial, Combined lipstick. I. M. Lang. 152,547, Feb. 1.
Case, Display. G. E. Millard. 152,555, Feb. 1.
Container for powdered soap or similar article. F. Barnes. 152,513, Feb. 1.
Earring or similar article. M. Chernow. 152,517, Feb. 1.
Earring or similar article. A. Philippe. 152,559–66, Feb. 1.
End plate, Lighting fixture. J. O. Howard. 152,543, Feb. 1.
Fabric. M. R. Hamre. 152,531, Feb. 1.
Fan housing. T. C. Brown. 152,516, Feb. 1.
Fish lure. T. F. Gelser. 152,526, Feb. 1.
Fishing lure. E. J. Howard. 152,542, Feb. 1.
Handle, Pot and pan. A. L. Henkel. 152,539, Feb. 1.
Holder, Candle. W. E. Mackelfresh, Jr. 152,551–2, Feb. 1.
Holder for paper sundae dish. L. M. Turner. 152,574, Feb. 1.
Hosiery display device. M. M. Halpern. 152,529, Feb. 1.
Knife or similar article of flatware. H. K. Friedman. 152,525, Feb. 1.
Master station unit, Intercommunicating system. M. Wasserman. 152,577, Feb. 1.
Memo book, Picture birthday. A. T. Turpin. 152,575, Feb. 1.
Photographic laboratory, Portable. C. M. Nielsen. 152,557, Feb. 1.
Picture screen base, Portable. J. T. Heck, L. J. Du Mais, and C. O. Talbot. 152,536, Feb. 1.
Picture screen, Portable. J. T. Heck, L. J. Du Mais, and C. O. Talbot. 152,537, Feb. 1.
Printing and developing machine, Combined. J. W. Coffman and F. O. Trump. 152,518, Feb. 1.
Sewing accessory or similar article. M. Muramatsu. 152,556, Feb. 1.
Sharpener, Pencil. C. Godfrey. 152,528, Feb. 1.
Sharpener, Pencil. R. A. May. 152,554, Feb. 1.
Shoe. J. Sandler. 152,568–72, Feb. 1.
Shoehorn. M. R. Lilly. 152,548, Feb. 1.
Stand, Display. C. M. Link. 152,549, Feb. 1.
Stand, Lamp. P. Schultz. 152,573, Feb. 1.
Station unit, Intercommunicating system. M. Wasserman. 152,578, Feb. 1.
Statuette. J. A. D'Arcy. 152,520, Feb. 1.
Stroller or similar article. S. J. Wallace. 152,576, Feb. 1.
Textile fabric or similar article. M. R. Hamre. 152,582–5, Feb. 1.
Tilting support for photographic cameras or the like. F. R. Heward. 152,540, Feb. 1.
Toy animal figure. J. L. Hvale. 152,544, Feb. 1.
Toy bank. D. D. Rupe. 152,567, Feb. 1.
Toy, Rocking. C. C. Flatt. 152,524, Feb. 1.
Tray. N. M. Dean. 152,521, Feb. 1.
Tray, Tiered. A. M. Paolino. 152,558, Feb. 1.
Washing machine. J. M. Little. 152,550, Feb. 1.

LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 1ST DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abrasive articles, Making. D. B. Sharpe. 2,460,367, Feb. 1.
Accordion, Amplified. W. J. Babicky. 2,460,408, Feb. 1.
Acetamido dimethylacrylic acid, Making. R. Mozingo and K. Folkers. 2,460,708, Feb. 1.
Acid ester of cellulose, Plasticized lower fatty. A. F. Caprio and W. Horback. 2,460,376, Feb. 1.
Adjustable multicolored light filter. R. C. Johnston. 2,460,507, Feb. 1.
Airbrush. J. A. Paasche. 2,460,529, Feb. 1.
Air conditioning device, Personal body. W. R. Appeldoorn, 2,460,269, Feb. 1.
Alarm, Tire pressure. W. Torrance. 2,460,315, Feb. 1.
Alcohol esters, Mercapto. B. H. Shoemaker, C. E. Adams, and W. A. Proell. 2,460,436, Feb. 1.
Aligning apparatus, Beam. C. E. Torsch. 2,460,609, Feb. 1.
Alkylation in the presence of water as catalyst. W. A. Stover. 2,460,719, Feb. 1.
Alkylation of phenol by alkyl halides catalyzed by finely divided gels of certain drying oils. C. J. Plank and E. F. Socolofsky. 2,460,793, Feb. 1.
Alloys, Dental metal. J. Reich. 2,460,595, Feb. 1.
Alpha-cyano esters, Preparation of. W. L. Semon. 2,460,603, Feb. 1.
Alternating current generator. C. S. Roys. 2,460,714, Feb. 1.
Aluminum phosphates, Preparation of. H. H. Greger. 2,460,344, Feb. 1.
Amino alcohols as softeners in butadiene-styrene copolymers. D. V. Sarbach. 2,460,600, Feb. 1.
Antiglare device. B. Waldman. 2,460,373, Feb. 1.
Apparatus for cementing wells. S. A. Winkelmann. 2,460,561, Feb. 1.
Apparatus for dehydrating petroleum products in situ in tank storage. E. P. Baker. 2,460,271, Feb. 1.
Apparatus for determining the permeability of materials. E. W. Rickmeyer. 2,460,655, Feb. 1.
Apparatus for feeding flowable material from a plurality of containers. J. A. Solssa. 2,460,605, Feb. 1.
Apparatus for film-type distillations. W. L. Semon. 2,460,602, Feb. 1.
Apparatus for flame cutting. F. J. Douglass. 2,460,412, Feb. 1.
Apparatus for launching rockets from turrets. B. Walker. 2,460,321, Feb. 1.
Apparatus for locating faults in cables. R. D. Gambrill and C. E. Lewis. 2,460,688, Feb. 1.
Apparatus for measuring liquid level or specific gravity. W. H. Howe. 2,460,503, Feb. 1.
Apparatus for supervising heat generating means. E. C. Thomson. 2,460,314, Feb. 1.
Applicator, Lip rouge dispenser. R. E. Kruck. 2,460,299, Feb. 1.
Arc extinguishing device. W. A. Atwood and E. W. Boehne. 2,460,727, Feb. 1.
Arm support. A. V. Lewis. 2,460,589, Feb. 1.
Arrangement for changing over the speaking direction in loud-speaker duplex systems. O. Tschumi. 2,460,475, Feb. 1.
Article handling apparatus. S. A. Corren. 2,460,379, Feb. 1.
Articulated vehicle. O. I. Oyler. 2,460,429, Feb. 1.
Artificial foot. E. P. Carmichael and C. W. Radcliffe. 2,460,446, Feb. 1.
Artificial sausage skins, Method of and apparatus for producing. J. Wolff. 2,460,480, Feb. 1.
Asbestos impregnated with tin oxide and producing. T. D. Callinan. 2,460,734, Feb. 1.
Assembly for flatwork ironer rolls, Protective. J. W. Foster. 2,460,343, Feb. 1.
Attachment for shears, Grass-catching. J. F. Appleton. 2,460,616, Feb. 1.
Axle, Drive. B. W. Keese. 2,460,295, Feb. 1.
Bag: *See*—
Coffee steeping bag.
Barrel. E. H. Benson. 2,460,410, Feb. 1.
Baseboard room heater. W. A. Ellis. 2,460,625, Feb. 1.
Base for medicinal, cosmetic, and toilet preparation, Bacteriostatic. J. G. Vincent. 2,460,776, Feb. 1.
Base material for adhesive attachment to surfaces and coating composition for same, Felt. R. F. Seedorf. 2,460,787, Feb. 1.
Bearing: *See*—
Slipper bearing.
Binder, Loose-leaf. C. B. Stevens. 2,460,718, Feb. 1.
Bird call. B. G. Shurley. 2,460,716, Feb. 1.
Bit: *See*—
Detachable bit.
Blade pitch adjustment. E. Wildhaber. 2,460,559, Feb. 1.
Blade, Rotor. F. A. Hoffman and M. B. Harlow. 2,460,351, Feb. 1.
Bleaching composition, Benzoyl peroxide. R. S. Whiteside and C. H. Allen. 2,460,439, Feb. 1.
Block: *See*—
Building block.
Blood collecting apparatus. J. J. Kleiner. 2,460,641, Feb. 1.
Bonded structures, Making. M. J. Buerger and E. Washken. 2,460,334, Feb. 1.
Boring head. H. C. Gillette. 2,460,689, Feb. 1.
Bottling apparatus. M. O'Hare. 2,460,711, Feb. 1.
Box: *See*—
Mixing box. Storage box.
Brake and tension for warp beamers. C. W. Burrum. 2,460,569, Feb. 1.
Brake beam structure, Railway. D. E. Barton. 2,460,670, Feb. 1.
Brassière. H. Schoebel. 2,460,715, Feb. 1.
Bridge plate type rail joint. R. Premoli and P. Corbat 2,460,362, Feb. 1.
Buffing wheel. J. F. Leslie. 2,460,588, Feb. 1.
Building block. P. P. Baccaro. 2,460,330, Feb. 1.
Building construction. N. Van Voorhis. 2,460,662, Feb. 1.
Building unit for house construction. R. F. Lufkin. 2,460,464, Feb. 1.
Bungs in metallic plates, Forming. R. J. Thompson. 2,460,721, Feb. 1.
Burner: *See*—
Gasifying fuel burner.
Button construction for garments and the like. R. E. Tuttle. 2,460,775, Feb. 1.
Cabinet and drawer with compressing and signaling means, Combined. M. Effros and C. E. Mills. 2,460,572, Feb. 1.
Cake pans, Wrapping tubular. J. M. Luker. 2,460,644, Feb. 1.
Can bodies having vented side seams, Producing. T. Begg. 2,460,273, Feb. 1.
Carbine tool. J. J. Bartolat. 2,460,272, Feb. 1.
Carburetor. O. Oswald. 2,460,528, Feb. 1.
Card, Record. R. Connor. 2,460,378, Feb. 1.
Carotenoid concentrates from palm oil, Preparing. E. W. Eckey. 2,460,796, Feb. 1.
Carrier: *See*—
Container carrier.
Case and lighter, Combined cigarette. H. E. Musselman and W. H. Buck. 2,460,427, Feb. 1.
Casing, Adjustable window. F. Cervellone. 2,460,677, Feb. 1.
Casket table for automobiles, Collapsible. R. G. Peterson. 2,460,712, Feb. 1.
Catheter. M. L. Smith. 2,460,473, Feb. 1.
Cathode-ray tube. C. S. Szegho. 2,460,608, Feb. 1.
Cellulose dielectric material and producing the same, Regenerated. G. B. Gardner. 2,460,282, Feb. 1.
Cellulose thread, Treatment of regenerated. C. Schlatter and C. V. Holmberg. 2,460,400, Feb. 1.
Cellulosic material with higher aliphatic acyl peroxides, Waterproofing. W. B. Warden. 2,460,777, Feb. 1.
Centrifugal clutch. E. C. Shank. 2,460,539, Feb. 1.
Ceramic articles and producing same, Unfired bonded. J. W. H. Miller. 2,460,761, Feb. 1.
Ceramic bodies, Making. E. L. Kreidl and J. L. Utter. 2,460,356, Feb. 1.
Chain: *See*—
Conveyer chain. Pintle chain.
Child's vehicle. W. N. Wheeler. 2,460,419, Feb. 1.
Chip breaker, Inside sidehead. M. T. McBryde. 2,460,465, Feb. 1.
Chlorinolysis. E. T. McBee and O. R. Pierce. 2,460,705, Feb. 1.
Chuck, Diaphragm. G. and E. F. Hohwart. 2,460,577, Feb. 1.
Chuck, Hand-piece. M. S. Lundsten. 2,460,302, Feb. 1.
Cigarette container. D. H. Bell. 2,460,730, Feb. 1.
Circuit: *See*—
Control circuit. Electronic circuit.
Circuit arrangement for compensating the aerial effect of directional antennae. T. W. LaRiviere. 2,460,367, Feb. 1.
Circuit controller. H. J. Lingal. 2,460,462, Feb. 1.
Circuit for pulse transmission systems, Receiver protective. B. H. Klyce, Jr. 2,460,755, Feb. 1.
Circuit for stabilizing frequencies of transmitter-receiver systems. H. R. Cantelo. 2,460,781, Feb. 1.
Circuit for suppressing noise components, Squelch. R. E. Schock. 2,460,786. Feb. 1.
Circuit interrupter. J. M. Cumming. 2,460,450, Feb. 1.
Circulating apparatus, Liquid. W. Kurz. 2,460,757, Feb. 1.

Clamp: *See*—
Rod or pipe clamp.
Clamp for slip joints, Channel type. R. I. Markey. 2,460,646, Feb. 1.
Clamping sleeve, Flexible. E. Laesser. 2,460,510, Feb. 1.
Clasp or the like, Jewelry. H. Pommier. 2,460,531, Feb. 1.
Cleaner: *See*—
Drill pipe cleaner.
Cleaner for pressure filters, Screen. U. E. Goodrich. 2,460,416, Feb. 1.
Cleaning apparatus, Dental floss tooth. T. E. Luzar. 2,460,591, Feb. 1.
Clip for paper. J. J. Nemeth. 2,460,650, Feb. 1.
Clock, Alarm. R. F. Heckmer, Sr. 2,460,634, Feb. 1.
Clock and like apparatus, Alarm. H. Blampain. 2,460,486, Feb. 1.
Closure, Vehicle. N. A. Schassberger. 2,460,399, Feb. 1.
Clothes drier. E. R. Koppel. 2,460,422, Feb. 1.
Clothesline pole. C. C. Long. 2,460,699, Feb. 1.
Clothesline tightener. H. M. Jensen and R. W. Bridges. 2,460,640, Feb. 1.
Clutch: *See*—
Centrifugal clutch.
Clutch device. M. B. Taylor. 2,460,313, Feb. 1.
Coated material and producing same, Flexible wrinkle. N. T. Beynon. 2,460,485, Feb. 1.
Coffee steeping bag. K. E. Carroll. 2,460,735, Feb. 1.
Cofferdam. C. Dobell. 2,460,624, Feb. 1.
Coil arrangement for electromagnetic devices. H. N. Wagar. 2,460,556, Feb. 1.
Coke-oven battery adapted to coke swelling coals, Combination vertical flued. F. Wethly. 2,460,324, Feb. 1.
Collating device, Alternate projection. C. Hinman. 2,460,350, Feb. 1.
Collector, Solar heat. C. G. Abbot. 2,460,482, Feb. 1.
Collet, Internal. M. M. Fuller. 2,460,414, Feb. 1.
Comb, W. L. Stewart. 2,460,548, Feb. 1.
Communication system, Railway train. W. L. Konrad, P. N. Bossart, and C. E. Leberknight. 2,460,334, Feb. 1.
Commutator machine control. F. W. Baumann. 2,460,729, Feb. 1.
Compass, Star matcher and sun. F. H. Hagner. 2,460,346, Feb. 1.
Compensator, Loop inductance. S. Cutler and N. Wiener. 2,460,492, Feb. 1.
Concrete block mold. L. F. Kreger. 2,460,697, Feb. 1.
Condenser: *See*—
Electrical condenser.
Reversible circulation condenser.
Cone tie, Spring equipped double. S. J. Kardos. 2,460,753, Feb. 1.
Connector: *See*—
Range connector.
Connector. K. McGee and H. D. Vanderpool. 2,460,304, Feb. 1.
Container: *See*—
Cigarette container. Face powder container.
Container and tissue packs therefor, Tissue dispensing. H. W. Patterson. 2,460,306, Feb. 1.
Container carrier. S. Petyak. 2,460,530, Feb. 1.
Container for liquefied gases. H. C. Kornemann. 2,460,355, Feb. 1.
Container having hinged cover, Molded plastic. J. Brunetti. 2,460,488, Feb. 1.
Control apparatus, Modulation. E. L. Ginston. 2,460,498, Feb. 1.
Control circuit. H. R. Shaw. 2,460,540, Feb. 1.
Control circuit for switching telegraph facilities. G. R. Pigman. 2,460,767, Feb. 1.
Control mechanism, Sequence. E. L. Hall. 2,460,693, Feb. 1.
Control system, Aircraft flight. B. Walls. 2,460,374, Feb. 1.
Conversions of hydrocarbons, Catalytic. J. W. Ward. 2,460,404, Feb. 1.
Conveyer chain. J. L. Clarkson. 2,460,447, Feb. 1.
Conveying means for shoe manufacture. B. T. Gialdini. 2,460,782, Feb. 1.
Cooler for air conditioning systems, Liquid. M. Di Zoppola. 2,460,623, Feb. 1.
Copying machine with optical system. E. A. Cooke. 2,460,491, Feb. 1.
Cord connecting means, Carrying. R. E. Prentice. 2,460,363, Feb. 1.
Core structures, Binding magnetic. M. B. Grout. 2,460,639, Feb. 1.
Coupling: *See*—
Flexible coupling. Tube coupling.
Coupling for hoses and the like. J. A. Jensen. 2,460,352, Feb. 1.
Cover: *See*—
Wheel cover.
Covering, Sanitary pillow. C. Hampton. 2,460,452, Feb. 1.
Cracking of a hydrocarbon oil, Noncatalytic. J. W. Loy. 2,460,463, Feb. 1.
Creatine and creatinine as catalysts for polymerization of butadiene. W. D. Stewart. 2,460,606, Feb. 1.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,460,520, Feb. 1.
Crystal apparatus, Piezoelectric. W. P. Mason. 2,460,703–4, Feb. 1.
Curler, Eyelash. W. R. Tuttle and W. J. Beldue. 2,460,317, Feb. 1.
Cushion construction, Spring. J. Lupanoff. 2,460,424, Feb. 1.
Cushion, Safety razor. W. P. MacMicking. 2,460,645, Feb. 1.
Cushion support. P. C. Roche. 2,460,596, Feb. 1.
Cutting means for metal stretching dies. H. A. Berliner. 2,460,483, Feb. 1.
Deflecting system, Cathode-ray tube. O. H. Schade. 2,460,601, Feb. 1.
Dehydrogenation catalysts, Preparation of. J. G. M. Bremmer, P. W. Reynolds, and A. W. C. Taylor. 2,460,333, Feb. 1.
Demagnetizing tubing, Method and apparatus for. C. Farrow. 2,460,684, Feb. 1.
Detachable bit. I. J. Berscheid. 2,460,673, Feb. 1.
Device for recording grocery wantlists. E. Stiles. 2,460,549, Feb. 1.
Device for simulating automatic radio compass indications in ground trainers. C. W. Muller. 2,460,305, Feb. 1.
Device for supporting infants while bathing. V. Pribil. 2,460,308, Feb. 1.
Diamine compound. H. A. Bruson and W. D. Niederhauser. 2,460,733, Feb. 1.
Dip co-ordinator. W. T. Knauth and R. B. Briggs. 2,460,642, Feb. 1.
Discharge device, Electron. M. Bowman-Manifold. 2,460,332, Feb. 1.
Discharge device, Electron. G. C. Sziklai. 2,460,402, Feb. 1.
Disk segment, Filter. J. H. V. Finney. 2,460,280, Feb. 1.
Dispenser: *See*—
Frozen food dispenser. Liquid dispenser.
Dispensing system, Predetermining. C. P. Bergman and M. Cornell. 2,460,275, Feb. 1.
Dolly, Trailer. J. E. Nogle. 2,460,466, Feb. 1.
Door check and closer. R. G. Stronach. 2,460,369, Feb. 1.
Draft regulator. F. H. Schneider. 2,460,538, Feb. 1.
Drawing crucible. C. R. Stevens. 2,460,547, Feb. 1.
Drier: *See*—
Clothes drier.
Drill pipe cleaner. L. F. Abel. 2,460,481, Feb. 1.
Drive, Airplane. V. A. Larsen. 2,460,587, Feb. 1.
Drying polymeric materials. A. B. Japs. 2,460,582, Feb. 1.
Dump body, Automatic. M. E. Teague. 2,460,403, Feb. 1.
Dyes, Triazine azo. E. Bernasconi. 2,460,618, Feb. 1.
Dynamoelectric machine. R. F. Hertel. 2,460,749–50, Feb. 1.
Dynamoelectric machine. W. E. Jacobsen. 2,460,752, Feb. 1.
Earth-moving machine. E. Oklejas. 2,460,764, Feb. 1.
Echo ranging and listening gear. H. M. Trent and T. F. Jones. 2,460,316, Feb. 1.
Electric motor. E. Hart. 2,460,418, Feb. 1.
Electric resistance element and heat-treatment. J. M. Lohr. 2,460,590, Feb. 1.
Electrical condenser. C. L. Richards. 2,460,534, Feb. 1.
Electrode construction. V. J. Francis. 2,460,738–9, Feb. 1.
Electrode unit assembly. F. H. Best and J. R. Pierce. 2,460,484, Feb. 1.
Electronic circuit. S. C. Hurley, Jr. 2,460,455–6, Feb. 1.
Electrotherapeutic apparatus. T. H. Moray. 2,460,707, Feb. 1.
Elevator, Portable grain. H. A. Tintes. 2,460,661, Feb. 1.
Engine mounting. W. A. Keetch. 2,460,586, Feb. 1.
Explosives and their manufacture, Granular or powder. J. Whetstone. 2,460,375, Feb. 1.
Fabric article, Shaped. L. Bihaly. 2,460,674, Feb. 1.
Fabric composed of rigid interconnected links, Flexible. H. Reinstein. 2,460,654, Feb. 1.
Face powder container. L. Bering. 2,460,444, Feb. 1.
Fastener. D. H. Waara. 2,460,722, Feb. 1.
Feed mechanism for stone cutting machines. K. J. Hillquist. 2,460,386, Feb. 1.
Feeding mechanism. H. E. Dickerman. 2,460,340, Feb. 1.
Feeding mechanism, Grinding wheel. C. G. Flygare and H. L. Swalney. 2,460,737, Feb. 1.
Fender protector. E. B. Peatross. 2,460,394, Feb. 1.
Fender skirt. R. C. Hessler. 2,460,349, Feb. 1.
Fibers and apparatus therefor, Treatment of synthetic. G. H. Brown and C. N. Hoyler. 2,460,566, Feb. 1.
Filaments of plasticized lower fatty acid esters of cellulose. A. F. Caprio and W. Horback. 2,460,377, Feb. 1.
File. E. B. Le Fevre. 2,460,513, Feb. 1.
Filter: *See*—
Adjustable multicolored light filter.
Filter. A. C. Kracklauer. 2,460,423, Feb. 1.
Fitting. C. H. Crawley. 2,460,622, Feb. 1.
Fitting R. E. Herold. 2,460,635, Feb. 1.
Fitting. P. D. Wursburger. 2,460,666–8, Feb. 1.
Fitting, Solder. P. D. Wursburger. 2,460,665, Feb. 1.
5-alkoxy-alkyl,5-cyclohexyl hydantoins. H. R. Henze. 2,460,747, Feb. 1.
Fixing and sealing tubes in a partition wall by use of fluid pressure, Method and device for. W. Huber. 2,460,580, Feb. 1.
Fixture, Curtain. I. Lundstrom. 2,460,517, Feb. 1.
Fixture, Window shade and curtain. K. H. J. Paradis. 2,460,360, Feb. 1.

Flexible coupling. T. L. Fawick. 2,460,628, Feb. 1.
Flow control device. W. G. Miller. 2,460,647, Feb. 1.
Folding article. R. M. Kraska. 2,460,459, Feb. 1.
Forming and dispensing machine, Ice cube. V. T. Erickson and E. F. Davis. 2,460,341, Feb. 1.
Frame: *See*—
Railway car truck side frame.
Frozen food dispenser. M. Rifkin. 2,460,396, Feb. 1.
Fuel and ignition control. F. J. Hahn. 2,460,383, Feb. 1.
Fungicidal preparations. K. G. Nolan, R. L. Morgan, and J. H. Fletcher. 2,460,710, Feb. 1.
Furnace: *See*—
Glass melting furnace. Kettle furnace.
Furnace slag and other smelts, Breaking up foamed blast. M. Gallai-Hatchard. 2,460,742, Feb. 1.
Furnaces from slag, Protection of. W. E. Heller. 2,460,347, Feb. 1.
Game, Artillery war. C. H. Shirey. 2,460,770, Feb. 1.
Game, Football card. T. B. Siler. 2,460,541, Feb. 1.
Garment finishing device. R. W. Brenner and J. R. Petre. 2,460,732, Feb. 1.
Garment hanger. M. Treiman. 2,460,438, Feb. 1.
Gasifying fuel burner. J. E. Farrell. 2,460,451, Feb. 1.
Gasoline manufacture. S. H. McAllister, J. Anderson, and W. H. Peterson. 2,460,303, Feb. 1.
Gate positioning mechanism for hulling machines. E. A. Schwarz. 2,460,769, Feb. 1.
Gear: *See*—
Echo ranging and listening gear.
Multicushioned gear.
Landing gear.
Gear for airplanes, Landing. C. R. Jamison. 2,460,506, Feb. 1.
Gear of prime movers, Speed control. G. Hallewell. 2,460,501, Feb. 1.
Gearing, Cushioned planetary. T. L. Fawick. 2,460,629, Feb. 1.
Generation of monomeric formaldehyde gas from formaldehyde polymers. A. R. Miller, Jr. 2,460,592, Feb. 1.
Generator: *See*—
Alternating current generator.
Oscillation generator.
Generator. C. W. Jarvis. 2,460,790, Feb. 1.
Geophysical prospecting. L. F. Kitto. 2,460,297, Feb. 1.
Glass melting furnace. L. S. Longenecker. 2,460,514, Feb. 1.
Glass setting device. J. T. Miller. 2,460,391, Feb. 1.
Globin and its preparation, Modified. M. M. Strumia and F. W. Chornock. 2,460,550, Feb. 1.
Golf club. F. B. Schaffer. 2,460,435, Feb. 1.
Grater with removable toolplate, Reciprocating. T. H. Walker. 2,460,663, Feb. 1.
Grid construction, Vacuum tube. H. Selvidge. 2,460,794, Feb. 1.
Grinding apparatus, Crankpin. A. G. Belden and C. G. Flygare. 2,460,781, Feb. 1.
Grinding machine. P. Catucci. 2,460,570, Feb. 1.
Grinding machine, Camshaft. C. J. Green. 2,460,744, Feb. 1.
Guard, Mixing bowl. L. S. Roesler. 2,460,364, Feb. 1.
Guide, Drawer. R. H. McMurtrie. 2,460,521, Feb. 1.
Guide, Shock-resistant filament. A. K. Seemann. 2,460,366, Feb. 1.
Guiding attachment, Adjustable fabric. G. Kahn and L. Schwartz. 2,460,583, Feb. 1.
Guiding device and method, Fabric. G. Kahn and L. Schwartz. 2,460,584, Feb. 1.
Gum, Candy chewing. E. G. Lindhe. 2,460,698, Feb. 1.
Gun-loading mechanisms. O. R. Haas. 2,460,384, Feb. 1.
Gun mount. D. Edgar. 2,460,380, Feb. 1.
Gun, Spray. W. M. Spreng. 2,460,545, Feb. 1.
Hammer for impact crushers with detachable and reversible hammer head. L. G. Ehmann. 2,460,279, Feb. 1.
Handle: *See*—
Lever handle.
Hanger: *See*—
Garment hanger. Safety hanger.
Headband and holder for telephone receivers. R. M. Kobrin. 2,460,458, Feb. 1.
Heat exchanger. E. H. Kidd. 2,460,754, Feb. 1.
Heat exchanger. T. Tinker. 2,460,660, Feb. 1.
Heater: *See*—
Baseboard room heater. Induction heater.
Heatsealing and apparatus therefor. N. Langer. 2,460,460, Feb. 1.
Heating unit, Hot-water. G. M. Godshall. 2,460,691, Feb. 1.
High-frequency potential dividing termination. H. J. Tyssee. 2,460,476, Feb. 1.
Holder: *See*—
Needle and thimble holder. Watch movement holder.
Holder for manifolding typewriters, Carbon paper. J. C. Doyle. 2,460,683, Feb. 1.
Holder for weft replenishing looms, Pneumatic thread. R. G. Turner. 2,460,611, Feb. 1.
Holding tool. S. P. Rogers. 2,460,470, Feb. 1.
Hood, Electric. E. B. Ripley. 2,460,433, Feb. 1.
Hose end. F. J. Raybould. 2,460,653, Feb. 1.
Housing for oil burners. E. C. Stauffer. 2,460,370, Feb. 1.
Hydraulic system. C. R. Alden. 2,460,440, Feb. 1.
Hydrocarbon synthesis. E. A. Johnson and S. B. Becker. 2,460,508, Feb. 1.
Improving the surface of form ground races. H. N. Seyferth. 2,460,472, Feb. 1.
Inclinometer. R. G. Bourgaize. 2,460,675, Feb. 1.
Index, Visible card. R. J. Copeland. 2,460,449, Feb. 1.
Indexing head. C. B. Wallman. 2,460,477, Feb. 1.
Indicator: *See*—
Photographic enlarger exposure indicator.
Indicator for radio relaying systems, Fault. L. E. Thompson. 2,460,789, Feb. 1.
Induction heater. N. E. Fuchs. 2,460,687, Feb. 1.
Instrument, Electrical. G. H. Fritzinger. 2,460,686, Feb. 1.
Instrument for post-mortem finger-printing. H. P. Peterson. 2,460,652, Feb. 1.
Instrument, Geometrical measuring and drafting. E. Richardson. 2,460,713, Feb. 1.
Intermittent photographic print washer. C. E. Mace. 2,460,425, Feb. 1.
Internal-combustion engine, Operating an. W. E. Lyons. 2,460,700, Feb. 1.
Interpolymers of vinylidene halides, dialkyl esters of maleic acid, and vinyl esters and making same. V. L. Folt. 2,460,573, Feb. 1.
Ironer, Flatwork. H. D. Forse. 2,460,496, Feb. 1.
Joint: *See*—
Bridge plate type rail joint.
Joint construction. T. Guthrie and G. R. Evans. 2,460,746, Feb. 1.
Joint for mill drives, Universal. R. R. Millar. 2,460,648, Feb. 1.
Kettle furnace. O. R. Olson. 2,460,392, Feb. 1.
Landing gear. W. H. Hunter. 2,460,387, Feb. 1.
Laundry souring composition. A. L. Courtney and C. E. Smith. 2,460,680, Feb. 1.
Lever handle. J. R. Hall. 2,460,500, Feb. 1.
Light and searchlight combination, Warning. J. D. Kennelly. 2,460,585, Feb. 1.
Light socket for refrigerator panels, Self-sealing electric. C. M. Holloway. 2,460,636, Feb. 1.
Line for butane tanks, Thief. L. L. Hughes. 2,460,454, Feb. 1.
Liner and tap ring for steel barrels. E. R. Koppel. 2,460,756, Feb. 1.
Lint removal means for bobbin winding machines. R. P. Drake. 2,460,736, Feb. 1.
Liquid dispenser. A. Machtinger. 2,460,518, Feb. 1.
Loader, Hay. C. J. Smith. 2,460,544, Feb. 1.
Loading machine, Agricultural. E. H. Appel. 2,460,441, Feb. 1.
Lock: *See*—
Removable core lock.
Unitary tumbler cylinder lock.
Lock and hydraulic release, Wheel. J. Kraus. 2,460,298, Feb. 1.
Lock mechanism. E. M. Navarro. 2,460,709, Feb. 1.
Lockout and alarm device for circuit breakers. H. H. Lawson. 2,460,758, Feb. 1.
Lubricant, Spark plug thread. B. Folda, Jr. 2,460,632, Feb. 1.
Lubricating system for motors. F. P. Gooch. 2,460,283, Feb. 1.
Machine for breaking fibrous materials. J. V. Cook. 2,460,448, Feb. 1.
Machine for plastics and other moldable materials, Molding. W. S. Renier. 2,460,468, Feb. 1.
Magazine pistol safety and cocking mechanism. F. D. Rosvall. 2,460,598, Feb. 1.
Mandrel, Expansible. M. L. Whitson and H. H. Harcum. 2,460,325, Feb. 1.
Manicure set. A. J. Miller. 2,460,522, Feb. 1.
Measuring and reeling device, Line. M. Weesner. 2,460,723, Feb. 1.
Measuring device, Surface roughness. J. P. Arndt, Jr. 2,460,726, Feb. 1.
Measuring persistence screen characteristics, Method and apparatus for. O. H. Schade. 2,460,471, Feb. 1.
Mechanical mounting. F. C. Doughman. 2,460,682, Feb. 1.
Mechanism for forming vented can end seams. W. F. Kinney. 2,460,296, Feb. 1.
Mercapto-aliphatic ethers as modifiers for butadiene emulsion polymerization, Aromatic. G. L. Browning, Jr. 2,460,567, Feb. 1.
Metal articles, Making. W. L. Garberding. 2,460,281, Feb. 1.
Methacrylonitrile and alpha-chloro isobutyronitrile, Production of. L. U. Spence and E. H. Sakal. 2,460,788, Feb. 1.
Mine exploder. B. Walker. 2,460,322, Feb. 1.
Mirror for automobiles, Rear-vision. A. S. Alexander. 2,460,406, Feb. 1.
Mitt, Welder's double. S. J. Errett. 2,460,413, Feb. 1.
Mixing box. G. A. Engert. 2,460,626, Feb. 1.
Modulator. P. Glass. 2,460,690, Feb. 1.
Mold: *See*—
Concrete block mold.
Mold for casting wall slabs. L. R. Porter, Jr. 2,460,532, Feb. 1.

Mop structure. F. E. Oakhill. 2,460,763, Feb. 1.
Motion-picture combination. C. Waldeyer. 2,460,320, Feb. 1.
Motor: *See*—
Electric motor. Self-starting synchronous
Outboard motor. hysteresis motor.
Motor control apparatus with automatic "Z" effect, Electric. R. Bernas. 2,460,276, Feb. 1.
Motor cooling means. A. N. Szwargulski. 2,460,371, Feb. 1.
Motor line connecting device, Selective. J. M. Gaylord and R. E. Ball. 2,460,415, Feb. 1.
Mount for electron discharge devices. O. H. Fulton, Jr. 2,460,382, Feb. 1.
Mount for electron tubes. O. H. Schade. 2,460,398, Feb. 1.
Mounting: *See*—
Engine mounting. Vibration insulating mount-
Mechanical mounting. ing.
Railway brake beam mount-
ing.
Mounting flange, Generator. R. M. Heintz. 2,460,502, Feb. 1.
Mounting for grading machines, Blade. A. R. Henry. 2,460,348, Feb. 1.
Mousetrap. R. F. Goostrey. 2,460,417, Feb. 1.
Movement for slush pumps, Mechanical. C. M. O'Leary. 2,460,428, Feb. 1.
Multicushioned gear. T. L. Fawick. 2,460,630, Feb. 1.
Multiplier unit and supporting means. S. V. Forgue. 2,460,381, Feb. 1.
N-alkylated compounds of condensed arylpyrrols, Preparing. H. W. Grimmel and H. B. Freyermuth. 2,460,745, Feb. 1.
Needle and thimble holder. R. L. Chiarizia. 2,460,678, Feb. 1.
Nursing unit. A. M. Allen and M. L. Van Evera. 2,460,329, Feb. 1.
Oils, Lubricating. B. H. Lincoln and G. D. Byrkit. 2,460,301, Feb. 1.
Oleonitrile, Preparation of. L. A. Stegemeyer. 2,460,772, Feb. 1.
Opener, Bobby pin. T. H. Worrell. 2,460,562, Feb. 1.
Opener, Can. C. N. Smith, Jr. 2,460,717, Feb. 1.
Organic medium for the production of aerosols. A. C. Pabst, A. E. Griffiths, and R. B. Killingsworth. 2,460,792, Feb. 1.
Oscillation generator. H. M. Huge. 2,460,637, Feb. 1.
Outboard motor. L. T. Kincannon. 2,460,419, Feb. 1.
Pattern mechanism, Knitting machine. P. W. Bristow. 2,460,487, Feb. 1.
Pawl, Floating. E. F. Carlstrom. 2,460,620, Feb. 1.
Peening the inside of tubes and other hollow bodies, Method and apparatus for. T. Robinson. 2,460,657, Feb. 1.
Pen, Ball point. F. E. Gruber. 2,460,345, Feb. 1.
Pencil, Mechanical. C. E. Wehn. 2,460,323, Feb. 1.
Periscope, Spring actuated telescoping. C. E. O. Larkin. 2,460,461, Feb. 1.
Photographic enlarger exposure indicator. J. M. Benton. 2,460,443, Feb. 1.
Phthalic anhydride, Chlorination of. T. M. Amacker. 2,460,564, Feb. 1.
Phthalic anhydride, Vapor phase chlorination of. T. M. Amacker. 2,460,565, Feb. 1.
Phthalocyanine pigments from ω-chlorine or ω-bromine substituted o-xylenes, Preparation of. H. Z. Lecher, R. E. Brouillard, and E. Baumgarten. 2,460,783, Feb. 1.
Pick and pick loom, Automatic. C. P. Bergstrom and A. J. Herard, Jr. 2,460,319, Feb. 1.
Pick and pick loom, Weft replenishing. W. H. Wakefield. 2,460,318, Feb. 1.
Pintle chain. L. H. Morin. 2,460,524, Feb. 1.
Pipe flange, Two-piece welding. N. J. Riley. 2,460,311, Feb. 1.
Piston ring. H. P. Phillips. 2,460,431, Feb. 1.
Planetary piston fuel pump. R. O. Balogh. 2,460,617, Feb. 1.
Plant, Gas turbine. W. Traupel. 2,460,610, Feb. 1.
Plaster of Paris, Manufacture of. C. L. Haddon. 2,460,266–7, Feb. 1.
Plastic composition and product, Apparatus and method for making a. R. W. Chaffee. 2,460,571, Feb. 1.
Plate for lock cylinders, Plug retaining. H. E. Soref and D. J. Foote. 2,460,474, Feb. 1.
Plate for measuring birefringence and making same, Calibrated retardation. D. D. Lowber, J. D. Reardon, and P. W. Collyer. 2,460,515, Feb. 1.
Polymeric products derived from diolefins and vinyl aromatic compounds and making same. W. J. Le Fevre and K. G. Harding. 2,460,300, Feb. 1.
Position indication and control system. L. M. Rodgers. 2,460,597, Feb. 1.
Positioning means. J. M. Benedick. 2,460,671, Feb. 1.
Post and tool for lathes, Tool. A. F. Feaster. 2,460,342, Feb. 1.
Post for wire baskets and the like, Built-up. W. Obernauer and M. Schuster. 2,460,594, Feb. 1.
Pot for holding molten solder, Dip. J. L. Ford. 2,460,685, Feb. 1.
Press with hydraulically controlled blankholder. D. C. Verson. 2,460,612, Feb. 1.
Pressure control means, Hydraulic. D. J. Whittingham. 2,460,664, Feb. 1.
Printing apparatus. W. C. Huebner. 2,460,504, Feb. 1.
Projectile, Rocket. C. N. Hickman. 2,460,289, Feb. 1.
Projector and magazine therefor, Slide. H. E. Page. 2,460,359, Feb. 1.
Projector, Nonintermittent motion-picture. W. C. Plank. 2,460,432, Feb. 1.
Propanoic acid, Preparing substituted. E. Pierson and M. Tishler. 2,460,785, Feb. 1.
Propulsion means, Ship. D. Diamantides. 2,460,339, Feb. 1.
Protector: *See*—
Fender protector.
Protector for rolled strip material, End. P. G. Salem. 2,460,434, Feb. 1.
Protein filaments, Manufacture of artificial. R. H. K. Thomson. 2,460,372, Feb. 1.
Pulsator for milking machines. R. E. Maes. 2,460,426, Feb. 1.
Pump: *See*—
Planetary piston fuel pump. Screw pump.
Pump by-pass valve assembly. J. M. Roth. 2,460,397, Feb. 1.
Pump for aerating bait containers, Wind. C. A. Oliveros. 2,460,527, Feb. 1.
Pump for outboard motors, Flexible vane. L. T. Kincannon. 2,460,421, Feb. 1.
Pump for thick fibrous suspensions, Rotary. E. P. Cook. 2,460,278, Feb. 1.
Pump with flow cushioning means, Gear. G. W. Muller. 2,460,649, Feb. 1.
Purifying device, Air. W. J. Buss. 2,460,335, Feb. 1.
Push-button means. P. W. Sullivan. 2,460,607, Feb. 1.
Puzzle, Relatively movable membered. A. Zelvin. 2,460,563, Feb. 1.
Rack: *See*—
Towel rack.
Radio antenna, Directive microwave. G. C. Southworth. 2,460,401, Feb. 1.
Railway brake beam mounting. E. G. Busse. 2,460,780, Feb. 1.
Railway car truck side frame. G. T. Johnson. 2,460,696, Feb. 1.
Range connector. A. Friedman. 2,460,741, Feb. 1.
Reaction products of thiuram disulfides alkylene imines. J. E. Jansen. 2,460,581, Feb. 1.
Reaction products, Resinous. H. L. Allen and E. G. Kerr. 2,460,724, Feb. 1.
Reciprocating and locking means for dies or the like. C. Roehri. 2,460,658, Feb. 1.
Recorder, Sound. S. Calvert. 2,460,411, Feb. 1.
Recorder with differentiated records, Tape time. H. E. Hobby. 2,460,576, Feb. 1.
Recording apparatus, Time. A. J. Schmidt. 2,460,659, Feb. 1.
Rectification. E. K. Metzner. 2,460,706, Feb. 1.
Reforming machine. S. S. Jacobs and H. B. Peterson. 2,460,293, Feb. 1.
Refractory composition and producing same. T. Kauffman, Jr., and L. J. Jacobs. 2,460,268, Feb. 1.
Refrigerating means for containers. H. E. Palaith. 2,460,765, Feb. 1.
Refrigerator having a door heating device. M. Rifkin and M. S. Sutton. 2,460,469, Feb. 1.
Registration system. P. Mallery. 2,460,702, Feb. 1.
Regulating device for compressors, Torque. A. V. D. Willgoos. 2,460,778, Feb. 1.
Regulating system, Automatic. N. P. W. Frisk and A. G. W. Hernqvist. 2,460,497, Feb. 1.
Regulator: *See*—
Draft regulator.
Releasable lever operated switch. C. E. Elrick. 2,460,495, Feb. 1.
Relief device for starting engines, Compression. C. C. Castillo. 2,460,338, Feb. 1.
Remote-control system. I. F. Cadman. 2,460,386, Feb. 1.
Remote-control system. R. S. Young. 2,460,337, Feb. 1.
Removable core lock. J. P. Andrew. 2,460,615, Feb. 1.
Removing excess liquid from filamentary material. H. J. McDermott. 2,460,390, Feb. 1.
Resin, Ion-exchange. E. L. Luaces. 2,460,516, Feb. 1.
Resin oils with mixed clay and organic acid catalyst, Polymerization of. D. F. Gould. 2,460,692, Feb. 1.
Resonator apparatus. W. W. Hansen and R. H. Varian. 2,460,288, Feb. 1.
Resonator, Radiating electromagnet. W. W. Hansen and R. H. Varian. 2,460,286–7, Feb. 1.
Retracting device for kneeling benches. B. S. Bernhard. 2,460,791, Feb. 1.
Reversible circulation condenser. J. F. Grace. 2,460,499, Feb. 1.
Rheostat, Foot pedal control. B. Eisenberg and O. B. Schwarz. 2,460,494, Feb. 1.
Ring: *See*—
Piston ring.
Ring or expander for pistons, Inner. H. P. Phillips. 2,460,430, Feb. 1.
Rod or pipe clamp. C. L. Malaspina. 2,460,701, Feb. 1.
Roller, Shade. E. F. Pigeon. 2,460,307, Feb. 1.
Rubber, Vulcanization of. P. T. Paul. 2,460,393, Feb. 1.
Rubbery polymeric organo-siloxane compositions, Making. E. L. Warrick. 2,460,795, Feb. 1.

Rule, Slide. O. A. Wiberg. 2,460,558, Feb. 1.
Safety hanger. G. W. Harris. 2,460,453, Feb. 1.
Saw-filing machine. E. R. Beverleigh. 2,460,331, Feb. 1.
Saw set. A. M. Lesanski. 2,460,388, Feb. 1.
Scoop for separable fasteners, Universally united. L. H. Morin. 2,460,525, Feb. 1.
Scooter, Child's. G. A. Reid. 2,460,395, Feb. 1.
Screw assembly, Captive. B. J. Whelan and R. A. Reich. 2,460,613, Feb. 1.
Screw pump. G. Rathman. 2,460,310, Feb. 1.
Seal, Electron discharge device. P. R. Hanson and H. W. Ulmer. 2,460,575, Feb. 1.
Sealing machine, Bundle. W. L. Irvine. 2,460,751, Feb. 1.
Sealing means. J. R. Frei. 2,460,740, Feb. 1.
Seat: *See*—
Ultraviolet ray toilet seat.
Seat and car, Convertible child's. F. White. 2,460,557, Feb. 1.
Self-starting synchronous hysteresis motor. C. A. Packard. 2,460,358, Feb. 1.
Servo follow-up control. C. M. Gilbert. 2,460,638, Feb. 1.
Shaft-fastening assembly. T. L. Fawick. 2,460,631, Feb. 1.
Sharpener, Knife. S. Tarapcsvnski. 2,460,552, Feb. 1.
Sheet metal, Working of high tensile. L. L. Marchant. 2,460,519, Feb. 1.
Shingle. J. L. Killingsworth. 2,460,353, Feb. 1.
Shoe tree construction, Sanitated. S. M. and A. Abrams. 2,460,405, Feb. 1.
Shoe with innersole providing arch supporting flap. F. J. Diamant. 2,460,493, Feb. 1.
Shoe with integral insole and backstay. F. L. Ayers. 2,460,669, Feb. 1.
Shunt for laminated core structures, Adjustable magnetic. W. Sliwiak. 2,460,656, Feb. 1.
Signaling apparatus, Submarine. H. Benioff. 2,460,274, Feb. 1.
Signaling means for aviation trainers, Automatic radio. G. L. Lang. 2,460,511, Feb. 1.
Siloxane polymers, Organo-substituted. J. F. Hyde. 2,460,457, Feb. 1.
Slipper bearing. J. A. Petbo. 2,460,361, Feb. 1.
Snowplow, Hand. H. Williams. 2,460,560, Feb. 1.
Solutions of vinylidene chloride polymers in a solvent containing a sulfoxy group. R. C. Houts. 2,460,579, Feb. 1.
Solutions of vinylidene chloride polymers in amide solvents. R. C. Houts. 2,460,578, Feb. 1.
Solvent extraction as step in milling process. W. R. Lloyd and G. H. Schafer. 2,460,389, Feb. 1.
Soybean protein, Isolation of. E. O. Erkko and R. T. Treifa. 2,460,627, Feb. 1.
Spiral cam adjustable socket wrench. F. C. Peterson. 2,460,766, Feb. 1.
Splicer, Film. J. Briskin, 2,460,619, Feb. 1.
Sprayer. W. M. Vogel. 2,460,554, Feb. 1.
Springing arrangement for tractor-trailers. G. E. Armington. 2,460,725, Feb. 1.
Stage or exhibiting device, Miniature rotatable. G. E. Young. 2,460,328, Feb. 1.
Starter mechanism for motors. L. T. Kincannon. 2,460,420, Feb. 1.
Stopper or the like, Basin plug. G. A. Riley. 2,460,768, Feb. 1.
Storage box. R. F. Davis. 2,460,681, Feb. 1.
Strainer. M. J. Zimmer. 2,460,614, Feb. 1.
Structural unit, Panel. G. M. Rapp. 2,460,309, Feb. 1.
Sulfa drug compositions. M. R. Thompson. 2,460,437, Feb. 1.
Sulfur, Production of insoluble. A. Schallis. 2,460,365, Feb. 1.
Support: *See*—
Arm support. Cushion support.
Support. A. E. Nelson. 2,460,593, Feb. 1.
Switch: *See*—
Releasable lever operated switch. Thermostatic switch.
Switch actuator, Electric. R. N. Rowe. 2,460,599, Feb. 1.
Switch actuator, Sensitive. M. M. Hennessy. 2,460,695, Feb. 1.
Synthesis of phthalocyanines from ω-chlorine or ω-bromine substituted o-tolunitriles. R. E. Brouillard and E. Baumgarten. 2,460,779, Feb. 1.
System of controlling electric lines. R. D. Nelson and E. A. Link. 2,460,467, Feb. 1.
Tappet, Self-adjusting. J. N. Paquin. 2,460,651, Feb. 1.
Target exchanger. L. S. Jessen. 2,460,294, Feb. 1.
Temperature control apparatus, Automatic. D. S. Hersey and A. A. Brown. 2,460,748, Feb. 1.
Temperature sensitive variable inductance. A. G. Stimson. 2,460,773, Feb. 1.
Tensioning and pressure mechanism, Web. H. L. Haswell. 2,460,694, Feb. 1.
Terpene alcohols, Preparation of. M. Hunt. 2,460,291, Feb. 1.
Tester, Magneto. S. Casper. 2,460,676, Feb. 1.
Testing machine, Cartridge extractor. N. P. Holcomb. 2,460,290, Feb. 1.
Testing machine, Materials. A. Sonntag. 2,460,771, Feb. 1.
Theft prevention means, Electric current. D. Trompeter. 2,460,553, Feb. 1.
Thermostatic switch. S. S. Minnich. 2,460,762, Feb. 1.
Threaded opening. R. J. Thompson. 2,460,720, Feb. 1.
Threader, Thimble-needle. F. Benedik. 2,460,672, Feb. 1.
Thumb or finger gripping means, Bowling ball. H. H. Hausman. 2,460,385, Feb. 1.
Tie clasp and chambered holder, Combination. J. Aversa. 2,460,728, Feb. 1.
Timing device, Electronic. P. J. Cade. 2,460,277, Feb. 1.
Tobacco composition and making it. W. J. Hale. 2,460,284, Feb. 1.
Tobacco products and making them. W. J. Hale. 2,460,285, Feb. 1.
Tool: *See*—
Carbine tool. Holding tool.
Tool assembly. F. Von Voigtlander. 2,460,555, Feb. 1.
Towel rack. W. J. Jahoda. 2,460,505, Feb. 1.
Trailer. W. F. Aycock. 2,460,442, Feb. 1.
Trainer, Aircraft personnel. C. E. Germanton. 2,460,743, Feb. 1.
Transmitter. C. M. Woodruff. 2,460,326, Feb. 1.
Tray and door fastener, Combined hinged. A. H. Potts. 2,460,533, Feb. 1.
Treating materials, Method and apparatus for. N. N. Stephanoff. 2,460,546, Feb. 1.
Trichloromethyl diaryl methanes, Manufacture of. J. W. Robinson. 2,460,535, Feb. 1.
Tube: *See*—
Cathode-ray tube.
Tube and glass clamp, Drinking. C. C. Smith. 2,460,542, Feb. 1.
Tube coupling. L. B. Courtot. 2,460,621, Feb. 1.
Tube working apparatus. M. F. Cook. 2,460,490, Feb. 1.
Turbocompressor and gas turbine, Combined gas. R. O. J. Moller. 2,460,523, Feb. 1.
2-benziminazoyl-amino pyrimidines. F. R. Basford, F. H. S. Curd, and F. L. Rose. 2,460,409, Feb. 1.
Tying device, Knot. D. Burkard. 2,460,489, Feb. 1.
Ultraviolet ray toilet seat. E. Spierer. 2,460,543, Feb. 1.
Unipod for optical instruments. O. Buehner. 2,460,568, Feb. 1.
Unitary tumbler cylinder lock. G. E. Swanson. 2,460,551, Feb. 1.
Valve. D. S. Ashley and W. H. Weaver. 2,460,270, Feb. 1.
Valve. W. C. Trautman. 2,460,774, Feb. 1.
Valve means. G. E. Franck. 2,460,633, Feb. 1.
Valves, Method and apparatus for lapping. G. F. Scherer. 2,460,312, Feb. 1.
Vehicle: *See*—
Articulated vehicle. Child's vehicle.
Vent construction for airplane fuel tanks. F. E. Snow. 2,460,368, Feb. 1.
Ventilator. B. B. Simcox. 2,460,604, Feb. 1.
Ventilator, Adjustable. E. Mazza. 2,460,760, Feb. 1.
Vessel, Heated drinking. D. E. Keller. 2,460,509, Feb. 1.
Vibration insulating mounting. N. Ivanovic. 2,460,292, Feb. 1.
Vinyl chloride polymers plasticized with dialkyl chlorophthalates. T. L. Gresham. 2,460,574, Feb. 1.
Vinyl cyanide and reactive methylene compounds, Reaction between. A. O. Rogers. 2,460,536, Feb. 1.
Warp tensioning means, Variable. A. Lans. 2,460,512, Feb. 1.
Washer: *See*—
Intermittent photographic print washer.
Washer for garden hose couplings. O. E. Andrus. 2,460,407, Feb. 1.
Watch movement holder. M. F. Clay. 2,460,679, Feb. 1.
Wedge, Adjustable lock. J. Lazar. 2,460,643, Feb. 1.
Weight for golf club heads, Adjustable. C. W. Bigler. 2,460,445, Feb. 1.
Weight, Releasable casting. H. L. Oliver and M. B. Anderson. 2,460,526, Feb. 1.
Weldrod, Coated. E. C. Rollason. 2,460,537, Feb. 1.
Welder, Electric resistance. G. B. Martin and B. D. Berger. 2,460,759, Feb. 1.
Wheel: *See*—
Buffing wheel.
Wheel cover. G. A. Lyon. 2,460,784, Feb. 1.
Wiper mechanism with shielding means, Solder. C. S. Woolford. 2,460,327, Feb. 1.
Wrapper, Splice. M. W. Warner. 2,460,478, Feb. 1.
Wrench: *See*—
Spiral cam adjustable socket wrench.

CLASSIFICATION OF PATENTS

ISSUED FEBRUARY 1, 1949

In view of the fact that the issue is being checked weekly by the Classification Division, the class and subclass in this list are correct as of this date. Where there is a discrepancy between the classification given in the patent head and the classification in this list, the classification of this list governs.

NOTE.—First number—class, second number—subclass, third number—patent number

CLASSIFICATION OF PATENTS

301— 9: 2,460,296
37: 2,460,784
306— 19: 2,460,783
34: 2,460,643
308—187.1: 2,460,740

309— 43: 2,460,430
45: 2,460,431
311— 21: 2,460,712
312— 36: 2,460,396
73: 2,460,730

312— 112: 2,460,661
315— 5: 2,460,332
6: 2,460,402
2,460,498
27: 2,460,540

315— 207: 2,460,456
208: 2,460,455
364: 2,460,471
318— 29: 2,460,276
2,460,497

318— 20: 2,460,638
244: 2,460,729
283: 2,460,277
497: 2,460,415
322— 60: 2,460,714

323— 105: 2,460,467
332— 13: 2,460,690
343— 100: 2,460,326
113: 2,460,357

This list shows the correct classification of those patents wherein the classification given in the patent head has been changed.

2,460,295: 74—701
2,460,300: 260—82.3
2,460,302: 279—51
2,460,312: 51—28
2,460,325: 242—72
2,460,332: 315—5
2,460,353: 287—23
2,460,347: 51—298
2,460,385: 273—64
2,460,400: 18—54

2,460,410: 220—71
2,460,415: 318—497
2,460,441: 198—9
2,460,442: 254—139.1
2,460,455: 315—208
2,460,480: 99—176
2,460,491: 51—100
2,460,495: 200—153
2,460,497: 318—29
2,460,509: 219—43

2,460,522: 30—189
2,460,544: 214—82
2,460,566: 18—19
2,460,567: 260—84.3
2,460,571: 154—27
2,460,578: 260—30.2
2,460,579: 260—30.2
2,460,582: 260—29.1
2,460,585: 240—48
2,460,593: 248—289

2,460,596: 248—350
2,460,598: 89—137
2,460,606: 260—82.5
2,460,608: 250—156
2,460,609: 250—161
2,460,616: 30—131
2,460,629: 74—801
2,460,631: 287—52.06
2,460,640: 24—71.1
2,460,641: 128—276

2,460,645: 30—34
2,460,647: 138—43
2,460,668: 285—118

NOTICES

Address Changes in Patented Files

Patentees desiring to have notices of change in address entered in the patented file may do so by mailing a record of such address change to the Patent Office. The notice should contain the following information: patentee's name, patent number, title of invention, date of issue, and the patentee's signature. A separate notice must be filed for each patent number.

C. E. HAGLUND,
Executive Officer.

January 18, 1949.

Notice of Tentative Recordation of Trade Name

[T. D. 52129]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C.

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"WALLACE SILVERSMITHS," owned by R. Wallace & Sons Mfg. Co., Wallingford, Conn., which is used in connection with the manufacture, importation, and sale of sterling silver and silver plated flatware, tableware, and carving sets, and analogous products, the merchandise being manufactured in the United States and Great Britain.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after January 25, 1949. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) FRANK DOW,
Acting Commissioner of Customs.

January 13, 1949.

Notice of Tentative Recordation of Trade Name

[T. D. 52130]

Tentative recordation of trade name under section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943

TREASURY DEPARTMENT
OFFICE OF THE COMMISSIONER OF CUSTOMS
Washington, D. C.

To Collectors of Customs and Others Concerned:

An application has been filed in the Treasury Department for the recordation of the following-described trade name under the provisions of section 42, Trade-Mark Act of July 5, 1946, and section 11.16, Customs Regulations of 1943:

"CHARVOZ," owned by Charvoz-Roos Corporation, a corporation of New York, 101 Fifth Avenue, New York, N. Y., which is used in connection with the manufacture, importation, and sale of drafting and drawing instruments and material by that corporation and Charvoz, Inc., a corporation of New Jersey, East Rutherford, N. J. The merchandise is manufactured in the United States and imported from Switzerland and France and later will be imported from Germany.

The recordation of the foregoing trade name shall become final at the expiration of 30 days after January 25, 1949. Any person who desires to file an opposition to the recordation of this trade name shall file it with the Commissioner of Customs prior to the expiration of such 30-day period.

Until the expiration of the above-mentioned 30-day period any articles of foreign manufacture bearing names or marks which copy or simulate the above-mentioned trade name shall be detained, but not seized, and thereafter shall receive the treatment provided for in section 11.17, Customs Regulations of 1943, unless notice of the cancellation of the recordation is sooner received.

(Signed) FRANK DOW,
Acting Commissioner of Customs.

January 13, 1949.

Publication of Abstracts of Applications

The Patent Office has been requested by the owners of numerous applications for patents to publish their applications, or abstracts of the disclosures of the applications. In view of these requests and the representations made, it has been decided to publish abstracts of such applications in the OFFICIAL GAZETTE.

(1) Upon the written request of the owner of a pending application for patent that an abstract of his application be published in the OFFICIAL GAZETTE and that the application simultaneously be made available to the public, such request also indicating that he intends to abandon the application, the abstract will be so published in the OFFICIAL GAZETTE, including a figure of the drawing and the serial number and date of filing. The person making the request may submit a proposed abstract of the disclosure of the application and designate which figure of the drawing he desires to be published. The Office reserves the right to refuse or refrain from publication of any particular application or to amend the abstract submitted.

(2) The request for publication may be accompanied by a formal abandonment of the application, to become effective on publication of the abstract, or a formal abandonment may be filed after the publication. However the request for publication may indicate that the application will be abandoned only if no interfering applications of others are found by the Examiner. In such event, if the application is awaiting action by the Office, action thereon will be suspended for a period of at least one year following the date of the publication except for such actions as may result in the declaration of an interference. After the expiration of such one-year period, the Examiner will make an interference search to determine if any applications then pending interfere with the published application. If no interfering application is found, the owner of the application will be so advised, and thereupon the owner will be expected to file a formal abandonment of the application involved.

(3) On publication of the abstract the entire application will be available to the public for inspection and obtaining of copies, and the publication will so state.

(4) The publications will be used as references against other applications in which they may be applicable.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

January 25, 1949.

Roster of Attorneys and Agents

Notice is hereby given of publication by the Patent Office of a pamphlet entitled *Roster of Attorneys and Agents Registered to Practice Before the U. S. Patent Office.*

This publication is an extract of the official roster maintained by the Patent Office and contains the name and address of all individuals and firms registered in the Patent Office as of January 1, 1949. The publication has been arranged in three sections (1) Individuals in the United States; (2) Individuals in Foreign Countries; and (3) Firms. The names listed in each section are grouped geographically by States and countries and in some instances by major cities within States or countries. The names are listed in alphabetical order under each geographical subdivision.

Copies of this pamphlet may be obtained from the Patent Office at $1.00 each. Patent Office coupons are acceptable in payment for this publication.

C. E. HAGLUND,
Executive Officer.

January 25, 1949.

Adverse Decisions in Interferences

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed.

Pat. 2,412,974, E. M. Deloraine, Electric wave communication system, decided Nov. 12, 1948, claims 1, 2, and 10.

Pat. 2,388,161, E. L. Kripa, Tetra-allyl silicane and process of preparing the same, decided Nov. 17, 1948, claim 2.

Pat. 2,416,290, W. A. Depp, Cathode-ray oscilloscope circuit, decided Nov. 19, 1948, claim 3.

Pat. 2,427,726, E. W. Hopkins, G. Josh, and L. A. Harriman, Preparing dried egg products, decided Jan. 12, 1949, claims 1, 2, 3, 4, 5, 6, 8, and 9.

Adjudicated Patent

(C. C. A. N. Y.) Berndt & Creighton patent, No. 2,072,416, for method of irradiating substances with active rays, claims 13, 14, and 16 to 18, inclusive *Held* invalid. *R. U. V. Engineering Corp.* v. *Borden Co.*, 170 F.2d 688; 79 USPQ 256.

Disclaimers

2,304,656.—*Joseph Rockoff*, Dayton, Ohio. SPINNING COT. Patent dated Dec. 8, 1942. Disclaimer filed Jan. 4, 1949, by the inventor and the assignee *The Dayton Rubber Company.*

Hereby enter this disclaimer to claims 1 and 6, inclusive, and to claim 9 of said Letters Patent.

2,428,745.—*Gordon H. Stillson*, Oakmont, Pa. ALKYLATION OF PHENOLS. Patent dated Oct. 7, 1947. Disclaimer filed Dec. 30, 1948, by the assignee, *Gulf Research & Development Company.*

Hereby enters this disclaimer to claims 1, 2, 3, 4 and 6 of said patent.

2,073,876.—*Guy C. Oliver*, Glendale, Calif. CORE BARREL. Patent dated Mar. 16, 1937. Disclaimer filed Dec. 27, 1948, by the inventor and by the assignees, *Jack E. Talbot* and *Robert Farley Lucas.*

Hereby enter this disclaimer to claim 13 in said specification.

ting operation. A wire member has parallel arms bridging top of pan to serve as a support as well as a gage for fruit. (Owner) Everett I. Hess, 253 11th St., S. E., Wash-

Pat. 2,449,728. ARTIFICIAL HAND AND ARM. Patented Sept. 21, 1948. Artificial hand and arm fits around a person's arm which has been amputated below the elbow.

REGISTER OF PATENTS AVAILABLE FOR LICENSING OR SALE

(The "Groups" appearing after the patent abstracts are based on the Standard Industrial Classification Manual, Vol. I, Manufacturing Industries, Executive Office of the President, Bureau of the Budget)

Pat. 2,451,248. PHONOGRAPH-RADIO SWITCH. Patented Oct. 12, 1948. Rotary radio-phonograph switch may be set to automatically shut off current to both a radio and a phonograph after a pre-selected number of records have been played. Also permits recordings of radio programs to be made. An insulated segmental part of a contact ring breaks the circuits and a cam engages an audio switch to disconnect audio circuit from phonograph and connect it back to radio so that radio may be played alone. Switch may be set for continued operation if desired. The contact ring with fourteen circumferential notches, the cam, a ratchet wheel with two teeth omitted, and a knob with a pointer are all mounted on a shaft. A catch arm engages ratchet wheel to rotate switch step by step. Current is supplied to the contact ring by a pair of resilient contact prongs engaging periphery of ring, and the ring supplies current to branch circuits through two opposed contact prongs which engage opposite sides of ring. (Owner) Joseph L. Slatin, 2109 South Kenilworth Ave., Berwyn, Ill. Group 36—19—61. Reg. No. 18,500.

American Cyanamid Company, 1937 West Main St., Stamford, Conn., has placed the following 11 patents on the Register of Patents. They are in Group 28—31.

Pat. 2,334,163. PREPARATION OF BETA-ALANINE. Patented Nov. 16, 1943. Reg. No. 18,501.

Pat. 2,335,605. PREPARATION OF BETA-ALANINE. Patented Nov. 30, 1943. Reg. No. 18,502.

Pat. 2,335,653. PREPARATION OF BETA-ALANINE. Patented Nov. 30, 1943. Reg. No. 18,503.

Pat. 2,335,997. PRODUCTION OF BETA-ALANINE AND BETA-ALANATES FROM ACRYLONITRILE. Patented Dec. 7, 1943. Reg. No. 18,504.

Pat. 2,336,067. PREPARATION OF BETA-ALANINE. Patented Dec. 7, 1943. Reg. No. 18,505.

Pat. 2,354,909. PREPARATION OF BETA-ALANINE AMIDE BY REDUCTION OF CYANOACETAMIDE. Patented Aug. 1, 1944. Reg. No. 18,506.

Pat. 2,364,538. PREPARATION OF BETA-ALANINE. Patented Dec. 5, 1944. Reg. No. 18,507.

Pat. 2,377,401. PREPARATION OF BETA-ALANINE. Patented June 5, 1945. Reg. No. 18,508.

Pat. 2,401,547. PREPARATION OF BETA-ALANINE BY REDUCTION OF CYANOACETIC ACID. Patented June 4, 1946. Reg. No. 18,509.

Pat. 2,414,389. PREPARATION OF BETA-ALANINE. Patented Jan. 14, 1947. Reg. No. 18,510.

Pat. 2,416,630. PREPARATION OF BETA-ALANINE. Patented Feb. 25, 1947. Reg. No. 18,511.

These 11 patents relate to various preparations of beta-alanine (beta-aminopropionic acid) an important intermediate in the preparation of pantothenic acid. The method of preparation in most of the patents is essentially the same, a typical example being Patent 2,414,389 in which beta-aminopropionic acid is produced by reacting hydracrylic acid with aqueous ammonia at a temperature ranging from 120–225° C., from 1 to 24 hours. The reaction mixture is concentrated to a sirup and diluted with methanol to precipitate the beta-aminopropionic acid. The residue may be re-used for further reactions. The various substances used in the remainder of the patents are as follows: bis-(cyanoethyl) amine (2,334,163); beta-alkoxypropionitrile (2,335,605); a substance of the group consisting of dihydracrylonitrile and thiodihydracrylonitrile (2,335,653); acrylonitrile with an ammonium hydroxide solution of ammonium carbonate (2,335,997); beta-aminopropionitrile (2,336,067); reduction of cyanoacetamide in an acetic acid solution (2,354,909); ethylene cyanohydrin (2,364,538); acrylonitrile (2,377,401); catalytic reduction of cyanoacetic acid (2,401,547); and the reaction of a member of the group consisting of iminodipropionic acid, dihydracrylic acid and thiodihydracrylic acid (2,416,630).

Pat. 2,448,980. STEM AND SOCKET COMBINATION. Patented Sept. 7, 1948. The wheel of this caster will not drop from socket, yet wheel may be readily inserted in or removed from socket by turning its stem in either direction. Socket around its inner surface is embossed with spaced, staggered ledge portions arranged in rows. Spaces between ledges form spiral and annular channels for the passage of a pair of lateral lugs at top end of stem of wheel. When wheel rests on floor, the lugs are disposed above top row of ledges. Socket may be stamped from a single piece of light sheet metal. (Owner) R. L. Hough, 52 Brant Ave., Brantford, Ontario, Canada. Group 33—59—73. Reg. No. 18,512.

Pat. 2,449,331. SECTIONAL POST LOCK FOR LOOSE-LEAF BINDERS. Patented Sept. 14, 1948. Loose-leaf binder having upper and lower flat tubular clamps includes locking means inside upper clamp actuated by a thumb screw so that the clamps may be locked together, or released, by simply adjusting screw. Screw is threaded into an opening in the center of an elongated flexible lock strip inside upper clamp. Each end of lock strip carries a flanged wedge plate loosely riveted thereto. A pair of posts of lower clamp extend upwardly through openings in upper clamp, and through openings in wedge plates. When lock strip is flexed by adjusting thumb screw, lateral fulcrum ridges in strip near its opposite ends cause ends of strip to move vertically. This forces the wedge plates to assume either a slanting position so that they frictionally engage the posts to lock the clamps together or horizontal position to release posts. (Owner) Walter Shoda, 118—17 192nd St., St. Albans 12, N. Y. Groups 27—83; 35—79. Reg. No. 18,513.

Pat. 2,099,978. FRUIT CUTTING DEVICE. Patented Nov. 23, 1937. Hand-operated fruit cutter is embodied in a split ring and a smaller ring connected in side-by-side relation by a block. The split ring is used for adjustably clamping the device to a juicer or other cylindrical support. The smaller ring supports a removable pan and a pivoted swinging knife above pan. Knife is mounted so it may be moved longitudinally back and forth during cutting operation. A wire member has parallel arms bridging top of pan to serve as a support as well as a gage for fruit. (Owner) Everett I. Hess, 253 11th St., S. E., Washington 20, D. C. Groups 33—73; 34—99. Reg. No. 18,514.

Pat. 2,452,148. ADJUSTABLE KEYHOLE SAW. Patented Oct. 26, 1948. An adjustable hand saw has a pistol-grip type handle with a magazine for housing blades of various sizes. The handle has a blade-receiving slot, one side wall of which is formed with a notch. A clamp plate is positioned within the slot and fitted in the notch to engage and clamp a blade. A bolt extends through the handle, slot, and plate and is tightened in position to hold the blades at various lengths. (Owners) Curtis Lee Rhodes and Perry Emmet O'Brien, Ripley, W. Va. Group 33—54. Reg. No. 18,515.

Pat. 2,448,837. BASEBALL GAME. Patented Sept. 7, 1948. A game board surface representing a baseball diamond is provided with recesses in the outfield section for trapping the ball. A ball is deposited in the trough of a pitching device and the player manipulates an oscillating batting device to cause a crank arm to strike the ball and propel it over the playing surface, where it is trapped in one of the recesses the position of which indicates the type of play, such as put-out, etc. If the batter misses the ball, it travels through a passage behind home plate into a collection trough. (Owner) C. E. Siberts, 1001 Euclid Ave., Jackson, Miss. Group 39—41. Reg. No. 18,516.

Des. Pat. 143,095. DESIGN FOR A BASKET. Patented Dec. 4, 1945. Body and handle of ornamental basket are covered with a tissue-like paper made up of rows of looped strands and forming an over-all fluffy appearance. (Owner) Mildred Rajah, 108 Renwick Place, Syracuse 3, N. Y. Groups 26—99; 39—41; 40. Reg. No. 18,517.

Pat. 2,451,698. EXTENSION TONGUE. Patented Oct. 19, 1948. Extension tongue for boat trailers includes three interconnected tongue sections held in telescoped position by a locking bolt placed through aligned apertures at center of each section. To extend the section the locking bolt is removed. Inner and intermediate sections have bearing rings on their outer ends and a pair of locking lugs forwardly of the rings for movement through locking slots in the front ends of the intermediate and larger sections. When the sections are rotated the locking lugs on one section will lock against shoulders on the next section. (Owner) Dean E. Swinehart, 111 North Sycamore St., Ravenna, Ohio. Groups 37—32; 38—11. Reg. No. 18,518.

Pat. 2,447,229. SHOTGUN FOREARM. Patented Aug. 17, 1948. Forearm for an automatic shotgun has a pair of securing pins molded therein for attachment to a breech mechanism of a conventional gun. An opening is provided in the bottom wall of forearm for storing a gun magazine plug. A lubricant fitting is permanently molded in the forearm in such a way that lubricant supplied to the tube will fall onto the recoil mechanism. Formed of a moldable material such as synthetic resin plastic. (Owner) George T. Bradley, R. F. D. 1, Pickett, Wis. Group 33—97. Reg. No. 18,519.

Pat. 2,451,763. FOLDING TABLE WITH SECTIONAL TOP. Patented Oct. 19, 1948. A folding table consisting of four sections bingedly connected in pairs to fold one over the other. Two-part telescoping legs fold between the sections. Table may be folded to one-fourth the original size for storing. (Owner) Michael J. Misko, 423 West 93rd St., Inglewood, Calif. Group 25—11—14. Reg. No. 18,520.

Pat. 2,449,728. ARTIFICIAL HAND AND ARM. Patented Sept. 21, 1948. Artificial hand and arm fits around a person's arm which has been amputated below the elbow. When arm is bent at elbow, the hand closes, and when arm is straightened out, hand opens. An elbow joint is formed in the artificial arm by pivotally connecting discs on the ends of pairs of forward and rear side bars. A pair of finger-actuating bars have pins in their forked inner ends engaged in curved eccentric slots in the rear discs to impart longitudinal movement to the bars to open and close hand. The thumb and fingers are formed of pivotally connected links to allow movement in a natural manner when hand is opened and closed. Thumb and each finger are surrounded by coil springs forming yieldable sleeves to permit good grip on an article without applying excessive pressure. The springs also impart a more natural appearance when covered with a glove. Modifications are shown. (Owner) Hans J. Snethun, 2646 Glen Drive, Vancouver, British Columbia, Canada. Group 39—16. Reg. No. 18,521.

Pat. 2,271,073. INSURANCE VENDOR. Patented Jan. 27, 1942. Coin-controlled machine is intended for use in transportation stations, hotels, filling stations, etc., to sell short-term insurance to travelers. Each policy has a detachable record strip along one vertical edge. Upon insertion of a coin, certain windows are opened to expose portions of record strip so that purchaser may inscribe his name and address and affix his thumbprint on a sensitized portion. Operation of a lever then stamps the date and hour on both policy and record strip, ejects policy, and locks windows. The record strip is automatically severed from policy and retained in machine. (Co-owner) Charles F. Harris. Correspondence to Edmund W. E. Kamm, 3932 Indiana Ave., Fort Wayne 6, Ind. Group 35—73. Reg. No. 18,522.

E. I. du Pont de Nemours and Company has placed more than 4,000 of its patents on the Register of Patents as available for license on reasonable terms. The index to these patents was published in the OFFICIAL GAZETTE, November 2, 1948. Abstracts of the patents are being published in the OFFICIAL GAZETTE beginning November 9, 1948. The following patents (Reg. Nos. 18,523 through 18,781) are part of Schedule 10, Groups 22; 26—27—29; 28; 29—11; 31—13.

Inquiries concerning these patents should be addressed to Patent Division, E. I. du Pont de Nemours and Company, Wilmington 98, Del.

Patents Relating to Chemicals for Treatment of Textiles, Paper and Leather

Pat. 1,892,889. Process of Purifying Abietene-Sulphonic Acid Compounds. Jan. 3, 1933. Purification of sulfonated abietene compounds by agitating with a water immiscible inert organic liquid which is a solvent for abietene hydrocarbons.

Pat. 1,897,120. Treating Bath and Process of Treating Textile Fibers. Feb. 14, 1933. Process of treating fibrous material, which comprises subjecting fibrous material to an aqueous treating bath containing water soluble sulfonation products of a member of the group consisting of abietene, abietine and abietane.

Pat. 1,897,124. Process of Tanning. Feb. 14, 1933. Process of tanning in which the hide is subjected to the action of a bath containing a vegetable tanning agent and a sulfonic acid body of the abietene family, their salts or aldehyde condensation products.

Pat. 1,926,614. Fixation of Dyes on Colored Paper. Sept. 12, 1933. Method of coloring paper by applying a dye containing an acid group thereto and fixing the dye by applying to the dyed paper a substance of the group consisting of di- and tri-aryl guanidines.

Pat. 1,929,145. Manufacture of Pulp From Colored Rags. Oct. 3, 1933. In the manufacture of paper pulp

a low substituted lower alkyl cellulose which is water-

from colored rags, the color is removed by treating with caustic alkali and then with alkaline hydrosulfite.

Pat. 1,953,908. Method of Treating Textile Material and Product. Apr. 3, 1934. Sulfur black dyed goods having a soluble fluoride on it as a stabilizer which also inhibits tendering.

Pat. 1,953,909. Treating Textile Materials. Apr. 3, 1934. Materials dyed with a sulfur dye and having on them a soluble fluoride and a soap to inhibit tendering.

Pat. 1,961,365. Manufacture of Multi-Ply Paper Board. June 5, 1934. Manufacture of multi-ply paper board having a water resisting liner by depositing on the inner face of the liner prior to the application of a silicate adhesive thereto, a water-soluble wetting agent, e. g. alkyl naphthalene sulfonate.

Pat. 1,967,393. Detergent Composition. July 24, 1934. Composition for cleaning metallic surfaces comprising an alkali metal carbonate, a sulfonic acid derivative of an alkylated aromatic hydrocarbon and amyl alcohol or cyclohexanol.

Pat. 1,967,394. Detergent Composition. July 24, 1934. Composition for cleaning metallic surfaces comprising trisodium phosphate, a sulfonic acid derivative of an alkylated aromatic hydrocarbon containing two benzene nuclei, and an organic solvent immiscible in water.

Pat. 1,979,145. Process of Producing Polynaphthyl Ethers. Oct. 30, 1934. Process of producing polynaphthyl ethers by heating together, in the presence of sulfuric acid, a naphthol and an aliphatic glycol or a polyhydroxy aliphatic ether alcohol.

Pat. 1,984,713. Abietyl Esters of Sulphopropane-Diol and Process of Preparing the Same. Dec. 18, 1934. Abietic acid esters of 3-sulfo-2, 1-propane-diol and their preparation by reacting abietic acid with 1-chloro-2-propanol-3-sodium sulfonate.

Pat. 1,984,714. Sulpho-Alkyl Esters of Abietic Acids and Process of Preparing the Same. Dec. 18, 1934. Sulfo alkyl esters of abietic acids and their preparation by reacting an abietic acid or salt with a halogen alkyl sulfonic acid.

Pat. 1,986,388. Metal Polish. Jan. 1, 1935. Metal polish containing wax and a higher fatty acid dissolved in an organic solvent which is immiscible with water, and an alkaline aqueous solution containing an oxalic, acetic, tartaric, or citric acid cleaning agent and a wetting out agent.

Pat. 1,994,467. Salt of Polyhydroxy Amines With Organic Acids, and Process for Preparing Same. Mar. 19, 1935. Salts resulting from the reaction of a normal open-chain amino alcohol having a hydroxyl group on each carbon atom except the one to which the nitrogen is attached, and a carboxylic, sulfonic or sulfonated carboxylic acid.

Pat. 2,004,131. Process of Separating Alcohols. June 11, 1935. Unsaturated alcohol is separated from a mixture of saturated and unsaturated alcohols by means of liquid sulfur dioxide at a temperature at which the former is insoluble and the latter soluble, e. g., —10 to —12° C.

Pat. 2,004,874. Product and Process for Preparing Same. June 11, 1935. A soap containing an aliphatic open-chain alcohol having 8–20 carbon atoms and corresponding to a fatty acid which is contained in naturally occurring fats.

Pat. 2,006,557. Stable Emulsions. July 2, 1935. Stable emulsions useful as wetting and penetrating agents, which comprise the emulsification product of water, alkyl naphthalene sulfonate, alkali metal hydroxide, water-soluble oil obtained by sulfonation of a glyceride of a higher fatty acid, and a water-insoluble residue obtained by the hydrogenation of CO.

Pat. 2,012,610. Treatment Process. Aug. 27, 1935. Method of soaking raw silk in an oil-in-water emulsion containing a water-soluble salt of a straight chain primary alkyl sulfate of at least 8 C atoms and a straight chain primary alcohol of at least 8 C atoms.

Pat. 2,012,611. Method of Preparing Emulsions. Aug. 27, 1935. A water-in-oil emulsion containing an insoluble sulfate ester salt of a normal straight-chain primary alcohol.

Pat. 2,012,612. Method of Preparing Emulsions. Aug. 27, 1935. Use of metallic oxides, hydroxides, or salts and a normal straight-chain primary aliphatic alcohol sulfate having at least 8 C atoms in the alkyl group, e. g., n-lauryl-1-sulfuric acid, to emulsify a mixture of water and mineral oil.

Pat. 2,015,023. Sulphonation of Rosin and Its Derivatives. Sept. 17, 1935. Sulfonation of rosins or abietic acids using SO_3 in the absence of any substantial amount of H_2SO_4.

Pat. 2,021,100. Production of Hydroabietyl Alcohols. Nov. 12, 1935. Production of hydroabietyl alcohol comprising treating an ester of hydroabietic acid with an active reducing metal in the presence of an alcohol.

Pat. 2,023,473. Hydroabietoyl Chloride and Process of Preparing the Same. Dec. 10, 1935. A hydroabietoyl chloride and its preparation by reacting hydrogenated rosin or abietic acid with an inorganic acid chloride.

Pat. 2,033,125. Chemical Product. Mar. 10, 1936. An aqueous alkaline bath of mercerising strength having improved wetting penetrating and dispersing power for vegetable fibers is obtained by adding a soluble salt of an aliphatic carboxylic acid having 6–12 carbon atoms.

Pat. 2,033,819. Alkaline Wetting and Penetrating Media. Mar. 10, 1936. In the mercerizing process the wetting, penetrating and dispersing power of the aqueous alkaline medium is improved by adding an alkali metal salt of a branched chain aliphatic carboxylic acid having 6–10 carbon atoms.

Pat. 2,036,438. Cleaning, Wetting, and Emulsifying Composition. Apr. 7, 1936. Washing, cleaning, wetting and emulsifying agent comprising a water soluble soap and 2,2-penta-methylene-4-oxymethyl-dihydrodioxol, 2,2-methyl-pentamethylene-4-oxymethyl-dihydrodioxol or 2,2-dimethylpentamethylene-4-oxymethyl-dihydro-dioxol.

Pat. 2,037,718. Xanthates and Method of Making Same. Apr. 21, 1936. Substantially pure xanthates of aliphatic primary monohydric alcohols having 6–15 C atoms.

Pat. 2,046,885. Textile Material. July 7, 1936. Textile materials sized with alkyl alkacrylate polymers.

Pat. 2,046,886. Flexible Article. July 7, 1936. A flexible article which comprises a flexible base material treated with methyl methacrylate polymers.

Pat. 2,047,217. Sizes. July 14, 1936. An emulsion for sizing fibrous materials containing an aqueous solution of a deacetylated chitin, a water repellent material, a fixing agent and/or an acid-resistant wetting agent.

Pat. 2,047,225. Emulsion. July 14, 1936. Emulsions for coating and impregnating containing a water-insoluble material which is liquid under the conditions of emulsification and an aqueous solution of a salt of deacetylated chitin.

Pat. 2,056,114. Method of Finishing Fibrous Material. Sept. 29, 1936. Treatment of fibrous materials or wood and metal surfaces to produce a smooth softer finish by applying a composition containing cyclic alcohol esters of fatty acids and other high molecular weight acids. Suitable esters are borneyl and fenchyl esters of cocoanut oil and palmkernel oil fatty acids, terpineol ester of naphthenic acids, cyclohexyl ester of montanic acid.

Pat. 2,058,013. Manufacture of Amides of Higher Fatty Acids. Oct. 20, 1936. Process of making N-aliphatic amides of aliphatic monocarboxylic acids containing chains of eight or more carbon atoms which comprises

reacting aliphatic esters of the acids with an aqueous solution of an aliphatic amine in a closed reaction vessel at a temperature above 100° C.

Pat. 2,062,454. Manufacture of Essentially Dry Alkali Metal Alkyl Sulphates. Dec. 1, 1936. Process of neutralising alkyl hydrogen sulfates by reacting the sulfates with a dry alkali metal halide under anhydrous conditions with the resultant evolution of a hydrogen halide. The products are useful as detergents, etc., e. g., gardinol.

Pat. 2,070,597. Process for Producing Alcohols. Feb. 16, 1937. Process for producing alcohols which comprises treating an ester of a fatty acid with an alkali metal and a hydrogenated aromatic hydroxy compound having in the ring at least one carbon atom to which is attached one hydroxyl group and one hydrogen atom in the presence of a solvent inert towards the alkali metal.

Pat. 2,076,563. Sulphonation Products of Hydro-Abietyl Alcohol and Process of Preparing the Same. Apr. 13, 1937. Preparation of a sulfuric acid ester of hydroabietyl alcohol by reacting SO_3 with hydroabietyl alcohol in an inert organic medium.

Pat 2,080,143. Cyclohexylamine Derivatives. May 11, 1937. Quaternary ammonium compounds derived from dialkyl cyclohexylamines and alkylating agents.

Pat. 2,081,876. Diaryl Oxide Sulphonic Acids and Process for Preparing the Same. May 25, 1937. Surface active compounds of the formula:

$$R_n\left[\left[X-O-Y\right]\right]_s-(SO_3M)_s$$

X = phenyl, Y = phenyl or naphthyl, R = aliphatic or hydroaromatic of at least 3 C atoms, M = H, NH_4 or alkali metal, n = 1–5 and s = 1–3.

Pat. 2,085,163. Paper. June 29, 1937. Surface colored paper after-impregnated with deacetylated chitin.

Pat. 2,087,237. Sizing Fabric. July 20, 1937. Fibrous material sized with a low-substituted cellulose ether of a hydroxy fatty acid the ether being insoluble in caustic alkali at room temperature but soluble below —5° C.

Pat. 2,091,121. Dry Cleaning Emulsion. Aug. 24, 1937. A water-in-oil emulsion comprising a hydrocarbon dry cleaning solvent in which is dissolved a long chain aliphatic alcohol and an oil-soluble salt of the sulfuric acid ester of oleyl alcohol which has been acetylated prior to sulfonation.

Pat. 2,091,956. Sulphuric Acid Esters of Higher Glycols. Sept. 7, 1937. Sulfuric acid esters of glycols having hydroxyl groups attached to adjacent carbon atoms, and their alkali metal salts.

Pat. 2,101,217. Production of Dicarboxylic Acids and Estera Thereof. Dec. 7, 1937. Preparation of alkyl esters of dicarboxylic acids by adding a polymethylene dihalide to an alkali metal derivative of an acetoacetic acid alkyl ester and heating the reaction mixture with an aliphatic alcohol and the corresponding alkali metal alcoholate.

Pat. 2,101,323. Monoamides of Dicarboxylic Acids and Process of Preparing the Same. Dec. 7, 1937. Monoamides of dicarboxylic acids and their preparation by reacting an anhydride of a dicarboxylic acid with a long chain aliphatic amine.

Pat. 2,104,803. Process for Separating Higher Aliphatic Alcohols From Aqueous Emulsions. Jan. 11, 1938. Process for breaking an aqueous emulsion formed by diluting with water the reaction mixture obtained in the sodium-alcohol reduction of a higher fatty acid ester and which contains a higher aliphatic alcohol, a soap, caustic soda, a hydrocarbon solvent, and water, by mixing the emulsion with a hydroxylated aromatic compound of the benzene series.

Pat. 2,107,852. Sizing Fabric. Feb. 8, 1938. Fabric having an adherent water insoluble laundry-fast sizing of a low substituted lower alkyl cellulose which is water-insoluble and insoluble in dilute NaOH at room temperature but soluble below —5° C.

Pat. 2,108,133. Process for Producing High Molecular Alcohols From the Corresponding Ketones. Feb. 15, 1938. Straight chain secondary aliphatic alcohols are produced by contacting a mixture of hydrogen and a saturated straight-chain aliphatic ketone of 13 to 17 C atoms with a highly active nickel catalyst at 75° to 200° C.

Pat. 2,110,077. Phenolic Compounds. Mar. 1, 1938. Branched chain alkylated phenols prepared by heating a phenolic compound and a branched-chain alcohol of at least 7 carbon atoms in the presence of a dehydrating agent.

Pat. 2,119,159. Buffing Compounds. May 31, 1938. A buffing composition containing an abrasive, a binder and an organic amine salt of a sulfated higher aliphatic alcohol.

Pat. 2,121,616. Sulphates of Polybasic Acid Esters. June 21, 1938. An ester of a sulfato-polycarboxylic acid having less than 15 C atoms with a branched, open chain aliphatic alcohol having at least 6 C atoms.

Pat. 2,139,276. Emulsifying and Treating Agents. Dec. 6, 1938. A self emulsifying composition comprising mineral oil or wax having dissolved therein an aliphatic monohydric alcohol of at least 4 C atoms and an N-dialkyl cyclohexylamine salt of a sulfuric acid ester of a normal primary aliphatic alcohol of 10 to 18 C atoms and emulsions of the above composition.

Pat. 2,142,986. Fibrous Product. Jan. 10, 1939. Noiseless, waterproof paper prepared by impregnating the paper with an aqueous mixture of an aliphatic alcohol and a water-soluble salt of a sulfated aliphatic alcohol and then with an emulsion of a wax in aqueous deacetylated chitin.

Pat. 2,146,280. Aliphatic Aminomethane Sulphuric Acids and Their Salts. Feb. 7, 1939. Surface active aliphatic aminomethane sulfinates of the formula:

$$RR'NCH_2SO_2M$$

in which R is an aliphatic radical of four or more carbon atoms; R' represents a member of the group consisting of hydrogen and lower alkyl radicals, and M stands for a member of the group consisting of hydrogen and a salt-forming group, e. g., sodium N-isobutyl aminomethane sulfinate, are claimed.

Pat. 2,147,785. Process of Forming Sulphuric Acid Esters. Feb. 21, 1939. Preparation of sulfuric acid esters by reacting a sulfuric acid solution of an amide with a saturated aliphatic alcohol or other aliphatic compound containing olefine linkages.

Pat. 2,160,176. Treatment of Textile Materials. May 30, 1939. Making textiles water repellent with $RCONH—CH_2—N(tert)—X$, R = alkyl of at least 7 C atoms, N(tert) = molecule of a tertiary base and X = acidic radical of an organic acid.

Pat. 2,161,937. Sulphate A,A'-Dialkyl Glycerine Ethers and Process for Preparing Them. June 13, 1939. β-sulfation of α,α'-dialkyl glycerine ethers having not more than 25 C atoms per molecule at low temperatures. Some of the products, e. g., β-sulfuric acid ester of α,α'-di-(2-ethylhexyl) glycerine ether, are claimed as new products.

Pat. 2,163,651. Manufacture of Normal, Secondary Pentadecyl Sulphates. June 27, 1939. Sodium pentadecyl-8 sulfate is made by reacting pentadecanol-8 and chlorosulfonic acid in dry ethyl ether or pyridine solution, and neutralizing with aqueous NaOH.

Pat. 2,174,127. Sulphated Acyloins and Process of Producing Them. Sept. 26, 1939. Sulfated acyloins and their preparation by sulfating acyloins, e. g., capryloin, at about 0° C.

Pat. 2,174,131. Sulphated Alkoxy Cyclohexanols and Process of Producing Them. Sept. 26, 1939. Sulfated alkoxy cyclohexanols and their preparation by low temperature sulfation.

Pat. 2,178,353. High Molecular Weight Tetravalent Sulphur Compounds and Process for Their Production. Oct. 31, 1939. Production of tetravalent sulfur compounds by reacting a dialkyl sulfide with a halogenated fatty acid.

Pat. 2,183,721. Softening Agent. Dec. 19, 1939. Process of imparting an improved softened finish to a fibrous material by applying an aqueous medium containing a sulfamate of the formula H_2NSO_2X, where X=H or a salt-forming radical, and a long chain alcohol sulfate ester salt containing 8 or more C atoms.

Pat. 2,187,338. Secondary Alkyl Monosulphonates. Jan. 16, 1940. Secondary alkyl monosulfonates containing 17 carbon atoms, e. g., a 3,9-diethyl-6-tridecanesulfonate salt.

Pat. 2,187,339. Secondary Alkyl Monosulphonates. Jan. 16, 1940. Secondary alkyl monosulfonates containing 19 carbon atoms, e. g., a 5,11-diethyl-8-pentadecanesulfonate salt.

Pat. 2,190,733. Manufacture of Alkyl Substituted Aryl Sulphates. Feb. 20, 1940. Alkyl substituted aryl sulfates of the benzene and naphthalene series in which an alkyl group contains at least 8 carbon atoms and the sulfate group is directly attached to a carbon atom in the aryl nucleus.

Pat. 2,192,906. Diamides of Aliphatic Sulpho- and Sulphato-Dicarboxylic Acids and Processes of Preparing Them. Mar. 12, 1940. Diamides of aliphatic sulfo- and sulfato-dicarboxylic acids in which each amide group is derived from an open chain aliphatic amine having 4–11 carbon atoms.

Pat. 2,199,398. Process of Sulphation. May 7, 1940. A saturated aliphatic compound having at least 8 C atoms and an OH group attached to a secondary C atom is sulfated in the presence of an alkyl ester of a 1 to 8 C aliphatic monocarboxylic acid having 1 to 8 C atoms in the alkyl group. Example: pentadecanol-8 and chlorosulfonic acid in ethyl acetate give pentadecyl-8 sulfate.

Pat. 2,199,399. Sulphating Aliphatic Alcohols. May 7, 1940. An unsaturated primary aliphatic alcohol having at least 8 C atoms is sulfated in the presence of an alkyl ester of a 1 to 8 C aliphatic monocarboxylic acid having 1 to 8 C atoms in the alkyl group. Example: oleyl alcohol and chlorosulfonic acid in ethyl acetate give oleyl sulfate.

Pat. 2,199,403. Sulphates of Unsaturated Alcohols. May 7, 1940. Claims myristoleyl sodium sulfate and palmitoleyl sodium sulfate as new products.

Pat. 2,202,741. Detergent Composition. May 28, 1940. A solid detergent in bar form consisting of sodium dodecyl sulfate, sodium sulfate, and, as a binder, sodium starch glycolate.

Pat. 2,203,339. Abietyl Sulphate and Process for Its Manufacture. June 4, 1940. Abietyl sulfates and their preparation by sulfating abietyl alcohol.

Pat. 2,204,210. Preparation of Secondary Alkyl Sulphonic Acids. June 11, 1940. Preparation of secondary alkyl monosulfonic acids by oxidizing secondary dialkyl disulfides.

Pat. 2,205,037. Extrusion of Higher Alkyl Sulphate Salts. June 18, 1940. Process of neutralizing a higher aliphatic alcohol sulfuric acid ester under reduced pressure conditions with a concentrated aqueous solution of an alkali metal base in the presence of an added water-soluble diluent which is solid at room temperature, e. g., sodium sulfate.

Pat. 2,205,042. Softening of Textile Materials and Composition Therefor. June 18, 1940. Textile fibers are softened in an aqueous bath containing a small amount of a condensation product of an alkylolamine with a higher fatty acid, ester, anhydride or halide, which has been after treated with an acid.

Pat. 2,225,673. Alkyl Esters of Sulphato-Carboxylic Acids. Dec. 25, 1940. Alkyl esters of branched-chain aliphatic mono-sulfato-monocarboxylic acids in which the alkyl and the monocarboxylic acid radicals each have more than 4 carbon atoms.

Pat. 2,228,465. Coloring of Paper With Sulphur Colors. Jan. 14, 1941. Manufacturing colored cellulosic fibers which comprises suspending the fibers in water, adding to the water suspension of the fibers a solution of an alkali metal sulfide and a sufficient quantity of a reduced sulfur dyestuff to dye the fibers and make the pulp mixture basic, adding to said mixture a water-soluble salt of a metal which forms insoluble sulfides in neutral and alkaline solutions.

Pat. 2,232,485. Amidomethyl Esters. Feb. 18, 1941. A lower monobasic monocarboxylic acid ester of an N-monomethylolamide of a higher monobasic monocarboxylic acid, e. g., stearamidomethyl acetate.

Pat. 2,234,648. Process of Making Colored Paper. Mar. 11, 1941. Process which comprises consecutively wetting a surface layer of a formed article of paper fibers with a solution comprising an azo dye coupling component and a solution comprising a diazotized aryl amine, and drying, the total acid remaining on the fiber before drying being not in excess of that which produces a combined residual mixture on the fiber which is neutral to slightly acid.

Pat. 2,238,672. Textile Treatment. Apr. 15, 1941. Process for reducing the tendency of wool to shrink which comprises treating with a dispersion of an acid-neutralizing substance and an organic compound containing at least one thiol (—SH) group, e. g. cyclohexane thiol, cetane thiol, formthional, etc.

Pat. 2,244,704. Sizing of Textile Materials. June 10, 1941. Cellulosic textile materials sized with an aqueous liquid containing from about 0.5 to about 5% by weight of a water-soluble salt of an interpolymer consisting of methacrylic acid and an alkyl methacrylate having not more than four carbon atoms in the alkyl group.

Pat. 2,245,132. Treatment of Cellulosic Textiles With Long Chain Vinyl Ethers. June 10, 1941. A cellulosic textile of improved water-repellency having impregnated thereon the product obtained by baking thereon a monomeric vinyl ether of a monohydric alcohol having an open chain of at least eight carbon atoms.

Pat. 2,254,001. Textile Process. Aug. 26, 1941. Process for making cellulosic material or a textile material of wool or silk crease-resistant and, optionally, also water-repellent by impregnating with an aqueous medium containing an alkyl ether of a methylolurea, with or without an organic water-repellent, and baking the same, preferably at 140°–175° C.

Pat. 2,263,254. Fat Liquoring Process. Nov. 18, 1941. Immunizing leather against attack by micro-organisms by fat-liquoring with an aqueous emulsion containing a water-insoluble preservative, e. g. phenyl mercury oleate, dissolved in the dispersed phase.

Pat. 2,268,169. Product and Process. Dec. 30, 1941. Preparation of dialkylethenones by reacting a secondary aliphatic monoacyl chloride containing at least sixteen aliphatic carbon atoms with an aliphatic tertiary amine, the reaction and isolation of the dialkylethenone being carried out under anhydrous conditions.

Pat. 2,271,619. Process of Making Pure Soaps. Feb. 3, 1942. Process of reacting a higher fatty acid glyceride with a saturated aliphatic monohydric alcohol having less than 5 carbon atoms in the presence of a small amount of an alkali metal hydroxide under substantially anhydrous conditions.

Pat. 2,284,895. Treatment of Textiles to Impart Water-Repellence. June 2, 1942. Water-repellent fabric obtained by baking at a temperature of 80–160° C. a cellulosic fabric impregnated with an isothiocyanic acid ester of an aliphatic alcohol of at least eight carbon atoms, until the fabric becomes water-repellent.

Pat. 2,287,696. Carbonization of Cellulose Esters. June 23, 1942. Selective destruction of the cellulose ester component of a mixed fabric by treating with a polyhydroxy phenol, e. g. resorcinol.

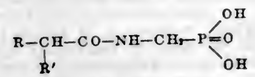
Pat. 2,292,067. Production of White Leather. Aug. 4, 1942. White leather having an improved light fastness by retanning chrome tanned leather with a condensation product of a diphenyl ether sulfonic acid and formaldehyde.

Pat. 2,293,649. Preparation of High Molecular Weight Branched Chain Acids. Aug. 18, 1942. Process for making branched chain aliphatic acids containing at least 24 carbon atoms from primary aliphatic alcohols containing at least 12 carbon atoms and at least one hydrogen atom on the carbon atom alpha to the carbinol group, by heating the alcohol with a small amount of an alkali metal. Claims also as a new product hexadecyl-2-eicosanoic acid.

Pat. 2,293,844. Process of Treating Textile Fiber. Aug. 25, 1942. Treating textile material with a carboxylic ester of a hydroxamic acid containing an aliphatic chain of at least 9 carbon atoms, and subjecting the impregnated material to the action of dry heat to increase the water-repellency.

Pat. 2,303,477. Tanning and Dyeing Leather. Dec. 1, 1942. Tanning a pickled skin incompletely in a chrome tanning bath containing a masking agent, dyeing the skin with an acid dye, completing the tanning with a chrome tanning bath containing a masking agent, and fatliquoring.

Pat. 2,304,156. Organic Compound and Process of Preparing the Same. Dec. 8, 1942. Phosphoric acids of the formula:



where r, r' is an organic radical.

Pat. 2,304,157. Process for Improving Textiles. Dec. 8, 1942. Impregnating textiles with RR'N—CH_2—$POCH_3$, R=H, lower alkyl or methylene bond to another N-substituted aminomethylenephosphoric acid and R'=organic radical containing a chain of at least 10 C atoms, no solubilizing groups and being attached to the N by —CS— or —CO—.

Pat. 2,308,841. Manufacture of Secondary Aliphatic Monoketomonosulphonates. Jan. 19, 1943. Production of a secondary aliphatic monoketomonosulfonate by agitating a solution of a bisulfite in a polar solvent with an alpha unsaturated aliphatic ketone.

Pat. 2,310,873. Quaternary Ammonium Compound. Feb. 9, 1943. Claims process for the preparation of N,N'-diquaternary ammonium compounds, and also claims hexane-bis(N-octadecylamidomethylene pyridinium chloride) as a new compound. Products are permanent water repellent agents.

Pat. 2,315,951. Condensation Products of Diaryl Ether Sulphonic Acids With Formaldehyde. Apr. 6, 1943. Claims the condensation product of diphenyl ether monosulfonic acid with formaldehyde, which is prepared by heating formaldehyde with sulfonic acid at a temperature that is low enough to avoid excessive discoloration of the condensation product, which is useful as a tanning and dispersing agent.

Pat. 2,318,036. Preparation of Surface-Active Sulphonates. May 4, 1943. Preparation of a surface-active sulfonate by agitating an unsaturated hydrocarbon, viz. acyclic or alicyclic hydrocarbons containing at least 6 carbon atoms and at least one double bond with a solution containing not more than 20% of a water-soluble bisulfite salt in a polar solvent in the presence of a catalytic amount of an oxidizing agent.

Pat. 2,323,938. Product and Synthesis Thereof. July 13, 1943. Production of β-ketocarbonamides by reacting an acyl ethenone of the formula: R—CH_2—CO—CR'=CO R and R'=monovalent aliphatic hydrocarbon radicals totalling at least nine carbon atoms, with a basic compound having a hydrogen bearing ammonia type nitrogen, e. g., ammonia or aliphatic hydrocarbon monoamines having hydrogen on amino nitrogen.

Pat. 2,326,228. Chemical Process. Aug. 10, 1943. Carboxylic acid chlorides are made from saturated aliphatic or saturated acyclic compounds by reacting them with oxalyl chloride in the presence of actinic light. Bensoyl peroxide may also be used to form the reaction. Example: toluene and oxalyl chloride give phenyl acetyl chloride.

Pat. 2,326,229. Process of Producing Carboxylic Acid Chlorides. Aug. 10, 1943. Carboxylic acid chlorides are produced by the action of oxalyl chloride on saturated aliphatic compounds or on acyclic compounds with saturated aliphatic side chains in the presence of organic peroxides. Example: phenyl acetic acid from toluene and oxalyl chloride in presence of benzoyl peroxide.

Pat. 2,326,270. Chemical Compound and Process. Aug. 10, 1943. Preparation of an alkali metal salt of the sulfuric acid ester of heptadecanol-9 by reacting heptadecanol-9 with chlorsulfonic acid in an anhydrous organic solvent and neutralizing the sulfated heptadecanol-9 with an aqueous solution of an alkali metal hydroxide.

Pat. 2,327,160. Treatment of Textile Fiber. Aug. 17, 1943. Production of a water-repellent textile fabric by treatment of the fiber with a compound of the formula:

A—CH_2—Z

A—an organic radical free from water-solubilizing groups containing an alkyl radical and being attached to the CH_2 through O, S or N. Z—a radical containing water-solubilizing groups, e. g., stearamidomethylpyridinium halide.

Pat. 2,332,817. Textile Treating Method. Oct. 26, 1943. In a process for finishing textile materials with a positively charged aqueous dispersion by a process of exhaustion, and wherein the finish exhausts at too rapid a rate to give a finish of the desired uniformity, the step which comprises retarding the rate of exhaustion by incorporating in the dilute suspension of the dispersed finish from 0.02% to 0.5% of a cationic surface active agent.

Pat. 2,335,582. Fabric and Finish. Nov. 30, 1943. A water-repellent organic textile material having incorporated the reaction residue of a copolymer of a member of the class consisting of polymerizable vinyl and vinylidene compounds with a member of the class consisting of 1-alkenyl isocyanates, aliphatic alpha, beta-unsaturated acyl isocyanates, and aliphatic alpha, beta-unsaturated acyl isothiocyanates.

Pat. 2,337,552. Purification of Saturated Hydrocarbon Sulphonic Acids. Dec. 28, 1943. Process of removing hydrocarbon impurities from an aqueous solution of a water-soluble saturated hydrocarbon sulfonate having at least 5 carbon atoms by mixing therewith in the liquid state a hydrocarbon which is solid at 20° C., allowing the mixture to stand, removing the layer of molten hydrocarbon, cooling the aqueous phase and removing the hydrocarbon which separates out in the solid state.

Pat. 2,338,829. Chemical Process and Product. Jan. 11, 1944. Preparation of sulfurized hydrocarbons having the molecular formula, $C_8H_{2n}S_n$, in which n is an integer greater than 5 by bringing an open-chain monoolefine hydrocarbon of at least 6 carbon atoms and having at least one hydrogen on each double bonded carbon atom into contact with about 3 atomic proportions of sulfur for each mole of monoolefine hydrocarbon, and heating the mixture

to between 100 and 200° C. Products are intermediates for conversion by oxidation to surface active sulfonic acids.

Pat. 2,338,830. Chemical Process and Product. Jan. 11, 1944. Surface-active hydroxy sulfonic acids containing not more than one sulfonic acid group and process for their preparation by oxidizing a monomeric polysulfide of the formula: $C_nH_{2n}S_5$ in which $n>5$ by means of nitric acid of at least 70% concentration.

Pat. 2,343,095. Resin Dispersion Useful in the Textile and Paper Industries. Feb. 29, 1944. A process of finishing textile fibers by exhausting thereon a highly dispersed polymerized vinyl compound from a dilute aqueous suspension of the same having a pH of from 4.0 to 7.5 the vinyl compound having been rendered substantive to the fiber by being dispersed in aqueous medium with a cationic surface active agent prior to dilution in the treating bath.

Pat. 2,343,920. Textile Treatment Process. Mar. 14, 1944. Textile of improved water repellence having impregnated therein the amide reaction product, formed in situ, of a monofunctional acylating agent, e. g., an ethenone, with a water insoluble non-tertiary mono or diamine of at least 10 C atoms.

Pat. 2,358,234. Hydrogenation Process. Sept. 12, 1934. Production of high molecular alcohols by reducing hydroabietic acid with hydrogen in the presence of a hydrogenating catalyst at 300 to 400° C. and 10 atmospheres pressure.

Pat. 2,358,871. Textile Treatment. Sept. 26, 1944. Process of increasing the resistance of a textile which comprises impregnating with a dispersion of a preformed lower monobasic monocarboxylic acid ester of an N-monomethylolamide of a monobasic monocarboxylic acid of at least eight carbon atoms and baking.

Pat. 2,360,844. Preparation of Detergents. Oct. 24, 1944. Production of soap by reacting a crude glyceride with an alkanol of not more than 4 C atoms under anhydrous conditions in the presence of sufficient alkali metal base to neutralize the free acids in the glyceride and to maintain the solution alkaline to Clayton yellow, adding an acid in sufficient amount to decompose the soaps formed, separating the glycerine, recovering the monoalkyl esters of the fatty acids contained in the glycerides, treating the esters with aqueous caustic soda and spray drying the resulting solution.

Pat. 2,361,270. Treatment of Textile Fiber With Water Repellency Agents. Oct. 24, 1944. Simultaneously treating textiles with water-repellency agents and vinyl polymers or copolymers.

Pat. 2,362,886. Disulphonamides Having Quaternary Ammonium Salt. Nov. 14, 1944. Ethane-1,2-bis-(N-octadecylsulfonamidomethyl-pyridinium chloride) useful for making fabrics water repellent.

Pat. 2,364,737. Ethers. Dec. 12, 1944. Process of reacting a compound containing a plurality of N-methylolcarbonamido groups joined to a hydrocarbon radical with a primary or secondary alcohol of 1 to 5 C atoms between 0 and 40° C. in the presence of an acid catalyst having a dissociation constant of at least 1×10^{-2}. Example: dimethylol adipamide + methanol + HCl + N,N'-bis(methoxymethyl) adipamide. Also claims the products which are useful molding and coating compositions and in finishing textiles.

Pat. 2,369,919. Ketoethenones and Process Therefor. Feb. 20, 1945. Preparation of octadecanoyl-hexadecylethenone by reacting decanoyl chloride with triethylamine in an anhydrous solvent under anhydrous conditions. Also claims the product, which is useful as an intermediate for dyes and other chemicals, and as a waterproofing agent.

Pat. 2,374,236. Surface Active Aldoside Condensation Products. Apr. 24, 1945. Preparation of a water-soluble, surface active condensation product by heating to 100–250° C., in the presence of a catalyst, a water-soluble aldose or -aldoside with a polyhydric alcohol of at least 2 C atoms having attached to the hydroxylated C atom via —O—, —S—, —CONH—, —CONalkyl—, —COO—, —Nalkyl—, —NH—, —CH_2—, —SO_2NH—, —SO_2N-alkyl—, or —SO_2O—, a 6–40 C atom acyclic radical.

Pat. 2,374,648. Condensation Products of N, N'-Bis (Alkoxymethyl) Urea and Processes for Their Production. May 1, 1945. Preparation of water-soluble surface-active condensation products by reacting N,N'-bis(alkoxymethyl) urea with a glycol and a monosulfonamide of a straight chain 13 to 20 C hydrocarbon. The products are useful as dyeing assistants.

Pat. 2,387,510. Unified Process for Treating Wool. Oct. 23, 1945. A process which comprises the steps of impregnating the loose wool with a substantially neutral and soap-free composite reagent consisting chiefly of saturated petroleum hydrocarbons and the sulfonates of saturated petroleum hydrocarbons, subjecting the wool to carding, spinning, and weaving; adding water to the fabric and fulling the same under substantially neutral conditions without soap, and finally scouring.

Pat. 2,391,942. Method of Treating Cellulosic Textile Materials. Jan. 1, 1946. A process to render the materials receptive to chrome and acid dyes while retaining their affinity for direct dyes which comprises impregnating the material with an aqueous solution of pH between 1.6 and 3.0 and which contains from 3 to 15% by weight of formaldehyde, from 0.05 to 2% of an acidic catalyst, and from 3 to 30% of a water-soluble salt of a water-soluble tertiary hydroxy-alkylamine, substantially drying the impregnated material, and thereafter heating the same at a temperature of 70° C. to 200° C.

Pat. 2,394,902. Preparation of Substituted Sulphonamides. Feb. 12, 1946. A hydrocarbon sulfon-N-chloramide of the formula: $R(SO_2NYCl)_n$, R=alkyl or cycloalkyl, Y=Cl or alkyl, and n=an integer. These compounds are a source of nascent chlorine, and hence useful as bleaching agents.

Pat. 2,398,492. Process for Refining Fats. Apr. 16, 1946. Process for refining a low-grade fat by esterifying the free acid components thereof with dimethyl, methyl ethyl or diethyl sulfate in the presence of an acid absorbing agent in quantity sufficient to neutralize the mineral acid liberated by the esterification process.

Pat. 2,402,351. Water Repellent Composition and the Process of Preparing the Same. June 18, 1946. A water-repellency composition comprising a stable aqueous emulsion of a wax comprising paraffin wax, normal or basic aluminum acetate of formate and a modified protective colloid.

Pat. 2,402,587. Chemical Processes. June 25, 1946. Surface active agents are made by sulfurizing a monoolefinic hydrocarbon having at least 6 C atoms, hydrogenating, and oxidizing to the sulfonic acid. Example: pentadecene-7→pentadecane-7,8 - dithiol→pentadecane-7,8 -disulfonic acid.

Pat. 2,406,958. Chemically Modified Wool. Sept. 3, 1946. A process which comprises reacting wool in an anhydrous inert medium with from 1 to 64 gram molecular weights, per 2060 grams of wool, of a monomeric unsaturated compound having a terminal methylene group linked by an ethylenic double bond to carbon, the double bond being conjugated through carbon atoms with another multiple bond in the molecule, e. g., styrene and in the presence of from 21.6 to 126.9 parts of iodine.

Pat. 2,416,447. Weather Resistant Flameproof Paper. Feb. 25, 1947. A parchment paper containing, uniformly distributed throughout, 5–20% by weight of antimony oxide and 5–25% of a chlorine-containing, water-insoluble, organic compound of the group adapted to liberate hydrogen chloride at the kindling temperature of the paper.

Patents Relating to Petroleum Chemicals

Pat. 1,884,640. Method of Inhibiting the Oxidation and Hydration of Lead Alloys. Oct. 25, 1932. Oxidation and hydration of hot lead sodium alloy is inhibited by keeping the alloy in an atmosphere of vapors of a mineral oil having a flash point above 300° C.

Pat. 1,907,701. Process of Producing Tetra Alkyl Lead. May 9, 1933. Recovery of tetraalkyl lead from metallic lead sludge by distilling in the presence of water at a temperature above that at which the tetraalkyl lead will decompose in the absence of water at atmospheric pressure.

Pat. 1,920,246. Preparation of Alkyl Halides. Aug. 1, 1933. Production of alkyl halides by reacting a monohydroxy alcohol with hydrogen halide in the presence of a solid dehydrating metal oxide.

Pat. 1,920,846. Preparation of Alkyl Halides. Aug. 1, 1933. Production of alkyl halides by passing an alkyl ether and a hydrogen halide over an inorganic oxygen containing compound of a metal of Group III or IV of the periodic table.

Pat. 1,933,704. Rendering Fibrous Material Impervious to Tetra Alkyl Lead. Nov. 7, 1933. Process of rendering articles of clothing impervious to tetra alkyl lead compounds by saturating them with a composition consisting of sodium soap, glycerin, and ethyl alcohol.

Pat. 1,939,659. Gum Inhibitor for Hydrocarbons. Dec. 19, 1933. Gasoline containing a gum-inhibiting amount of a diaryl guanidine salt of a fatty acid.

Pat. 1,940,445. Gum Inhibitor for Gasoline. Dec. 19, 1933. A cracked gasoline containing a small proportion of an aliphatic polybutyl amine or an amylamine as a color and gum formation inhibitor.

Pat. 1,944,167. Alloy for Use in the Manufacture of Tetraethyl Lead. Jan. 23, 1934. Composition for use in making alkyl lead compounds comprising the product obtained by melting together 10 parts sodium, 90 parts lead and 0.01 part $AlCl_3$ or $FeCl_3$.

Pat. 1,945,521. Motor Fuel Stabilization. Feb. 6, 1934. Cracked gasoline stabilized against gum formation with a xylenol having at least one methyl group in o- or p-position.

Pat. 1,957,134. Stabilized Motor Fuel. May 1, 1934. Cracked gasoline to which has been added a gum-inhibiting amount of p-hydroxy-anilido-acetonitrile or its alkyl or aralkyl substituted derivatives.

Pat. 1,962,173. Manufacture of Tetraethyl Lead. June 12, 1934. Production of tetraethyl lead by reacting under pressure ethyl chloride and an alloy of (1) Pb, (2) Na, and (3) $AlCl_3$ or $FeCl_3$.

Pat. 1,962,435. Gum Inhibitor for Cracked Hydrocarbons. June 12, 1934. Cracked gasoline containing a gum-inhibiting amount of a p-hydroxy-phenyl-glycine.

Pat. 1,971,329. Gum Inhibitor. Aug. 28, 1934. Gasoline comprising cracked hydrocarbon spirits containing a gum-inhibiting amount of a tolulene-di-amine.

Pat. 1,972,760. Gum Inhibitor for Hydrocarbon Fuels. Sept. 4, 1934. A motor fuel comprising cracked gasoline containing a small amount of a diaryl guanidine as a gum-inhibitor.

Pat. 1,975,171. Process of Purifying Tetra Alkyl Lead. Oct. 2, 1934. Removal of suspended matter from tetraalkyl lead by agitating with an aqueous solution of a wetting and detersive compound, e. g., trisodium phosphate, allowing to settle and drawing off purified tetraalkyl lead.

Pat. 1,979,254. Lead-Sodium Alloy. Nov. 6, 1934. Composition comprising sodium, lead and magnesium for use in making tetraethyl lead.

Pat. 1,980,200. Motor Fuel. Nov. 13, 1934. A motor fuel comprising cracked hydrocarbon distillates containing a gum-inhibiting amount of an alkyl or aralkyl benzyl amino phenol.

Pat. 1,980,201. Motor Fuel. Nov. 13, 1934. A motor fuel comprising cracked gasoline containing a gum-inhibiting amount of a benzylidene aminophenol.

Pat. 1,983,535. Process of Producing Tetra Alkyl Lead. Dec. 11, 1934. Production of tetraalkyl lead from alkyl chloride and lead monosodium alloy in which the alloy is first reacted with a small amount of alkylchloride and then enough alkylchloride is added to complete the reaction.

Pat. 1,983,542. Preparation of Alkyl Halides. Dec. 11, 1934. Production of an alkyl halide from an alkanol and a hydrogen halide in the presence of a solution of a metal halide catalyst maintained at reaction temperature and having a concentration below equilibrium concentration at the temperature used.

Pat. 1,999,830. Stabilizing Motor Fuels. Apr. 30, 1935. Cracked gasoline containing a gum-inhibiting amount of an alkoxy substituted dihydroxy benzene, e. g. a pyrogallol mono-methyl ether.

Pat. 2,000,069. Preparation of Lead Alkyls. May 7, 1935. Production of lead alkyls from an alkyl halide and a composition comprising sodium, lead and magnesium.

Pat. 2,000,283. Motor Fuel. May 7, 1935. Cracked gasoline containing a gum-inhibiting amount of a hydroxy aromatic amine having one hydrogen of the amine group replaced by a cyclohexyl radical.

Pat. 2,004,160. Tetra Alkyl Lead. June 11, 1935. Recovery of tetraalkyl lead from a lead sludge containing it by adding a dispersing agent, distilling off most of the tetraalkyl lead, adding a wetting agent to the undistilled sludge and continuing the distillation.

Pat. 2,009,818. Fuel. July 30, 1935. A compression ignition fuel comprising an oil boiling above the gasoline range containing dialkyl or alkylene nitroso amines as ignition accelerators.

Pat. 2,014,200. Stabilization of Motor Fuels. Sept. 10, 1935. Cracked gasoline containing a gum-inhibiting amount of 2:3:4:5-tetra-alkyl-1-hydroxy or 2:3:5:6-tetraalkyl-1-hydroxy benzene.

Pat. 2,016,072. Production of Alkyl Halides. Oct. 1, 1935. Continuous process for the production of alkyl halides containing 2–4 C atoms by continuously absorbing an olefine hydrocarbon having 2–4 C atoms in sulfuric acid, bringing the resultant product together with an aqueous solution of a hydrogen halide in a reaction zone at a temperature over 100° C.

Pat. 2,016,075. Organic Halides. Oct. 10, 1935. Production of alkyl halides by reacting an alkanol of less than 4 C atoms with a hydrohalide at above the boiling point of the alcohol in the presence of a bismuth halide catalyst.

Pat. 2,025,192. Stabilization of Mineral Hydrocarbon Products. Dec. 24, 1935. Cracked gasoline containing a gum-inhibiting amount of a dihydroxy naphthalene.

Pat. 2,029,091. Process of Preparing Tetra Alkyl Lead.

Pat. 2,091,114. Process of Making Tetra-Alkyl Lead.

Pat. 2,161,615. Lubricant. June 6, 1939. Lubricating

Pat. 2,226,160. Color Stabilizer for Mineral Oils. Dec. 24, 1940. A viscous petroleum oil normally tending to

claims the product, which is useful as an intermediate for dyes and other chemicals, and as a waterproofing agent.

linked by an ethylenic double bond to carbon, the double bond being conjugated through carbon atoms with another multiple bond in the molecule, e. g., styrene and in the presence of from 21.6 to 126.9 parts of iodine.

Pat. 2,029,091. Process of Preparing Tetra Alkyl Lead. Feb. 4, 1936. Production of tetraalkyl lead from an organic halide and a lead monosodium alloy in the form of small dust-free particles of uniform size.

Pat. 2,038,703. Recovery of Alkyl Lead Compounds From Their Reaction Masses. Apr. 28, 1936. Recovery of tetraalkyl lead from a reaction mass containing unreacted lead sodium alloy comprising distilling in the presence of sufficient acid to adjust the pH to not below 7.

Pat. 2,038,704. Recovery of Alkyl Lead Compounds. Apr. 28, 1936. Recovery of tetraalkyl lead from a reaction mass containing unreacted lead sodium alloy comprising adding water, steam distilling to remove tetraalkyl lead, acidifying the distillation residue and redistilling with steam.

Pat. 2,043,224. Production of Alkylated Lead. June 9, 1936. Apparatus for the production of lead-sodium alloy.

Pat. 2,047,391. Machine and Method for Making Solid Comminuted Material. July 14, 1936. Production of comminuted solid material of the character of lead-sodium alloy comprising depositing a molten mass of such material on a surface sufficiently cold to quickly solidify the molten material and immediately removing and comminuting the cooled material.

Pat. 2,053,466. Motor Fuel. Sept. 8, 1936. Treatment of motor fuel mixtures containing cracked gasoline to make them light stable and inhibit gum formation by adding a small amount of an aliphatic-amine salt of a hydroxy-aryl compound.

Pat. 2,061,267. Preparation of Lead-Sodium-Magnesium Alloys. Nov. 17, 1936. Preparation of a lead-sodium alloy containing .05–1% magnesium.

Pat. 2,065,568. Gum Inhibitor for Hydrocarbon Fuels. Dec. 29, 1936. Cracked gasoline containing a gum-inhibiting amount of a condensed aromatic ring hydrocarbon substituted by primary amino and hydroxy groups e. g. 1-amino-2-naphthol.

Pat. 2,066,173. Lubricant. Dec. 29, 1936. Lubricant assistant comprising 1–5 parts of a nitro aromatic compound and 0.3–2 parts of an aromatic or aliphatic amine.

Pat. 2,071,064. Stabilization of Motor Fuels. Feb. 16, 1937. Cracked gasoline containing a gum-inhibiting amount of a hydroxy N-aryl morpholine.

Pat. 2,074,288. Fluorescent Hydrocarbon Oils. Mar. 16, 1937. Hydrocarbon oils and hydrocarbon type solvents containing a fluorescent color component obtained by heating anthraquinone, bensanthrone or anthanthrone or their methyl or halogen derivatives with iron, zinc, tin, nickel or lead under conditions which prevent the escape of any of the products.

Pat. 2,076,581. Method of Refining Gasoline. Apr. 13, 1937. Cracked gasoline is refined by contacting with anhydrous HF in an amount sufficient to polymerize the less stable constituents to remove these color-forming and gum-forming constituents.

Pat. 2,088,441. Separation of Mixtures of Hydrocarbons. July 27, 1937. Non-paraffinic compounds are separated from paraffinic compounds by extracting the hydrocarbon mixture with a furfurylamine.

Pat. 2,091,112. Process of Making Tetra-Alkyl Lead. Aug. 24, 1937. Production of tetraethyl lead from ethylchloride and lead-sodium alloy under pressure above the normal boiling point of ethylchloride in which ethylchloride vapors evolved from the reaction are condensed, stored and reused, all in a closed circuit.

Pat. 2,091,114. Process of Making Tetra-Alkyl Lead. Aug. 24, 1937. Production of alkylated lead from an alkyl halide and a lead-alkali metal alloy under pressure and at a temperature above the normal boiling point of the alkyl halide.

Pat. 2,091,801. Temperature Control. Aug. 31, 1937. System for temperature control to keep a product molten, e. g., during the production of lead sodium alloy for use in making tetraethyl lead.

Pat. 2,091,986. Production of Lower Alkyl Chlorides. Sept. 7, 1937. Production of alkyl chlorides by feeding the corresponding alkanol in vapor phase with HCl, formed from sodium chloride and sulfuric acid, to an aqueous solution of a metal halide catalyst.

Pat. 2,094,097. Lubricants. Sept. 28, 1937. Oils and greases containing a nitro aryl thiocyanate, nitro aryl sulfide or nitro aryl mercaptan.

Pat. 2,104,796. Lubricating Oil and Process for Improving Same. Jan. 11, 1938. A lubricant comprising a lubricating oil containing as sludge inhibitor a small amount of a compound having a molecular weight of at least 800 and being an oil-soluble polymerized acrylic ester of an amino alcohol or an oil-soluble long-chain fatty acid salt of a polymerized acrylic acid ester of an amino alcohol.

Pat. 2,107,147. Gum Inhibitors for Gasoline. Feb. 1, 1938. Cracked gasoline containing a gum-inhibiting amount of a secondary di-aromatic amine containing at least one hydroxy or alkoxy substituent.

Pat. 2,109,005. Preparation of Lead-Sodium Alloys. Feb. 22, 1938. Production of a lead sodium alloy of small uniform crystal size.

Pat. 2,111,769. Lubricating Compositions. Mar. 22, 1938. Lubricating oil comprising a viscous petroleum hydrocarbon fraction containing a high molecular weight ether condensation product as pour-point depressant.

Pat. 2,121,611. Naphthenyl Esters of Phosphorous Acids. June 21, 1938. Naphthenyl esters of a phosphorous acid, e. g., trinaphthenyl trithiophosphite, which are useful as lubricant additives.

Pat. 2,128,075. Motor Fuel Stabilization. Aug. 23, 1938. Production of a gum and color stable motor fuel by adding a small amount of ortho- or para-amino-phenol and distilling.

Pat. 2,132,847. Lubricating Oil. Oct. 11, 1938. A lubricant comprising a lubricating oil containing a minor proportion of unvulcanized rubber which has been plasticized by means of a peptizing agent to improve the viscosity-temperature relationship.

Pat. 2,134,091. Apparatus for the Solidifying or Casting of Molten Materials. Oct. 25, 1938. Apparatus for the solidifying or casting of molten materials such as lead-sodium alloy.

Pat. 2,143,142. Lubricant. Jan. 10, 1939. Lubricants comprising lubricating oils containing hydroxylated acetals obtainable by reacting polyhydric alcohols with aliphatic aldehydes or ketones having at least six carbon atoms.

Pat. 2,150,156. Lubricating Oil. Mar. 14, 1939. Lubricant comprising a petroleum lubricating oil containing a small amount of the product of the reaction of hydrogenated castor oil with a neutral alcohol, aldehyde, isocyanate or isothiocyanate having at least six carbon atoms to reduce the pour point.

Pat. 2,158,096. Lubricant. May 16, 1939. High pressure lubricant comprising a lubricating oil or grease containing a small amount of an aliphatic acid-ester of a dibasic organic acid, the aliphatic radical containing at least 6 carbon atoms, e. g., octyl acid phthalate.

Sept. 4, 1934. A motor fuel comprising cracked gasoline containing a small amount of a diaryl guanidine as a gum-inhibitor.

Pat. 2,025,192. Stabilization of Mineral Hydrocarbon Products. Dec. 24, 1935. Cracked gasoline containing a gum-inhibiting amount of a dihydroxy naphthalene.

Pat. 2,161,615. Lubricant. June 6, 1939. Lubricating oil containing a small amount of a long chain ester of a mono-substituted carbamic acid, e. g., N-phenyl dodecyl carbamate.

Pat. 2,161,625. Chemical Process. June 6, 1939. Solvent extraction of hydrocarbons using an acetylenic alcohol.

Pat. 2,167,064. Lubricant. July 25, 1939. Lubricating oil containing a polymerized aliphatic hydrocarbon product having a molecular weight of at least 800 and a hydrogenated condensed ring compound devoid of acidic substituents to improve the viscosity index.

Pat. 2,167,867. Lubricant. Aug. 1, 1939. Lubricating oil for silver-cadmium bearings containing an organic ester of a phosphoric acid as corrosion inhibitor.

Pat. 2,170,353. Combination Valve and Enclosure Plate for High Pressure Reaction Vessels. Aug. 22, 1939. Piston valve for high pressure reaction vessels.

Pat. 2,178,610. Lubricant. Nov. 7, 1939. A lubricant comprising a lubricating oil having incorporated therein an ester of an acid of phosphorus containing at least one naphthenyl radical.

Pat. 2,181,121. Stabilization of Organic Substances. Nov. 28, 1939. Catalytic oxidation of organic substances in the presence of copper is inhibited by the presence of stabilizers of the type:

HO—A—CH=N—R—N=CH—A—OH

A=mononuclear aromatic group of the benzene series, OH is ortho to the —CH=N— group, and R=aliphatic or cyclo-aliphatic.

Pat. 2,181,122. Stabilization of Organic Substances. Nov. 28, 1939. Method of inhibiting the catalytic oxidation of an organic substance caused by copper or its compounds by incorporating a small amount of a copper deactivator of the formula:

HO—A—CH=N—R—N=CH—A—OH

where A=aromatic ring or unsaturated 5 or 6 membered heterocyclic ring whose hetero atom is N, the OH being attached to a ring C ortho to the —CH=N— group, and R—aromatic or cycloaliphatic having 6 C atom ring or a heterocyclic 6 membered ring, in which N is hetero atom.

Pat. 2,188,531. Separation of Mixtures of Hydrocarbons. Jan. 30, 1940. Non-paraffinic compounds are separated from paraffinic compounds by extracting the hydrocarbon mixture with a furonitrile.

Pat. 2,197,851. Motor Fuel. Apr. 23, 1940. Motor fuel containing a minor amount of an N-substituted organic sulfonamide which, except for the SO_2—N, consists of carbon and hydrogen and has a high solvent power for kauri gum.

Pat. 2.198,961. Lubricant. Apr. 30, 1940. Viscous hydrocarbon oil containing a small amount of a substituted pyridine or quinoline, e. g., 4-(beta-piperidyethyl)-quinoline, to inhibit corrosion and sludge formation.

Pat. 2,215,956. Lubrication of Steam Cylinders. Sept. 24, 1940. Lubrication of steam cylinders using a mineral oil lubricant which is free of saponifiable oils and contains a small amount of a neutral aromatic ester of an acid of phosphorus.

Pat. 2,221,846. Solvent Refining of Motor Fuels. Nov. 19, 1940. Solvent extraction of motor fuels using a dialkoxyalkyl phthalate in which each alkoxyalkyl group contains only three to four carbon atoms.

Pat. 2,224,904. Coloring of Petroleum Distillates. Dec. 17, 1940. Gasoline colored with a monoazo compound having a reddish to bluish-red shade with a bronzy fluorescence.

Pat. 2,226,160. Color Stabilizer for Mineral Oils. Dec. 24, 1940. A viscous petroleum oil normally tending to deteriorate in color having incorporated therein a small proportion of a dicyclohexylamine having at least one hydroxymethyl group bonded directly to an aliphatic carbon atom attached directly to the amino nitrogen, the amine being otherwise free of acid reacting and basic reacting substituents.

Pat. 2,230,371. Stabilization of Organic Substances. Feb. 4, 1941. Method of inhibiting the catalytic deterioration of an organic substance caused by a member of the group consisting of copper and its compounds in the presence of oxygen by incorporating in the organic substance a small proportion of a phosphorus compound selected from the class of organic monophosphonic acids and organic dihydroxyphosphines, e. g., methane phosphonic acid or ethyl dihydroxyphosphine.

Pat. 2,236,168. Lubricant. Mar. 25, 1941. Claims a lubricant comprising a major proportion of a viscous petroleum oil and a small proportion of an oil-soluble organic sulfonamide, which except for one to two

$$-SO_2N\diagdown\diagup$$

groups, consists of carbon and hydrogen, e. g., N,N'-di (p-toluene sulfonyl) piperazine, N,N'-di-(p-toluene sulfonyl)-1,2-ethane diamine.

Pat. 2,243,198. Fuel Oil. May 27, 1941. Non-viscous hydrocarbon fuel oil containing a small amount of the product of the reaction of hydrogenated castor oil with an alcohol, aldehyde, isocyanate or isothiocyanate to decrease the pour point.

Pat. 2,254,124. Organic Compound of Quinquivalent Phosphorus. Aug. 26, 1941. Tertiary alpha-hydroxy-phosphonates useful as metal deactivators for motor fuels and as detergents and wetting agents.

Pat. 2,255,597. Stabilization of Organic Substances. Sept. 9, 1941. Method of inhibiting the catalytic deterioration of an organic substance normally caused by copper and its compounds in the presence of oxygen by incorporating in the organic substance a small proportion of di-(2-hydroxy-5-methyl-acetophenone) ethylene diamine.

Pat. 2,263,618. Lubrication. Nov. 25, 1941. Claims high pressure lubricants comprising lubricating oils and greases having incorporated therein an organic ester of a thiophosphorous acid.

Pat. 2,276,031. Preparation of Lead-Sodium Alloys. Mar. 10, 1942. Claims preparation of mono sodium lead alloy by adding simultaneously to 15–60% of the lead at 307–425° C. the sodium and remaining lead in the ratio of 1 : 7.65–3.6.

Pat. 2,279,560. Viscous Hydrocarbon Oil. Apr. 14, 1942. Claims a composition comprising a major proportion of a viscous hydrocarbon oil having incorporated therein a small proportion of organic sulfonhydroxamic acids and its carboxylic acid esters and ethers or carboxylic acid esters and ethers of organic hydroxamic acids.

Pat. 2,279,561. Stabilization of Viscous Petroleum Oils. Apr. 14, 1942. A condensation product of an aliphatic polyamine and an aliphatic aldehyde is added to a viscous petroleum oil to inhibit deterioration in color.

Pat. 2,282,513. Stabilization of Viscous Petroleum Oils. May 12, 1942. Claims a viscous petroleum oil normally subject to deterioration in color having incorporated therein a Schiff's base, obtained by condensing an aliphatic polyamine with an aldehyde.

Pat. 2,282,710. Stabilization of Petroleum Hydrocarbons. May 12, 1942. Petroleum hydrocarbons containing a small amount of an organic compound having an amino

Aug. 24, 1937. Production of tetraethyl lead from ethylchloride and lead-sodium alloy under pressure above the normal boiling point of ethylchloride in which ethylchloride vapors evolved from the reaction are condensed, stored and reused, all in a closed circuit.

Pat. 2,158,096. Lubricant. May 16, 1939. High pressure lubricant comprising a lubricating oil or grease containing a small amount of an aliphatic acid-ester of a dibasic organic acid, the aliphatic radical containing at least 6 carbon atoms, e. g., octyl acid phthalate.

Pat. 2,224,904. Coloring of Petroleum Distillates. Dec. 17, 1940. Gasoline colored with a monoazo compound having a reddish to bluish-red shade with a bronzy fluorescence.

Pat. 2,282,710. Stabilization of Petroleum Hydrocarbons. May 12, 1942. Petroleum hydrocarbons containing a small amount of an organic compound having an amino

nitrogen atom and a divalent sulfur atom, each singly bonded to adjacent aliphatic carbon atoms, the second valence of the sulfur being satisfied by hydrogen or an aliphatic radical, e. g., bis(beta-aminoethyl)sulfide.

Pat. 2,284,267. Stabilization of Nonviscous Cracked Petroleum Distillates. May 26, 1942. Schiff's bases, of the type obtained by condensing 1 mole of an aliphatic polyamine containing at least two primary amino groups directly attached to different carbon atoms of the same open chain with at least 2 moles of an o-hydroxy substituted aromatic aldehyde so that not more than one mole of aldehyde reacts for each primary amino group of the amine, are used as vanadium deactivators in gasoline.

Pat. 2,285,853. Lubrication. June 9, 1942. A lubricant for metallic bearing surfaces consisting of a major proportion of a petroleum lubricating oil and a minor amount of an acid ester of a sulfur-free acid of phosphorus, e. g., dilauryl phosphate, dicresyl phosphate.

Pat. 2,285,854. Lubrication. June 9, 1942. A lubricant for metallic bearing surfaces consisting of a major proportion of a mineral lubricating oil and a minor amount of an aliphatic ester of a sulfur-free acid of phosphorus e. g., dilauryl phosphate.

Pat. 2,285,855. Lubrication. June 9, 1942. A lubricant for metallic bearing surfaces comprising a major proportion of a petroleum lubricating oil and a minor proportion of an organic ester of a phosphorous acid, e. g., trilorol phosphite, triphenyl phosphite.

Pat. 2,287,639. Lubricant Composition Comprising Organic Sulphonamides. June 23, 1942. A lubricant composition comprising an aqueous carrying medium containing from 10% to 80% of a sulfonamide having an organic radical attached to the sulfur atoms, e. g. cetane sulfonamide, propane sulfonamide, cyclohexane sulfonamide.

Pat. 2,291,214. Stabilization of Oils. July 28, 1942. An undissolved oil-insoluble, water-insoluble, dilute-alkali-insoluble, film-forming, basic amine resin is used to inhibit deterioration of petroleum oils.

Pat. 2,294,804. Extreme Pressure Lubricant. Sept. 1, 1942. A lubricant for metallic bearing surfaces comprising a major proportion of a mineral lubricating oil and a minor proportion of an aliphatic ester of phosphorous acid in which each aliphatic group contains from 1 to 5 carbon atoms.

Pat. 2,294,817. Extreme Pressure Lubricant. Sept. 1, 1942. A lubricant for metallic bearing surfaces comprising a major proportion of lubricating oil and a minor proportion of a member of the group consisting of reaction products of fatty oils and oxides of phosphorus, organic esters of the acids of arsenic, selenium and tellurium, oxides, sulfides and selenides of phosphorus and arsenic, oxides and sulfides of selenium and oxides of tellurium.

Pat. 2,304,623. Reaction of Ethylenimines With Thiols and Product Thereof. Dec. 8, 1942. Preparation of beta-aminoethyl sulfides which are useful as anti-corrosion and anti-sludge agents for lubricants.

Pat. 2,312,082. Color Stabilizer for Oils. Feb. 23, 1943. A viscous petroleum oil normally tending to deteriorate in color having incorporated therein a small proportion, sufficient to materially inhibit such deterioration, of a diester of an N,N-ethylene-di(beta-amino-crotonic) acid which, except for the N of the amino groups and the O of the ester groups, consists of carbon and hydrogen.

Pat. 2,325,727. Dihydroisobensofurans and Process of Preparing Them. Aug. 3, 1943. 1,3-Diaryl-4,7-dihydroisobensofurans are prepared by Diels-Alder condensation of butadienes with diaroyl ethylenes, followed by furan ring closure of the substituted cyclohexenes. Products are intermediates for lube oil fluorescent agents.

Pat. 2,336,070. Lubricating Oil. Dec. 7, 1943. A lubricant containing as a sludge dispersant an acylated polyamine in which each acyl group is derived from naphthenic acid.

Pat. 2,336,596. Stabilization of Organic Substances. Dec. 14, 1948. o-Hydroxy aromatic oxime compounds free of strongly acidic groups are metal deactivators. Example: 2-hydroxy-5-chloro-bensaldoxime.

Pat. 2,338,578. Heating Fuel Oil. Jan. 4, 1944. The combustion characteristics of liquid heating fuel oil are improved by the addition of oil-soluble compounds of chromium.

Pat. 2,341,850. Organic Compound. Feb. 15, 1944. 4,5-Diaroylcyclohexenes-1,2 useful as intermediates in the production of 1,3-diaryl-4,7-dihydro-isobensfurans, are prepared by condensing butadiene and 1,2 diaroylethylenes.

Pat. 2,341,851. Organic Compound. Feb. 15, 1944. o-Diaroylbenzenes are prepared by brominating 1,3-diaryl-4,7-dihydro isobenzofurans and then dehydrobrominating. By conversion of the o-diaroylbenzenes to 1,3-diarylisobenzofurans, products of particular value as oil fluorescent colors are obtained.

Pat. 2,343,756. Lubricant. Mar. 7, 1944. A stable lubricant comprising a lubricating oil having dissolved therein 50–500 parts per million of copper in the form of an oil-soluble compound, e. g. copper naphthenate, and 0.1%–0.5% of sulfur in the form of an oil-soluble sulfur compound, e. g. sulfurized dehydrated "Ocenol."

Pat. 2,346,665. Acid. Apr. 18, 1944. Claims an organic dihydroxamic acid wherein the two hydroxamid acid

groups are separated by a carbon containing chain of at least 4 C atoms which may be interrupted by —O—, —S—, or tertiary amino nitrogen. Products are useful in the synthesis of polymethylene diisocyanates, in the synthesis of polyamides and as metal deactivators. Examples: sebacodihydroxamic acid.

Pat. 2,353,690. Stabilization of Organic Substances. July 18, 1944. Composition comprising an organic substance normally subject to oxidation containing Cr, Fe, Co, Cu or Mn or their compounds and a metal deactivator of the formula:

R—an o-divalent aromatic radical, R'—H or hydrocarbon, R''—H or organic, X—O, S or NH, e. g., 1-salicylalaminoguanidine.

Pat. 2,356,661. Lubricating Oil. Aug. 22, 1944. A lubricant comprising a petroleum lubricating oil containing 50 to 1000 P. P. M. of copper in the form of an oil-soluble non-ionogenic organic copper compound and sulfur in the form of an oil-soluble organic sulfur compound. Example: copper-treated sulfurized dehydrated "Ocenol." The additive acts as an antioxidant.

Pat. 2,356,907. 1,3-Diarylisobensofurans and Process for Preparing the Same. Aug. 29, 1944. 1,3-diaryl-isobensofurans which are useful as oil fluorescent colors and exhibit relatively good light fastness when dissolved in oil.

Pat. 2,362,890. Viscous Hydrocarbon Oils. Nov. 14, 1944. Claims a viscous hydrocarbon oil containing an aliphatic amine salt of thiocyanic acid, e. g., dimethylamine thiocyanate, to inhibit absorption of oxygen by the oil.

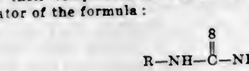
Pat. 2,363,777. Stabilization of Organic Substances. Nov. 28, 1944. A composition comprising an organic substance capable of being air-oxidised containing a metal and having incorporated therein a metal deactivator obtained by condensing one mole of an alkali metal salt of an alpha primary amino aliphatic carboxylic acid with at least one mole of an ortho hydroxy substituted aromatic aldehyde so that not more than one mole of aldehyde reacts for each primary amino group, e. g., salicylal sodium tyrosinate.

Pat. 2,363,778. Stabilization of Organic Substances. Nov. 28, 1944. A composition comprising an organic substance capable of being air-oxidized, containing a metal and as a metal deactivator a heterocyclic carboxylic acid in which the heterocyclic ring consists of one N atom and 5 C atoms, the C atom of the COOH group being bonded to the C atom of the heterocyclic ring adjacent to the N atom of the ring, e. g., pyridine, 2,4-dicarboxylic acid.

Pat. 2,370,943. Hydrocarbon Oil. Mar. 6, 1945. Claims a paraffin wax-containing hydrocarbon oil containing an amount sufficient to reduce the pour point of the oil of a linear polymeric material having a molecular weight of at least 1000 in which the chain units are dimethylene groups and N-A-2,5-pyrrolidinedione, A—aliphatic having at least 12 C., and one hydrogen of the dimethylene group is replaced by an aromatic or aromatic ether radical, e. g., a linear styrene/N-octadecyl-maleimide polymer.

Pat. 2,373,021. Stabilization of Petroleum Hydrocarbons. Apr. 3, 1945. Petroleum hydrocarbons containing a V, Mn, Fe, Co, or Cu catalyst and a guanylguanidine metal deactivator.

Pat. 2,373,049. Stabilization of Organic Substances. Apr. 3, 1945. Oxidation of organic substances, particularly petroleum hydrocarbons, containing V, Mn, Co, Cu, or their compounds is retarded by adding a metal deactivator of the formula:



R—H or an electronegative organic radical, e. g., N-(3-amino-phenyl)-thiourea.

Pat. 2,381,952. Stabilization of Organic Substances. Aug. 14, 1945. Compositions comprising an organic substance and a metal deactivator therefor obtained by condensing one mole of an o-hydroxy aromatic aldehyde with one mole of a sugar amine containing a single primary amino group, e. g., salicylaldehyde + glucamine.

Pat. 2,382,309. Phosphonamide. Aug. 14, 1945. α,β-unsaturated alkenephosphonidiamides, specifically N,N,N',N'-tetramethyl-2-propenephosphonidiamide. These phosphonamides are useful as additives for lubricating oils.

Pat. 2,382,781. Lubricant. Aug. 14, 1945. A lubricant comprising a hydrocarbon lubricating oil and a small amount of an oil-soluble ferric dialkyl dithiocarbamate, e. g., ferric diamyl dithiocarbamate which serves as an antioxidant and a corrosion inhibitor.

Pat. 2,382,904. Stabilization of Organic Substances. Aug. 14, 1945. A composition comprising an organic substance, an anti-oxidant and a metal deactivator of the formula: HO—R—N—N—R'—OH, R and R'—divalent radicals of benzene, naphthalene, or pyrazolone in which the free valences are on adjacent carbon atoms. Example: gasoline + p-bensyl-aminophenol + 2,2',4'-trihydroxyazobensene.

Pat. 2,382,905. Stabilization of Petroleum Hydrocarbons. Aug. 14, 1945. Petroleum hydrocarbons containing an antioxidant, a copper deactivator and a trithiophosphate.

Pat. 2,382,906. Stabilization of Petroleum Hydrocarbons. Aug. 14, 1945. Petroleum hydrocarbons containing an antioxidant, a copper deactivator, and a 2-mercaptothiazole.

Pat. 2,387,501. Hydrocarbon Oil. Oct. 23, 1945. A hydrocarbon oil containing at least 0.01% of oil-soluble polymeric N-aliphatic arylamide of a molecular weight of at least 1000 in which the aliphatic group has a chain of at least 8 C atoms. This oil has a reduced pour point and a high viscosity index.

Pat. 2,396,156. Stabilization of Organic Substances. Mar. 5, 1946. 3-β-methallyl-4-methallyloxydiphenylamine, which is useful as an age-resister for rubber.

Pat. 2,400,383. Tetraethyl Lead. May 14, 1946. Method of purifying tetraethyl lead containing sludge forming bismuth compounds by passing an oxygen-containing gas through tetraethyl lead until the bismuth compounds have been converted to sludge and then separating the sludge from the tetraethyl lead.

Pat. 2,401,234. Preparation of Alkylamino-Alkanethiols. May 28, 1946. Process for preparing N,N-diethylaminoalkanethiols by reacting 3 mols of diethylamine at 75°–150° C. with one mol of a chloroalkylthiolacetate having the chlorine 2–10 carbons removed from the acetylthio group.

Pat. 2,401,957. Stabilization of Petroleum Hydrocarbons. June 11, 1946. Petroleum hydrocarbons boiling below 760° F. are stabilized against deterioration on storage with a 2-aminomethyl-4-aminophenol in which 1 to 2 of the amino hydrogens are replaced by alkyl groups and 0 to 2 of the hydrogens of the 4-amino group are replaced by alkyl groups, e. g., 2-(dimethylaminomethyl)-4-aminophenol.

Pat. 2,407,261. Process for Stabilizing or Deactivating Sludges, Precipitates, and Residues Occurring or Used in the Manufacture of Tetraalkyl Leads. Sept. 10, 1946. Stabilization against ignition of tetraalkyl lead adsorbed on sludges which are precipitated from crude steam distilled tetraalkyl lead by washing with an aqueous solution of alkali metal or ammonium monosulfide, polysulfide or sulfhydrate, causing the formation and separation of the sludge from tetraalkyl lead.

Pat. 2,407,262. Process for Stabilizing or Deactivating Sludges, Precipitates, and Residues Occurring or Used in the Manufacture of Tetraalkyl Leads. Sept. 10, 1946. Stabilization against ignition of tetraalkyl lead absorbed on sludges which are precipitated from crude tetraalkyl lead by washing with an aqueous solution of a phenol containing at least one substituent of the group consisting of hydroxy, alkoxy, carboxy, aldehyde, ketone, nitro, nitroso, and ester groups attached to a ring carbon.

Pat. 2,407,263. Process for Stabilizing or Deactivating Sludges, Precipitates, and Residues Occurring or Used in the Manufacture of Tetraalkyl Leads. Sept. 10, 1946. Stabilization against spontaneous ignition of tetraalkyl lead adsorbed on sludges which are precipitated from crude tetraalkyl lead by washing with a solution of an oil soluble copper or iron salt of a carboxylic acid, as copper naphthenate or iron stearate.

Pat. 2,407,307. Process for Stabilizing or Deactivating Sludges, Precipitates, and Residues Occurring or Used in the Manufacture of Tetraalkyl Leads. Sept. 10, 1946. Stabilization against spontaneous ignition of tetraalkyl lead adsorbed on sludges which are precipitated from crude tetraalkyl lead compounds by washing with an aromatic amine in aqueous solution, as p-amino-phenol.

Isobensofurans are prepared by Diels-Alder condensation of butadienes with diaroyl ethylenes, followed by furan ring closure of the substituted cyclohexenes. Products are intermediates for lube oil fluorescent agents.

Pat. 2,362,890. Viscous Hydrocarbon Oils. Nov. 14, 1944. Claims a viscous hydrocarbon oil containing an aliphatic amine salt of thiocyanic acid, e. g., dimethylamine thiocyanate, to inhibit absorption of oxygen by the oil.

Pat. 2,382,906. Stabilized Hydrocarbons. Aug. 14, 1945. Petroleum hydrocarbons containing an antioxidant, a copper deactivator and a trithiophosphate.

Pat. 2,410,356. Purification of Tetraethyl Lead. Oct. 29, 1946. Method of purifying steam distilled tetraethyl lead containing sludge-forming impurities by washing with at least 1/5 volume of a weak aqueous solution of H_2O_2, alkali metal peroxide, alkaline earth metal peroxide, alkali metal perborate, or alkaline earth metal perborate.

Pat. 2,411,453. Apparatus for Making Alkyl Lead Compounds. Nov. 19, 1946. Apparatus for preparing lead alkyl compounds from alkyl halides and lead sodium alloys which permits a more rapid addition of the halide to the alloy, more accurate control of the reaction and pressures therein, and which allows maximum removal of heat from the reaction by the use of full flow of cooling media to the coudenser and the autoclave.

Pat. 2,414,028. Polymeric Materials. Jan. 7, 1947. A wax-like polymerisation product, useful as a lube oil additive, is made by heating in the presence of a Friedel-Crafts catalyst stearoyl chloride and a polymer in which the recurring units are

Pat. 2,426,598. Manufacturing Tetraethyl Lead in the Presence of an Anhydride. Sept. 2, 1947. Use of a carboxylic acid anhydride having a single —CO—O—CO— group, e. g., butyric anhydride, as a catalyst in the preparation of tetraethyl lead from ethyl chloride and lead monosodium alloy.

Pat. 2,426,766. Stabilization of Organic Substances. Sept. 2, 1947. Method of suppressing the catalytic effect of metal compounds on olefinic distillates comprising adding 2-hydroxy-1-naphthylidene-ortho-aminophenol thereto.

Pat. 2,426,789. Purification of Tetra Ethyl Lead. Sept. 2, 1947. Method of purifying steam distilled tetra-ethyl lead containing sludge forming impurities comprising agitating with at least 1/5 volume of a weak aqueous solution of an alkali metal or alkaline earth metal chlorite containing 1% of a non-oxidising mineral acid, settling the mixture and separating tetraethyl lead from the aqueous solution and the reaction products of the chlorite with the sludge-forming impurities.

Pat. 2,432,321. Process for Stabilising or Deactivating Sludges, Precipitates, and Residues Occurring or Used in the Manufacture of Tetraalkyl Leads. Dec. 9, 1947. Method for inhibiting spontaneous ignition of tetraalkyl lead compounds adsorbed on sludges which are precipitated from crude tetraalkyl lead compounds comprising washing the sludges with a quaternary ammonium compound in an aqueous medium.

Pat. 2,433,[illegible]. Crude tetraalkyl lead compounds by washing with an aromatic amine in aqueous solution, as p-amino-phenol.

RULES OF PRACTICE
OF
THE UNITED STATES PATENT OFFICE
IN
PATENT CASES

The following rules governing the practice and procedure in the Patent Office with respect to applications for patent and related matters, and the recognition of attorneys and agents, have been adopted and promulgated, effective March 1, 1949, under the authority of R. S. 483; 35 U. S. C. 6, R. S. 487; 35 U. S. C. 11, and other authority, after publication of proposed rules and a public hearing, and consideration of the material and arguments submitted. (The announced proposed changes in the rule relating to advertising by attorneys and agents is still under consideration.)

The new rules shall take effect March 1, 1949, except as otherwise indicated.

These rules shall apply to further proceedings in applications pending on such date and also to further inter partes action in contested cases pending on such date, except to the extent that, in the opinion of the Commissioner, their application to a particular case pending when these rules take effect, or to a particular action or paper in such case, would not be feasible or would work injustice, in which event the rules in effect immediately prior to March 1, 1949, shall apply to such case, action or paper.

Rules 192 to 195 shall not apply to appeals from final rejections of the primary examiners made before March 1, 1949, and appeals to the Board of Appeals from such rejections shall be governed by the applicable rules in effect prior to March 1, 1949.

Rule 302 shall not apply to cases in which the time for appeal had expired prior to March 1, 1949.

These rules were published in the Federal Register for December 31, 1948. In the Federal Register and in the Code of Federal Regulations these rules are Part 1 of Title 37, Patents, Trade-Marks and Copyrights, Subchapter A, Patents, and the individual rules, there called sections, are numbered with the part number and a decimal point prefixed to the numbers to the rules here used; thus section 1.33 in the Federal Register and Code of Federal Regulations is here termed rule 33.

A pamphlet edition of these rules, containing forms and additional supplementary material is in course of preparation.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

GENERAL INFORMATION AND CORRESPONDENCE

1 All communications to be addressed to Commissioner of Patents.
2 Business to be transacted in writing.
3 Business to be conducted with decorum and courtesy.
4 Nature of correspondence.
5 Identification of application or patent.
6 Receipt of letters and papers.
7 Times for taking action; expiration on Sunday or holiday.

RECORDS AND FILES OF THE PATENT OFFICE

11 Patent files open to the public.
12 Assignment records open to public inspection.
13 Copies and certified copies.
14 Applications preserved in secrecy.

FEES AND PAYMENT OF MONEY

21 Fees and charges.
22 Fees payable in advance.
23 Method of payment.
24 Coupons.
25 Deposit accounts.
26 Refunds.

PROSECUTION OF APPLICATION AND APPOINTMENT OF ATTORNEY OR AGENT

31 Applicants may be represented by an attorney or agent.
32 Prosecution by assignee.
33 Correspondence when no attorney or agent.
34 Power of attorney or authorization.
35 Correspondence held with attorney.
36 Revocation of power of attorney or authorization; withdrawal of attorney or agent.

WHO MAY APPLY FOR A PATENT

41 Only inventor may apply for patent.
42 When the inventor is dead.
43 When the inventor is insane.
44 Proof of authority.
45 Joint inventors.
46 Assigned inventions and patents.
47 Applicant.

THE APPLICATION

51 General requisites of an application.
52 Language, paper, writing, margin.
53 Application accepted and filed for examination only when complete.
54 Parts of application to be filed together.
55 Serial number and filing date of application.
56 Improper applications.
57 Signatures.
58 Single signature form.
59 Papers of complete application not to be returned.

PETITION

61 Petition.

THE OATH

65 Oath of applicant.
66 Officers authorized to administer oaths.
67 Supplemental oath for matter not originally claimed.

SPECIFICATION

71 Detailed description and specification of the invention.
72 Title of the invention.
73 Summary of the invention.
74 Reference to drawings.
75 Claim.
76 Signature to the specification.
77 Arrangement of specification.
78 Cross-references to other applications.
79 Reservation clauses not permitted.

THE DRAWINGS

81 Drawings required.
82 Signature to drawing.
83 Content of drawing.
84 Standards for drawings.
85 Informal drawings.
86 Draftsman to make drawings.
87 Return of drawings.
88 Use of old drawings.

MODELS, EXHIBITS, SPECIMENS

91 Models not generally required as part of application or patent.
92 Model or exhibit may be required.
93 Specimens.
94 Return of models, exhibits or specimens.
95 Copies of exhibits.

EXAMINATION OF APPLICATIONS

101 Order of examination.
102 Advancement of examination.
103 Suspension of action.
104 Nature of examination; examiner's action.
105 Completeness of examiner's action.
106 Rejection of claims.
107 Citation of references.
108 Abandoned and forfeited applications not cited.

ACTION BY APPLICANT AND FURTHER CONSIDERATION

111 Reply by applicant.
112 Re-examination and reconsideration.
113 Final rejection or action.

AMENDMENTS

115 Amendment by applicant.
116 Amendments after final action.
117 Amendment and revision required.
118 Amendment of disclosure.
119 Amendment of claims.
121 Manner of making amendments.
122 Entry and consideration of amendments.
123 Amendments to the drawing.
124 Amendment of amendments.
125 Substitute specification.
126 Numbering of claims.
127 Petition from refusal to admit amendment.

AFFIDAVITS OVERCOMING REJECTIONS

131 Affidavit of prior invention to overcome cited patent or publication.
132 Affidavits traversing grounds of rejection.

INTERVIEWS

133 Interviews.

TIME FOR RESPONSE BY APPLICANT; ABANDONMENT OF APPLICATION

135 Abandonment for failure to respond within time limit.
136 Time less than six months.
137 Revival of abandoned application.
138 Express abandonment.

JOINDER OF INVENTIONS IN ONE APPLICATION; DIVISION

141 Different inventions in one application.
142 Requirement for division.
143 Reconsideration of requirement.
144 Appeal from requirement for division.
145 Subsequent presentation of claims for different inventions.
146 Election of species.
147 Separate application for invention not elected.

DESIGN PATENTS

151 Rules applicable.
152 Drawing.
153 Title, description and claim.
154 Arrangement of specification.
155 Term of design patent.

PLANT PATENTS

161 Rules applicable.
162 Applicant, oath.
163 Specification.
164 Claim.
165 Drawings.
166 Specimens.
167 Examination.

REISSUES

171 Application for reissue.
172 Applicants, assignees.
173 Specification.
174 Drawings.
175 Reissue oath.
176 Examination of reissue.
177 Reissue in divisions.
178 Original patent.
179 Notice of reissue application.

PETITIONS AND ACTION BY THE COMMISSIONER

181 Petition to the Commissioner.
182 Questions not specifically provided for.
183 Suspension of rules.
184 Reconsideration of cases decided by former Commissioners.

APPEALS TO THE BOARD OF APPEALS

191 Appeal to the Board of Appeals.
192 Appellant's brief.
193 Examiner's answer.
194 Hearing.
195 Affidavits after appeal.
196 Decision by the Board of Appeals.
197 Action following decision.
198 Reopening after decision.

INTERFERENCES: DEFINITION, PREPARATION, DECLARATION

201 Definition; when declared.
202 Preparation for interference between applications; preliminary inquiry of junior applicant.
203 Preparation for interference between applications; suggestion of claims for interference.
204 Interference with a patent; affidavit by junior applicant.
205 Interference with a patent; copying claims from patent.
206 Interference with a patent; claims improperly copied.
207 Preparation of interference notices and statements.
208 Conflicting parties having same attorney.
209 Declaration of interference; mailing of notices.
211 Jurisdiction of interference.
212 Suspension of ex parte prosecution.

INTERFERENCES: PRELIMINARY STATEMENT

215 Preliminary statement required.
216 Contents of the preliminary statement.
217 Contents of the preliminary statement; invention made abroad.
218 Time for filing preliminary statement.
219 Statements sealed before filing.
221 Defective statements.
222 Correction of statement on motion.
223 Effect of statement.
224 Reliance on prior application.
225 Failure of junior party to file statement or to overcome filing date of senior party.
226 Notice and access to applications.
227 Access to preliminary statements.

INTERFERENCES: MOTION PERIOD, DISSOLUTION, REFORMATION

231 Motion period.
232 Motions to dissolve.
233 Motions to amend.
234 Motion to include another application.
235 Motions relating to burden of proof.
236 Hearing and determination of motions.
237 Dissolution on motion of examiner.
238 Addition of new party by examiner.

INTERFERENCES: MISCELLANEOUS PROVISIONS

241 Copies of part of application.
242 Prosecution by assignee.
243 Motions before the Examiners of Interference.
244 Motions; miscellaneous provisions.
245 Extensions of time.
246 Stay of proceedings.
247 Service of papers.
248 Service of papers; manner of service.

INTERFERENCES: TRIAL

251 Assignment of times for taking testimony.
252 Failure of junior party to take testimony.
253 Copies of the testimony.
254 Briefs at final hearing.
255 Requests for findings of fact and conclusions of law.
256 Final hearing.
257 Burden of proof.
258 Matters considered in determining priority.
259 Recommendation by Board of Interference Examiners.

INTERFERENCES: TERMINATION

261 Termination of interference.
262 Disclaimer, concession, abandonment.
263 Statutory disclaimer by patentee.
264 Reissue filed by patentee.
265 Status of claims of defeated applicant after interference.
266 Action after interference.
267 Second interference.

TESTIMONY IN INTERFERENCES AND OTHER CONTESTED CASES

271 Evidence must comply with rules.
272 Manner of taking testimony of witnesses.
273 Notice of examination of witnesses.
274 Persons before whom depositions may be taken.
275 Examination of witnesses.
276 Certification and filing by officer.
277 Form of deposition.
278 Depositions must be filed.
279 Inspection of testimony.
281 Additional time for taking testimony.
282 Official records and printed publications.
283 Testimony taken in another interference or action.
284 Testimony taken in foreign countries.
285 Effect of errors and irregularities in depositions.
286 Objections to admissibility.

PROTESTS AND PUBLIC USE PROCEEDINGS

291 Protests to the grant of a patent.
292 Public use proceedings.

APPEAL TO THE U. S. COURT OF CUSTOMS AND PATENT APPEALS

301 Appeal to court.
302 Notice and reasons of appeal.

CIVIL ACTION UNDER R. S. 4915

306 Civil action under R. S. 4915.

ALLOWANCE AND ISSUE OF PATENT

311 Notice of allowance.
312 Amendments after allowance.
313 Withdrawal from issue.
314 Issuance of patent.
315 Delivery of patent.
316 Forfeited application.
317 Delayed payment of final fee.

DISCLAIMER

321 Statutory disclaimer in patent.

CORRECTION OF ERRORS IN PATENT

322 Certificate of correction.
323 Other mistakes not corrected.

ASSIGNMENTS AND RECORDING

331 Recording of assignments.
332 Receipt and recording.
333 Conditional assignments.
334 Issue of patent to assignee.

RECOGNITION OF ATTORNEYS AND AGENTS

341 Registration of attorneys and agents.
342 Limited recognition.
343 Persons not registered or recognized.
344 Professional conduct.
345 Advertising.
346 Signature and certificate of attorney.
347 Removing names from registers.
348 Suspension or disbarment proceedings.

AMENDMENT OF RULES

351 Amendments to rules will be published.
352 Publication of notice of proposed amendments.

GENERAL INFORMATION AND CORRESPONDENCE

1 **All communications to be addressed to The Commissioner of Patents.** All letters and other communications intended for the Patent Office must be addressed to "The Commissioner of Patents," Washington 25, D. C. When appropriate, a letter may be marked for the attention of a particular officer or individual.

[Rule 2] [1]

2 **Business to be transacted in writing.** All business with the Patent Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent Office is unnecessary. The action of the Patent Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

[Rules 1, 4]

3 **Business to be conducted with decorum and courtesy.** Applicants and their attorneys or agents are required to conduct their business with the Patent Office with decorum and courtesy. Papers presented in violation of this requirement will be submitted to the Commissioner and will be returned by his direct order. Complaints against examiners and other employees must be made in communications separate from other papers.

[Rule 22a, b]

4 **Nature of correspondence.** (a) Correspondence with the Patent Office comprises (1) correspondence relating to services and facilities of the Office, such as general inquiries, requests for publications supplied by the Office, orders for printed copies of patents, orders for copies of records, transmission of assignments for recording, and the like, and (2) correspondence in and relating to a particular application or other proceeding in the Office. See particularly the rules relating to the filing and prosecution of applications or other proceedings (rule 31 and following rules).

(b) Since different matters may be considered by different branches or sections of the Patent Office, each distinct subject, inquiry or order should be contained in a separate letter to avoid confusion and delay in answering letters dealing with different subjects.

[Rule 8]

5 **Identification of application or patent.** (a) When a letter concerns an application for patent, it should state the name of the applicant, the title of the invention, the serial number of the application, the date of filing the same, and, if known, the division to which it has been assigned (see rule 55).

(b) When the letter concerns a patent, it should state the number and date of issue of the patent, the name of the patentee, and the title of the invention.

[Rules 9, 10]

6 **Receipt of letters and papers.** (a) Letters and other papers received in the Patent Office are stamped with the date of receipt.

(b) Mail placed in the Patent Office pouch up to midnight on weekdays, excepting holidays, by the post office at Washington, D. C., serving the Patent Office, is considered as having been received in the Patent Office on the day it was so placed in the pouch.

(c) In addition to being mailed or delivered by hand during office hours, letters and other papers may be deposited up to midnight in a box provided at the guard's desk at the 14th and E Street entrance of the Patent Office on week-days except Saturdays, and at the main entrance of the Commerce Building on Saturdays, excepting holidays, and all papers deposited therein are considered as received in the Patent Office on the day of deposit.

(d) No papers are received in the Patent Office on Sundays or holidays within the District of Columbia.

[Rule 12]

7 **Times for taking action; expiration on Sunday or holiday.** Whenever periods of time are specified in these rules in days, calendar days are intended unless otherwise indicated. When the day, or the last day, fixed by statute or by or under these rules for taking any action or paying any fee falls on Sunday, or on a holiday within the District of Columbia, the action may be taken, or the fee paid, on the next succeeding day which is not a Sunday or a holiday.

[Rule 31, par. 6]

[1] The number of the old rule approximately corresponding in whole or in part to the new rule is placed in brackets following each rule.

RECORDS AND FILES OF THE PATENT OFFICE

11 **Patent files open to the public.** After a patent has been issued, the specification, drawings, and all papers relating to the case in the file of the patent are open to inspection by the general public, and copies may be furnished upon paying the fee therefor. The file of any terminated interference involving a patent, or an application on which a patent has subsequently issued, is similarly open to public inspection and procurement of copies.

[Rule 16]

12 **Assignment records open to public inspection.** The assignment records, including digests and indexes, are open to public inspection and copies of any instrument recorded may be obtained upon payment of the fee therefor. An order for a copy of an assignment should give the liber and page of the record. If identified only by the name of the patentee and number of the patent, or by name of the applicant and serial number of the application, an extra charge will be made for the time consumed in making a search for such assignment.

[Rule 192]

13 **Copies and certified copies.** (a) Copies of patents and of any records, books, papers, or drawings belonging to the Patent Office and open to the public, will be furnished by the Patent Office to any person, and copies of other records or papers will be furnished to persons entitled thereto, upon payment of the fee therefor.

(b) Such copies will be authenticated by the seal of the Patent Office and certified by the Commissioner, or in his name attested by a chief of division, duly designated by the Commissioner, upon payment of the fee for the authentication certificate in addition to the fee for the copies.

[Rule 193]

14 **Applications preserved in secrecy.** (a) Pending applications are preserved in secrecy. No information will be given by the Office respecting the filing by any particular person of an application for a patent, the pendency of any particular case before it, or the subject matter of any particular application, nor will access be given to or copies furnished of any pending application or papers relating thereto, without written authority of the applicant, or his assignee or attorney or agent, unless it shall be necessary to the proper conduct of business before the Office or as provided by these rules.

(b) Abandoned applications are likewise not open to public inspection, except that if an application referred to in a United States patent is abandoned and is available, it may be inspected or copies obtained by any person on written request, without notice to the applicant. Abandoned applications may be destroyed after twenty years from their filing date, except those to which particular attention has been called and which have been marked for preservation. Abandoned applications will not be returned.

(c) Applications for patents which disclose or which appear to disclose, or which purport to disclose, inventions or discoveries relating to atomic energy are reported to the Atomic Energy Commission and the Commission will be given access to such applications, but such reporting does not constitute a determination that the subject matter of each application so reported is in fact useful or an invention or discovery or that such application in fact discloses subject matter in categories specified by sec. 11 (d) of the Atomic Energy Act of 1946, 60 Stat. 768, 42 U. S. C. 1811.

[Rule 15]

FEES AND PAYMENT OF MONEY

21 **Fees and charges.** The following is the schedule of fees and charges to be paid to the Patent Office:

1. Filing fee. On filing each original application for a patent having 20 claims or less, except in design cases	$30.00
For each additional claim over 20	1.00
2. Final fee. On issuing each original patent having 20 claims or less, except in design cases	30.00
For each additional claim over 20	1.00
3. Filing fee, designs. In design cases: For term of 3 years and 6 months	10.00
For term of 7 years	15.00
For term of 14 years	30.00
4. Filing fee, reissues. On every application for the reissue of a patent	30.00
5. On filing each petition for the revival of an abandoned application for patent	10.00
6. On filing each petition for the delayed payment of the final fee	10.00
7. On an appeal for the first time from the Primary Examiner to the Board of Appeals	15.00
8. On filing each disclaimer	10.00
9. For certification of copies of records, etc., in any case, in addition to the cost of copy certified	.50
10. For typewritten manuscript copies of records, for every 100 words or fraction thereof	.10
11. For photostat copies of records or printed material, per sheet	.20
12. For photo prints of drawings, for each sheet of drawing	.20
13. For uncertified printed copies of the specifications and accompanying drawings of patents, except design patents, if in print, each	.25
14. For certified copies of patents if in print: For specification and drawing, per copy	.25
For the certificate	.50
For the grant	.50
15. For uncertified printed copies of design patents, if in print	.10
16. For recording every assignment, agreement, or other paper, not exceeding six pages	3.00
For each additional patent or application included or involved in one writing, where more than one is so included or involved, additional	.50
For each additional two pages or less	1.00

17. For abstracts of title to each patent or application:	
For the search, one hour or less, and certificate	3.00
Each additional hour or fraction thereof	1.50
For each brief from the digest of assignments, of 200 words or less	1.00
Each additional 100 words or fraction thereof	.10
18. For title reports required for Office use	1.00
19. For translations, made only of references cited in applications or of papers filed in the Office, for every 100 words or fraction thereof	1.25
20. On admission to practice as an attorney or agent	5.00
21. For certificate of good standing as an attorney or agent	1.00
22. For making drawings, when they can be made by the Patent Office, the cost of making the same, minimum charge per sheet	15.00
23. For correcting drawings, the cost of making the correction, minimum charge	1.00
24. For the mounting of unmounted drawings and photoprints received with patent applications, provided they are of approved permanency	1.00
25. For photographic prints of patent models, building facilities, etc., if available:	
For 5 x 7 photographic print	.50
For 8 x 10 photographic print	.75
26. Searching for and supplying list of references cited in the file of a patent issued before February 4, 1947 (this list is printed on the copies of patents issued on and after February 4, 1947), for list and time involved, one hour or less, $1.50, and $1.50 for each additional hour or fraction.	
27. Search of records to determine the filing by any particular person of applications for patents, on presentation of proper authorization, one hour or less	1.50
28. Subscription orders for printed copies of patents as issued: Annual service charge for entry of order and one subclass, $1.00, and 10 cents for each additional subclass; amount to be deposited (for the price of the copies supplied), as determined with respect to each order.	
29. Lists of U. S. patents classified in a subclass, made to order, per sheet (containing 100 patent numbers or less)	.20
30. Local delivery box rental, annual	5.00

NOTE: The Official Gazette and other publications in the following list are sold, and the prices therefor established, by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., to whom all communications respecting the same should be addressed (except with respect to items indicated as supplied by the Patent Office only).

Official Gazette of the United States Patent Office:	
Annual subscription, domestic	$17.50
Including indexes of patents and trade-marks, paper bound $21.00; cloth bound $24.50.	
Annual subscription, foreign	26.50
Including indexes of patents and trade-marks, paper bound $31.00; cloth bound $34.50.	
Single numbers	.35
Portions of the Official Gazette supplied separately:	
Decision leaflets, domestic $2.50, foreign $4.25, per annum; single numbers	.05
Trade-mark section, domestic $8.00, foreign $10.00, per annum; single numbers	.20
Weekly index pages (supplied only by Patent Office), $2.50 per annum; single numbers	.05
Weekly page or pages of classification of patents issued that week (supplied only by the Patent Office), $2.50 per annum; single numbers	.05
Annual index relating to patents; price varies, 1947 volume, $4.00 cloth; paper	2.00
Annual index relating to trade-marks; price varies, 1947 volume, $3.00 cloth; paper	1.75
Decisions of the Commissioner of Patents; price varies, 1946 volume, buckram	2.00
Classification Bulletins published from time to time (also supplied by the Patent Office), price varies for different numbers, according to size, from 10 to 35 cents.	
Manual of Classification of Patents (July, 1947)	4.00

[Rule 191]

22 **Fees payable in advance.** Fees and charges payable to the Patent Office are required to be paid in advance, that is, at the time of making application for any action by the Office for which a fee or charge is payable.

[Rule 190]

23 **Method of payment.** All payments of money required for Patent Office fees should be made in United States specie, Treasury notes, national bank notes, post office money orders or postal notes payable in Washington, D. C., or by certified checks. If sent in any other form, the Office may delay or cancel the credit until collection is made. Money orders and checks must be made payable to the Commissioner of Patents. Remittances from foreign countries must be payable and immediately negotiable in the United States for the full amount of the fee required. Money sent by mail to the Patent Office will be at the risk of the sender; letters containing money should be registered.

[Rule 194]

24 **Coupons.** Coupons in denominations of ten cents and twenty-five cents are sold by the Patent Office for the convenience of regular purchasers of printed copies of patents and designs (and also of trade-mark registrations); these coupons may also be used for small remittances. The ten-cent coupons are sold individually and in pads of 20 for $2.00 and books of 100 with stubs for record for $10.00. The twenty-five cent coupons are sold individually and in pads of 20 for $5.00 and in books of 100 with stubs for record for $25.00. These coupons are good until used; they may be transferred but cannot be redeemed.

NOTE: Public document coupons issued by the Superintendent of Documents cannot be used in the Patent Office, nor can the coupons issued by the Patent Office be used at the Government Printing Office or elsewhere.

25 **Deposit accounts.** (a) For the convenience of attorneys, agents and the general public, in ordering services offered by the Office, copies of records, etc., special deposit accounts may be established in the Patent Office. A minimum deposit of $25 or more, depending on the activity of the individual account, is required. At the close of each month's business, a statement will be rendered. Whenever the statement shows that the account has fallen below the required minimum balance, a remittance must be made to cover the deficiency. An amount sufficient to cover all services, copies, etc., requested must always be on deposit.

(b) **Filing, final, appeal and petition fees** will not be charged against these accounts.

26 **Refunds.** Money paid by actual mistake or in excess, such as a payment not required by law, will be refunded, but a mere change of purpose after the payment of money, as when a party desired to withdraw his application for a patent or to withdraw an appeal, will not entitle a party to demand such a return. Amounts of ten cents or less will not be returned unless specifically demanded, within a reasonable time, nor will the payer be notified of such amount; amounts over ten cents but less than one dollar may be returned in postage stamps, and other amounts by check.

[Rule 195]

PROSECUTION OF APPLICATION AND APPOINTMENT OF ATTORNEY OR AGENT

31 **Applicants may be represented by an attorney or agent.** An applicant for patent may file and prosecute his own case, or he may be represented by an attorney or agent authorized to practice before the Patent Office in patent cases. The Patent Office cannot aid in the selection of an attorney or agent.

[Rule 17, par. 1]

32 **Prosecution by assignee.** The assignee of record of the entire interest in an application for patent is entitled to conduct the prosecution of the application to the exclusion of the inventor.

[Rule 5]

33 **Correspondence when no attorney or agent.** When no attorney or agent has been appointed, all notices, official letters and other communications in the case will be sent to the applicant, or to the assignee of the entire interest if the applicant or such assignee so request, or to the assignee of an undivided part if the applicant so request, at the post office address of which the Office has been notified in the case. Amendments and other papers filed in the application must be signed by the applicant, or if there is an assignee of an undivided part interest, by the applicant and such assignee, or if there is an assignee of the entire interest, by such assignee.

[Rule 73, par. 3]

34 **Power of attorney or authorization.** Before any attorney or agent, original or associate, will be allowed to inspect papers or take action of any kind in any application or proceeding, a written power of attorney or authorization, from the person or persons entitled to prosecute the application or from the principal attorney or agent in the case of an associate attorney or agent, must be filed in that particular application or proceeding.

[Rule 18]

35 **Correspondence held with attorney.** When an attorney or agent shall have filed his power of attorney, or authorization, duly executed, the correspondence will be held with him; notices, official letters and other communications in the case intended for the applicant will be sent to the attorney or agent at the address of which notice shall have been given in the case, and replies to Office actions, or other actions in the case, will be received from him. Double correspondence with an applicant and his attorney or agent, or with two representatives, will not be undertaken. If more than one attorney or agent be appointed, correspondence will be held with the one last appointed unless otherwise requested.

[Rule 7]

36 **Revocation of power of attorney or authorization; withdrawal of attorney or agent.** A power of attorney or authorization of agent may be revoked at any stage in the proceedings of a case, and an attorney or agent may withdraw, upon application to and approval by the Commissioner; and when it is so revoked, or the attorney or agent so withdrawn, the Office will communicate directly with the applicant, or with such other attorney or agent as he may appoint. An attorney or agent will be notified of the revocation of his power of attorney or authorization and the applicant will be notified of the withdrawal of the attorney or agent. An assignment will not of itself operate as a revocation of a power or authorization previously given, but the assignee of the entire interest may revoke previous powers and be represented by an attorney or agent of his own selection.

[Rule 20]

WHO MAY APPLY FOR A PATENT

41 **Only inventor may apply for patent.** Only the actual inventor may apply for a patent and the application papers must be signed and the necessary oath executed by the inventor, unless the inventor is dead or insane. See rule 147.

42 **When the inventor is dead.** In case of the death of the inventor, the executor or administrator of the deceased inventor may sign the application papers and make the necessary oath, and apply for and obtain the patent. Where the inventor dies during the time intervening between the filing of his application and the granting of a patent thereon, the letters patent may be issued to the executor or administrator upon proper intervention by him.

[Rule 25, par. 1]

43 **When the inventor is insane.** In case an inventor becomes insane, the legally appointed guardian, conservator, or representative of the insane inventor may sign the application papers and make the necessary oath, and apply for and obtain the patent.

[Rule 25, par. 2]

44 **Proof of authority.** In the cases mentioned in rules 42 and 43, proof of the power or authority of the executor or administrator, or of the guardian, conservator, or representative, must be recorded in the Patent Office before the grant of a patent.

45 **Joint inventors.** (a) Joint inventors must apply for a patent jointly and each must sign the application papers and make the required oath; neither of them alone, nor less than the entire number, can apply for a patent for an invention invented by them jointly.

(b) If an application for patent has been made inadvertently or by mistake and without fraudulent intention by two or more persons as joint inventors when they were not in fact joint inventors, the application may be amended to remove the names of those not inventors upon filing a statement of the facts verified by all of the original applicants, and an oath as required by rule 65 by the applicant who is the actual inventor, provided the amendment is diligently made. An application can not be amended to add the name of a joint inventor who was omitted, but a new independent application must be filed.

[Rule 28]

46 **Assigned inventions and patents.** In case the whole or a part interest in the invention or in the patent to be issued is assigned, the application must still be made by the inventor as indicated in rules 41 and 45, or by one of the persons mentioned in rules 42 and 43. However, the patent may be issued to the assignee or jointly to the inventor and the assignee as provided in rule 334.

[Rule 26]

47 **Applicant.** Unless the contrary is indicated, the word "applicant" when used in these rules refers to the inventor (rule 41), joint inventors who have applied for a patent (rule 45), or to the person mentioned in rule 42 or 43 who has applied for a patent in place of the inventor.

THE APPLICATION

51 **General requisites of an application.** Applications for patents must be made to the Commissioner of Patents. A complete application comprises:

(a) A petition or request for a patent, see rule 61.

(b) A specification, including a claim or claims, see rules 71 to 77.

(c) An oath, see rule 65.

(d) Drawings, when necessary, see rules 81 to 88.

(e) The prescribed filing fee. (See rule 21 for filing fees.)

[Rule 30]

52 **Language, paper, writing, margins.** (a) The petition, specification, and oath must be in the English language. All papers which are to become a part of the permanent records of the Patent Office must be legibly written or printed in permanent ink.

(b) The specification and claims, and also papers subsequently filed, must be plainly written on but one side of the paper. A wide margin must be reserved on the left-hand side and on the top of each page and the lines must not be crowded too closely together. Legal paper, 8 to 8½ by 12½ to 13 inches, typewritten and double spaced with margins of one and one-half inches on the left-hand side and top is deemed preferable. Typewritten or printed papers suitable for use by the Office may be required if the papers originally filed are not correctly, legibly and clearly written.

(c) Any interlineation, erasure or cancellation or other alteration made before the application was signed and sworn to should be clearly referred to in a marginal note or footnote on the same sheet of paper, and initialed or signed and dated by the applicant to indicate such fact. (See rule 56.)

[Rules 30, 45]

53 **Application accepted and filed for examination only when complete.** An application for a patent will not be accepted and placed upon the files for examination until all its required parts, complying with the rules relating thereto, are received, except that certain minor informalities may be waived subject to subsequent correction whenever required.

If the papers and parts are incomplete, or so defective that they cannot be accepted as a complete application for examination, the applicant will be notified; the papers will be held six months for completion and, if not by then completed, will be stored as an abandoned incomplete application and eventually destroyed or otherwise disposed of; the fee submitted will be refunded.

[Rule 31, pars. 1, 5]

54 **Parts of application to be filed together.** It is desirable that all parts of the complete application be deposited in the Office together; otherwise a letter must accompany each part, accurately and clearly connecting it with the other parts of the application.

[Rule 32]

55 **Serial number and filing date of application.** Complete applications are numbered in regular order, and the applicant will be informed of the serial number and filing date of the application by a filing receipt. The filing date of the application is the date on which the complete application, acceptable for placing on the files for examination, is received in the Patent Office; or the date on which the last part completing such application is received in the case of an incomplete or defective application completed within six months.

NOTE. See R. S. 4887; 35 U. S. C. 32, second paragraph, for right to rely on filing date of foreign application.

[Rule 31, pars. 3, 4]

56 **Improper applications.** Any application signed or sworn to in blank, or without actual inspection by the applicant, and any application altered or partly filled in after being signed or sworn to, and also any application fraudulently filed or in connection with which any fraud is practiced or attempted on the Patent Office, may be stricken from the files.

[Rule 31, par. 2]

57 **Signatures.** The petition, the specification and claim, and the oath, must be signed by the applicant in person. Full names must be given, including the full first name without abbreviation, and the middle initial or name if any.

58 **Single signature form.** The petition, oath, specification and claim, and power of attorney may be included in a single document and may be executed by a single signature of the applicant if an approved single signature form supplied by the Office or approved by the Office is used.

[Rule 30A]

59 **Papers of complete application not to be returned.** The papers in a complete application will not be returned for any purpose whatever. If applicants have not preserved copies of the papers, the Office will furnish copies at the usual cost. See rule 87 for return of drawing.

[Rule 72, par. 1]

PETITION

61 **Petition.** The petition must be addressed to the Commissioner of Patents and must state the name, residence, and post office address of the petitioner and request the grant of a patent; designate by title the invention sought to be patented; contain a reference to the specification for a full disclosure of such invention; and must be signed by the applicant in person.

The power of attorney or authorization of agent may be incorporated in the petition.

In the single signature form, the statements above required for a separate petition do not all appear in the petition paragraph and are differently arranged. (See rule 58.)

[Rule 33]

THE OATH

65 **Oath of applicant.** (a) The applicant, if the inventor, must make oath or affirmation that he does verily believe himself to be the original and first inventor or discoverer of the art, machine, manufacture, composition, or improvement, or of the variety of plant, for which he solicits a patent; that he does not know and does not believe that the same was ever known or used before his invention or discovery thereof, and shall state of what country he is a citizen and where he resides, and whether he is a sole or joint inventor of the invention claimed in his application. In every original application the applicant must distinctly state under oath that to the best of his knowledge and belief the invention has not been in public use or on sale in the United States for more than one year prior to his application, or patented or described in any printed publication in any country before his invention or more than one year prior to his application, or patented in any foreign country on an application filed by himself or his legal representatives or assigns more than twelve months prior to his application in this country. If any application for patent has been filed in any foreign country by the applicant in this country, or by his legal representative or assigns, prior to his application in this country, he shall state the country or countries in which such application has been filed, giving the date of such application, and shall also state that no application has been filed in any other country or countries than those mentioned, and if no application for patent has been filed in any foreign country, he shall so state. This oath must be subscribed to by the affiant.

(b) If the application be made by an executor or administrator of a deceased person or the guardian, conservator, or representative of an insane person, the oath shall state the relationship of the affiant to the inventor and, upon information and belief, the facts which the inventor is required by this rule to make oath to.

(c) An additional oath may be required if the application has not been filed in the Patent Office within a reasonable time after the execution of the original oath.

(d) In the case of applications for patent for inventions to which section 3 of 61 Stat. 794; Public Law 380, August 6, 1947; 35 U.S.C., Supp., 101 note, applies, the oath should include a statement that the invention was not made before January 1, 1946, or was not made before January 1, 1946 in Germany or Japan or in the territory of any other of the Axis Powers or in any territory occupied by the Axis forces. If not included in the oath, a separate affidavit will be required.

[Rule 46]

66 **Officers authorized to administer oaths.** (a) The oath or affirmation may be made before any person within the United States authorized by law to administer oaths, or, when the applicant resides in a foreign country, before any minister, chargé d'affaires, consul, or commercial agent holding commission under the Government of the United States, or before any notary public, judge, or magistrate having an official seal and authorized to administer oaths in the foreign country in which the applicant may be, whose authority shall be proved by a certificate of a diplomatic or consular officer of the United States, the oath being attested in all cases in this and other countries, by the proper official seal of the officer before whom the oath or affirmation is made, except that no oath or affirmation may be administered by any attorney or agent appearing in the case. When the person before whom the oath or affirmation is made in this country is not provided with a seal, his official character shall be established by competent evidence, as by a certificate from a clerk of a court of record or other proper officer having a seal.

(b) When the oath is taken before an officer in a country foreign to the United States, all the application papers, except the drawings, must be attached together and a ribbon passed one or more times through all the sheets of the application, except the drawings, and the ends of said ribbon brought together under the seal before the latter is affixed and impressed, or each sheet must be impressed with the official seal of the officer before whom the oath is taken. If the papers as filed are not properly ribboned or each sheet impressed with the seal, the case will be accepted for examination but before it is allowed, duplicate papers, prepared in compliance with the foregoing sentence, must be filed.

[Rule 47]

67 **Supplemental oath for matter not originally claimed.** (a) When an applicant presents a claim for matter originally shown or described but not substantially embraced in the statement

of invention or claim originally presented, he shall file a supplemental oath to the effect that the subject matter of the proposed amendment was part of his invention; that he does not know and does not believe that the same was ever known or used before his invention or discovery thereof, or patented or described in any printed publication in any country before his invention or discovery thereof, or more than one year before his application, or in public use or on sale in the United States for more than one year before the date of his application, that said invention has not been patented in any foreign country on an application filed by himself or his legal representatives or assigns more than twelve months prior to his application in the United States, and has not been abandoned. Such supplemental oath should accompany and properly identify the proposed amendment, otherwise the proposed amendment may be refused consideration.

(b) In proper cases the oath here required may be made on information and belief by an executor or administrator of a deceased person or a guardian, conservator, or representative of an insane person.

[Rule 48]

SPECIFICATION

71 **Detailed description and specification of the invention.** (a) The specification must include a written description of the invention or discovery and of the manner and process of making, constructing, compounding, and using the same, and is required to be in such full, clear, concise, and exact terms as to enable any person skilled in the art or science to which the invention or discovery appertains, or with which it is most nearly connected, to make, construct, compound, and use the same.

(b) The specification must set forth the precise invention for which a patent is solicited, in such manner as to distinguish it from other inventions and from what is old. It must describe completely a specific embodiment of the process, machine, manufacture, composition of matter or improvement invented, and must explain the mode of operation or principle whenever applicable. The best mode devised by the inventor of carrying out his invention must be set forth.

(c) In the case of an improvement, the specification must particularly point out the part or parts of the process, machine, manufacture, or composition of matter to which the improvement relates, and the description should be confined to the specific improvement and to such parts as necessarily cooperate with it or as may be necessary to a complete understanding or description of it.

[Rules 34, 35, 36]

72 **Title of the invention.** The title of the invention, which should be as short and specific as possible, should appear as a heading on the first page of the specification.

73 **Summary of the invention.** A brief summary of the invention indicating its nature and substance, which may include a statement of the object of the invention, should precede the detailed description. Such summary should, when set forth, be commensurate with the invention as claimed and any object recited should be that of the invention as claimed.

74 **Reference to drawings.** When there are drawings, there shall be a brief description of the several views of the drawings and the detailed description of the invention shall refer to the different views by specifying the numbers of the figures, and to the different parts by use of reference letters or numerals (preferably the latter).

[Rule 38]

75 **Claim.** (a) The specification must conclude with a claim particularly pointing out and distinctly claiming the part, improvement, or combination which the applicant regards as his invention or discovery.

(b) More than one claim may be presented, provided they differ substantially from each other and are not unduly multiplied.

(c) When more than one claim is presented, they may be placed in dependent form in which a claim may refer back to and further restrict a single preceding claim.

(d) The claim or claims must conform to the invention as set forth in the remainder of the specification and the terms and phrases used in the claims must find clear support or antecedent basis in the description so that the meaning of the terms in the claims may be ascertainable by reference to the description.

See rules 141 to 147 as to claiming different inventions in one application.

[Rule 37]

76 **Signature to the specification.** The specification and claim must be signed by the applicant in person. See rules 57 and 58.

[Rule 40]

77 **Arrangement of specification.** The following order of arrangement should be observed in framing the specification:

(a) Title of the invention; or a preamble stating the name, citizenship and residence of the applicant and the title of the invention may be used.

(b) Brief summary of the invention.

(c) Brief description of the several views of the drawing, if there are drawings.

(d) Detailed description.

(e) Claim or claims.

(f) Signature.

[Rule 39]

78 **Cross-references to other applications.** (a) When an applicant files an application claiming an invention disclosed in a prior filed application of the same applicant, the second application must contain a reference to the prior application, identifying it by serial number and filing date and indicating the relationship of the applications. When an applicant files, or a common assignee owns, two or more applications relating to the same subject matter of invention, with one or more of the applications disclosing unclaimed matter that is disclosed and claimed in another of the applications, the applications not claiming it must refer to and identify the application claiming it. Cross-references to other related applications may be made when appropriate. See rule 14 (b).

(b) Where two or more applications filed by the same applicant, or owned by the same party, contain conflicting claims, elimination of such claims from all but one application may be required in the absence of good and sufficient reason for their retention in more than one application.

[Rules 43, 94, par. 5]

79 **Reservation clauses not permitted.** A reservation for a future application of subject matter disclosed but not claimed in a pending application will not be permitted in the pending application.

[Rule 44]

THE DRAWINGS

81 **Drawings required.** The applicant for patent is required by statute to furnish a drawing of his invention whenever the nature of the case admits of it; this drawing must be filed with the application. Illustrations facilitating an understanding of the invention (for example, flow sheets in cases of processes, and diagrammatic views) may also be furnished in the same manner as drawings, and may be required by the Office when considered necessary or desirable.

[Rule 49]

82 **Signature to drawing.** The drawing must either be signed by the applicant in person or have the name of the applicant placed thereon followed by the signature of the attorney or agent as such.

[Rule 50]

83 **Content of drawing.** The drawing must show every feature of the invention specified in the claims. When the invention consists of an improvement on an old machine the drawing must when possible exhibit, in one or more views, the improved portion itself, disconnected from the old structure, and also in another view, so much only of the old structure as will suffice to show the connection of the invention therewith.

[Rule 50]

84 **Standards for drawings.** The complete drawing is printed and published when the patent issues, and a copy is attached to the patent. This work is done by the photolithographic process, the sheets of drawings being reduced about one-third in size. In addition, a reduction of a selected portion of the drawings of each application is published in the Official Gazette. It is therefore necessary for these and other reasons that the character of each drawing be brought as nearly as possible to a uniform standard of execution and excellence, suited to the requirements of the reproduction process and of the use of the drawings, to give the best results in the interests of inventors, of the Office, and of the public. The following regulations with respect to drawings are accordingly prescribed:

(a) *Paper and ink.* Drawings must be made upon pure white paper of a thickness corresponding to two-ply or three-ply Bristol board. The surface of the paper must be calendered and smooth and of a quality which will permit erasure and correction. India ink alone must be used for pen drawings to secure perfectly black solid lines. The use of white pigment to cover lines is not acceptable.

(b) *Size of sheet and margins.* The size of a sheet on which a drawing is made must be exactly 10 by 15 inches. One inch from its edges a single marginal line is to be drawn, leaving the "sight" precisely 8 by 13 inches. Within this margin all work and signatures must be included. One of the shorter sides of the sheet is regarded as its top, and, measuring down from the marginal line, a space of not less than 1¼ inches is to be left blank for the heading of title, name, number, and date, which will be applied subsequently by the Office in a uniform style.

(c) *Character of lines.* All drawings must be made with drafting instruments or by photolithographic process which will give them satisfactory reproduction characteristics. Every line and letter (signatures included) must be absolutely black. This direction applies to all lines however fine, to shading, and to lines representing cut surfaces in sectional views. All lines must be clean, sharp, and solid, and fine or crowded lines should be avoided. Solid black should not be used for sectional or surface shading. Freehand work should be avoided wherever it is possible to do so.

(d) *Hatching and shading.* Hatching should be made by oblique parallel lines, which may be not less than about one-twentieth inch apart.

Heavy lines on the shade side of objects should be used except where they tend to thicken the work and obscure reference characters. The light should come from the upper left hand corner at an angle of 45°. Surface delineations should be shown by proper shading, which should be open.

(e) *Scale.* The scale to which a drawing is made ought to be large enough to show the mechanism without crowding when the drawing is reduced in reproduction, and views of portions of the mechanism on a larger scale should be used when necessary to show details clearly; two or more sheets should be used if one does not give sufficient room to accomplish this end, but the number of sheets should not be more than is necessary.

(f) *Reference characters.* The different views should be consecutively numbered figures. Reference numerals (and letters, but numerals are preferred) must be plain, legible and carefully formed, and not be encircled. They should, if possible, measure at least one-eighth of an inch in height so that they may bear reduction to one-twenty-fourth of an inch; and they may be slightly larger when there is sufficient room. They must not be so placed in the close and complex parts of the drawing as to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, at the closest point where there is available space, and connected by lines with the parts to which they refer. They should not be placed upon hatched or shaded surfaces but when necessary, a blank space may be left in the hatching or shading where the character occurs so that it shall appear perfectly distinct and separate from the work. The same part of an invention appearing in more than one view of the drawing must always be designated by the same character, and the same character must never be used to designate different parts.

(g) *Symbols, legends.* Graphical drawing symbols for conventional elements may be used when appropriate, subject to approval by the Office. The elements for which such symbols are used must be adequately identified in the specification.

While descriptive matter on drawings is not permitted, suitable legends may be used, or may be required in proper cases, as in diagrammatic views and flow sheets. The lettering should be as large as, or larger than, the reference characters.

(h) *Location of signature and names.* The signature of the applicant, or the name of the applicant and signature of the attorney or agent, should be placed in the lower right hand corner of each sheet within the marginal line. Signatures of witnesses are not required. The title of the invention must not be placed on the drawing but may be written in pencil below the lower marginal line.

(i) *Views.* The drawing must contain as many figures as may be necessary to show the invention; the figures should be consecutively numbered if possible in the order in which they appear. The figures may be plan, elevation, section, or perspective views, and detail views of portions or elements, on a larger scale if necessary may also be used. Exploded views, with the separated parts of the same figure embraced by a bracket, to show the relationship or order of assembly of various parts are permissible. When necessary, a view of a large machine or device in its entirety may be broken and extended over several sheets if there is no loss in facility of understanding the view (the different parts should be identified by the same figure number but followed by the letters, *a*, *b*, *c*, etc., for each part). The plane upon which a sectional view is taken should be indicated on the general view by a broken line, the ends of which should be designated by numerals corresponding to the figure number of the sectional view and have arrows applied to indicate the direction in which the view is taken. A moved position may be shown by a broken line superimposed upon a suitable figure if this can be done without crowding, otherwise a separate figure must be used for this purpose. Modified forms of construction can only be shown in separate figures. Views should not be connected by projection lines nor should center lines be used.

(j) *Arrangement of views.* All views on the same sheet must stand in the same direction and should, if possible, stand so that they can be read with the sheet held in an upright position. If views longer than the width of the sheet are necessary for the clearest illustration of the invention, the sheet may be turned on its side. The space for a heading must then be reserved at the right and the signatures placed at the left, occupying the same space and position on the sheet as in the upright views and being horizontal when the sheet is held in an upright position. One figure must not be placed upon another or within the outline of another.

(k) *Figure for Official Gazette.* The drawing should, as far as possible, be so planned that one of the views will be suitable for publication in the Official Gazette as the illustration of the invention.

(l) *Extraneous matter.* An agent's or attorney's stamp, or address, or other extraneous matter, will not be permitted upon the face of a drawing, within or without the marginal line, except that the title of the invention in pencil, and identifying indicia, to distinguish from other drawings filed at the same time, may be placed below the lower margin.

(m) *Transmission of drawings.* Drawings transmitted to the Office should be sent flat, protected by a sheet of heavy binder's board, or may be rolled for transmission in a suitable mailing tube; but must never be folded. If received creased or mutilated, new drawings will be required.

See rule 152 for design drawings, 165 for plant drawings, and 174 for reissue drawings.

[Rule 52]

85 **Informal drawings.** The requirements of rule 84 relating to drawings will be strictly enforced. A drawing not executed in conformity thereto may be admitted for purpose of examination, but in such case the drawing must be corrected or a new one furnished, as required. The necessary corrections will be made by the Office upon applicant's request and at his expense. (See rule 21.)

[Rule 54]

86 **Draftsman to make drawings.** Applicants are advised to employ competent draftsmen to make their drawings.

The Office may furnish the drawings at the applicant's expense as promptly as its draftsmen can make them, for applicants who can not otherwise conveniently procure them. (See rule 21.)

[Rule 55]

87 **Return of drawings.** The drawing of an accepted application will not be returned to the applicant except for signature.

A photographic print is made of the drawing of an accepted application.

88 **Use of old drawings.** If the drawings of a new application are to be identical with the drawings of a previous application of the applicant on file in the Office, or with part of such drawings, the old drawings or any sheets thereof may be used if the prior application is, or is about to be, abandoned, or if the sheets to be used are cancelled in the prior application. The new application must be accompanied by a letter requesting the transfer of the drawings, which should be completely identified.

MODELS, EXHIBITS, SPECIMENS

91 **Models not generally required as part of application or patent.** Models were once required in all cases admitting a model, as a part of the application, and these models became a part of the record of the patent. Such models are no longer generally required (the description of the invention in the specification, and the drawings, must be sufficiently full and complete, and capable of being understood, to disclose the invention without the aid of a model), and will not be admitted unless specifically called for.

[Rules 56, 57, 58]

92 **Model or exhibit may be required.** A model, working model, or other physical exhibit, may be required if deemed necessary for any purpose on examination of the application.

[Rule 59]

93 **Specimens.** When the invention is a composition of matter, the applicant may be required to furnish specimens of the composition, and of its ingredients or intermediates, sufficient in quantity for the purpose of experiment.

[Rule 62]

94 **Return of models, exhibits or specimens.** Models, exhibits, or specimens in applications which have become abandoned, and also in other application on conclusion of the prosecution, may be returned to the applicant upon demand and at his expense, unless it be deemed necessary that they be preserved in the Office. Such physical exhibits in contested cases may be returned to the parties at their expense. If not claimed within a reasonable time, they may be disposed of at the discretion of the Commissioner.

[Rules 60, 61]

95 **Copies of exhibits.** Copies of models or other physical exhibits will not ordinarily be furnished by the Office, and any model or exhibit in an application or patent shall not be taken from the Office except in the custody of an employee of the Office specially authorized by the Commissioner.

[Rule 60]

EXAMINATION OF APPLICATIONS

101 **Order of examination.** Applications filed in the Patent Office and accepted as complete applications (rules 53 and 55) are assigned for examination to the respective examining divisions having the classes of inventions to which the applications relate. Applications shall be taken up for examination by the examiner to whom they have been assigned in the order in which they have been filed.

Applications which have been acted upon by the examiner, and which have been placed by the applicant in condition for further action by the examiner (amended applications) shall be taken up for such action in the order in which they have been placed in such condition (date of amendment).

[Rule 63, pars. 1, 2]

102 **Advancement of examination.** Applications will not be advanced out of turn for examination or for further action except as provided by these rules, or upon order of the Commissioner to expedite the business of the Office, or upon a verified showing which, in the opinion of the Commissioner, will justify so advancing it.

Applications wherein the inventions are deemed of peculiar importance to some branch of the public service and the head of some department of the Government requests immediate action for that reason, may be advanced for examination; but in this case it shall be the duty of the head of that department to be represented before the Commissioner in order to prevent the improper issue of a patent. (See 29 Stat. 694; 35 U. S. C. 43.)

[Rule 63, pars. 3 and 5]

103 **Suspension of action.** Suspension of action by the Office will be granted at the request of the applicant for good and sufficient cause and for a reasonable time specified. Only one suspension may be granted by the primary examiner; any further suspension must be approved by the Commissioner.

If action on an application is suspended when not requested by the applicant, the applicant shall be notified of the reasons therefor.

Action by the examiner may be suspended by order of the Commissioner in the case of applications owned by the United States whenever publication of the invention by the granting of a patent thereon might be detrimental to the public safety or defense, at the request of the appropriate department or agency.

[Rule 77, pars. 5, 6]

104 **Nature of examination, examiner's action.** (a) On taking up an application for examination, the examiner shall make a thorough study thereof and shall make a thorough investigation of the available prior art relating to the subject matter of the invention sought to be patented. The examination shall be complete with respect both to compliance of the application with the statutes and rules and to the patentability of the invention as claimed, as well as with respect to matters of form, unless otherwise indicated.

(b) The applicant will be notified of the examiner's action. The reasons for any adverse action or any objection or requirement will be stated and such information or references will be given as may be useful in aiding the applicant to judge of the propriety of continuing the prosecution of his application.

105 **Completeness of examiner's action.** The examiner's action will be complete as to all matters, except that in appropriate circumstances, such as misjoinder of invention, fundamental defects in the application, and the like, the action of the examiner may be limited to such matters before further action is made. However, matters of form need not be raised by the examiner until a claim is found allowable.

[Rule 64]

106 **Rejection of claims.** If the invention is not considered patentable, or not considered patentable as claimed, the claims, or those considered unpatentable will be rejected.

In rejecting claims for want of novelty or for want of invention, the examiner must cite the best references at his command. When a reference is complex or shows or describes inventions other than that claimed by the applicant, the particular part relied on must be designated as nearly as practicable. The pertinence of each reference, if not obvious, must be clearly explained and each rejected claim specified.

[Rule 66, par. 1]

107 **Citation of references.** If domestic patents be cited, their numbers and dates, the names of the patentees, and the classes of inventions must be stated. If foreign patents be cited, their nationality or country, numbers and dates, and the names of the patentees must be stated, and such other data must be furnished as may be necessary to enable the applicant to identify the patents cited. In citing foreign patents, the number of pages of specification and sheets of drawing must be specified, and in case part only of the patent be involved, the particular pages and sheets containing the parts relied upon must be identified. If printed publications be cited, the author (if any), title, date, pages or plates, and place of publication, or place where a copy can be found, shall be given. When a rejection is based on facts within the personal knowledge of an employee of the Office, the data shall be as specific as possible, and the reference must be supported, when called for by the applicant, by the affidavit of such employee, and such affidavit shall be subject to contradiction or explanation

by the affidavits of the applicant and other persons.

[Rule 66, par. 2]

108 **Abandoned and forfeited applications not cited.** Abandoned and forfeited applications as such will not be cited as references.

[Rule 177]

ACTION BY APPLICANT AND FURTHER CONSIDERATION

111 **Reply by applicant.** (a) After the Office action, if adverse in any respect, the applicant, if he persist in his application for a patent, must reply thereto and may request re-examination or reconsideration, with or without amendment.

(b) In order to be entitled to re-examination or reconsideration, the applicant must make request therefor in writing, and he must distinctly and specifically point out the supposed errors in the examiner's action; the applicant must respond to every ground of objection and rejection in the prior Office action (except that request may be made that objections or requirements as to form not necessary to further consideration of the claims to be held in abeyance until a claim is allowed), and the applicant's action must appear throughout to be a bona fide attempt to advance the case to final action. The mere allegation that the examiner has erred will not be received as a proper reason for such re-examination or reconsideration.

(c) In amending an application in response to a rejection, the applicant must clearly point out the patentable novelty which he thinks the claims present in view of the state of the art disclosed by the references cited or the objections made. He must also show how the amendments avoid such references or objections.

See rules 135 and 136 for time for reply.

[Rules 68, par. 1, 69]

112 **Re-examination and reconsideration.** After response by applicant (rule 111) the application will be re-examined and reconsidered, and the applicant will be notified if claims are rejected, or objections or requirements made, in the same manner as after the first examination. Applicant may respond to such Office action, in the same manner provided in rule 111, with or without amendment, but any amendments after the second Office action must ordinarily be restricted to the rejection or to the objections or requirements made, and the application will be again considered, and so on repeatedly, unless the examiner has indicated that the action is final.

113 **Final rejection or action.** (a) On the second or any subsequent examination or consideration, the rejection or other action may be made final, whereupon applicant's response is limited to appeal in the case of rejection of any claim (rule 191) or to amendment as specified in rule 116. Petition may be taken to the Commissioner in the case of objections or requirements not involved in the rejection of any claim (rule 181). Response to a final rejection or action must include cancellation of, or appeal from the rejection of, each claim so rejected and, if any claim stands allowed, compliance with any requirement or objection as to form.

(b) In making such final rejection, the examiner shall repeat or state all grounds of rejection then considered applicable to the claims in the case, clearly stating the reasons therefor.

AMENDMENTS

115 **Amendment by applicant.** The applicant may amend before or after the first examination and action, and also after the second or subsequent examination or reconsideration as specified in rule 112 or when and as specifically required by the examiner.

[Rule 68, par. 1]

116 **Amendments after final action.** (a) After final rejection or action (rule 113) amendments may be made cancelling claims or complying with any requirement of form which has been made, and amendments presenting rejected claims in better form for consideration on appeal may be admitted; but the admission of any such amendment or its refusal, and any proceedings relative thereto, shall not operate to relieve the application from its condition as subject to appeal or to save it from abandonment under rule 135.

(b) If amendments touching the merits of the application be presented after final rejection, or after appeal has been taken, or when such amendment might not otherwise be proper, they may be admitted upon a showing of good and sufficient reasons why they are necessary and were not earlier presented.

(c) No amendment can be made as a matter of right in appealed cases. After decision on appeal, amendments can only be made as provided in rule 198, or to carry into effect a recommendation under rule 196.

[Rule 68, pars. 2, 3, 5]

117 **Amendment and revision required.** The specification, claims and drawing must be amended and revised when required, to correct inaccuracies of description and definition or unnecessary prolixity, and to secure correspondence between the claims, the specification and the drawing.

[Rule 71]

118 **Amendment of disclosure.** In original applications, all amendments of the drawings or specifications, and all additions thereto, must conform to at least one of them as it was at the time of the filing of the application. Matter not found in either, involving a departure from or an addition to the original disclosure, cannot be added to the application even though supported by a supplemental oath, and can be shown or claimed only in a separate application.

[Rule 70]

119 **Amendment of claims.** The claims may be amended by cancelling particular claims, by presenting new claims, or by amending the language of particular claims (such amended claims being in effect new claims). In presenting new or amended claims, the applicant must point out how they avoid any reference or ground of rejection of record which may be pertinent.

121 **Manner of making amendments.** Erasures, additions, insertions, or alterations of the papers and records must not be made by the applicant. Amendments are made by filing a paper (which should conform to rule 52), directing or requesting that specified amendments be made. The exact word or words to be stricken out or inserted in the application must be specified and the precise point indicated where the deletion or insertion is to be made.

[Rule 73, par. 1]

122 **Entry and consideration of amendments.** (a) Amendments are "entered" by the Office by making the proposed deletions by drawing a line in red ink through the word or words cancelled, and by making the proposed substitutions or insertions in red ink, small insertions being written in at the designated place and larger insertions being indicated by reference.

(b) Ordinarily all amendments presented in a paper filed while the application is open to amendment are entered and considered, subsequent cancellation or correction being required of improper amendments. Untimely amendatory papers may be refused entry and consideration in whole or in part.

123 **Amendments to the drawing.** (a) No change in the drawing may be made except by permission of the Office. Permissible changes in the construction shown in any drawing may be made only by the Office. A sketch in permanent ink showing proposed changes, to become part of the record, must be filed. The paper requesting amendments to the drawing should be separate from other papers. The drawing may not be withdrawn from the Office except for signature.

(b) Substitute drawings will not ordinarily be admitted in any case unless required by the Office.

[Rule 72, par. 2]

124 **Amendment of amendments.** When an amendatory clause is to be amended, it should be wholly rewritten and the original insertion cancelled, so that no interlineations or deletions shall appear in the clause as finally presented. Matter cancelled by amendment can be reinstated only by a subsequent amendment presenting the cancelled matter as a new insertion.

[Rule 74]

125 **Substitute specification.** If the number or nature of the amendments shall render it difficult to consider the case, or to arrange the papers for printing or copying, the examiner may require the entire specification or claims, or any part thereof, to be rewritten. A substitute specification will ordinarily not be accepted unless it has been required by the examiner.

[Rule 74]

126 **Numbering of claims.** The original numbering of the claims must be preserved throughout the prosecution. When claims are cancelled, the remaining claims must not be renumbered. When claims are added by amendment or substituted for cancelled claims, they must be numbered by the applicant consecutively beginning with the number next following the highest numbered claim previously presented (whether entered or not). When the application is ready for allowance, the examiner, if necessary, will renumber the claims consecutively in the order in which they appear or in such order as may have been requested by applicant.

[Rule 73, par. 2]

127 **Petition from refusal to admit amendment.** From the refusal of the primary examiner to admit an amendment, in whole or in part, a petition will lie to the Commissioner under rule 181.

[Rule 68, par. 4]

AFFIDAVITS OVERCOMING REJECTIONS

131 **Affidavit of prior invention to overcome cited patent or publication.** (a) When any claim of an application is rejected on reference to a domestic patent which substantially shows or describes but does not claim the rejected invention, or on reference to a foreign patent or to a printed publication, and the applicant shall make oath to facts showing a completion of the invention in this country before the filing date of the application on which the domestic patent issued, or before the date of the foreign patent, or before the date of the printed publication, then the patent or publication cited shall not bar the grant of a patent to the applicant, unless the date of such patent or printed publication be more than one year prior to the date on which the application was filed in this country.

(b) The showing of facts shall be such, in character and weight, as to establish reduction to practice prior to the effective date of the reference, or conception of the invention prior to the effective date of the reference coupled with due diligence from said date to a subsequent reduction to practice or to the filing of the application. Original exhibits of drawings or records, or photographic or photostatic copies thereof, must accompany and form part of the affidavit or their absence satisfactorily explained.

[Rule 75]

132 **Affidavits traversing grounds of rejection.** When any claim of an application is rejected on reference to a domestic patent which substantially shows or describes but does not claim the invention, or on reference to a foreign patent, or to a printed publication, or to facts within the personal knowledge of an employee of the Office, or when rejected upon a mode or capability of operation attributed to a reference, or because the alleged invention is held to be inoperative or lacking in utility, or frivolous or injurious to public health or morals, affidavits traversing these references or objections may be received.

[Rule 76]

INTERVIEWS

133 **Interviews.** (a) Interviews with examiners concerning applications and other matters pending before the Office must be had in the examiners' rooms at such times, within office hours, as the respective examiners may designate. Interviews will not be permitted at any other time or place without the authority of the Commissioner. Interviews for the discussion of the patentability of pending applications will not be had before the first official action thereon. Interviews should be arranged for in advance.

(b) In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for response to Office actions as specified in rules 111, 135.

[Rules 13, 68, par. 1]

TIME FOR RESPONSE BY APPLICANT; ABANDONMENT OF APPLICATION

135 **Abandonment for failure to respond within time limit.** (a) If an applicant fails to prosecute his application within six months after the date when the last official notice of any action by the Office was mailed to him, or within such shorter time as may be fixed (rule 136), the application will become abandoned.

(b) Prosecution of an application to save it from abandonment must include such complete and proper action as the condition of the case may require. The admission of an amendment not responsive to the last official action, or refusal to admit the same, and any proceedings relative thereto, shall not operate to save the application from abandonment.

(c) When action by the applicant is a bona fide attempt to advance the case to final action, and is substantially a complete response to the examiner's action, but consideration of some matter or compliance with some requirement has been inadvertently omitted, opportunity to explain and supply the omission may be given before the question of abandonment is considered.

(d) Prompt ratification or filing of a correctly signed copy may be accepted in case of an unsigned or improperly signed paper.

See rule 7.

[Rules 77, par. 1; 171, par. 2]

136 **Time less than six months.** (a) An applicant may be required to prosecute his application in a shorter time than six months, but not less than thirty days, whenever such shorter time is deemed necessary or expedient. Unless the applicant is notified in writing that response is required in less than six months, the maximum period of six months is allowed.

(b) The time for reply, when a time less than six months has been set, will be extended only for good and sufficient cause, and for a reasonable time specified. Any request for such extension must be filed on or before the day on which action by the applicant is due, but in no case will the mere filing of the request effect any extension. Only one extension may be granted by the primary examiner in his discretion; any further extension must be approved by the Commissioner. In no case can any extension carry the date on which response to an action is due beyond six months from the date of the action.

[Rule 77, pars. 2, 3]

137 **Revival of abandoned application.** An application abandoned for failure to prosecute may be revived as a pending application if it is shown to the satisfaction of the Commissioner that the delay was unavoidable. A petition to revive an abandoned application must be accompanied by a verified showing of the causes of the delay, by the proposed response unless it has been previously filed, and by the petition fee.

[Rule 172]

138 **Express abandonment.** An application may be expressly abandoned by filing in the Patent Office a written declaration of abandonment, signed by the applicant himself and the assignee of record, if any, and identifying the application.

[Rule 171, par. 1]

JOINDER OF INVENTIONS IN ONE APPLICATION; DIVISION

141 **Different inventions in one application.** Two or more independent inventions can not be claimed in one application; but (a) where several distinct inventions are dependent upon each other and mutually contribute to produce a single result they may be claimed in one application, and (b) more than one species of an invention, not to exceed three, may be specifically claimed in different claims in one application, if that application also includes an allowable claim generic to all the claimed species.

[Rule 41]

142 **Requirement for division.** (a) If two or more inventions are claimed in a single application, and they are of such a nature that a single patent may not be issued to cover them the applicant will be required to limit the claims to whichever invention he may elect, this official action being called a requirement for division. If the divisibility of the inventions be clear, such requirement will be made before any other action on the merits; however, it may be made at any time before final action in the case, at the discretion of the examiner.

(b) Claims to the invention or inventions not elected, if not cancelled, are nevertheless withdrawn from further consideration by the examiner by the election, subject however to reinstatement in the event the requirement for division is withdrawn or overruled.

[Rule 42]

143 **Reconsideration of requirement.** (a) If the applicant disagrees with the requirement for division, he may request reconsideration and withdrawal or modification of the requirement, giving the reasons therefor (see rule 111). In requesting reconsideration the applicant must indicate a provisional election of one invention for prosecution, which invention shall be the one elected in the event the requirement becomes final.

(b) The requirement for division will be reconsidered on such a request, but will not be repeated and made final without the written approval of an examiner of classification, a copy of which approval shall be supplied to the applicant. If the requirement is repeated and made final, the examiner will at the same time act on the claims to the invention elected.

[Rule 42]

144 **Appeal from requirement for division.** After a final requirement for division the applicant, in addition to making any response due on the remainder of the action, may appeal from the requirement. The prosecution of claims to the elected invention may be continued during such appeal. Appeal may be deferred until after final action on or allowance of the claims to the invention elected. Appeal may not be taken if reconsideration of the requirement was not requested.

[Rule 42]

145 **Subsequent presentation of claims for different invention.** If, after an Office action on an application, the applicant presents claims directed to an invention divisible from the invention previously claimed, such claims, if the amendment is entered, will be rejected and the applicant will be required to limit the claims to the invention previously claimed. Such rejection and requirement will not be repeated and made final without the written approval of an examiner of classification.

146 **Election of species.** In the first action on an application containing a generic claim and claims restricted separately to each of more than one species embraced thereby, the examiner, if of the opinion after a complete search on the generic claims that no generic claim presented is allowable, shall require the applicant in his response to that action to elect that species of his invention to which his claims shall be restricted if no generic claim is finally held allowable. However, if such application contains claims directed to more than three species, the examiner may require restriction of the claims to not more than three species before taking any further action in the case.

[Rule 41]

147 **Separate application for invention not elected.** The non-elected inventions, those not elected after a requirement for division (rule 142), may be made the subjects of separate applications, which must conform to the rules applicable to original applications and which will be examined in the same manner as original applications. However, if such an application is filed before the original application is patented or becomes abandoned, and if it is identical with the original application as filed, the drawings being identical and the papers constituting an exact copy of the original papers which were signed and executed by the applicant, signing and execution by the applicant may be omitted; such application may consist of the filing fee, a copy of the drawings complying to rules relating to drawings and a certified typewritten copy of the original application as filed, together with a proposed amendment cancelling the irrelevant claims or other matter.

DESIGN PATENTS

151 **Rules applicable.** The rules relating to applications for patents for other inventions or discoveries are also applicable to applications for patents for designs except as otherwise provided.

[Rule 81]

152 **Drawing.** The design must be represented by a drawing made in conformity with the rules laid down for drawings of mechanical inventions and must contain a sufficient number of views to constitute a complete disclosure of the appearance of the article. Appropriate surface shading must be used to show the character or contour of the surfaces represented.

[Rule 84]

153 **Title, description and claim.** The title of the design must designate the particular article. No specific description, other than a reference to the drawing, is ordinarily required or permitted. The claim shall be in formal terms to the ornamental design for the article (specifying name) as shown, or as shown and described. More than one claim is neither required nor permitted.

[Rule 81]

154 **Arrangement of specification.** The following order of arrangement should be observed in framing design specifications:

(a) Preamble, stating name and residence of the applicant and title of the design.

(b) Description of the figure or figures of the drawing.

(c) Description, if any.

(d) Claim.

(e) Signature of applicant.

See rule 58.

[Rule 82]

155 **Term of design patent.** (a) The petition for a design patent should specify the term, 3½, 7, or 14 years, for which a design patent is sought; but if no term is specified, or if the term specified is greater than that covered by the fee paid, the application will be accepted as filed for a term corresponding to the fee received, and the applicant so notified.

(b) Where the applicant initially requests that the patent issue for one of the shorter terms, he may, at any time before the application is allowed and passed to issue, upon the payment of the additional sum necessary, amend his application by requesting that the patent be issued for a longer term. In order to afford the applicant an opportunity for making such an amendment and paying the additional sum, the Office may notify him before the application is allowed and passed to issue unless otherwise directed, but failure of the Office to send or of the applicant to receive such notification will not warrant any change in the term requested after the application is allowed and passed to issue.

[Rule 80]

PLANT PATENTS

161 **Rules applicable.** The rules relating to applications for patent for other inventions or discoveries are also applicable to applications for patents for plants except as otherwise provided.

162 **Applicant, oath.** The applicant for a plant patent must be the person who has invented or discovered and asexually reproduced the new and distinct variety of plant for which a patent is sought (or his executor or administrator, or guardian, as stated in rules 42 and 43). The oath required of the applicant, in addition to the averments required by rule 65, must state that he has asexually reproduced the plant.

163 **Specification.** The specification must contain as full and complete a disclosure as possible of the plant and the characteristics thereof that distinguish the same over related known varieties, and its antecedents, and must particularly point out where and in what manner the variety of plant has been asexually reproduced.

Two copies of the specification (including the claim) must be submitted, but only one need be signed and executed; the second copy may be a legible carbon copy of the original.

164 **Claim.** The claim shall be in formal terms to the new and distinct variety of the specified plant as described and illustrated, and may also recite the principal distinguishing characteristics. More than one claim is neither required nor permitted.

165 **Drawings.** Plant patent drawings are not mechanical drawings and should be artistically and competently executed. Figure numbers and reference characters need not be employed unless required by the examiner. The drawing must

rules 83 and 84. On filing divisional reissue ap-

(f) The mere filing of a petition will not stay

disclose all the distinctive characteristics of the plant capable of visual representation.

The drawing may be in color and when color is a distinguishing characteristic of the new variety, the drawing must be in color. Two copies of color drawings must be submitted. Color drawings may be made either in permanent water color or oil, or in lieu thereof may be photographs made by color photography or properly colored on sensitized paper. The paper in any case must correspond in size, weight and quality to the paper required for other drawings.

166 **Specimens.** The applicant may be required to furnish specimens of the plant, or its flower or fruit, in a quantity and at a time in its stage of growth as may be designated, for study and inspection. Such specimens, properly packed, must be forwarded in conformity with instructions furnished to the applicant. When it is not possible to forward such specimens, plants must be made available for official inspection where grown.

167 **Examination.** Applications may be submitted by the Patent Office to the Department of Agriculture for study and report.

Affidavits from qualified agricultural or horticultural experts regarding the novelty and distinctiveness of the variety of plant may be received when the need of such affidavits is indicated.

REISSUES

171 **Application for reissue.** An application for reissue must contain the same parts required for an application for an original patent, complying with all the rules relating thereto except as otherwise provided, and in addition, must comply with the requirements of the rules relating to reissue applications. The application must be accompanied by a certified copy of an abstract of title or an order for a title report, to be placed in the file, and by an offer to surrender the original patent (rule 178).

[Rules 85, 86]

172 **Applicants, assignees.** Reissue applications must be signed and sworn to by the inventors if they be living, and must be accompanied by the written assent of all assignees, if any, owning an undivided interest in the patent. If the inventor is dead, a reissue application may be made by the assignee of the entire interest.

A reissue will be granted to the original patentee, his legal representatives or assigns as the interest may appear.

[Rules 85, 86]

173 **Specification.** The specification of the reissue application must include the entire specification and claims of the patent, with the matter to be omitted by reissue enclosed in square brackets or otherwise indicated as being deleted; and any additions made by the reissue must be underlined, so that the old and the new specifications and claims may be readily compared. Claims should not be renumbered and the numbering of claims added by reissue should follow the number of the highest numbered patent claim. No new matter shall be introduced into the specification.

[Rule 88]

174 **Drawings.** The drawings upon which the original patent was issued may be used in reissue applications if no changes whatsoever are to be made in the drawings. In such cases, when the reissue application is filed, the applicant must submit a temporary drawing which may consist of a copy of the printed drawings of the patent or a photoprint of the original drawings securely mounted by pasting on sheets of drawing board of the size required for original drawing, or an order for the same.

Amendments which can be made in a reissue drawing, that is, changes from the drawing of the patent, are restricted.

[Rules 53, 88]

175 **Reissue oath.** Applicants for reissue, in addition to complying with the requirements of the first sentence of rule 65, must also file with their applications a statement under oath as follows:

(a) That applicant verily believes the original patent to be wholly or partly inoperative or invalid, and the reasons why.

(b) When it is claimed that such patent is so inoperative or invalid "by reason of a defective or insufficient specification," particularly specifying such defects or insufficiencies.

(c) When it is claimed that such patent is inoperative or invalid "by reason of the patentee claiming as his own invention or discovery more than he had a right to claim as new," distinctly specifying the part or parts so alleged to have been improperly claimed as new.

(d) Particularly specifying the errors which it is claimed constitute the inadvertence, accident, or mistake relied upon, and how they arose or occurred.

(e) That said errors arose "without any fraudulent or deceptive intention" on the part of the applicant.

(f) When any reissue claim is broader in any respect than the patent claims, applicant shall explain when and under what circumstances he became aware of the lack of breadth in the patent claims, and shall further explain any delay thereafter up to the filing of such reissue application.

Corroborating affidavits of others may be filed and the examiner may, in any case, require additional information or affidavits concerning the application for reissue and its object.

[Rule 87]

176 **Examination of reissue.** An original claim, if re-presented in the reissue application, is subject to re-examination, and the entire application will be examined in the same manner as original applications, subject to the rules relating thereto, excepting that division will not be required. Applications for reissue will be acted on by the examiner in advance of other applications.

[Rule 90]

177 **Reissue in divisions.** The Commissioner may, in his discretion, cause several patents to be issued for distinct and separate parts of the thing patented, upon demand of the applicant, and upon payment of the required fee for each division. Each division of a reissue constitutes the subject of a separate specification descriptive of the part or parts of the invention claimed in such division; and the drawing may represent only such part or parts, subject to the provisions of

rules 83 and 84. On filing divisional reissue applications, they shall be referred to the Commissioner. Unless otherwise ordered by the Commissioner, all the divisions of a reissue will issue simultaneously; if there by any controversy as to one division, the others will be withheld from issue until the controversy is ended, unless the Commissioner shall otherwise order.

[Rule 89]

178 **Original patent.** The application for a reissue must be accompanied by an offer to surrender the original patent. The application should also be accompanied by the original patent, or if the original is lost or inaccessible, by an affidavit to that effect. The application may be accepted for examination in the absence of the original patent or the affidavit, but one or the other must be supplied before the case is allowed. If a reissue be refused, the original patent will be returned to applicant upon his request.

[Rule 91, par. 1]

179 **Notice of reissue application.** When an application for a reissue is filed, there will be placed in the file of the original patent a notice stating that an application for reissue has been filed. When the reissue is granted or the reissue application is otherwise terminated, the fact will be added to the notice in the file of the original patent.

[Rule 91, par. 2]

PETITIONS AND ACTION BY THE COMMISSIONER

181 **Petition to the Commissioner.** (a) Petition may be taken to the Commissioner (1) from any action or requirement of any examiner in the ex parte prosecution of an application which is not subject to appeal to the Board of Appeals or to the court; (2) in cases in which a statute or the rules specify that the matter is to be determined directly by or reviewed by the Commissioner; and (3) to invoke the supervisory authority of the Commissioner in appropriate circumstances.

(b) Any such petition must contain a statement of the facts involved and the point or points to be reviewed and the action requested. Briefs or memoranda, if any, in support thereof should accompany or be embodied in the petition; and where facts are to be proven, the proof in the form of affidavits (and exhibits, if any) must accompany the petition.

(c) When a petition is taken from an action or requirement of an examiner in the ex parte prosecution of an application, it may be required that there have been a proper request for reconsideration (rule 111) and a repeated action by the examiner. The examiner may be directed by the Commissioner to furnish a written statement, within a specified time, setting forth the reasons for his decision upon the matters averred in the petition, supplying a copy thereof to the petitioner.

(d) No fee is required for a petition to the Commissioner except in the case of a petition to revive an abandoned application (rule 137) or for the delayed payment of a final fee (rule 317).

(e) Oral hearing will not be granted except when considered necessary by the Commissioner.

(f) The mere filing of a petition will not stay the period for replying to an examiner's action which may be running against an application, nor act as a stay of other proceedings.

(g) Determination of petitions of various kinds may be delegated by the Commissioner to the Supervisory Examiners or to the Solicitor and Law Examiners.

[Rule 142]

182 **Questions not specifically provided for.** All cases not specifically provided for in these rules will be decided in accordance with the merits of each case by or under the authority of the Commissioner, and such decision will be communicated to the interested parties in writing.

[Rule 199]

183 **Suspension of rules.** In an extraordinary situation, when justice requires, any requirement of these rules which is not a requirement of the statutes may be suspended or waived by the Commissioner in person on petition of the interested party, subject to such other requirements as may be imposed.

184 **Reconsideration of cases decided by former Commissioners.** Cases which have been decided by one Commissioner will not be reconsidered by his successor except in accordance with the principles which govern the granting of new trials.

[Rule 147]

APPEAL TO THE BOARD OF APPEALS

191 **Appeal to Board of Appeals.** (a) Every applicant for a patent or for reissue of a patent, any of the claims of which have been twice rejected, or who has been given a final rejection (rule 113), and every applicant who has been twice required to divide his application (rule 143), may, upon the payment of the fee required by law, appeal from the decision of the primary examiner to the Board of Appeals within the time allowed for response.

(b) The appeal must identify the rejected claim or claims appealed, and must be signed by the applicant or his duly authorized attorney or agent.

(c) Except as otherwise provided by rules 144 and 206, appeal when taken must be taken from the rejection of all claims under rejection which applicant proposes to contest. Questions relating to matters not affecting the merits of the invention may be required to be settled before an appeal can be considered.

192 **Appellant's brief.** The appellant shall, within sixty days from the date of the appeal, or within six months from the date of the action appealed from if such time is later, file a brief of the authorities and arguments on which he will rely to maintain his appeal, including a concise explanation of the invention and a copy of the claims involved, at the same time indicating if he desires an oral hearing.

On failure to file the brief within the time allowed, the appeal shall stand dismissed.

193 **Examiner's answer.** (a) The primary examiner may, within such time as may be directed by the Commissioner, furnish a written statement in answer to the appellant's brief including such explanation of the invention claimed and of the references and grounds of rejection as

may be necessary, supplying a copy to the appellant. If the primary examiner shall find that the appeal is not regular in form or does not relate to an appealable action, he shall so state and a petition from such decision may be taken to the Commissioner as provided in rule 181.

(b) The appellant may file a reply brief directed only to such new points as may be raised in the examiner's answer, within twenty days from the date of such answer.

194 **Hearing.** If no request for oral hearing has been made by the appellant, the appeal will be assigned for consideration and decision. If the appellant has requested an oral hearing, a day of hearing will be set, and due notice thereof given to the appellant. Hearing will be held as stated in the notice, and oral argument will be limited to one-half hour unless otherwise ordered before the hearing begins.

[Rule 137]

195 **Affidavits after appeal.** Affidavits or exhibits submitted after the case has been appealed will not be admitted without a showing of good and sufficient reasons why they were not earlier presented.

[Rule 138]

196 **Decision by the Board of Appeals.** (a) The Board of Appeals, in its decision, may affirm or reverse the decision of the primary examiner in whole or in part on the grounds and on the claims specified by the examiner. The affirmance of the rejection of a claim on any of the grounds specified constitutes a general affirmance of the decision of the primary examiner on that claim, except as to any ground specifically reversed.

(b) Should the Board of Appeals have knowledge of any grounds not involved in the appeal for rejecting any claim, it may include in its decision a statement to that effect with its reasons for so holding, which statement shall constitute a rejection of the claims. The appellant may submit an appropriate amendment of the claims so rejected or a showing of facts, or both, and have the matter reconsidered by the primary examiner. The statement shall be binding upon the primary examiner unless an amendment or showing of facts not previously of record be made which, in the opinion of the primary examiner, avoids the additional ground for rejection stated in the decision. The applicant may waive such reconsideration before the primary examiner and have the case reconsidered by the Board of Appeals upon the same record before them. Where request for such reconsideration is made the Board of Appeals shall, if necessary, render a new decision which shall include all grounds upon which a patent is refused. The applicant may waive reconsideration by the Board of Appeals and treat the decision, including the added grounds for rejection given by the Board of Appeals, as a final decision in the case.

(c) Should the decision of the Board of Appeals include an explicit statement that a claim may be allowed in amended form, applicant shall have the right to amend in conformity with such statement, which shall be binding on the primary examiner in the absence of new references or grounds of rejection.

[Rule 139]

197 **Action following decision.** After decision by the Board of Appeals, the case shall be returned to the primary examiner, subject to the applicant's right of appeal or other review, for such further action by the applicant or by the primary examiner, as the condition of the case may require, to carry into effect the decision.

Any request or petition for rehearing or reconsideration must be filed before the limit of appeal to the U. S. Court of Customs and Patent Appeals expires. (See rule 302, for time for appeal to the court.)

[Rule 141]

198 **Reopening after decision.** Cases which have been decided by the Board of Appeals will not be reopened or reconsidered by the primary examiner, except under the provisions of rule 196, without the written authority of the Commissioner, and then only for the consideration of matters not already adjudicated, sufficient cause being shown.

[Rule 140]

INTERFERENCES; DEFINITION, PREPARATION, DECLARATION

201 **Definition, when declared.** (a) An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention and may be instituted as soon as it is determined that common patentable subject matter is claimed in a plurality of applications or in an application and a patent.

(b) An interference will be declared between pending applications for patent or for reissue of different parties when such applications contain claims for substantially the same invention which are allowable in the application of each party, and interferences will also be declared between pending applications for patent, or for reissue, and unexpired original or reissued patents, of different parties, when such applications and patents contain claims for substantially the same invention which are allowable in all of the applications involved, in accordance with the provisions of these rules.

(c) Interferences will not be declared, nor continued, between applications or applications and patents owned by the same party unless good cause is shown therefor. The parties shall make known any and all right, title and interest affecting the ownership of any application or patent involved or essential to the proceedings, not recorded in the Patent Office, when an interference is declared, and of changes in such right, title, or interest, made after the declaration of the interference and before the expiration of the time prescribed for seeking review of the decision in the interference.

[Rules 93, 94, pars. 1, 5]

202 **Preparation for interference between applications; preliminary inquiry of junior applicant.** In order to ascertain whether any question of priority arises between applications which appear to interfere and are otherwise ready to be prepared for interference, any junior applicant may be called upon to state in writing under oath the date and the character of the earliest fact or act, susceptible of proof, which can be relied upon to establish conception of the invention under consideration for the purpose of establishing priority of invention. The statement filed in compliance with this section will be retained by the Patent Office separate from the application file and if an interference is declared will be opened simultaneously with the preliminary statement of the party filing the same. In case the junior applicant makes no reply within the time specified, not less than thirty days, or if the earliest date alleged is subsequent to the filing date of the senior party, the interference ordinarily will not be declared.

[Rule 93]

203 **Preparation for interference between applications; suggestion of claims for interference.** (a) Before the declaration of interference, it must be determined that there is common patentable subject matter in the cases of the respective parties, patentable to each of the respective parties, subject to the determination of the question of priority. Claims in the same language, to form the counts of the interference, must be present or be presented, in each application.

(b) When the claims of two or more applications differ in phraseology, but relate to substantially the same patentable subject matter, the examiner shall, if it has been determined that an interference should be declared, suggest to the parties such claims as are necessary to cover the common invention in the same language. The examiner shall send copies of the letter suggesting claims to the applicant and to the assignee, as well as to the attorney or agent of record in each case. The parties to whom the claims are suggested will be required to make those claims (i. e., present the suggested claims in their applications by amendment) within a specified time, not less than 30 days, in order that an interference may be declared. The failure or refusal of any applicant to make any claim suggested within the time specified, shall be taken without further action as a disclaimer of the invention covered by that claim unless the time be extended upon a proper showing.

(c) The suggestion of claims for purpose of interference will not stay the period for response to an Office action which may be running against an application, unless the claims are made by the applicant within the time specified for making the claims.

(d) When an applicant presents a claim in his application (not suggested by the examiner as specified in this rule) which is copied from some other application, either for purpose of interference or otherwise, he must so state, at the time he presents the claim and identify the other application.

[Rules 95, par. 1; 96, par. 1; 77, par. 4]

204 **Interference with a patent; affidavit by junior applicant.** (a) The fact that one of the parties has already obtained a patent will not prevent an interference. Although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who, in the interference, proves himself to be the prior inventor.

(b) When the filing date or effective filing date of an applicant is subsequent to the filing date of a patentee, the applicant, before an interference will be declared, shall file an affidavit that he made the invention in controversy in this country, before the filing date of the patentee, or that his acts in this country with respect to the invention were sufficient under the law to establish priority of invention relative to the filing date of the patentee; and, when required, the applicant shall file an affidavit (of the nature specified in rule 131) setting forth facts which would prima facie entitle him to an award of priority relative to the filing date of the patentee.

[Rules 93, 94, par. 1]

205 **Interference with a patent; copying claims from patent.** (a) Before an interference will be declared with a patent, the applicant must present in his application copies of all the claims of the patent which also define his invention and such claims must be patentable in the application. If claims cannot be properly presented in his application owing to the inclusion of an immaterial limitation or variation, an interference may be declared after copying the claims excluding such immaterial limitation or variation.

(b) Where an applicant presents a claim copied or substantially copied from a patent, he must, at the time he presents the claim, identify the patent, give the number of the patented claim, and specifically apply the terms of the copied claim to his own disclosure, unless the claim is copied in response to a suggestion by the Office. The examiner will call to the Commissioner's attention any instance of the filing of an application or the presentation of an amendment copying or substantially copying claims from a patent without calling attention to that fact and identifying the patent.

[Rule 94, par. 3]

206 **Interference with a patent; claims improperly copied.** (a) Where claims are copied from a patent and the examiner is of the opinion that the applicant can make only some of the claims so copied, he shall notify the applicant to that effect, state why he is of the opinion the applicant cannot make the other claims and state further that the interference will be promptly declared. The applicant may proceed under rule 233, if he desires to further contest his right to make the claims not included in the declaration of the interference.

(b) Where the examiner is of the opinion that none of the claims can be made, he shall state in his action why the applicant can not make the claims and set a time limit, not less than 30 days, for reply. If, after response by the applicant, the rejection is made final, a similar time limit shall be set for appeal. Failure to respond or appeal, as the case may be, within the time fixed will, in the absence of a satisfactory showing, be deemed a disclaimer of the invention claimed.

[Rules 94, par. 2; 63d, par. 2]

207 **Preparation of interference notices and statements.** (a) When an interference is found to exist and the applications are in condition therefor, the primary examiner shall forward the files to the Examiners of Interference, together with notices of interference to be sent to all the parties (as specified in rule 209) disclosing the name and residence of each party and those of his attorney or agent, and of any assignee, and,

if any party be a patentee, the date and number of the patent. The notices shall also specify the issue of the interference, which shall be clearly and concisely defined in only as many counts as may be necessary to define the interfering subject matter (but in the case of an interference with a patent all the claims of the patent which can be made by the applicant should constitute the counts), and shall indicate the claim or claims of the respective cases corresponding to the count or counts. If the application or patent of a party included in the interference is a division or continuation of a prior application and the examiner has determined that it is entitled to the filing date of such prior application, the notice to such party shall so state.

(b) The primary examiner shall also forward a statement for the Examiners of Interferences disclosing the applications involved in interference, fully identified, arranged in the inverse chronological order of the filing of the completed applications, and also disclosing the count or counts in issue and the ordinals of the corresponding claims, the name and residence of any assignee, and the names and addresses of all attorneys or agents, both principal and associate.

[Rule 97]

208 **Conflicting parties having same attorney.** Whenever it shall be found that two or more parties whose interests appear to be in conflict are represented by the same attorney or agent, the examiner shall notify each of said principal parties and the attorney or agent of this fact, and shall also call the matter to the attention of the Commissioner. If conflicting interests exist, the same attorney or agent or his associates will not be recognized to represent either of the parties whose interests are in conflict without the consent of the other party or in the absence of special circumstances requiring such representation, in further proceedings before the Patent Office involving the matter or application or patent in which the conflicting interests exist.

[Rule 96, par. 2]

209 **Declaration of interference; mailing of notices.** (a) When the notices of interference are in proper form, an examiner of interferences shall assign a number to the interference and add to the notices a designation of the time within which the preliminary statements required by rule 215 must be filed, and shall, pro forma, institute and declare the interference by forwarding the notices to the several parties to the proceeding.

(b) The notices of interference shall be forwarded by the Examiner of Interferences to all the parties, in care of their attorneys or agents; a copy of the notices will also be sent the applicants or patentees in person and if the application or patent in interference has been assigned, to the assignees. When one of the parties has received a patent, a notice shall be sent to the patentee as well as to the attorney or agent last of record.

(c) When the notices sent in the interest of a patent are returned to the Office undelivered, or when one of the parties resides abroad and his agent in the United States is unknown, additional notice may be given by publication in the Official Gazette for such period of time as the Commissioner may direct.

[Rules 102, 103]

211 **Jurisdiction of interference.** Upon the institution and declaration of the interference, as provided in rule 209, the Examiners of Interferences will take jurisdiction of the same, which will then become a contested case.

The primary examiner will retain jurisdiction of the case until the declaration of interference is made. See rule 237 (b).

[Rules 100, 101]

212 **Suspension of ex parte prosecution.** On declaration of the interference, ex parte prosecution of an application is suspended, and amendments and other papers received during the pendency of the interference will not be entered or considered without the consent of the Commissioner, except as provided by these rules. Proposed amendments directed toward the declaration of an interference with another party will be considered to the extent necessary. Ex parte prosecution as to specified matters may be continued concurrently with the interference, on order from or with the consent of the Commissioner.

[Rule 109, par. 2]

INTERFERENCES: PRELIMINARY STATEMENT

215 **Preliminary statement required.** Each party to the interference will be required to file a concise preliminary statement giving certain facts and dates, on or before a date fixed by the Office. The preliminary statement must be signed and sworn to by the inventor but in appropriate circumstances, as when the inventor is dead or a showing is made of inability to obtain a statement from the inventor, the preliminary statement may be made by the personal representative or assignee or by someone authorized or entitled to make the statement and having knowledge of the facts.

[Rule 110]

216 **Contents of the preliminary statement.** The preliminary statement must state that the applicant made the invention set forth by each count of the interference, and whether the invention was made in the United States or abroad.

(a) When the invention was made in the United States the preliminary statement must set forth as to the invention defined by each count the following facts relating to conception of the invention, and reduction of the invention to practice;

(1) The date upon which the first drawing of the invention was made; if a drawing of the invention has not been made prior to the filing date of the application, it must be so stated.

(2) The date upon which the first written description of the invention was made; if a written description of the invention has not been made prior to the filing date of the application, it must be so stated.

(3) The date upon which the invention was first disclosed to another person; if the invention was not disclosed to another person prior to the filing date of the application, it must be so stated.

(4) The date of the first act or acts susceptible of proof (other than acts of the character specified in subparagraphs (1), (2), and (3)) of this paragraph which, if proven, would establish conception of the invention, and a brief description of such act or acts; if there have been no such acts it must be so stated.

(5) The date of the actual reduction to practice of the invention; if the invention has not been actually reduced to practice before the filing date of the application, it must be so stated.

(6) The date after conception of the invention when active exercise of reasonable diligence toward reducing the invention to practice began.

(b) The preliminary statement in every case must also set forth:

(1) The serial number and filing date of any prior co-pending application in the United States by the same applicant, not specified by the examiner in the notice of interference, disclosing the invention set forth by the counts of the interference, the benefit of the filing date of which application may be claimed as the effective filing date of the application or patent involved.

(2) The filing date and country (and number, if known) of any application for the same invention in a foreign country, the filing date of which may be claimed under R. S. 4887; 35 U.S.C. 32, second paragraph.

If a party intends to rely solely on a prior application, domestic or foreign, and on no other evidence, the preliminary statement may so state and may then consist only of the identification of the prior application and need not be signed or sworn to by the inventor.

[Rule 110]

217 **Contents of the preliminary statement; invention made abroad.** When the invention was made abroad the facts specified by rule 216 (a) (1) to (6) are not required, and in lieu thereof there should be stated:

When the invention was introduced into this country by or on behalf of the party, giving the circumstances with the dates connected therewith which are relied upon to establish the fact and, when appropriate, including allegations of activity in this country of the nature of that represented by rule 216 (a) (1) to (6).

If a party is entitled to the benefit of the proviso in 60 Stat. 943, sec. 9; 35 U. S. C. 109, he must so state and his preliminary statement must include allegations of activity abroad corresponding to those required by rule 216 (a) (1) to (6).

[Rule 110]

218 **Time for filing preliminary statement.** The time for filing the preliminary statement is ordinarily specified in the notices of interference mailed to the parties (rule 209). If either party require a postponement of the time for filing his preliminary statement, he shall present a motion, duly served on the other parties, with his reasons therefor, and such motion should be made, if possible, prior to the day previously set. But an examiner of interferences may, in his discretion, extend the time on ex parte request, on stipulation, or upon his own motion.

[Rule 104]

219 **Statements sealed before filing.** The statement must be filed in a sealed envelope bearing the name of the party filing it and the number and title of the interference. The envelope should contain nothing but this statement and if mailed should be enclosed in an outer envelope. The statements may be opened only by an examiner of interferences.

[Rule 110]

221 **Defective statements.** If, on examination, a statement is found to be defective in any particular, the party may be notified of the defects, and a time assigned within which he must cure the same by an amended statement or be restricted in a specified manner; but in no case will the original or amended statement be returned to the party after it has been filed.

If a party shall fail or refuse to file an amended statement, he shall be restricted in the further proceedings in the interference as specified in the notice of the defects.

[Rule 112]

222 **Correction of statement on motion.** In case of material error arising through inadvertence or mistake, the statement may be corrected on motion (see rule 243), upon a satisfactory showing that the correction is essential to the ends of justice. The motion to correct the statement must be made, if possible, before the taking of any testimony, and as soon as practicable after the discovery of the error.

[Rule 113]

223 **Effect of statement.** (a) The preliminary statement should be carefully prepared, as each of the parties by whom or on whose behalf it is made will be strictly held in his proofs to the dates set forth therein. This includes joint applicants; a new preliminary statement will not be received in the event the application is amended to remove the names of those not inventors, except by motion under rule 222.

(b) If a party proves any date earlier than alleged in his preliminary statement, such proof will be held to establish the date so alleged and none earlier.

(c) If a party to an interference fails to file a statement, testimony will not be received subsequently from him to prove that he made the invention at a date prior to the filing date of his application.

(d) The preliminary statement can in no case be used as evidence in behalf of the party making it.

[Rules 110, 115, 117]

224 **Reliance on prior application.** A party will not be permitted to rely on a prior application to obtain the benefit of its filing date unless the prior application is specified in the notice of interference or is set forth in the preliminary statement. If a prior foreign application is set forth in the preliminary statement, said foreign application cannot be relied upon unless the necessary papers to prove a date of priority under R. S. 4887, 35 U. S. C. 32, second paragraph, are filed within three months, or within such extension of time as may be granted, from the filing of the preliminary statement, if they have not previously been filed. A motion to amend the preliminary statement to recite a prior application may be brought under rule 222 but a copy of such prior application must be served on the opposing party with the motion.

225 **Failure of junior party to file statement or to overcome filing date of senior party.** If a junior party to an interference fails to file a

statement, or if his statement fails to overcome the prima facie case made by the filing date of the application of a senior party, such junior party shall be notified by an examiner of interferences that judgment upon the record will be rendered against him at the expiration of a time fixed by the examiner of interferences, not less than thirty days, unless cause be shown why such action should not be taken. Within this period any of the motions permitted by rules 231 to 236 may be brought, except that motions to dissolve (rule 232) must be limited to such matters as may be considered at final hearing (rule 258), but if a patent is not involved such junior party may file a statement as to his reasons for considering such claim or claims unpatentable, which statement shall be given due consideration by the primary examiner after the termination of the interference before acting on the application of the successful party. If a motion is denied by the primary examiner, the party under order to show cause may, within twenty days from the decision, request that final hearing be set to consider such matters as may be reviewed under rule 258.

[Rule 114]

226 **Notice and access to applications.** After the preliminary statements have been received and approved, or the time for filing them has expired, the parties will be notified, and given the serial numbers and filing dates of the applications of each adverse party, including any applications which the parties may be entitled to inspect, and the parties will be permitted to see or obtain copies of each other's applications, except copies of affidavits filed under rules 131 and 202, which shall be and remain sealed until preliminary statements are opened under rule 227. The preliminary statements are re-sealed by an examiner of interferences and shall not be revealed to the opposing parties except as provided in rule 227.

The notices will also ordinarily specify the motion period (rule 231), the times for taking testimony (rule 251), and the date of final hearing (rules 251, 258), except when an order to show cause is given under rule 225.

[Rule 108]

227 **Access to preliminary statements.** (a) The preliminary statements shall not be opened to the inspection of the opposing parties until after all motions under rules 231 to 236 and proceedings respecting the same have been finally disposed of or the time for filing such motions has expired without such a motion having been filed, and the case is in condition for taking of testimony.

(b) A junior party who fails to file a preliminary statement or a party who alleges no date in his preliminary statement earlier than the filing date of the application of another party shall not have access to the preliminary statement of said other party.

(c) If the interference be terminated by dissolution before the preliminary statements have been opened to the inspection of the parties, the preliminary statements will remain sealed.

(d) Unopened statements will be removed from interference files and preserved by the Office, and in no case will such statements be open to the inspection of the opposing party without authority from the Commissioner.

[Rules 111, 112]

INTERFERENCES: MOTION PERIOD, DISSOLUTION, REFORMATION

231 **Motion period.** After the preliminary statements have been received and approved, or the time for filing them has expired, a period will be fixed within which the various motions specified in rules 232 to 236 may be brought by the parties. The period, not less than thirty days, will be fixed by an examiner of interferences in the notice referred to in rule 226. In the case of a junior party under order to show cause (rule 225) the period specified for answer to the order is the motion period and such motions may be brought as constitute an answer to the order.

232 **Motions to dissolve.** (a) Motions to dissolve an interference may be brought on the ground (1) that there has been such informality in declaring the same as will preclude the proper determination of the question of priority of invention, or (2) that the claims forming the counts of the interference are not patentable, or are not patentable to a particular applicant, while being patentable to another party, or (3) that a particular party has no right to make the claims, or (4) that there is no interference in fact if the interference involves a design or plant patent or application, or if the interference involves a patent, the claims of which have been copied in modified form.

(b) When one of the parties to the interference is a patentee, motions to dissolve on the ground that the counts are unpatentable, may not be brought.

(c) Motions to dissolve on the ground that the counts are unpatentable, or are unpatentable to the party bringing the motion, must be accompanied by a proposed amendment to the application of the moving party cancelling the claims forming the counts of the interference, which amendment shall be entered by the primary examiner to the extent the motion is not denied, after the interference is terminated.

[Rule 122]

233 **Motions to amend.** (a) Motions may be brought to amend the interference to put in issue any claims which should be made the basis of interference between the moving party and any other party. When a patent is involved, such claims must be claims of the patent (as provided by rule 205). If the claims are not already in the application of the moving party, the motion must be accompanied by a proposed amendment adding the claims to the application. The preliminary statement for the proposed counts may be required before the motion is considered.

(b) Such motions must, if possible, be made within the time set, but if a motion to dissolve the interference has been brought by another party, such motion may be made within thirty days from the filing of the motion to dissolve, or if the interference is dissolved by the primary examiner on his own motion as provided in rule 237, within 30 days from the date on which the interference was suspended and referred to the primary examiner under rule 237 or the date of the decision if there was no such reference.

(c) Where a party opposes the addition of such claims in view of prior patents or publications, full notice of such patents or publications, applying them to the proposed counts, must be given to all parties at least twenty days prior to the date of the hearing.

(d) The proposed claims must be indicated to be patentable in the opinion of the moving party in each of the applications involved in the motion and must, unless they stand allowed, be distinguished from the prior art of record or sufficient other reason for their patentability given. The reason why an additional count is necessary must be stated and when more than one count is proposed, the motion must point out wherein they differ materially from each other and why each proposed count is necessary to the interference. The proposed claims must also be applied to the disclosure of each application involved in the motion, except as to an application in which the claims already appear and the claims identified as originating therein.

(e) On the granting of such motion and the adoption of the claims by the other parties within a time specified, and after the expiration of the time for filing any new preliminary statements, the Primary Examiner shall redeclare the interference or shall declare such other interferences as may be necessary to include said claims. A preliminary statement as to the added claims need not be filed if a party states he intends to rely on the original statement. A second motion period will not be set and subsequent motions with respect to such matters as could have been raised during the motion period will not be considered.

[Rule 109]

234 **Motion to include another application.** (a) Any party to an interference may bring a motion to add (subject to the provisions of rule 201 (c)) or substitute any other application owned by him, as to the existing issue; or to include any other application or patent owned by him as to any subject matter disclosed in his application or patent involved in the interference and in an opposing party's application or patent in the interference which should be made the basis of interference between himself and such other party.

(b) Such motions are subject to the same conditions and the procedure in connection therewith is the same, so far as applicable, as set forth in rule 233 for motions to amend.

[Rule 109]

235 **Motions relating to burden of proof.** Any party may bring a motion to shift the burden of proof on the ground that he is entitled to the benefit of the filing date of an earlier domestic or foreign application, or on the ground that an opposing party is not entitled to the benefit of an earlier application of which he has been given the benefit in the declaration. (See rule 224.)

236 **Hearing and determination of motions.** (a) The motions specified must contain a full statement of the grounds therefor, and any briefs or memoranda in support thereof or in opposition thereto shall, except as hereinafter provided, be filed in the Patent Office not less than ten days prior to the date of hearing and, if not so filed, consideration thereof may be refused.

(b) If, in the opinion of an examiner of interferences, such motions, and motions of a similar character, be in proper form, they will be set for hearing before the primary examiner, due notice of the day of hearing being given by the Office to all parties. Appearance at the hearing is not required; any party may waive oral hearing and, in lieu of appearance at the hearing but not in addition thereto, file a reply brief no later than three days following the date of the hearing. If, in the opinion of the examiner of interferences, the motion be not in proper form, or if it be not brought within the time specified and no satisfactory reason given for the delay, it will not be considered and the parties will be so notified. Consideration of matters raised by motion which can be considered at final hearing may, as directed by the Commissioner, be deferred to final hearing.

(c) Setting a motion brought under the provisions of rules 231 to 235 for hearing will act as a stay of proceedings pending the determination of the motion.

(d) In the determination of a motion to dissolve an interference between an application and a patent, the prior art of record in the patent file may be referred to for the purpose of construing the issue.

[Rules 122, 123, 124, par. 1; 163]

237 **Dissolution on motion of examiner.** (a) If, during the pendency of an interference, a reference or other reason be found which, in the opinion of the primary examiner, renders all or part of the counts unpatentable, the attention of the examiners of interferences shall be called thereto unless the interference is before the primary examiner for determination of a motion. The interference may be suspended and referred to the primary examiner for his determination of the question of patentability, in which case the interference shall be dissolved or continued in accordance with such determination. The consideration of such reference or reason by the primary examiner shall be inter partes as in the case of a motion to dissolve. If such reference or reason be found while the interference is before the primary examiner for determination of a motion, decision thereon may be incorporated in the decision on the motion, but the parties shall be entitled to reconsideration or rehearing if they have not been heard on the matter. (See rule 236)

(b) Prior to the approval of the preliminary statements and notification of the parties thereof (rule 226), an interference may be withdrawn at the request of the primary examiner, in which event the interference shall be considered as not having been declared.

[Rule 128]

238 **Addition of new party by examiner.** If, during the pendency of an interference, another case appears, claiming substantially the subject matter in issue, the primary examiner may request the suspension of the interference for the purpose of adding said case. Such suspension will be granted as a matter of course by an examiner of interferences if no testimony has been taken. If, however, any testimony may have been taken, a notice for the proposed new party, disclosing the issue in interference and the names and addresses of the interferants and of their attorneys or agents, and notices for the interferants disclosing the name and address of the said party and his attorney or agent, shall be pre-

pared by the primary examiner and forwarded to the examiner of interferences, who shall mail said notices and set a time for stating any objections and at his discretion a time of hearing on the question of the admission of the new party. If the examiner of interferences be of the opinion that the interference should be suspended and the new party added, he shall prescribe the terms for such suspension.

[Rule 129]

INTERFERENCES: MISCELLANEOUS PROVISIONS

241 **Copies of part of application.** When an application is involved in an interference in which a part only of the invention is included in the issue, the applicant may file certified copies, one for the record and one for each party, of the part or parts of the specification and drawings, and other papers in the file, which exclude merely the noninterfering disclosure and such copies may be used in the proceedings in place of the complete application.

[Rule 105]

242 **Prosecution by assignee.** When on motion duly made and upon satisfactory proof, it shall be shown that, by reason of the inability or refusal of the inventor to take suitable action in an interference, or from other cause, the ends of justice require that an assignee of an undivided interest in the invention be permitted to prosecute the same, it may be so ordered.

[Rule 131]

243 **Motions before the Examiners of Interferences.** Motions of a character other than specified in rules 232 to 236 will be determined by an examiner of interferences or the Board of Interference Examiners, as may be deemed appropriate. Such motions shall be made in writing and shall contain a full statement of the action sought and the grounds therefor, and satisfactory proof of any facts required, if necessary, must accompany the motion. Oral hearings will not be held except on order of the examiner of interferences or Board of Interference Examiners. Briefs or memoranda in support of such motions shall accompany the motion. Any reply to the motion, together with any brief or memorandum in support thereof, shall be filed within ten days unless some other date is set by the examiner of interferences.

[Rules 124, 153, 163]

244 **Motions; miscellaneous provisions.** (a) Typewritten briefs may be used in connection with all motions. By stipulation of the parties subject to approval or by order of the tribunal before whom the motion is pending, briefs may be received if filed otherwise than as prescribed.

(b) In oral hearings on motions, the moving parties shall have the right to make the opening and closing arguments. Unless otherwise ordered before the hearing begins, oral arguments will be limited to one-half hour for each party.

(c) Petitions for reconsideration or modification of the decision must be filed within twenty days after the date of the decision.

(d) There is no appeal from decisions rendered on motions, either of the primary examiners or of the examiners of interferences, but the Commissioner may consider on petition any matter involving abuse of discretion or the exercise of his supervisory authority, or such other matters as he may deem proper to consider. Any such petition must comply with rule 181 and, if not filed within twenty days from the decision complained of, may be dismissed as untimely.

[Rules 153, 163]

245 **Extensions of time.** Extensions of time in any case not otherwise provided for may be had by stipulation of the parties, subject to approval, or on motion duly brought, sufficient cause being shown for such extension.

246 **Stay of proceedings.** Except as provided in rule 236, to effect a stay of proceedings, motion should be made before the tribunal having jurisdiction of the interference, who will, sufficient ground appearing therefor, order a suspension of the interference pending the determination of such motion.

[Rule 123]

247 **Service of papers.** Every paper filed in the Patent Office in interference cases must be served upon the other parties as provided in rule 248, except the following, (a) the application involved and any papers therein prior to the declaration of the interference, and any application referred to by the examiner in the notice of interference (rule 207) or by the party in a timely filed preliminary statement, (b) preliminary statements, (c) ex parte requests for extension of time to file preliminary statements (rule 218), (d) documentary exhibits introduced at the taking of a deposition, (e) original transcripts of testimony (but copies of the record must be served (rule 253)), (f) statutory disclaimers of entire claims involved in the interference and (g) disclaimers, concessions of priority or abandonments of the invention under rule 262. The specification in certain rules that a designated paper must be served does not imply that other papers, not enumerated above, need not be served. However, the requirement for service of designated papers may be waived under particular circumstances and service may be required of other designated papers which need not ordinarily be served. Proof of such service must be made before the paper will be considered in the interference by the Office. A statement of the attorney, attached to or appearing in the original paper when filed, clearly stating the time and manner in which service was made will be accepted as prima facie proof of service except as stated in rule 273.

[Rule 153a]

248 **Service of papers; manner of service.** Service of papers must be on the attorney or agent of the party if there be such or on the party if there is no attorney or agent, and may be made in either of the following ways: (a) By delivering a copy of the paper to the person served; (b) by leaving a copy at the usual place of business of the person served with some one in his employment; (c) when the person served has no usual place of business, by leaving a copy at his residence, with a member of his family over 14 years of age and of discretion; (d) transmission by first class or registered mail. Whenever it shall be satisfactorily shown to the Commissioner that none of the above modes of obtaining or serving the paper is practicable, service may be by notice published in the Official Gazette.

[Rule 154b]

INTERFERENCES: TRIAL

251 **Assignment of times for taking testimony.** (a) Times will be assigned in which the junior party shall complete his testimony in chief, and in which the other party shall complete the testimony on his side, and a further time in which the junior party may take rebutting testimony, but he shall take no other testimony. If there be more than two parties to the interference, the times for taking testimony will be so arranged that each shall have an opportunity to prove his case against prior parties and to rebut their evidence, and also to meet the evidence of junior parties.

(b) The times for taking testimony will ordinarily be assigned in the notices sent to the parties when the preliminary statements have been received and approved (rule 226). The date for final hearing will ordinarily be set in the same notices. If motions under rules 231 to 236 have been brought and set for hearing, the times will be re-assigned after determination thereof.

(c) Testimony shall be taken during the times assigned in accordance with rules 271 et seq.

[Rule 118, 120]

252 **Failure of junior party to take testimony.** Upon the filing of a motion for judgment by any senior party to an interference stating that the time for taking testimony on behalf of any junior party has expired and that no testimony has been taken and no other evidence offered by said junior party, an order shall be entered that the junior party show cause within a time set therein, not less than ten days, why judgment should not be rendered against him, and in the absence of a showing of good and sufficient cause, judgment shall be so rendered.

[Rule 119]

253 **Copies of the testimony.** (a) In addition to the original transcript of the testimony (rules 275 to 278), three true copies of the record of each party must be filed, for the use of the Patent Office, and one true copy of the record must be served upon each of the opposing parties.

(b) These copies of the record may be submitted either in printed or in typewritten form.

(c) These records, whether printed or typewritten, must include the testimony presented by the party filing the same. A copy of the counts of the interference and the preliminary statement required by rule 215 et seq. must be included. Each record must contain an index of the names of the witnesses, giving the pages where their examination and cross-examination begin, and an index of the exhibits, briefly describing their nature and giving the pages at which they are introduced and offered in evidence, and also the pages where copies of exhibits are shown when such exhibits are copied in the record. The names of the witnesses must appear at the top of the pages over their testimony, and the pages must be consecutively numbered.

(d) The copies of the record for the junior party or parties must be filed and served not less than seventy days before the day for final hearing, and in the case of the senior party not less than fifty days before the day for final hearing, unless otherwise specified by the examiner of interferences.

(e) When the copies of the record are submitted in printed form, they shall be printed in 11-point type and adequately leaded; the paper must be opaque and unglazed; the size of the page shall be 7⅝ by 10¼ inches; the size of the printed matter shall be 4⅛ by 7⅛ inches; and they shall be bound to lie flat when opened. Twenty-five additional copies for the United States Court of Customs and Patent Appeals, should appeal be taken, may also be filed; if no such appeal be taken, the twenty-five copies will be returned to the party filing them.

(f) When the copies of the record are submitted in typewritten form, they must be clearly legible copies on opaque, unglazed, durable paper approximately 8½ by 11 inches in size (letter-size) and one of the three copies for the Office must be a ribbon copy. The typing shall be on one side of the paper, in not smaller than pica type; and double-spaced with a margin of 1½ inches on the left-hand side of the page. The sheets shall be bound at their left edges, in such manner to lie flat when opened, in a volume or volumes of convenient size (approximately 100 pages per volume is suggested) provided with covers. Multigraphed or otherwise reproduced copies conforming to the standards specified will be accepted.

(g) The testimony of any party failing to supply copies of his record as specified may be refused consideration.

[Rule 162]

254 **Briefs at final hearing.** Briefs at final hearing before the Board of Interference Examiners shall be submitted in printed form, except that when not in excess of fifty legal-size double spaced typewritten pages, or the equivalent thereof, and in any other case where satisfactory reason therefor is shown, they may be submitted in typewritten form. If submitted in printed form, they shall be the same in size and the same as to page and print as is specified for printed copies of testimony. Typewritten briefs shall conform to the requirements for typewritten copies of testimony, except that legal size paper may be used and the binding and covers specified are not required. Three copies of each brief must be filed. Unless other dates are set by an examiner of interferences, the brief of the junior party or parties shall be filed not less than forty days, and that of the senior party not less than twenty days, prior to the hearing. Reply briefs, if filed, shall be due not less than ten days before the hearing.

[Rule 163]

255 **Request for findings of fact and conclusions of law.** Either party may, in his brief, submit concise proposed findings of fact, supported by specific references to and analysis of the record, and conclusions of law, supported by citation of authorities. The opposing party may, in his brief in reply thereto, accept any such proposed findings, or reject any proposed findings giving the reasons therefor, and may likewise submit proposed findings. The Board of Interference Examiners may, in its discretion, adopt the proposed findings in whole or in part.

256 **Final hearing.** Final hearings will be held by the Board of Interference Examiners on the day appointed at the designated time. If either

party appear at the proper time, he will be heard. After the day of hearing, the case will not be taken up for oral argument except by consent of all parties. If the Board of Interference Examiners be prevented from hearing the case at the time specified, a new assignment will be made, or the case will be continued from day to day until heard. Unless it shall be otherwise ordered before the hearing begins, oral arguments will be limited to not more than one hour for each party. After a contested case has been argued, nothing further relating thereto will be heard unless upon request of the Board of Interference Examiners.

Hearings may be set, advanced, and adjourned, as far as convenient and proper, to meet the wishes of the parties and their attorneys.

Petitions for rehearings or modification of the decision must be filed before the limit of appeal expires.

See rule 302.

[Rule 151]

257 **Burden of proof.** The parties to an interference will be presumed to have made their inventions in the chronological order of the filing dates of their applications for patents involved in the interference or the effective filing dates which such applications have been accorded; and the burden of proof will rest upon the party who shall seek to establish a different state of facts.

The termination of the interference by dissolution under rules 232 or 237, without an award of priority, or by an award of priority based solely upon ancillary matters, shall not disturb this presumption, and a party under these circumstances enjoying the status of a senior party with respect to any subject matter of his application shall not be deprived of any claim to such subject matter solely on the ground that such claim was not added to the interference by amendment under rule 233.

[Rule 116]

258 **Matters considered in determining priority.** In determining priority of invention, the Board of Interference Examiners will consider only priority of invention on the evidence submitted. Questions of patentability of a claim generally will not be considered in the decision on priority; and neither will the patentability of a claim to an opponent be considered, unless the non-patentability of the claim to the opponent will necessarily result in the conclusion that the party raising the question is in fact the prior inventor on the evidence before the Office, or relates to matters which have been determined to be ancillary to priority and must be considered, but a party shall not be entitled to raise such non-patentability unless he has duly presented and prosecuted a motion under rule 232 for dissolution upon such ground or shows good reason why such a motion was not presented and prosecuted.

The matters raised on a motion relating to the burden of proof (rule 235) may be reviewed at final hearing.

At final hearing between an application and a patent the prior art of record in the patent file may be referred to for the purpose of construing the issue.

[Rules 122, par. 2; 130]

259 **Recommendation by Board of Interference Examiners.** The Board of Interference Examiners may, either before or concurrently with their decision on the question of priority, but independently of such decision, direct the attention of the Commissioner to any matter not relating to priority which may have come to their notice, and which in their opinion establishes the fact that no interference exists, or that there has been irregularity in declaring the same, or which amounts to a bar to the grant of a patent to either of the parties for the claim or claims in interference. The Commissioner may suspend the interference and remand the case to the primary examiner for his consideration of the matters to which attention has been directed if such matters have not been considered before by the examiner, or take other appropriate action. If the case is not so remanded, the primary examiner will, after judgment on priority, consider such matters, unless the same shall have been previously disposed of by the Commissioner.

INTERFERENCES: TERMINATION

261 **Termination of interference.** An interference will be terminated by judgment of priority after final hearing (rules 251 et seq.), or by judgment on the record as provided by rule 225 or rule 252, or by dissolution as provided by rule 232 or rule 237, or as otherwise provided.

[Rule 125]

262 **Disclaimer, concession, abandonment.** (a) An applicant or a patentee involved in an interference may, at any time, file a written disclaimer or concession of priority, or abandonment of the invention, signed by the inventor in person with the written consent of the assignee when there has been an assignment. Upon the filing of such an instrument by any party, judgment shall be rendered against him.

(b) An applicant, except an applicant for reissue having a claim or claims from his patent in the interference, may at any time prior to the taking of testimony, and at any time thereafter with the consent of all of the other parties involved, avoid the continuance of the interference as to all counts by filing a written abandonment of the contest or of the application, signed by the inventor in person with the written consent of the assignee when there has been an assignment. Upon the filing of such abandonment of the contest or of the application, the interference shall be dissolved as to that party, but such dissolution shall in subsequent proceedings have the same effect with respect to the party filing the same as an adverse award of priority.

(c) Upon a showing of sufficient cause, the disclaimer, or abandonment of the invention, or abandonment of the contest or of the application, above referred to, may be executed and filed by the assignee of the entire interest. A concession of priority may not be made by an assignee.

(d) Such disclaimer, concession of priority, abandonment of the invention, or abandonment of the contest shall operate without further action as a direction to cancel the claims involved from the application of the party making the same on termination of the interference on the basis thereof.

[Rule 107]

263 **Statutory disclaimer by patentee.** The disclaimer referred to in rule 262, when made by a patentee in interference is not a disclaimer under R. S. 4917; 35 U. S. C. 65. If a disclaimer under the statute, see rule 321, which has the effect of cancelling the claims from the patent, is made by the patentee, including all assignees as shown by the records of the Patent Office, the interference will be dissolved pro forma.

264 **Reissue filed by patentee.** If a patentee in interference files an application for reissue during the interference, omitting the claims involved (for the purpose of avoiding the interference), the application will be examined and such examination will include the question of patentability over the issue of the interference and over the application of the other party. The interference will not be terminated unless a reissue is granted excluding claims to the conflicting subject matter, whereupon the interference will be dissolved. If a reissue application is filed for other purposes, it may be held subject to the outcome of the interference. An application for reissue will not be included in the interference on the basis of new claims presented by the reissue unless a motion to that effect is brought during the motion period or any delay adequately explained.

265 **Status of claims of defeated applicant after interference.** Whenever an award of priority has been rendered in an interference proceeding and the limit of appeal from such decision has expired, the claim or claims constituting the issue of the interference in the application of the defeated or unsuccessful applicant or applicants stand finally disposed of without further action by the examiner and are not open to further ex parte prosecution.

[Rule 132]

266 **Action after interference.** After the termination of the interference, the primary examiner will promptly take such action in each of the applications involved as may be necessary. Amendments presented during the interference shall not be entered except as otherwise provided; amendments required to accompany motions to amend shall be entered only to the extent the motion was granted (matter not entered may be subsequently presented by the applicant, subject to the rules relating to amendments, provided the prosecution of the application is not otherwise closed). The examiner will act on any matter requiring action and call for response to any examiner's action unresponded to.

After judgment of priority, the application of any party may be held subject to further examination, including interference with other applications.

[Rule 96]

267 **Second interference.** A second interference between the same parties will not be declared upon another application for patent for the same invention filed by either party.

[Rule 127]

TESTIMONY IN INTERFERENCES AND OTHER CONTESTED CASES

271 **Evidence must comply with rules.** Evidence touching the matter at issue which shall not have been taken and filed in compliance with these rules will not be considered in determining the interference or other proceeding.

[Rule 159]

272 **Manner of taking testimony of witnesses.** (a) The testimony of witnesses shall be taken by depositions on oral examination in accordance with these rules.

(b) If the parties so stipulate in writing, deposition may be taken before any person authorized to administer oaths, at any place, upon any notice, and in any manner, and when so taken may be used like other depositions. By agreement of the parties, provided the Commissioner consent, testimony may be taken before an officer or officers of the Patent Office under such terms and conditions as the Commissioner may prescribe.

(c) By agreement of the parties, the testimony of any witness or witnesses of any party, may be submitted in the form of an affidavit by such witness or witnesses. The parties may stipulate what a particular witness would testify to if called, or the facts in the case of any party may be stipulated.

273 **Notice of examination of witnesses.** Before the depositions of witnesses shall be taken by a party, due notice in writing shall be given to the opposing party or parties, as provided in rule 248, of the time when and place where the depositions will be taken, of the cause or matter in which they are to be used, and of the names and residences of the witnesses to be examined. The opposing party shall have full opportunity, either in person or by attorney, to cross-examine the witnesses. If the opposing party shall attend the examination of witnesses not named in the notice, and shall either cross-examine such witnesses or fail to object to their examination, he shall be deemed to have waived his right to object to such examination for want of notice. Neither party shall take testimony in more than one place at the same time, nor so nearly at the same time that reasonable opportunity for travel from one place of examination to the other cannot be had.

The notice for taking testimony must be served (unless otherwise stipulated in an instrument in writing filed in the case) upon the attorney of record, if there be one, or, if there be no attorney of record, upon the adverse party. Reasonable time must be given therein for such adverse party to reach the place of examination. Such notice shall, with sworn proof of the fact, time, and mode of service thereof, be attached to the deposition or depositions, whether the opposing party shall have cross-examined or not.

[Rule 154 a, b]

274 **Persons before whom depositions may be taken.** (a) Within the United States, or within a territory or insular possession of the United States, depositions shall be taken before an officer authorized to administer oaths by the laws of the United States or of the place where the examination is held.

(b) No such officer who is a relative or employee of either of the parties, or of their attorneys or agents, or interested, directly or indirectly, in the matter in controversy, either as counsel, attorney, agent or otherwise, shall be competent to take depositions, unless with the written consent of all the parties.

[Rule 156]

275 Examination of witnesses. (a) Each witness before testifying shall be duly sworn according to law by the officer before whom his deposition is to be taken.

(b) The testimony shall be taken in answer to interrogatories, with the questions and answers recorded in their regular order by the officer, or by some other person (who shall be subject to the provisions of rule 274 (b)) in the presence of the officer except when his presence is waived on the record by agreement of the parties. The testimony shall be taken stenographically and transcribed, unless the parties present agree otherwise.

(c) In the absence of all opposing parties and their attorneys or agents, testimony may be taken in longhand, typewriting, or stenographically.

(d) All objections made at the time of the examination to the qualifications of the officer taking the deposition, or to the manner of taking it, or to the evidence presented, or to the conduct of any party, and any other objection to the proceedings, shall be noted by the officer upon the deposition. Evidence objected to shall be taken subject to the objections.

(e) When the testimony has been transcribed, the deposition shall be carefully read over by the witness, or by the officer to him, and shall then be signed by the witness in the presence of the officer unless the reading and the signature be waived on the record by agreement of all parties.

[Rules 154c, 156]

276 Certification and filing by officer. The officer shall annex to the deposition his certificate showing: (a) Due administration of the oath by the officer to the witness before the commencement of his testimony; (b) the name of the person by whom the testimony was taken down, and whether, if not taken down by the officer, it was taken down in his presence; (c) the presence or absence of the adverse party; (d) the place, day, and hour of commencing and taking the deposition; (e) that the deposition was read by or to the witness before he signed the same, and that he signed the same in the presence of the officer; and (f) the fact that the officer was not disqualified as specified in rule 274. If any of the foregoing requirements are waived, the certificate shall so state. The officer shall sign the certificate and affix thereto his seal of office, if he have such seal. Unless waived on the record by agreement, he shall then, without delay, securely seal in an envelope all the evidence, notices, and paper exhibits, inscribe upon the envelope a certificate giving the number and title of the case, the name of each witness, and the date of sealing, address the package, and forward the same to the Commissioner of Patents. If the weight or bulk of an exhibit shall exclude it from the envelope, it shall, unless waived on the record by agreement of all parties, be authenticated by the officer and transmitted in a separate package, marked and addressed as provided in this rule.

[Rule 154c]

277 Form of deposition. The pages of each deposition must be numbered consecutively, and the name of the witness plainly and conspicuously written at the top of each page. The testimony may be written on legal-size or letter-size paper, with a wide margin on the left-hand side of the page, and with the writing on one side only of the sheet. The questions propounded to each witness must be consecutively numbered and each question must be followed by its answer.

The form of the deposition may be such as to facilitate preparation of the copies of the record required by rule 253.

[Rule 155]

278 Depositions must be filed. All depositions which are taken must be duly filed in the Patent Office. On refusal to file, the Office at its discretion will not further hear or consider the contestant with whom the refusal lies; and the Office may, at its discretion, receive and consider a copy of the withheld deposition, attested by such evidence as is procurable.

[Rule 154f]

279 Inspection of testimony. After testimony is filed in the Office, it may be inspected by any party to the case, but it cannot be withdrawn for the purpose of printing. It may be printed by someone specially designated by the Office for that purpose, under proper restrictions.

[Rule 161]

281 Additional time for taking testimony. If either party shall be unable to procure the testimony of a witness or witnesses within the time limited and said time has expired or is about to expire, and desires additional time for such purpose, he must file a motion, accompanied by a statement under oath setting forth specifically the cause of such inability, the name or names of the witness or witnesses, the facts expected to be proved by such witness or witnesses, the steps which have been taken to procure such testimony, and the dates on which efforts have been made to procure it.

See rule 245 for extensions of time.

[Rule 154d]

282 Official records and printed publications. Official records and any special matter contained in a printed publication, if competent evidence and pertinent to the issue, may be introduced in evidence by filing in the Patent Office a notice to that effect, before the closing of the time for taking the testimony of the party (before the time for taking the testimony in chief if such matters are not in rebuttal), specifying the record or the printed publication, the page or pages thereof to be used, indicating generally its relevancy, and accompanied by the record or authenticated copy, or the printed publication or a copy. The notice and copies of the record or publication must be served on each of the other parties.

See rules 216 and 224 for introduction of prior applications, the filing date of which is claimed.

[Rule 154e]

283 Testimony taken in another interference or action. Upon motion duly made and granted, testimony taken in another interference proceeding, or testimony taken in a suit between the same parties or those in interest, may be used in an interference proceeding, so far as relevant and material, subject, however, to the right of any contesting party to recall or demand the recall of witnesses whose testimony has been taken, and to take other testimony in rebuttal of the testimony.

[Rule 157]

284 Testimony taken in foreign countries. Upon motion duly made and granted, testimony may be taken in foreign countries, upon complying with the following requirements:

(a) The motion must designate a place for the examination of the witnesses at which an officer duly qualified to take testimony under the laws of the United States in a foreign country shall reside, and it must be accompanied by a statement under oath that the motion is made in good faith, and not for the purposes of delay or of vexing or harassing any party to the case; it must also set forth the names of the witnesses, the particular facts to which it is expected each will testify, and the grounds on which is based the belief that each will so testify.

(b) It must appear that the testimony desired is material and competent, and that it can not be taken in this country at all, or can not be taken here without hardship and injury to the moving party greatly exceeding that to which the opposite party will be exposed by the taking of such testimony abroad.

(c) Upon the granting of such motion, a time will be set within which the moving party shall file in duplicate the interrogatories to be propounded to each witness, and serve a copy of the same upon each adverse party, who may, within a designated time, file, in duplicate, cross-interrogatories. Objections to any of the interrogatories or cross-interrogatories may be filed at any time before the depositions are taken, and such objections will be considered and determined upon the hearing of the case.

(d) As soon as the interrogatories and cross-interrogatories are decided to be in proper form, the Commissioner will cause them to be forwarded to the proper officer, with the request that, upon payment of, or satisfactory security for, his official fees, he notify the witnesses named to appear before him within a designated time and make answer thereto under oath; and that he reduce their answers to writing, and transmit the same, under his official seal and signature, to the Commissioner of Patents with the certificate prescribed in rule 276.

(e) By stipulation of the parties the requirements of paragraph (c) of this rule as to written interrogatories and cross-interrogatories may be dispensed with, and the testimony may be taken before the proper officer upon oral interrogatories by the parties, their attorneys or their agents.

(f) Unless false swearing in the giving of such testimony before the officer taking it shall be punishable as perjury under the laws of the foreign state in which it shall be taken, it will not stand on the same footing in the Patent Office as testimony duly taken in the United States; but its weight in each case will be determined by the tribunal having jurisdiction of such case.

[Rule 158]

285 Effect of errors and irregularities in depositions. Notice will not be taken of merely formal or technical objections which shall not appear to have wrought a substantial injury to the party raising them; and in case of such injury it must be made to appear that, as soon as the party became aware of the ground of objection, he gave notice thereof.

(a) *As to notice.* All errors and irregularities in the notice for taking a deposition are waived unless objection is promptly made and served in writing upon the party giving the notice.

(b) *As to disqualification of officer.* Objection to taking a deposition because of disqualification of the officer before whom it is to be taken is waived unless made before the taking of the deposition begins or as soon thereafter as the disqualification becomes known or could be discovered with reasonable diligence.

(c) *As to taking of deposition.* (1) Objections to the competency of a witness or to the competency, relevancy, or materiality of testimony are not waived by failure to make them before or during the taking of the deposition, unless the ground of the objection is one which might have been obviated or removed if presented at that time.

(2) Errors and irregularities occurring at the oral examination in the manner of taking the deposition, in the form of the questions or answers, in the oath or affirmation, or in the conduct of the parties, and errors of any kind which might be obviated, removed, or cured if promptly presented, are waived unless seasonable objection thereto is made at the taking of the deposition.

(d) *As to completion and return of deposition.* Errors and irregularities in the manner in which the testimony is transcribed or the deposition is prepared, signed, certified, sealed, indorsed, transmitted, filed, or otherwise dealt with by the officer are waived unless a motion to suppress the deposition or some part thereof is made with reasonable promptness after such defect is, or with due diligence might have been, ascertained.

[Rule 159]

286 Objections to admissibility. Subject to the provisions of rule 285, objection may be made to receiving in evidence any deposition or part thereof, or any other evidence, for any reason which would require the exclusion of the evidence according to the established rules of evidence, which will be applied strictly by the Office.

[Rule 159]

PROTESTS AND PUBLIC USE PROCEEDINGS

291 Protests to the grant of a patent. The patent statutes do not provide for opposition to the grant of a patent on the part of the public. Protests to the grant of a patent are ordinarily merely acknowledged, and filed after being referred to the examiner having charge of the subject matter involved for his information.

[Rule 11, par. 1]

292 Public use proceedings. (a) When a petition for the institution of public use proceedings, supported by affidavits, is filed by one having information of the pendency of an original application and is found, on reference to the primary examiner, to make a prima facie showing that the invention involved in an interference or claimed in an application believed to be on file had been in public use or on sale one year before the filing of the application, or before the date alleged by an interfering party in his preliminary statement or the date of invention established by such party, a hearing may be had before the Commissioner to determine whether a public use

proceeding should be instituted. If instituted, times may be set for taking testimony, which shall be taken as provided by rules 271 to 286. The petitioner will be heard in the proceedings but after decision therein will not be heard further in the prosecution of the application for patent.

(b) The petition and accompanying papers should be filed in duplicate, or served upon the applicant, his attorney or agent of record, and petitioner should offer to bear any expense to which the Office may be put in connection with the proceeding.

[Rule 11, pars. 2, 3]

APPEAL TO THE U. S. COURT OF CUSTOMS AND PATENT APPEALS

301 **Appeal to court.** Any applicant dissatisfied with the decision of the Board of Appeals, and any party to an interference dissatisfied with the decision of the Board of Interference Examiners, may appeal to the U. S. Court of Customs and Patent Appeals. The appellant must take the following steps in such an appeal: (a) In the Patent Office, give notice to the Commissioner and file the reasons of appeal (see rule 302); (b) in the court, file a petition of appeal and a certified transcript of the record within a specified time after filing the reasons of appeal, and pay the fee for appeal, as provided by the rules of the court.

[Rule 148]

302 **Notice and reasons of appeal.** When an appeal is taken to the U. S. Court of Customs and Patent Appeals, the appellant shall give notice thereof to the Commissioner, and file in the Patent Office, within sixty days from the date of the decision appealed from, his reasons of appeal specifically set forth in writing. If a petition for rehearing or reconsideration is filed within thirty days after said decision, the notice of appeal may be given and the reasons of appeal filed within thirty days after action on the petition. No petition for rehearing or reconsideration filed more than thirty days after such decision, nor any proceedings on such petition, shall operate to extend the period of sixty days hereinabove provided for appeal.

In interferences and other contested cases, the notice and reasons must be served as provided in rule 248.

[Rule 149, par. 1]

CIVIL ACTION UNDER R. S. 4915

305 **Civil action under R. S. 4915.** (a) From adverse decisions by the Board of Appeals in ex parte cases, and from decisions of the Board of Interference Examiners, the appellant, if an applicant, has the option of proceeding under R. S. 4915; 35 U. S. C. 63, instead of appealing to the U. S. Court of Customs and Patent Appeals.

(b) If an applicant in an ex parte case has taken an appeal to the U. S. Court of Customs and Patent Appeals, he thereby waives his right to proceed under R. S. 4915 (U. S. C., title 35, sec. 63).

(c) If a defeated applicant to an interference proceeding has taken an appeal to the U. S. Court of Customs and Patent Appeals, and any adverse party to the interference shall, within twenty days after the appellant shall have filed notice of the appeal to the court (rule 302), file notice with the Commissioner that he elects to have all further proceedings conducted as provided in R. S. 4915; 35 U. S. C. 63, certified copies of such notices will be transmitted to the U. S. Court of Customs and Patent Appeals for such action as may be necessary. The notice of election must be served as provided in rule 248.

[Rule 149, pars. 2, 3, 4]

ALLOWANCE AND ISSUE OF PATENT

311 **Notice of allowance.** If, on examination, it shall appear that the applicant is justly entitled to a patent under the law, a notice of allowance will be sent him, his attorney or his agent, calling for the payment of the final fee within six months from the date of such notice of allowance. Upon the receipt of the fee within the time fixed by law, the patent will be prepared for issue. In cases in which no final fee is due (designs, reissues, and patents issued under the act of April 30, 1928, 45 Stat. 467; 35 U. S. C. 45), the patent will be prepared for issue in due course after the notice of allowance is sent.

[Rule 164]

312 **Amendments after allowance.** Amendments after the notice of allowance of an application will not be permitted as a matter of right, but may be made, if the printing of the specification has not begun, on the recommendation of the primary examiner, approved by the Commissioner, without withdrawing the case from issue.

[Rule 78]

313 **Withdrawal from issue.** After the notice of allowance of an application is sent, the case will not be withdrawn from issue except by approval of the Commissioner, and if withdrawn for further action on the part of the Office, a new notice of allowance will be sent if the application is again allowed. When the final fee has been paid, and the patent to be issued has received its date and number, the application will not be withdrawn from issue on account of any mistake or change of purpose of the applicant, his attorney or his agent, nor for the purpose of enabling the inventor to procure a foreign patent, nor for any other reasons except mistake on the part of the Office, or because of fraud or illegality in the application, or for interference. Express abandonment of the application (rule 138) may not be recognized by the Office unless it is actually received by appropriate officials in time to act thereon before the date of issue.

[Rule 165]

314 **Issuance of patent.** Every patent shall issue within a period of three months from the date of the payment of the final fee, which fee shall be paid not later than six months from the date on which the application was allowed and the notice of allowance sent; and if the final fee be not paid within that period, the patent shall be withheld. In the absence of request to suspend issue of the patent up to three months, the patent will issue in regular course in about one month. The issue closes weekly on Thursday, and the patents ordinarily bear date as of the fourth Tuesday thereafter.

[Rule 167]

315 **Delivery of patent.** The patent will be delivered or mailed on the day of its date to the attorney or agent of record, if there be one; or if the attorney or agent so request, to the patentee or assignee of an interest therein; or, if there be no attorney or agent, to the patentee or to the assignee of the entire interest, if he so request.

[Rule 169]

316 **Forfeited application.** A forfeited application is one upon which a patent has been withheld for failure to pay the final fee within the prescribed time. (See rule 314.)

A forfeited application is not considered as pending while forfeited, and, if the final fee is not subsequently paid and accepted as provided in rule 317, the application is abandoned, as of the date it became forfeited.

[Rules 174, 178]

317 **Delayed payment of final fee.** The Commissioner of Patents may, in his discretion, receive the final fee if paid within one year after the six months' period for payment has passed and the patent shall issue as specified in rule 314. Each petition for the delayed payment of the final fee shall be accompanied by the final fee and the petition fee, and a verified statement in support of the petition.

[Rule 175]

DISCLAIMER

321 **Statutory disclaimer in patent.** A disclaimer under R. S. 4917; 35 U. S. C. 65, must comply with the requirements of the statute and must also identify the patent, specify that the claiming of more than the patentee had a right to claim occurred through inadvertence, accident or mistake and without any fraudulent or deceptive intention, identify the claim or claims subject to the disclaimer, and be signed by the person making the disclaimer. Such disclaimers are not examined except as to formal matters, but a disclaimer observed not to be a disclaimer in fact may be refused, and the recording of a disclaimer does not indicate that it is considered by the Patent Office to be proper or valid or that the patent after disclaimer, or any claim thereof, is considered valid. A notice of the disclaimer is published in the Official Gazette and attached to the printed copies of the specification. See rule 21 for fee for disclaimer.

[Rule 181]

CORRECTION OF ERRORS IN PATENT

322 **Certificate of correction.** A certificate of correction under the act of March 4, 1925, 43 Stat. 1268, 35 U. S. C. 88, may be issued at the request of the patentee or his assignee and endorsed on the patent itself. Such certificate will not be issued at the request or suggestion of anyone not owning an interest in the patent, nor on motion of the Office, without first notifying the patentee (including any assignee of record) and affording him an opportunity to be heard.

If the nature of the mistake on the part of the Office is such that a certificate of correction is deemed inappropriate in form, the Commissioner, with the consent of the patentee (or assignee of record, if any) may issue a reissued patent in lieu thereof as a more appropriate form for certificate of correction, without expense to the patentee.

[Rule 170, par. 1]

323 **Other mistakes not corrected.** Mistakes not incurred through the fault of the Office, and not affording legal grounds for reissue, will not be corrected after the date of the patent.

Changes or corrections will not be made in a patent after the date thereof except as provided in rule 322.

[Rule 170, pars. 2, 3]

ASSIGNMENTS AND RECORDING

331 **Recording of assignments.** (a) Assignments, including grants and conveyances, of patents or applications for patents under R. S. 4898; 35 U. S. C. 47, will be recorded in the Patent Office in books kept for that purpose. Other instruments affecting title to a patent or application for patent, and licenses, even though the recording thereof may not serve as constructive notice under R. S. 4898, will be recorded as provided in this rule or in the discretion of the Commissioner.

(b) No instrument will be recorded which is not in the English language and which does not amount to an assignment, grant, mortgage, lien, incumbrance, or license, or which does not affect the title of the patent or invention to which it relates, and which does not identify the patent or application to which it relates, except as ordered by the Commissioner.

(c) An instrument relating to a patent should identify the patent by number and date (the name of the inventor and title of the invention as stated in the patent should also be given); an instrument relating to an application should identify the application by serial number and date of filing (the name of the inventor and title of the invention as stated in the application should also be given) but if an assignment is executed concurrently with or subsequent to the execution of the application but before the application is filed or before its serial number and filing date are ascertained, it should adequately identify the application, as by its date of execution and name of the inventor and title of the invention; so that there can be no mistake as to the patent or application intended.

[Rule 186]

332 **Receipt and recording.** The receipt of assignments is generally acknowledged by the Office. They are recorded in regular order as promptly as possible, and then transmitted with the date of record and Liber and Page number stamped thereon to the persons entitled to them. The date of the record is the date of the receipt of the assignment at the Office in proper form and accompanied by the full legal fee for recording.

[Rules 188, 189]

333 **Conditional assignments.** Assignments which are made conditional on the performance of certain acts or events, as the payment of money or other condition subsequent, if recorded in the Office are regarded as absolute assignments for Office purposes until cancelled with the written consent of both parties or by the decree of a competent court. The Office has no means for determining whether such conditions have been fulfilled.

[Rule 187]

334 **Issue of patent to assignee.** In case of an assignment of the entire interest in the invention

and application, or of the entire interest in the patent to be granted, the patent will normally issue to the assignee; and if the assignee hold an undivided part interest, the patent will normally issue jointly to the inventor and the assignee; if it is desired that the patent so issue the assignment in either case must first have been recorded, and at a day not later than the date of the payment of the final fee; in the case of an application for reissue, the assignment must be recorded before the case is allowed; in the case of an application for a design patent, the assignment must be recorded at least ten days before the case is allowed.

[Rules 26, 188]

RECOGNITION OF ATTORNEYS AND AGENTS

341 Registration of attorneys and agents. A register of attorneys and a register of agents are kept in the Patent Office on which are entered the names of all persons recognized as entitled to represent applicants before the Patent Office in the preparation and prosecution of applications for patent. Registration in the Patent Office under the provisions of these rules shall only entitle the persons registered to practice before the Patent Office.

[Rule 17]

(a) *Attorneys at law.* Any attorney at law in good standing admitted to practice before any United States Court or the highest court of any State or Territory of the United States who fulfills the requirements and complies with the provisions of these rules may be admitted to practice before the Patent Office and have his name entered on the register of attorneys.

[Rule 17a]

(b) *Agents.* Any citizen of the United States not an attorney at law who fulfills the requirements and complies with the provision of these rules may be admitted to practice before the Patent Office and have his name entered on the register of agents.

NOTE: All persons registered prior to November 15, 1938, were registered as attorneys, whether they were attorneys at law or not, and such registrations have not been changed.

[Rule 17c, k]

(c) *Requirements for registration.* No person will be admitted to practice and registered unless he shall apply to the Commissioner of Patents in writing on a prescribed form supplied by the Commissioner and furnish all requested information and material; and shall establish to the satisfaction of the Commissioner that he is of good moral character and of good repute and possessed of the legal and scientific and technical qualifications necessary to enable him to render applicants for patents valuable service, and is otherwise competent to advise and assist them in the presentation and prosecution of their applications before the Patent Office. In order that the Commissioner may determine whether a person seeking to have his name placed upon either of the registers has the qualifications specified, satisfactory proof of good moral character and repute, and of sufficient basic training in scientific and technical matters must be submitted and an examination which is held from time to time must be taken and passed. The taking of an examination may be waived in the case of any person who has served for three years in the examining corps of the Patent Office.

[Rule 17e]

(d) *Registration of firms.* Any firm, the individual members of which are each registered on the register of attorneys, may have its name entered upon the register of attorneys. Any firm, one of the individual members of which is registered on the register of agents and each of the remaining individual members are registered either on the register of attorneys or the register of agents, may have its name entered on the register of agents. If the membership of the firm is changed, application must be made for registration of the firm as changed.

[Rule 17b, d]

(e) *Foreign patent attorneys and agents.* Any foreign patent attorney or agent not a resident of the United States who shall file proof to the satisfaction of the Commissioner that he is registered and in good standing before the patent office of the country in which he resides and practices, and is possessed of the qualifications stated in paragraph (c) of this rule, may be registered on the register of agents as entitled to represent applicants located in such country before the United States Patent Office in the presentation and prosecution of applications: *Provided*, That the patent office of such country allows substantially reciprocal privileges to those admitted to practice before the United States Patent Office. Such registration shall continue only during the period that the conditions specified obtain.

[Rule 17f]

(f) *Government employees.* Officers and employees of the United States who are disqualified by statute (18 U. S. C. 281) from practicing as attorneys or agents in proceedings or other matters before government departments or agencies, may not be registered, and if any registered attorney or agent becomes such an officer or employee, his name on the register shall be endorsed as inactive during the period of such employment, but officers or employees whose official duties require the preparation and prosecution of applications for patent may be registered (on compliance with these rules) or recognized to practice, to the extent necessary to carry out their official duties.

(g) *Former examiners.* No person who has served in the examining corps of the Patent Office will be registered after termination of his services, nor, if registered before such service, be reinstated, unless he undertakes (1) not to prosecute or aid in any manner in the prosecution of any application pending in any examining division in which he served, on the date he left said division; and (2) not to prepare or prosecute nor to assist in any manner in the preparation or prosecution of any application of another filed within two years after the date he left such division, and assigned to such division, without the specific authorization of the Commissioner. Associated and related classes in other divisions may be required to be included in the undertaking or designated classes may be excluded. In case application for registration or reinstatement is made after resignation from the Office, the applicant will not be registered, or reinstated, if he has prepared or prosecuted, or assisted in the preparation or prosecution of any such application as indicated in this paragraph.

(h) *Oath and registration fee.* Before his name may be entered on the register of attorneys or on the register of agents, every applicant for registration must, after his application is approved, subscribe and swear to an oath prescribed by the Commissioner of Patents and pay the prescribed registration fee (see rule 21).

[Rule 17j]

(i) *Committee on Enrollment.* The Commissioner may establish a Committee on Enrollment to receive and act upon applications for registration to practice before the Patent Office, to conduct and supervise the examinations provided for in paragraph (c) of this rule, to maintain the registers and to perform such other duties in connection with enrollment and recognition of attorneys and agents as may be necessary; or such functions may be performed by designated officials of the Patent Office. Any action of such committee or official may be reviewed by the Commissioner.

342 Limited recognition. Any person not registered and not entitled to be recognized under rule 341 as an attorney or agent to represent applicants generally may, upon a showing of circumstances which render it necessary or justifiable, be recognized by the Commissioner to prosecute as attorney or agent a specified application or applications, but this limited recognition shall not extend further than the application or applications specified.

[Rule 17g]

343 Persons not registered or recognized. No person or firm not registered or specifically recognized as provided in rule 342 will be permitted to prosecute applications of others before the Patent Office.

[Rule 17h]

344 Professional conduct. Attorneys and agents appearing before the Patent Office must conform to the standards of ethical and professional conduct generally applicable to attorneys before the courts of the United States.

345 Advertising. Every attorney and agent registered to practice before the United States Patent Office shall submit to the Commissioner of Patents for approval copies of all proposed advertising matter, circulars, letters, cards, etc., intended to solicit patent business, and if it be not disapproved by him and the attorney or agent so notified within ten days after submission, it may be considered approved.

No registered agent shall, in advertising matter or in papers filed in the Patent Office, represent himself to be an attorney, solicitor, or lawyer.

Any registered attorney or agent sending out or using any such matter, a copy of which has not been submitted to the Commissioner of Patents in accordance with this rule, or which has been disapproved by the Commissioner of Patents, and any registered agent misrepresenting his status shall be subject to suspension or disbarment.

[Rule 17i]

346 Signature and certificate of attorney. Every paper filed by an attorney or agent representing an applicant or party to a proceeding in the Patent Office must bear the signature of such attorney or agent, except papers which are required to be signed by the applicant or party in person (such as the application itself and affidavits required of applicants). The signature of an attorney or agent to a paper filed by him, or the filing or presentation of any paper by him, constitutes a certificate that the paper has been read; that its filing is authorized; that to the best of his knowledge, information, and belief there is good ground to support it; and that it is not interposed for delay. When an applicant or party is represented by a registered firm such papers must carry the signature of an individual member of the firm or an individual registered attorney or agent employed by the firm and duly authorized to sign on behalf of the firm, in addition to the firm name, and the certification shall be a certification by and on behalf of the firm and by the individual.

347 Removing names from registers. Attorneys, agents, and firms, registered to practice before the Patent Office, should notify the Office of any change of address for entry on the register, by letter separate from any notice of change of address filed in individual applications. The Office may address a letter to any person or firm on the registers, at the address of which separate notice for the register was last received, for the purpose of ascertaining whether such person or firm desires to remain on the register. The name of any person or firm failing to reply and give the information requested within a time limit specified will be removed from the register, and the names so removed published in the Official Gazette. Any name so removed may be reinstated, either on the register of attorneys or the register of agents, as may be appropriate.

348 Suspension or disbarment proceedings. Except as otherwise provided, proceedings for suspension, disbarment, or exclusion from practice are before a Commissioner.

(a) *Investigating and prosecuting officer.* The duties of investigation, preparing charges, collecting and presenting testimony, and presenting a case for suspension, exclusion from practice or disbarment shall be performed by the Solicitor of the Patent Office or, at his direction, by a designated law examiner or other person, and neither the Solicitor nor such law examiner or other person shall participate in any manner in the decision of the case. If, upon investigation of a complaint or other information concerning an attorney or agent, it shall appear to the Solicitor that grounds for suspension, exclusion from practice, or disbarment exist, he shall prepare and forward the necessary notice and statement.

(b) *Notice of proceedings.* Proceedings for suspension or disbarment shall be instituted by the Solicitor by mailing to, or otherwise serving on, the respondent a notice of such proceeding with a statement of the charges against him, at the same time forwarding a copy to the Commissioner. It shall be the duty of the respondent to answer the charges as specified in paragraph (c) of this rule.

(c) *Answer.* The respondent's answer shall be filed in writing with the Commissioner within thirty days from the time the notice is served on the respondent, or within such extension of time

as may be allowed by the Commissioner for good cause shown. The answer shall be under oath. Failure to answer within the time allowed will be taken as an admission of the charges. The respondent in his answer should specifically admit or deny every material allegation of fact in the statement of charges; every allegation not denied shall be deemed admitted, unless the respondent states that he has no knowledge thereof sufficient to form a belief, which statement shall be considered a denial. Any special matters of defense shall be stated affirmatively in the answer. False statements in the answer may be made the basis of supplemental charges.

(d) *Hearing.* Unless the Commissioner finds the answer sufficient to dispose of the charges, he will set the case for hearing before him, notifying the respondent and the Solicitor of the place, day and time of commencement of the hearing. Evidence as to the matters in issue may be submitted at the hearing, the testimony of witnesses being presented orally, under oath and reported.

The hearing may be advanced and continued by the Commissioner, as far as may be deemed convenient and proper.

Depositions for use at the hearing in lieu of personal appearance of witnesses may be taken by either the Solicitor or the respondent on application to and with the written consent of the Commissioner within such times and under such conditions as the Commissioner may prescribe.

(e) *Hearing officer.* The Commissioner may, in his discretion, delegate the conduct of the hearing to a hearing or trial examiner who shall be the presiding officer and who shall make a recommended decision.

(f) *Administrative Procedure Act.* Proceedings shall be governed, in matters not specifically set forth herein, by the provisions of the Administrative Procedure Act, 60 Stat. 237, 5 U. S. C. 1001–1011, which may be applicable.

AMENDMENT OF RULES

351 **Amendments to rules will be published.** All amendments to these rules will be published in the Official Gazette and in the Federal Register. [Rule 198]

352 **Publication of notice of proposed amendments.** Whenever required by law, and in other cases whenever practicable, notice of proposed amendments to these rules will be published in the Official Gazette and in the Federal Register. If not published with the notice, copies of the text will be furnished to any person requesting the same. All comments, suggestions, and briefs received within a time specified in the notice will be considered before adoption of the proposed amendments which may be modified in the light thereof.

Oral hearings may be held at the discretion of the Commissioner.

RULES OF PRACTICE IN TRADE-MARK CASES

The following amendments to particular rules of the Rules of Practice in Trade-Mark Cases have been adopted and promulgated to change references to, or inclusion by reference of, particular rules of the Rules of Practice in Patent Cases or to conform them to related or corresponding patent rules.

These amendments take effect on March 1, 1949, in the same manner as the changes in the patent rules. See the Federal Register for December 31, 1948.

The time of taking effect of Trade-Mark Rule 4.4 is further extended to July 1, 1949, and until such time old Trade-Mark Rule 11, fourth and fifth paragraphs, is still in effect.

LAWRENCE C. KINGSLAND,
Commissioner of Patents.

---

1. Rule 2.1 is amended by changing the note at the end of said rule to read as follows:

NOTE: The Official Gazette and other publications are sold by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., who also sets the prices, to whom all communications respecting the same should be addressed (except with respect to items indicated as supplied by the Patent Office only).

Official Gazette of the United States Patent Office:	
Annual subscription, domestic	$17.50
Including indexes of patents and trade marks, paper bound $21.00; cloth bound $24.50.	
Annual subscription, foreign	26.50
Including indexes of patents and trade marks, paper bound $31.00; cloth bound $34.50.	
Single numbers	.35
Portions of the Official Gazette supplied separately:	
Decision leaflets, domestic $2.50 per annum, foreign $4.25 per annum; single numbers	.05
Trade-mark section, domestic $8.00 per annum, foreign $10.00 per annum; single numbers	.20
Weekly index pages (supplied only by the Patent Office), $2.50 per annum; single numbers	.05
Annual index relating to trade-marks; price varies, 1947 volume, $3.00 cloth; paper	1.75
Decisions of the Commissioner of Patents; price varies, 1946 volume, buckram	2.00

2. Rule 4.2, first paragraph. The reference "Patent Rule 17" is changed to read "Patent Rule 341."

3. Rule 4.4, Advertising, is amended by adding the following note:

NOTE: The following rule, being paragraphs 4 and 5 of old Trade-Mark Rule 11, the rule currently in effect, shall be in effect until this rule comes into effect:

Every attorney prosecuting applications for registration of trade-marks shall submit to the Commissioner of Patents for approval copies of all proposed advertising matter, circulars, letters, cards, etc., intended to solicit trade-mark business, and if it be not disapproved by him and the attorney so notified within 10 days after submission, it may be considered approved.

Any such attorney sending out or using any such matter, a copy of which has not been submitted to the Commissioner of Patents in accordance with this rule, or which has been disapproved by the Commissioner of Patents, shall be subject to suspension or exclusion from practice before the Patent Office, or any division thereof.

4. Rule 4.5 is amended to read as follows:

4.5 Signature and certificate of attorney. Every paper filed by an attorney at law or other recognized person representing an applicant or party to a proceeding in the Patent Office must bear the signature of such attorney or person, except papers which are required to be signed by the applicant or party in person (such as the application itself and affidavits required of applicants or registrants). The signature of an attorney or such other person to a paper filed by him, or the filing or presentation of any paper by him, constitutes a certificate that the paper has been read; that its filing is authorized; that to the best of his knowledge, information, and belief there is good ground to support it; and that it is not interposed for delay. When an applicant or party is represented by a firm such papers must carry the signature of an individual member of the firm or an individual attorney employed by the firm and duly authorized to sign on behalf of the firm, in addition to the firm name, and the certification shall be a certification by and on behalf of the firm and by the individual.

5. Rule 4.6 is amended by adding the following sentence at the end of the rule, preceding the parenthetical note: "Proceedings for suspension, disbarment or exclusion from practice are conducted as provided in Patent Rule 348."

6. Rule 23.3 is amended by changing the first sentence thereof to read as follows: "Every paper filed in the Patent Office in contested cases, including appeals, must be served upon the other parties as provided by Patent Rule 248 except the notices of interference (Rule 19.3), the notice of opposition (Rule 20.5), the petition for cancellation (Rule 21.3) and the notices of a concurrent use proceeding (Rule 22.1), which are mailed by the Patent Office."

7. Rule 23.4 is amended by cancelling the last sentence thereof.

8. Rule 23.5 is amended by changing the reference "Patent Rules 154 to 161," to read, "Patent Rules 271 to 286,".

9. Rule 23.6 is amended by changing the first sentence to read: "In addition to the original transcript of the testimony, two true copies of the record of each party must be filed, for the use of the Patent Office, and one true copy of the record must be served upon each of the opposing parties."

10. Rule 26.4 is amended by changing the reference "Patent Rules 148 to 150" in the parenthetical note at the end of said rule to read "Patent Rules 301, 302 and 305."

TRADE-MARKS

OFFICIAL GAZETTE, FEBRUARY 8, 1949

[VOL. 619. NO. 2]

ACT OF 1905

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication. As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Marks published for opposition under the act of 1946 follow the 1905 publications.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Ser. No. 506,154. JOHN M. BASH, doing business as Phillips Chemical Company, Chicago, Ill. Filed July 24, 1946.

PSC

FOR CLEANING COMPOUNDS AND SOLVENTS FOR CLEANING FERROUS AND NON-FERROUS METALS.
Claims use since Nov. 13, 1945.

Ser. No. 521,400. THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Apr. 26, 1947.

WHIRLAWAY

FOR CLEANING COMPOSITION PARTICULARLY ADAPTED FOR CLEARING DRAINS.
Claims use since Mar. 24, 1947.

Ser. No. 521,401. THE PENNSYLVANIA SALT MANUFACTURING COMPANY, Philadelphia, Pa. Filed Apr. 26, 1947.

PENNSALT
WHIRLAWAY

FOR CLEANING COMPOSITION PARTICULARLY ADAPTED FOR CLEARING DRAINS.
Claims use since Mar. 24, 1947.

CLASS 5

ADHESIVES

Ser. No. 504,947. UNITED STATES QUARRY TILE COMPANY, Canton and East Sparta, Ohio, and Parkersburg, W. Va. Filed July 1, 1946.

DIAMONITE

FOR HEAT CONDUCTING ADHESIVE CEMENT COMPOSED OF GROUND FIRED CERAMIC MATERIAL WHICH UPON SETTING IS RESISTANT TO DECOMPOSITION BY HEAT, AND WHICH FOR USE IS MIXED WITH AN AQUEOUS SOLUTION OF A CRYSTALLIZING SALT SUCH AS SILICATE OF SODA CAUSING THE MATERIAL TO SET OR HARDEN BY CRYSTALLIZATION, AND WHICH MAY BE USED FOR EXAMPLE IN SPARK PLUG MANUFACTURE FOR CEMENTING THE CENTER ELECTRODE OF THE SPARK PLUG IN THE SPARK PLUG INSULATOR OR FOR CEMENTING THE SPARK PLUG INSULATOR IN THE SPARK PLUG SHELL.
Claims use since June 20, 1946.

Ser. No. 504,949. UNITED STATES QUARRY TILE COMPANY, Canton and East Sparta, Ohio, and Parkersburg, W. Va. Filed July 1, 1946.

SAPPHIRITE

FOR HEAT CONDUCTING ADHESIVE CEMENT COMPOSED OF GROUND FIRED CERAMIC MATERIAL WHICH UPON SETTING IS RESISTANT TO DECOMPOSITION BY HEAT, AND WHICH FOR USE IS MIXED WITH AN AQUEOUS SOLUTION OF A CRYSTALLIZING SALT SUCH AS SILICATE OF SODA CAUSING THE MATERIAL TO SET OR HARDEN BY CRYSTALLIZATION, AND WHICH MAY BE USED FOR EXAMPLE IN SPARK PLUG MANUFACTURE FOR CEMENTING THE CENTER ELECTRODE OF THE SPARK PLUG IN THE SPARK PLUG INSULATOR OR FOR CEMENTING THE SPARK PLUG INSULATOR IN THE SPARK PLUG SHELL.
Claims use since June 20, 1946.

proved by the Commissioner of Patents, shall be "Patent Rules 301, 302 and 305."

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Ser. No. 475,114. WILLIAM S. HIEBER, doing business as Henri Monet, Atlanta, Ga. Filed Oct. 9, 1944.

GYPSY BELLE

FOR PERFUMES.
Claims use since November 1928.

Ser. No. 509,973. COOK CHEMICAL COMPANY, Kansas City, Mo. Filed Sept. 30, 1946.

Wonder

FOR WEED KILLER AND INSECTICIDE.
Claims use since May 1945, on insecticide, and since April 1946, on weed killer.

Ser. No. 511,335. LINCOLN LABORATORIES, INCORPORATED, Decatur, Ill. Filed Oct. 23, 1946.

Histicevit

FOR MEDICINAL PREPARATION SOLD ONLY ON A PHYSICIAN'S PRESCRIPTION AND ADMINISTERED BY INTRA-VENOUS INJECTION USED IN THE TREATMENT OF PEPTIC AND DUODENAL ULCERS.
Claims use since Mar. 17, 1944.

Ser. No. 517,028. WOL DRUG COMPANY, Milwaukee, Wis. Filed Feb. 4, 1947.

PINK FOG

The word "Pink" is disclaimed apart from the mark.
FOR COSMETIC PREPARATIONS FOR CLEANSING AND BEAUTIFYING THE SKIN—NAMELY, FACIAL MASQUE.
Claims use since Oct. 19, 1946.

Ser. No. 525,314. MCBRIDE & HALL, Orange, Calif. Filed July 1, 1947.

Natural-Le

The descriptive term "Natural" is disclaimed apart from the other features of the mark as shown.
FOR HAIR RINSE AND CONDITIONER.
Claims use since July 1, 1946.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Ser. No. 479,501. UNITED AIRCRAFT PRODUCTS, INC., Dayton, Ohio. Filed Feb. 6, 1945.

AEROFUSE

FOR AUTOMATIC CUT-OFF VALVES FOR HYDRAULIC FLUID LINES, OPERATIVE ONLY ON EXCESS QUANTITY FLOW INCIDENT TO RUPTURE OF LINES BEYOND THEM.
Claims use since Aug. 31, 1944.

Ser. No. 510,424. THE COLUMBUS MCKINNON CHAIN CORPORATION, Tonawanda, N. Y. Filed Oct. 8, 1946.

DREADNAUGHT

FOR TIRE-CHAINS.
Claims use since 1915.

Ser. No. 516,951. THE BROCKWAY COMPANY, Naugatuck, Conn. Filed Feb. 5, 1947.

UNIFLARE

FOR PIPE FITTINGS—NAMELY, CONNECTORS, COUPLINGS, UNIONS, CROSSES, ELBOWS AND NUTS, MADE OF FERROUS AND NON-FERROUS METALS, AND FLEXIBLE METAL PIPE.
Claims use since Nov. 29, 1946.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Ser. No. 502,769. SANITEX PRODUCTS COMPANY, Los Angeles, Calif., assignor to Sanitex Products, Inc., Los Angeles, Calif. Filed May 25, 1946.

SANISHEEN

FOR FLOOR WAX.
Claims use since September 1943.

Ser. No. 518,559. PITTSBURGH PLATE GLASS COMPANY, Pittsburgh, Pa. Filed Mar. 5, 1947.

The words "Color Division Pittsburgh Plate Glass Co., Detroit, U. S. A. Dependable Finishes" are disclaimed apart from the mark as shown. The drawing is lined for yellow and red.
FOR CANVAS SEALER FOR SEALING AND UNDERCOATING CANVAS DECKS ON TRAILERS, TRUNKS AND BOATS; MASKING LIQUID AS A NON-DRYING COVERING FOR WINDOWS AND METAL PLATING TO PROTECT SURFACES AGAINST LACQUER AND PAINT SPRAYS; POLISH AND CLEANER FOR CLEANING AND POLISHING LACQUERED AND ENAMELED SURFACES; RUBBING COMPOUND FOR RUBBING AND POLISHING LACQUERED SURFACES; AND RUBBER DRESSING FOR SPRAYING OR BRUSHING UPON RUBBER TIRES, RUNNING BOARDS, FLOOR MATS AND OTHER RUBBER PRODUCTS.
Claims use since Jan. 1, 1941.

CLASS 19

VEHICLES

Ser. No. 486,306. GUST KALYBABA, Kirkland, Wash. Filed July 26, 1945.

ZEPHYR-CRAFT

No exclusive right is claimed to the separate use of the word "Craft."
FOR MARINE BOATS UNDER 75 FEET IN LENGTH, EXCLUDING TOY BOATS.
Claims use since June 28, 1945.

Ser. No. 521,040. TRICO PRODUCTS CORPORATION, Buffalo, N. Y. Filed Apr. 19, 1947.

FOR FLUID OPERATED AUTOMOBILE ACCESSORIES—NAMELY, FLUID OPERATED WINDSHIELD CLEANERS OF THE SQUEEGEE TYPE, AND PARTS THEREOF INCLUDING FLUID MOTORS, BLADES AND ARMS; FLUID OPERATED WINDOW OPERATORS AND PARTS THEREOF INCLUDING FLUID MOTORS; AND FLUID OPERATED WINDSHIELD WASHERS AND PARTS THEREOF INCLUDING FLUID MOTORS.
Claims use since Oct. 22, 1945.

Ser. No. 521,882. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y. Filed May 5, 1947.

Rollfast

FOR BICYCLES.
Claims use since about 1913.

Ser. No. 522,807. HARWILL, INC., St. Charles, Mich. Filed May 22, 1947.

The word "Craft" is disclaimed apart from the mark.
FOR POWER BOATS AND ROW BOATS.
Claims use since July 15, 1946.

Ser. No. 524,981. D. P. HARRIS HARDWARE & MANUFACTURING CO., INC., New York, N. Y. Filed June 27, 1947.

FOR BICYCLES.
Claims use since 1920.

Ser. No. 524,985. D. P. HARRIS HARDWARE MANUFACTURING CO., INC., New York, N. Y. Filed June 27, 1947.

KEYSTONE

FOR BICYCLES.
Claims use since 1920.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Ser. No. 491,329. INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, Washington, D. C. Filed Nov. 9, 1945.

ELECTRIC UNIT
UNION MADE
FABRICATION LABEL

No claim is made to the words "affiliated with," "American," Union Made," "Fabrication Label," "Electrical," and "Electric Unit" apart from the mark.

FOR ELECTRICAL EQUIPMENT AND SUPPLIES—NAMELY, CONDUITS AND FITTINGS FOR CONDUITS; SWITCHBOARDS, PANEL BOARDS AND ENCLOSED SWITCHES; TELEPHONES AND TELEPHONE SUPPLIES—NAMELY, CORDS, INDUCTION COILS, RECEIVER SWITCHES, CONDENSERS, RINGERS, TERMINALS, TERMINAL STRIPS, GONGS, CHIMES, BUZZERS, JACKS, PLUGS, RELAYS, SIGNAL ALARMS, ARRESTERS, GROUND RODS, AND GENERATORS; OUTLET BOXES; WIRE AND CABLE; LIGHTING FIXTURES, POWER LINE TRANSFORMERS, LUMINOUS TUBE TRANSFORMERS; ELECTRIC PORTABLE LAMPS, ELEVATOR CONTROL BOARDS; ELECTRICAL METAL MOLDING AND SURFACE METAL RACEWAYS; RADIO RECEIVING AND TRANSMITTING SETS, FLASHLIGHTS AND BATTERIES, SOCKETS, SWITCH PLATES, DRY CELL BATTERIES AND FUSES; NON-METALLIC ELECTRODES; FLOOR BOXES; WET CELL BATTERIES; ARMATURE AND MOTOR WINDINGS; MOTORS, HOUSEHOLD APPLIANCES—NAMELY, HOT PLATES, TOASTERS, SPACE HEATERS, HAIR CURLERS, FOOD MIXERS, VACUUM CLEANERS, AND FLATIRONS.
Claims use since Sept. 1, 1939.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Ser. No. 506,195. PHILLIPS MANUFACTURING COMPANY, Chicago, Ill. Filed July 24, 1946.

Torrent

FOR POWER SPRAY WASHERS FOR METAL CLEANING.
Claims use since Feb. 2, 1946.

Ser. No. 506,315. HELM SPECIALTY COMPANY, Middletown, Ohio. Filed July 26, 1946.

FISH No Fuss ACE SCALER No Muss

Applicant disclaims the words "Fish Scaler," "No Muss," and "No Fuss."
FOR HAND-OPERATED FISH SCALERS.
Claims use since Apr. 8, 1941.

CLASS 26

MEASURING AND SCIENTIFIC APPLIANCES

Ser. No. 504,023. ARLIN PRODUCTS, INCORPORATED, Detroit Mich. Filed June 17, 1946.

Detectron

FOR ELECTRIC GAUGING MECHANISMS FOR DETERMINING PHYSICAL DIMENSIONS.
Claims use since Oct. 9, 1945.

Ser. No. 510,402. QUVAS PRODUCTS INC., West Orange, N. J. Filed Oct. 7, 1946.

QUVAS

FOR ELECTRICAL MEASURING INSTRUMENTS—NAMELY, AMMETERS, MILLIAMMETERS, MICROAMMETERS, VOLTMETERS OHMMETERS, MULTIMETERS, LIGHT METERS AND INSTRUMENTS OF THE ABOVE TYPE PROVIDED WITH A MOVABLE AND A STATIONARY CONTACT ADAPTED TO CLOSE AND OPEN AN AUXILIARY ELECTRICAL CIRCUIT IN ACCORDANCE WITH THE MAGNITUDE OF CURRENT FLOWING IN THE INSTRUMENT.
Claims use since Dec. 15, 1945.

CLASS 28

JEWELRY AND PRECIOUS-METAL WARE

Ser. No. 518,005. JACOBY-BENDER, INC., New York, N. Y. Filed Feb. 24, 1947.

"Champion"

FOR MEN'S EXPANSION BRACELETS AND LINKS THEREFOR.
Claims use since Dec. 1, 1941.

CLASS 36

MUSICAL INSTRUMENTS AND SUPPLIES

Ser. No. 504,265. SOCIETE ANONYME DES ANCIENS ESTABLISSEMENTS MARTIN FRERES, Paris, France. Filed June 20, 1946.

MARTIN Frères

FOR WOOD-WIND MUSICAL INSTRUMENTS—NAMELY, REEDS, CLABINETS, OBOES, AND BASSOONS.
Claims use since 1740.

CLASS 37

PAPER AND STATIONERY

Ser. No. 505,556. CELANESE CORPORATION OF AMERICA, New York, N. Y. Filed July 18, 1946.

CELCON

FOR ENVELOPES, ENVELOPE WINDOWS, PAPERY MATERIAL FOR WRITING, DRAWING, PRINTING AND DECORATIVE PURPOSES, STENCILS, GUMMED SHEETS AND CELLULOSIC TRANSPARENT AND TRANSLUCENT WRAPPING AND PACKAGING MATERIAL.
Claims use since July 1, 1946.

Ser. No. 511,147. A. GROSSMAN, New York, N. Y. Filed Oct. 19, 1946.

ON TIME

FOR ENVELOPES FOR GREETING CARDS SOLD EMPTY.
Claims use since Oct. 16, 1946.

CLASS 38

PRINTS AND PUBLICATIONS

Ser. No. 521,798. CENTURY PUBLICATIONS, Chicago, Ill. Filed May 3, 1947.

CARAVAN

FOR PERIODICAL MAGAZINE OF FICTIONAL CHARACTER, AND FOR GENERAL CIRCULATION.
Claims use since Apr. 22, 1947.

Ser. No. 522,061. NORCROSS, INC., New York, N. Y. Filed May 8, 1947.

INKY

FOR GREETING CARDS, PRINTED GREETING FOLDERS, CALENDARS, PRINTED DECORATIVE TAGS, AND PRINTED SEALS.
Claims use since Apr. 8, 1947.

CLASS 39

CLOTHING

Ser. No. 522,916. BREVIT SHOES LIMITED, Leicester, England. Filed May 23, 1947.

'Floatees'

FOR SHOES.
Claims use since October 1946.

CLASS 42

KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR

Ser. No. 516,284. HOUSE BEAUTIFUL CURTAINS, INC., New York, N. Y. Filed Jan. 24, 1947.

Four Line

The word "Line" and the representation of the stitched fabric is disclaimed apart from the mark.
FOR SHOWER CURTAINS.
Claims use since Nov. 1, 1946.

Ser. No. 520,296. PEDIGREE FABRICS, INC., New York, N. Y. Filed Apr. 7, 1947.

Pedalure

FOR WOVEN FABRIC OF RAYON OR NYLON, OR MIXTURES THEREOF, SOLD BY THE PIECE.
Claims use since August 1939.

Ser. No. 524,040. ALGEMEENE KUNSTZIJDE UNIE, N. V., Arnhem, Netherlands. Filed June 12, 1947.

FIBRENKA

FOR KNITTED, NETTED, AND TEXTILE FABRICS IN THE PIECE, MADE OF RAYON, NYLON, AND PROTEIN FIBERS AND YARNS.
Claims use since 1935.

CLEANERS, AND FLATIRONS.
Claims use since Sept. 1, 1939.

THEREFOR.
Claims use since Dec. 1, 1941.

CHARACTER, AND FOR
Claims use since Apr. 22, 1947.

Claims use since 1935.

CLASS 44

DENTAL, MEDICAL, AND SURGICAL APPLIANCES

Ser. No. 523,770. CONTINENTAL SALES CORPORATION, Indianapolis, Ind. Filed June 7, 1947.

VITA-LIFE

FOR BATH CABINETS FITTED FOR THE DELIVERY OF STEAM, WATER, AND DRY HEAT TO THE INTERIOR THEREOF.
Claims use since May 28, 1947.

CLASS 46

FOODS AND INGREDIENTS OF FOODS

Ser. No. 506,740. DUTCH MILL CANDY CO., Chicago, Ill. Filed Aug. 2, 1946.

PECAN TOTS

The word "Pecan" is disclaimed apart from the mark.
FOR CANDIES.

Filed Nov. 25, 1946, Serial No. 513,199. Published Oct. 26, 1948. Class 28.

442,030. WAGON BOXES HAVING UNLOADING MECHANISM. MALLORY MANUFACTURING COMPANY, Chapin, Iowa.
Filed Nov. 29, 1946, Serial No. 513,424. Published Oct. 5, 1948. Class 19.

442,031. READY-MIXED PAINT FOR SASH AND TRIM. MORRIS PAINT & VARNISH CO., St. Louis, Mo.
Filed Dec. 2, 1946, Serial No. 513,577. Published Oct. 19, 1948. Class 16.

442,032. SOLIDIFIED IODINE OINTMENT. VOGEL COMPANY, Chicago, Ill., now by change of name Vodine Company, a corporation of Illinois, assignor to Benjamin Clayton, San Marino, Calif.
Filed Dec. 6, 1946, Serial No. 513,859. Published Nov. 2, 1948. Class 6.

442,033. KEY CHAINS MADE OF PRECIOUS OR COMBINATION OF PRECIOUS AND BASE METAL. JACQUES KREISLER MANUFACTURING CORPORATION, North Bergen, N. J.
Filed Dec. 13, 1946, Serial No. 514,202. Published Oct. 26, 1948. Class 28.

442,034. MACHINE POSTING TRAYS, RACKS, STANDS, AND FILING CABINETS. WILSON-JONES COMPANY, Chicago, Ill.
Filed Dec. 13, 1946, Serial No. 514,237. Published Oct. 26, 1948. Class 32.

442,035. SELF-ENERGIZING AND/OR POWER INDUCED ENERGIZING ELECTROLYTIC WATER CORRECTION DEVICES USED PRIMARILY FOR THE PREVENTION OF RUST AND SCALE. EDGAR M. BUTLER, doing business as Butler Engineering Co., New Orleans, La.
Filed Dec. 19, 1946, Serial No. 514,518. Published Oct. 26, 1948. Class 21.

442,036. FLAX FIBER. FRANKLIN E. SMITH, South Dartmouth, Mass.
Filed Jan. 2, 1947, Serial No. 515,200. Published Oct. 26, 1948. Class 1.

442,037. FACE POWDER, LIPSTICK, ROUGE, TALCUM POWDER, COLD CREAM, ACNE LOTION, AND SHAMPOO. ALMAY, INC., New York, N. Y.
Filed Jan. 7, 1947, Serial No. 515,355. Published Sept. 21, 1948. Class 6.

442,038. RADIO TRANSMITTERS AND RECEIVERS FOR USE IN NAVIGATION TO DETERMINE DISTANCES AND POSITION IN TERMS OF PHASE ANGLE RELATIONSHIPS. CHARLES B. HASTINGS, doing business as Hastings Instrument Company, Hampton, Va.
Filed Jan. 8, 1947, Serial No. 515,423. Published Oct. 19, 1948. Class 26.

442,039. CHEMICAL FIRE EXTINGUISHING COMPOSITION FOR USE IN ORDINARY FIRE EXTINGUISHERS. MICHIGAN CHEMICAL CORPORATION, St. Louis, Mich.
Filed Jan. 9, 1947, Serial No. 515,506. Published Oct. 5, 1948. Class 6.

442,040. PLASTIC PROTECTIVE COATINGS FOR ELECTROLYTIC PLATING TANKS AND RACKS. MICHIGAN CHROME & CHEMICAL COMPANY, Detroit, Mich.
Filed Jan. 10, 1947, Serial No. 515,577. Published Oct. 19, 1948. Class 16.

442,041. INSECTICIDES, RODENTICIDES, AND FUNGICIDES. PARAMOUNT PEST CONTROL SERVICE, Oakland, Calif.
Filed Jan. 11, 1947, Serial No. 515,631. Published Nov. 2, 1948. Class 6.

442,042. METAL TANKS AND COMBINATION METAL AND CONCRETE TANKS AND THE PARTICULAR USE BEING FOR OIL, WATER, GAS, AND GASOLINE STORAGE. HAMMOND IRON WORKS, Warren, Pa.
Filed Jan. 16, 1947, Serial No. 515,833. Published Nov. 2, 1948. Class 2.

442,043. MATTRESSES. FRANK M. TRITICO, doing business as Tritico Mattress Factory, Lake Charles, La.
Filed Jan. 17, 1947, Serial No. 515,917. Published Oct. 12, 1948. Class 32.

442,044. ATHLETIC FOOT REMEDY. ELMER T. KELLEY, doing business as Kekell Company, Louisville, Ky.
Filed Jan. 27, 1947, Serial No. 516,419. Published Mar. 9, 1948. Class 6.

442,045. CLASPS OR PINS OF PRECIOUS METAL SUCH AS SILVER, GOLD, OR PLATINUM, AND ADAPTED FOR SECURING SHIRT COLLARS. JOHN M. CROWNOVER, Tula, Okla.
Filed Jan. 29, 1947, Serial No. 516,538. Published Oct. 26, 1948. Class 28.

442,046. READY MIXED PAINTS, PASTE PAINTS, WOOD STAINS, VARNISHES, VARNISH STAINS, PAINT ENAMELS, CHEMICAL PAINT AND VARNISH REMOVERS, FILLERS FOR USE BY PAINTERS, AND COLORS IN OIL. ROBERTS PAINT CORP., New York, N. Y.
Filed Jan. 29, 1947, Serial No. 516,574. Published Oct. 19, 1948. Class 16.

442,047. CEMENT BASE PAINT FOR WATERPROOFING MASONRY. JAMES H. NADEN, doing business as J. H. Naden Sales Co., Denver, Colo.
Filed Feb. 4, 1947, Serial No. 516,910. Published Oct. 19, 1948. Class 16.

442,048. GOLF TEES. LEO REIFMAN, doing business as A-Jus-Tee Co., Jackson Heights, N. Y.
Filed Feb. 5, 1947, Serial No. 516,999. Published Oct. 12, 1948. Class 22.

442,049. METAL FURNITURE—NAMELY, BRIDGE SETS COMPOSED OF CHAIRS AND TABLES, ESPECIALLY FOLDING METAL BRIDGE CHAIRS AND FOLDING METAL BRIDGE TABLES; FOLDING TRAY STANDS; FOLDING LUGGAGE RACKS; AND JUVENILE FOLDING TABLE AND CHAIR SETS. ERO MANUFACTURING COMPANY, Chicago, Ill.
Filed Feb. 8, 1947, Serial No. 517,188. Published Feb. 17, 1948. Class 32.

442,050. INSTRUMENTS FOR CONTROLLING THE FUNCTIONING OF INTERNAL COMBUSTION ENGINES, ETC. GENERAL RESEARCH & DEVELOPMENT CO., Fenton, Mich.
Filed Feb. 8, 1947, Serial No. 517,189. Published Sept. 28, 1948. Class 26.

442,051. EMOLLIENT FOR USE AS A TEAT CONDITIONER AND AS A SOOTHING AND COOLING DRESSING FOR CHAPPED TEATS, CUTS, AND SKIN ABRASIONS. NEWELL & EBERCART, Stockton, Calif.
Filed Feb. 8, 1947, Serial No. 517,195. Published Sept. 9, 1947. Class 6.

442,052. PERFUME. LILLIAN HUNTER BROWNBACK, doing business as Qui Sait Company, Linfield, Pa.
Filed Feb. 10, 1947, Serial No. 517,235. Published Oct. 5, 1948. Class 6.

442,053. PERFUMES AND HAIR DYE. HIJOS DE N. LOPEZ CABO, Barcelona, Spain.
Filed Feb. 12, 1947, Serial No. 517,351. Published Oct. 26, 1948. Class 6.

442,054. REAR VIEW MIRRORS. JAY ELECTRIC CO., Detroit, Mich.
Filed Mar. 1, 1947, Serial No. 518,355. Published Oct. 5, 1948. Class 19.

442,055. NECKLACES AND RELIGIOUS ORNAMENTS FOR THE SAME, ALL MADE OF PRECIOUS METALS. E. S. WINSTAN CO., New York, N. Y.
Filed Mar. 5, 1947, Serial No. 518,576. Published Oct. 26, 1948. Class 28.

442,056. COSTUME JEWELRY—NAMELY, NECKLACES, ETC. STAR JEWELRY CO., INC., New York, N. Y.
Filed Mar. 18, 1947, Serial No. 519,232. Published Oct. 26, 1948. Class 28.

442,057. ELECTRIC TOASTERS. RADIRON CORPORATION, Miamisburg, Ohio.
Filed Mar. 27, 1947, Serial No. 519,694. Published Nov. 2, 1948. Class 21.

442,058. ELECTRO-THERAPY APPARATUS AND PARTS THEREOF. NEIL F. SAUNDERS, Detroit, Mich.
Filed Mar. 29, 1947, Serial No. 519,834. Published Oct. 26, 1948. Class 44.

442,059. COLORS, PAINT PIGMENTS (CAKE AND MOIST TUBE), AND WATER COLOR LIQUIDS IN BOTTLES, ALL FOR ARTISTS' USE. WINSOR & NEWTON, LIMITED, Wealdstone, Harrow, Middlesex, England.
Filed Apr. 16, 1947, Serial No. 520,847. Published Oct. 19, 1948. Class 16.

442,060. FACE CREAMS, ASTRINGENTS, SKIN FRESHENERS, AND SHAMPOOS. LOUISE SHERRITT TIBBETTS, doing business as Lamoraga Specialties, Moraga, Calif.
Filed Apr. 22, 1947, Serial No. 521,159. Published Nov. 2, 1948. Class 6.

442,061. SMOKED AND PICKLED MEATS, VIZ., HICKORY SMOKED BACON, HICKORY SMOKED PORK SHOULDER BUTTS, ETC. STAHL-MEYER, INC., New York, N. Y.
Filed Apr. 25, 1947, Serial No. 521,368. Published Oct. 26, 1948. Class 46.

442,062. SYRINGE WHICH IS PROVIDED WITH A FLOAT THAT WILL, WHEN SURROUNDED BY THE ELECTROLYTES OF ELECTRIC STORAGE BATTERIES, INDICATE THE TIME OF CHARGE, ETC. B-L ELECTRIC MANUFACTURING COMPANY, St. Louis, Mo., assignor to The Benwood-Linze Company, a corporation of Missouri.
Filed Apr. 28, 1947, Serial No. 521,427. Published Oct. 12, 1948. Class 26.

442,063. CHEMICAL PREPARATION FOR DISSOLVING SLUDGE IN CARBURETORS IN INTERNAL COMBUSTION ENGINES. ADAM OGINT, doing business as Carburetone Manufacturing Co., Hollywood, Calif.
Filed May 1, 1947, Serial No. 521,677. Published Oct. 5, 1948. Class 6.

442,064. LIGHTER FUEL. COLIBRI LIGHTERS LIMITED, London, England.
Filed May 2, 1947, Serial No. 521,722. Published Sept. 28, 1948. Class 6.

442,065. AUTOMOBILE RADIATOR GUARDS, COLLAPSIBLE STEP FOR VEHICLES, AND AUTOMOBILE LUGGAGE CARRIERS. STATE WELDING WORKS, INC., New York, N. Y.
Filed May 5, 1947, Serial No. 521,938. Published Oct. 12, 1948. Class 19.

442,066. HAIR AND SCALP CREAM PREPARATIONS FOR RELIEVING ITCHING SCALP. MARY L. ALLEN, Newark, N. J.
Filed May 12, 1947, Serial No. 522,298. Published Nov. 2, 1948. Class 6.

442,067. REAGENTS AND VOLUMETRIC SOLUTIONS FOR USE IN CHEMICAL, ETC. CENTRAL SCIENTIFIC COMPANY, Chicago, Ill.
Filed May 26, 1947, Serial No. 523,077. Published Nov. 2, 1948. Class 6.

442,068. SOAP, CLEANING COMPOUNDS FOR FABRICS, AND COMPOUNDS FOR REMOVING STAINS FROM FABRICS. ERNEST E. VAN ALLSBURG, doing business as Van Chemical Company, Detroit, Mich.
Filed June 5, 1947, Serial No. 523,630. Published Oct. 26, 1948. Class 4.

442,069. BEDDING CONSISTING OF MATTRESSES, BOX SPRINGS, STUDIO COUCHES, AND SOFA BEDS. MASSACHUSETTS MATTRESS COMPANY, Boston, Mass.
Filed June 10, 1947, Serial No. 523,902. Published Oct. 19, 1948. Class 32.

442,070. LAXATIVES. GEORGE L. NICHOLAS, doing business as The Medicine Chest, Indianapolis, Ind.
Filed June 11, 1947, Serial No. 523,979. Published Nov. 2, 1948. Class 6.

442,071. BRAKE FLUID. PORTS MANUFACTURING CO. INC., doing business as Joray Mfg. Co., Brooklyn, N. Y.
Filed June 13, 1947, Serial No. 524,151. Published Sept. 28, 1948. Class 6.

442,072. MEAT SANDWICHES. RICHARD SPRANSO, doing business as Beefiet Sandwich Shop, Chicago, Ill., assignor to Beefiet Sandwich Shops, Inc., Chicago, Ill., a corporation of Illinois.
Filed June 18, 1947, Serial No. 524,426. Published Oct. 26, 1948. Class 46.

442,073. INSECTICIDES, FUNGICIDES, HERBICIDES, GERMICIDES, DISINFECTANTS, PESTICIDES, INTERMEDIATES, ETC. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio.
Filed June 24, 1947, Serial No. 524,730. Published Nov. 2, 1948. Class 6.

442,074. PUTTY, CAULKING COMPOUND, CRACK FILLERS AND GLAZING COMPOUNDS FOR MOUNTING GLASS, ETC. THE SHERWIN-WILLIAMS COMPANY, Cleveland, Ohio.
Filed June 24, 1947, Serial No. 524,732. Published Sept. 28, 1948. Class 12.

442,075. CHOCOLATE FLAVOR SYRUP USED IN FOODS. KRIM-KO CORPORATION, Chicago, Ill.
Filed June 25, 1947, Serial No. 524,802. Published Oct. 19, 1948. Class 46.

442,076. JEWELRY FOR PERSONAL WEAR (NOT INCLUDING WATCHES), ETC. CAMPUS JEWELRY PRODUCTS, INC., Providence, R. I.
Filed June 27, 1947, Serial No. 524,948. Published Nov. 2, 1948. Class 28.

442,077. CARBON AND GRAPHITE CONSTRUCTION MATERIALS AND STRUCTURAL ELEMENTS—NAMELY, BRICKS, BEAMS, BLOCKS, PLATES, SLABS, TILE, RODS, GRATINGS, TUBES, AND TUBE SHEETS. NATIONAL CARBON COMPANY, INC., New York, N. Y.
Filed July 1, 1947, Serial No. 525,370. Published Aug. 24, 1948. Class 12.

442,078. EDUCATIONAL TOY, CONSISTING OF A SHEET OR SHEETS OF PAPER IN LOOSE OR IN BOUND FORM HAVING THEREON NORMALLY INVISIBLE PICTURES MADE VISIBLE BY THE APPLICATION OF A FLUID. MARTHA L. WARD, doing business as M. L. Ward Mfg. Company, also known as M. L. Ward Manufacturing Company, M. L. Ward Company, and M. L. Ward Co., Philadelphia, Pa.
Filed July 1, 1947, Serial No. 525,512. Published Sept. 28, 1948. Class 22.

442,079. BAR BELLS, DUMBBELLS, LEG-DEVELOPMENT WEIGHTS, NECK-DEVELOPMENT WEIGHTS, BAR BELL PLATES, DUMBBELL AND BAR BELL OUTFITS. HARVEY W. HUBNER, also doing business as Independent Iron Works, Los Angeles, Calif.
Filed July 2, 1947, Serial No. 525,599. Published Oct. 5, 1948. Class 22.

442,080. WOOLEN AND WORSTED PIECE GOODS. J. P. STEVENS & CO., INC., New York, N. Y.
Filed July 2, 1947, Serial No. 525,701. Published Oct. 19, 1948. Class 42.

442,081. NON-CERAMIC ELECTRICAL CONDENSERS. ILLINOIS CONDENSER CO., Chicago, Ill.
Filed July 3, 1947, Serial No. 525,850. Published Oct. 26, 1948. Class 21.

ACT OF 1946, PRINCIPAL REGISTER

506,387. ELECTRIC FOOD MIXERS, JUICERS, AND CHOPPERS. DORMEYER CORPORATION, Chicago, Ill.
Filed Nov. 12, 1947; originally filed, act of 1905, Oct. 18, 1945, Serial No. 490,107. Published Oct. 19, 1948. Class 21.

506,388. COMBINATION TOYS CAPABLE OF BEING CONVERTED INTO A TOY WAGON, A TOY TRICYCLE, A TOY SCOOTER, AND A TOY WHEELBARROW. THE TRIGON CORPORATION, Santa Monica, Calif., assignee of Serene & Reeves.
Filed Oct. 31, 1947; originally filed, act of 1905, Nov. 5, 1945, Serial No. 491,130. Published Oct. 5, 1948. Class 22.

506,389. WAX FINISH FOR TILE, MARBLE, TERRAZZO, AND FLOOR SURFACES. MINWAX COMPANY, INC., New York, N. Y.
Filed July 26, 1947; originally filed, act of 1905, Feb. 12, 1946, Serial No. 496,454. Published Oct. 19, 1948. Class 16.

506,390. PREPARATION CONTAINING VITAMIN B_1, TRICALCIUM PHOSPHATE, CALCIUM GLYCEROPHOSPHATE, FERRIC HYPOPHOSPHATE, AND LECITHIN, FOR USE AS A GENERAL TONIC. RHODES PHARMACAL CO., INC., Cleveland, Ohio.
Filed Jan. 17, 1948; originally filed, act of 1905, Apr. 24, 1946, Serial No. 500,826. Published Oct. 26, 1948. Class 6.

Filed Aug. 25, 1947, Serial No. 532,383. Published Nov. 2, 1948. Class 28.

506,468. SORGHUM SIRUP. WACONIA SORGHUM COMPANY, Cedar Rapids, Iowa.
Filed Aug. 26, 1947, Serial No. 532,530. Published Oct. 19, 1948. Class 46.

506,469. WALL-ATTACHED AND CEILING-ATTACHED ELECTRIC LIGHT FIXTURES AND ELECTRIC AIR HEATERS FOR DOMESTIC USE. MARKEL ELECTRIC PRODUCTS, INC., Buffalo, N. Y.
Filed Aug. 27, 1947, Serial No. 532,617. Published Nov. 2, 1948. Class 21.

506,470. PAINT SOLD IN PASTE FORM. PATEK BROTHERS, INC., Milwaukee, Wis.
Filed Aug. 29, 1947, Serial No. 532,867. Published Oct. 19, 1948. Class 16.

506,471. MEDICATED CREAM-LIKE SUBSTANCE FOR USE IN THE TREATMENT OF CORNS AND CALLOUSES. COLORADO CHEMICAL COMPANY, Denver, Colo.
Filed Aug. 30, 1947, Serial No. 532,911. Published Sept. 28, 1948. Class 6.

506,472. ELECTRIC LAMPS — NAMELY, FLOOR LAMPS, BRIDGE LAMPS, BED LAMPS, TABLE LAMPS, AND ELECTRIC LIGHTING FIXTURES—NAMELY, CHANDELIERS, CEILING LIGHTS, ETC. LIGHTOLIER, INCORPORATED, New York, N. Y.
Filed Aug. 30, 1947, Serial No. 532,942. Published Oct. 26, 1948. Class 21.

506,473. FLEXIBLE OUTPUT CONDUCTORS FOR AUDIO AMPLIFIERS WORN ON THE HUMAN BODY, SPECIFICALLY CORDS FOR HEARING AIDS. THE MAICO COMPANY, INCORPORATED, Minneapolis, Minn.
Filed Aug. 30, 1947, Serial No. 532,946. Published Nov. 2, 1948. Class 44.

506,474. EDUCATIONAL GAMES IN THE NATURE OF BOOKLETS WITH NUMBERED SQUARES. ELSADA MEARS HATTENHAUER, doing business as Modern Educational Publishers, Chicago, Ill.
Filed Sept. 2, 1947, Serial No. 533,019. Published Oct. 12, 1948. Class 22.

506,475. DIATOMACEOUS EARTH FOR USE AS SURFACE COVERING IN POULTRY YARDS. CHICK BED COMPANY, Cedar Rapids, Iowa.
Filed July 5, 1947, Serial No. 533,442. Published Nov. 2, 1948. Class 1.

506,476. HOLDERS FOR RETAINING ELECTRON EMISSION TUBES USED IN RADIO RECEIVERS AND IN OTHER ELECTRONIC CIRCUITS AGAINST ESCAPE FROM TUBE SOCKETS. EDWARD F. STAVER, doing business as Staver Mfg. Co., Jackson Heights, N. Y.
Filed Sept. 10, 1947, Serial No. 534,063. Published Nov. 2, 1948. Class 21.

506,477. SHIELDS FOR USE ON ELECTRON EMISSION TUBES EMPLOYED IN RADIO RECEIVERS AND IN ELECTRONIC CIRCUITS IN GENERAL. EDWARD F. STAVER, doing business as Staver Mfg. Co., Jackson Heights, N. Y.
Filed Sept. 10, 1947, Serial No. 534,064. Published Nov. 2, 1948. Class 21.

506,478. PISTON RINGS, PISTON RING EXPANDERS, AND BEARING SHIMS. MCQUAY-NORRIS MANUFACTURING CO., St. Louis, Mo.
Filed Sept. 11, 1947, Serial No. 534,169. Published Oct. 26, 1948. Class 35.

506,479. VARNISHES, JAPANS, READY-MIXED PAINTS, PAINT ENAMELS, BRONZING LIQUIDS, OIL STAINS, VARNISH STAINS AND WOOD PENETRATING STAINS, LIQUID AND PASTE DRYERS FOR PAINT AND VARNISH, LIQUID AND PASTE FILLERS FOR WOOD, COLORS IN OIL LACQUERS, PREPARED SHELLAC, SHELLAC SUBSTITUTES, AND OIL FINISH VARNISH. CLOVER LEAF PAINT & VARNISH CORPORATION, Long Island City, N. Y.
Filed Sept. 12, 1947, Serial No. 534,243. Published Oct. 19, 1948. Class 16.

506,480. LEAHTER BELTING. HOLYOKE BELTING COMPANY, Holyoke, Mass.
Filed Sept. 12, 1947, Serial No. 534,286. Published Nov. 2, 1948. Class 35.

506,481. COLOGNE. THE ANDREW JERGENS COMPANY, Cincinnati, Ohio.
Filed Sept. 15, 1947, Serial No. 534,535. Published Oct. 26, 1948. Class 6.

506,482. ARTICLES AND PRODUCTS FOR ELECTRICAL PURPOSES AND CONSISTING EITHER WHOLLY OR IN PART OF CARBON OR GRAPHITE, ETC. SPEER CARBON COMPANY, Saint Marys, Pa.
Filed Sept. 15, 1947, Serial No. 534,563. Published Nov. 2, 1948. Class 21.

506,483. HYDRAULIC SHOCK ABSORBER FLUID AND HYDRAULIC BRAKE FLUID. WINDSOR-LLOYD PRODUCTS, INC., Wilmington, Del.
Filed Sept. 16, 1947, Serial No. 534,702. Published Sept. 28, 1948. Class 6.

506,484. WINDSHIELD WIPERS FOR AUTOMOBILES AND TRUCKS. WINDSOR-LLOYD PRODUCTS, INC., Wilmington, Del.
Filed Sept. 16, 1947, Serial No. 534,703. Published Oct. 12, 1948. Class 19.

506,485. FRESH CANTALOUPES. FAZIO BROS., Fresno, Calif.
Filed Sept. 19, 1947, Serial No. 535,013. Published Oct. 19, 1948. Class 46.

506,486. NOSE DROPS, ANTIPYRETIC TABLETS, VAPOR INHALANT, COUGH MEDICINE, LAXATIVE TABLETS, CHEST RUB, SKIN LOTION, ASPIRIN, ETC. MEDICINE FOR CHILDREN, INCORPORATED, San Francisco, Calif.
Filed Sept. 19, 1947, Serial No. 535,061. Published Sept. 14, 1948. Class 6.

506,487. PRE-COOKED CEREAL WITH PAPAYA. WYETH INCORPORATED, Philadelphia, Pa.
Filed Sept. 20, 1947, Serial No. 535,209. Published Oct. 19, 1948. Class 46.

506,488. VARNISHES. THE BISSELL VARNISH COMPANY, Bridgeport, Conn.
Filed Sept. 23, 1947, Serial No. 535,295. Published Oct. 19, 1948. Class 16.

506,489. MEDICINAL PREPARATION USED AS A NERVE SEDATIVE. OD PEACOCK SULTAN COMPANY, St. Louis, Mo.
Filed Sept. 23, 1947, Serial No. 535,343. Published Sept. 28, 1948. Class 6.

506,490. HAND LOTIONS OR CREAMS. JOHN B. RESPONDEK, doing business as Gloria Fay, Detroit, Mich.
Filed Sept. 23, 1947, Serial No. 535,350. Published Oct. 26, 1948. Class 6.

506,491. COMBINATION HAND TOOL INCLUDING A STEEL WOOL PAD FOR USE IN CLEANING AND POLISHING FLOORS. E. L. BRUCE Co., Memphis, Tenn.
Filed Sept. 24, 1947, Serial No. 535,471. Published Oct. 5, 1948. Class 29.

506,492. DOG FOOD. HILL PACKING COMPANY, Topeka, Kans.
Filed Sept. 24, 1947, Serial No. 535,528. Published Oct. 19, 1948. Class 46.

506,574. SOAP. MURPHY LABORATORIES, INC., Clifton Heights, Pa.
Filed Feb. 16, 1948, Serial No. 549,827. Published Oct. 26, 1948. Class 4.

506,575. COVERING FOR BED PADS, MATTRESSES, AND BEDDING, MADE OF FABRIC. THE STANLEY MANUFACTURING CO., INC., Denver, Colo.
Filed Feb. 16, 1948, Serial No. 549,852. Published Oct. 19, 1948. Class 42.

506,576. CARBON PAPER. F. S. WEBSTER COMPANY, Cambridge, Mass.
Filed Mar. 17, 1948, Serial No. 552,196. Published Oct. 26, 1948. Class 11.

506,577. CLEANING COMPOUND FOR GENERAL LAUNDRY PURPOSES. THE M. WERK COMPANY, St. Bernard, Ohio.
Filed Mar. 18, 1948, Serial No. 552,297. Published Oct. 19, 1948. Class 4.

506,578. CLEANING COMPOUND FOR GENERAL LAUNDRY, TEXTILE, AND SIMILAR INDUSTRIAL USES. THE M. WERK COMPANY, St. Bernard, Ohio.
Filed Mar. 18, 1948, Serial No. 552,298. Published Oct. 19, 1948. Class 4.

506,579. SHEETS, PILLOW CASES, AND COTTON AND RAYON TEXTILE FABRICS BY THE YARD AND IN THE BOLT. THE SPRINGS COTTON MILLS, Lancaster, S. C.
Filed Apr. 14, 1948, Serial No. 554,621. Published Oct. 19, 1948. Class 42.

506,580. SHEETS, PILLOW CASES, AND COTTON AND RAYON TEXTILE FABRICS BY THE YARD AND IN THE BOLT. THE SPRINGS COTTON MILLS, Lancaster, S. C.
Filed Apr. 14, 1948, Serial No. 554,623. Published Oct. 19, 1948. Class 42.

506,581. SHEETS, PILLOW CASES, AND COTTON AND RAYON TEXTILE FABRICS BY THE YARD AND IN THE BOLT. THE SPRINGS COTTON MILLS, Lancaster, S. C.
Filed Apr. 14, 1948, Serial No. 554,624. Published Oct. 19, 1948. Class 42.

506,582. ENZYME PREPARATION ESPECIALLY FOR THE PRODUCTION OF ALCOHOL FOR INDUSTRIAL OR BEVERAGE USE. WALLERSTEIN COMPANY, INC., New York, N. Y.
Filed May 26, 1948, Serial No. 557,878. Published Oct. 12, 1948. Class 6.

506,583. STEELWOOL AND STEEL SHAVINGS FOR CLEANING PURPOSES. RONUK, LIMITED, Portslade, England.
Filed June 14, 1948, Serial No. 559,182. Published Oct. 19, 1948. Class 4.

506,584. TOILET SOAPS. LES PARFUMS DE DANA, INC., New York, N. Y.
Filed July 8, 1948, Serial No. 560,906. Published Oct. 26, 1948. Class 4.

506,585. INORGANIC DETERGENT HAVING WATER SOFTENING PROPERTIES FOR GENERAL WASHING PURPOSES. DIAMOND ALKALI COMPANY, Cleveland, Ohio.
Filed July 22, 1948, Serial No. 561,893. Published Nov. 2, 1948. Class 4.

ACT OF 1946, SUPPLEMENTAL REGISTER

These registrations are not subject to opposition.

505,586. Issued as a registration in the OFFICIAL GAZETTE of January 18, 1949.

505,587. Issued as a registration in the OFFICIAL GAZETTE of January 18, 1949.

506,588. (CLASS 19. VEHICLES.) FRITZSCHE TIRE & RELINER COMPANY, Chicago, Ill. Filed Sept. 28, 1948; originally filed, act of 1905, May 29, 1947, Serial No. 523,257.

FRISCO

FOR COMPOSITION RUBBER AND FABRIC AUTOMOBILE MAT PADS.
Claims use since Mar. 15, 1947.

506,589. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) WESTERFIELD PHARMACAL CO. INC., Dayton, Ohio. Filed July 17, 1948; originally filed, act of 1905, June 2, 1947, Serial No. 523,447.

WESTERFIELD

FOR CHEMICAL TEST SETS FOR DETECTING PREGNANCY BY MEANS OF A SERIES OF CHEMICAL REAGENTS ADDED TO URINE; CHEMICAL TEST SETS FOR DETECTING ALBUMIN IN URINE; CHEMICAL TEST SETS FOR DETECTING GLUCOSE IN URINE; CHEMICAL TEST SETS FOR DETECTING ACETONE IN URINE.
Claims use since Aug. 1, 1945.

506,590. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE HOOVER COMPANY, North Canton, Ohio. Filed June 23, 1948, Serial No. 527,121.

HOOVER

Applicant claims ownership of registrations Nos. 130,756, 165,890, and 377,138.
FOR ELECTRIC MOTORS.
Claims use since September 1946.

506,591. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SWITCHCRAFT, INC., Chicago, Ill. Filed Oct. 20, 1948, Serial No. 527,328.

SWITCHCRAFT

FOR ELECTRICAL GOODS — NAMELY, PHONE JACKS, PHONE PLUGS, ROTARY SWITCHES, PUSH BUTTON SWITCHES, STACK SWITCHES, SWITCH ASSEMBLIES, AND PARTS THEREFOR.
Claims use since Mar. 6, 1946.

506,592. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PAGE MILK CO., Merrill, Wis. Filed June 2, 1948, Serial No. 532,485.

MARSHALL

Applicant claims ownership of registration No. 276,905.
FOR EVAPORATED MILK.
Claims use since Feb. 19, 1929.

506,593. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS, AND SUBSTITUTES THEREFOR.) SAMUEL EHRMAN & CO., INC., New York, N. Y. Filed Feb. 25, 1948, Serial No. 533,150.

GENUINE
Korde'Lace

Applicant claims ownership of registration No. 304,020.
FOR LACES IN THE PIECE.
Claims use since Jan. 4, 1932.

506,594. (CLASS 35. BELTING, HOSE, MACHINERY PACKING, AND NONMETALLIC TIRES.) RAYBESTOS-MANHATTAN, INC., Passaic, N. J. Filed Oct. 21, 1948, Serial No. 533,379.

"KEY-LOK"

FOR BRAKE LININGS AND BRAKE BLOCKS.
Claims use since March 1945.

506,595. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) ROCKWELL MANUFACTURING COMPANY, Pittsburgh, Pa. Filed Sept. 13, 1947, Serial No. 534,352.

ROCKWELL

Applicant claims ownership of registrations Nos. 428,477, 428,478 and 428,699.
FOR SANDING KITS CONTAINING INDIVIDUAL CONTAINERS OF CEMENT AND ASSORTED GRADES OF ABRASIVE GRIT FOR PRODUCING SANDING BLOCKS.
Claims use since Dec. 13, 1945.

506,596. (CLASS 21. ELECTRICAL APPARATUS, MACHINES AND SUPPLIES.) DYNAMIC ELECTRONICS-NEW YORK, INC., New York, N. Y. Filed Nov. 5, 1948, Serial No. 535,948.

REMOTELEVISION

FOR TELEVISION RECEIVERS.
Claims use since Sept. 10, 1947.

506,597. (CLASS 21. ELECTRICAL APPARATUS, MACHINES AND SUPPLIES.) DYNAMIC ELECTRONICS-NEW YORK, INC., New York, N. Y., assignor to Hotelevision Inc., New York, N. Y., a corporation of New York. Filed Nov. 5, 1948, Serial No. 535,944.

HOTELEVISION

FOR TELEVISION RECEIVERS.
Claims use since Sept. 10, 1947.

506,598. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) L. R. STONE COMPANY, INC., Los Angeles, Calif. Filed Nov. 2, 1948, Serial No. 537,484.

The consent from Xavier Cugat to use the name "Cugat's" and the caricatures as shown is filed herewith.
FOR NOUGAT CANDY.

CLASS 2

TRADE-MARK REGISTRATIONS REPUBLISHED

The following marks registered under the act of 1905, or the act of 1881, are published under the provisions of section 12(c) of the Trade-Mark Act of 1946. These registrations are not subject to opposition but are subject to cancellation under section 14 of the act of 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 215,466. Registered July 20, 1926. EASTERN CARBON BLACK COMPANY, Charleston, W. Va. Republished by United Carbon Company, Inc. (Maryland), Charleston, W. Va., a corporation of Maryland.

TRIANGLE BRAND

The word "Brand" is disclaimed apart from the mark as shown.

FOR CARBON BLACK HAVING A GENERAL USE IN THE INDUSTRIAL ARTS.

Claims use since 1918.

Reg. No. 236,179. Registered Dec. 6, 1927. KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Republished by The May Department Stores Company, St. Louis, Mo., a corporation of New York.

HIGHLAND PARK

The words "Lawn Seed" and "Highland Park" are disclaimed apart from the mark as shown. The lining indicates the colors red and green.

FOR LAWN SEED.

Claims use since about Feb. 15, 1915.

Reg. No. 239,739. Registered Mar. 13, 1928. THE DENVER FIRE CLAY COMPANY, Denver, Colo., a corperation of Delaware. Republished by registrant.

FORMART

FOR PREPARED CLAY FOR USE IN MODELING AND ART WORK.

Claims use since about May 1927.

Reg. No. 258,749. Registered July 16, 1929. LUBRICANT LABORATORIES INC., Everett and Boston, Mass. Republished by Interlake Chemical Corporation of Delaware, Cleveland, Ohio, a corporation of Delaware.

THERMO PLASTIC COMPOUND — MAKALOT — SYMBOLIZES GREATER PRODUCTION

The words "Thermo Plastic Compound—Symbolizes Greater Production" are disclaimed apart from the mark as shown.

FOR MOLDING COMPOUND OF THE PHENOL FORMALDEHYDE TYPE IN THE NATURE OF A MOLDING CLAY.

Claims use since Oct. 29, 1927.

Reg. No. 337,915. Registered Aug. 25, 1936. DE KALB AGRICULTURAL ASSOCIATION, De Kalb, Ill. Republished by De Kalb Agricultural Association, Inc., De Kalb, Ill., a corporation of Delaware.

No claim is made to the representation of seed corn apart from the mark as shown.

FOR SEED CORN.

Claims use since Jan. 19, 1936.

Reg. No. 362,877. Registered Dec. 6, 1938. THE DOW CHEMICAL COMPANY, Midland, Mich. Republished by The Dow Chemical Company, Midland, Mich., a corporation of Delaware.

STYRON

FOR POLYMERIZED STYRENE.

Claims use since Dec. 1, 1937.

Reg. No. 378,134. Registered May 28, 1940. TRUAX-TRAER COAL COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The word "Coal" is disclaimed apart from the mark as shown.

FOR COAL.

Claims use since Dec. 1, 1938.

Reg. No. 380,644. Registered Aug. 27, 1940. TRUAX-TRAER COAL COMPANY, Chicago, Ill., a corporation of Delaware. Republished by registrant.

The word "Coal" is disclaimed apart from the mark as shown.

FOR COAL.

Claims use since Mar. 1, 1939.

Reg. No. 434,952. Registered Dec. 9, 1947. FERRY-MORSE SEED CO., San Francisco, Calif., a corporation of Michigan. Republished by registrant.

Playground

FOR MIXED LAWN SEED.

Claims use since Sept. 1, 1946.

CLASS 1

RAW OR PARTLY PREPARED MATERIALS

Reg. No. 434,971. Registered Dec. 9, 1947. PIONEER HI-BRED CORN COMPANY, Des Moines, Iowa, a corporation of Iowa. Republished by registrant.

340

FOR HYBRID SEED CORN.

Claims use since about Jan. 1, 1943.

CLASS 2

RECEPTACLES

Reg. No. 200,293. Registered June 30, 1925. STEVENS & THOMPSON PAPER CO., New York, N. Y., a corporation of New York. Republished by registrant, present address Greenwich, N. Y.

SANI-TRAY

The word "Tray" is disclaimed apart from the mark as shown.

FOR TRAYS MADE OF PAPER OR FIBER.

Claims use since Sept. 15, 1923.

Reg. No. 206,408. Registered Dec. 1, 1925. OSBORN PAPER COMPANY, Marion, Ind., a corporation of Indiana. Republished by registrant.

RAPTITE

FOR PAPER BAGS.

Claims use since May 18, 1925.

Reg. No. 264,137. Registered Nov. 19, 1929. RHEEM MANUFACTURING COMPANY, Emeryville, Calif. Republished by Rheem Manufacturing Company, New York, N. Y., a corporation of California.

Rheem

FOR STEEL DRUMS AND TANKS FOR SHIPPING AND STORING OILS AND GREASES.

Claims use since Nov. 15, 1926.

Reg. No. 363,178. Registered Dec. 13, 1938. STEVENS & THOMPSON PAPER CO., New York, N. Y., a corporation of New York. Republished by registrant, present address Greenwich, N. Y.

ATLASTA

FOR PAPER TRAYS FOR MEAT, BUTTER, LARD, AND SIMILAR PRODUCTS.

Claims use since May 15, 1924.

Reg. No. 363,891. Registered Jan. 10, 1939. NORTHERN PAPER MILLS, Green Bay, Wis., a corporation of Wisconsin. Republished by registrant.

MORFOLD
ECONOMIZER
SERVICE

The words "Economizer Service" are disclaimed apart from the mark as shown.

FOR DISPENSING CABINETS FOR PAPER PRODUCTS.

Claims use since Aug. 12, 1938.

CLASS 3

BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS

Reg. No. 436,060. Registered Jan. 20, 1948. NASH INC., Jersey City, N J., a corporation of New Jersey. Republished by registrant.

UNDERCOVER

FOR BILL FOLDS, POCKET BOOKS, PURSES, AND WALLETS.

Claims use since Mar. 1, 1947.

CLASS 4

ABRASIVE, DETERGENT, AND POLISHING MATERIALS

Reg. No. 144,967. Registered July 19, 1921. JOHN WANAMAKER NEW YORK, New York, N. Y., a corporation of New York. Republished by registrant.

KNICKERBOCKER

FOR SOAP.

Claims use since Mar. 16, 1910.

Reg. No. 206,138. Registered Nov. 24, 1925. JAMES P. SMITH & COMPANY, New York, N. Y. Republished by James P. Smith & Company, Inc., New York, N. Y., a corporation of New York.

FONTAINE BRAND

The word "Brand" is disclaimed apart from the mark as shown.

FOR IMPORTED FRENCH CASTILE SOAP.

Claims use since about 1904.

Reg. No. 239,895. Registered Mar. 13, 1928. LAMBERT PHARMACAL COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant, present address St. Louis, Mo.

LISTERINE

FOR SAPONACEOUS PASTE COMMONLY KNOWN AS SHAVING CREAM.

Claims use since about July 8, 1927.

Reg. No. 296,324. Registered Aug. 2, 1932. JOSEPH WARREN BULLEN, doing business as The Bullen Chemical Company, Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.

BULLEN'S
Universal Cleaner
B.U.C.

The word "Cleaner" is disclaimed apart from the mark as shown.

FOR CLEANSER FOR CLEANING, PRESERVING, AND RENEWING VARNISHED AND PAINTED SURFACES OF ALL KINDS, AND ALSO FOR GENERAL HOUSEHOLD USE.

Claims use since Jan. 1, 1907.

Reg. No. 414,636. Registered June 19, 1945. J. WARREN BULLEN, doing business as The Bullen Chemical Company, Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.

FOR LIQUID COMPOUNDS, SOAPS, AND POWDERS USED FOR CLEANSING AND POLISHING PURPOSES ON GLASS, METAL, AND UNFINISHED WOOD SURFACES, AND FOR THE HANDS.

Claims use since Apr. 7, 1919.

Reg. No. 422,759. Registered Aug. 13, 1946. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ACTIVOL

FOR LIQUID DETERGENT USED FOR WASHING AND SCOURING RAW WOOL, WOOLEN YARNS, AND WOOLEN AND WORSTED PIECE GOODS.

Claims use since Mar. 5, 1936.

Reg. No. 432,645. Registered Sept. 9, 1947. HENRY B. HELLER CORP., New York, N. Y., a corporation of New York. Republished by registrant, present address St. Louis, Mo.

TETFOAM-20

FOR SOAPLESS CLEANER.

Claims use since July 15, 1946.

CLASS 6

CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS

Reg. No. 68,118. Registered Mar. 10, 1908. MARY GARDNER, executrix of Charles J. Moffett, St. Louis, Mo. Republished by C. J. Moffett Medicine Company, Columbus, Ga., a partnership.

TEETHINA

FOR TEETHING-POWDERS.

Claims use since July 1877.

Reg. No. 68,119. Registered Mar. 10, 1908. GEORGE A. SCHMIDT COMPANY, Chicago, Ill. Republished by Schmidt Soap Products, Inc., Chicago, Ill., a corporation of Illinois.

IT

FOR CREAMS AND COSMETIC PREPARATIONS TO BE APPLIED TO THE SKIN, SKIN POWDERS, LOTIONS, AND PERFUMES.

Claims use since Feb. 1, 1907.

Reg. No. 68,586. Registered Apr. 21, 1908. THE LIVERPOOL BORAX CO., LTD., Liverpool, England. Republished by Feedwaters, Inc., New York, N. Y., a corporation of New York.

ALGOR.

FOR PREPARATION FOR REMOVING SCALE, CORROSION, AND GREASE FROM BOILERS.

Claims use since 1905.

Reg. No. 69,823. Registered July 7, 1908. WARNER DRUG CO., Nashville, Tenn. Republished by The Warner Drug Co., Inc., Nashville, Tenn., a corporation of Tennessee.

RENNAR

FOR REMEDY FOR RHEUMATISM AND GOUT.

Claims use since Nov. 1, 1907.

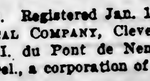
Reg. No. 128,948. Registered Jan. 20, 1920. JOSEPH WARREN BULLEN, Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.

CRE-BOL-YOU

FOR DISINFECTANT.

Claims use since Sept. 15, 1907.

Reg. No. 129,047. Registered Jan. 20, 1920. ADELAIDE R. PERRY, Buffalo, N. Y. Republished by Sue A. Perry, Buffalo, N. Y.



FOR REMEDY FOR NEURALGIA, SICK AND BILIOUS HEADACHE.

Claims use since about 1893.

Reg. No. 192,125. Registered Nov. 25, 1924. THE UNITED OIL & NATURAL GAS PRODUCTS CORPORATION, Monroe, La. Republished by United Carbon Company, Inc. (Maryland), Charleston, W. Va., a corporation of Maryland.

PERFECTO

FOR HYDROCARBON BLACK USED IN THE MANUFACTURE OF RUBBER TIRES, RUBBER GOODS, PHONOGRAPH RECORDS, PAINTS, VARNISHES, ENAMELS, PRINTING INK, STENCILING INK, DRAWING INK, WRITING INK, STOVE POLISH, SHOE POLISH, LACQUERS, CARBON PAPER, PAPER, BUTTONS, CELLULOID, ELECTRICAL INSULATION, COLORS, AND IN THE COLORING AND DYEING OF CLOTH, ARTIFICIAL STONE, LEATHER GOODS, AND CUSHIONS.

Claims use since Feb. 22, 1924.

Reg. No. 233,550. Registered Oct. 4, 1927. THE MAY DEPARTMENT STORES COMPANY, Los Angeles, Calif., a corporation of New York. Republished by registrant, present addresses New York, N. Y., and St. Louis, Mo.

ANITA

FOR CREAMS, LIQUIDS, PASTES, POWDERS, AND SOLID SUBSTANCES FOR BEAUTIFYING AND PRESERVING THE TEETH, NAILS, SKIN, HAIR, AND BODY GENERALLY, DEPILATORIES, DEODORANTS, AND PERFUMERY.

Claims use since June 1, 1888.

Reg. No. 237,349. Registered Jan. 10, 1928. THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Republished by E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware.

808

FOR ACCELERATORS FOR RUBBER VULCANIZATION.

Claims use since about Oct. 17, 1925.

Reg. No. 237,373. Registered Jan. 10, 1928. McCORMICK & Co., INCORPORATED, Baltimore, Md., a corporation of Maryland. Republished by registrant.

Bee Brand

The word "Brand" is disclaimed apart from the mark as shown.

FOR LIQUID-INSECTICIDE-SPRAYING COMPOSITIONS.

Claims use since about January 1924.

Reg. No. 237,527. Registered Jan. 10, 1928. WALLACE & TIERNAN CO., INC., Newark, N. J., a corporation of New York. Republished by registrant.

Lavel

FOR LAUNDRY BLEACHING MATERIAL.

Claims use since Mar. 1, 1927.

Reg. No. 240,162. Registered Mar. 20, 1928. LAMBERT PHARMACAL COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant, present address St. Louis, Mo.

LISTERINE

FOR MEDICINAL, ANTISEPTIC, AND DEODORANT COMPOUND, TOOTH POWDER, TOOTH PASTE, TALCUM POWDER, MEDICATED TABLETS FOR THE RELIEF OF INDIGESTION AND AILMENTS OF THE THROAT, COLD CREAM, BATH SALTS.

Claims use since about May 1, 1881.

Reg. No. 244,676. Registered July 24, 1928. LAMBERT PHARMACAL COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant, present address St. Louis, Mo.

LISTERINE

FOR MEDICATED PREPARATION FOR TREATMENT OF THE HAIR AND SCALP AND THE REMOVAL OF DANDRUFF.

Claims use since about May 1, 1881.

Reg. No. 300,192. Registered Jan. 10, 1933. J. WARREN BULLEN, doing business as The Bullen Chemical Company, Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.

CRE-TO-LA

FOR DISINFECTANT AND INSECTICIDE.

Claims use since Jan. 1, 1907.

Reg. No. 304,514. Registered July 11, 1933. J. WARREN BULLEN, doing business as The Bullen Chemical Company, Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.

TAR-O-LENE

FOR INSECTICIDE AND DISINFECTANT.

Claims use since July 11, 1909.

Reg. No. 324,597. Registered May 21, 1935. CALVIN C. MARSHALL, Hendersonville, N. C. Republished by Plough, Inc., Memphis, Tenn., a corporation of Delaware.

ASPICO

FOR MEDICINAL COMPOUND FOR THE TREATMENT OF COLDS, GRIPPE, PLEURISY, RHEUMATISM, ARTHRITIS, AND ACUTE INFLAMMATORY GLAND CONDITIONS, AS WELL AS FOR THE RELIEF OF ACUTE NEURALGIC PAINS, MIGRANE, AND OTHER COMMON AILMENTS.

Claims use since June 25, 1934.

Reg. No. 351,158. Registered Oct. 19, 1937. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

GLYCOLA

FOR HYGROSCOPIC CHEMICAL AGENT FOR TEXTILE PRINTING MIXTURES.

Claims use since Feb. 20, 1936.

Reg. No. 357,132. Registered May 24, 1938. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

GAYNTEX

FOR TEXTILE WEIGHTING CHEMICALS.

Claims use since Jan. 8, 1936.

Reg. No. 376,215. Registered Mar. 12, 1940. S. M. LABORATORIES COMPANY, Seattle, Wash. Republished by J. Wm. Sheets, doing business under the name of S. M. Laboratories, Seattle, Wash.

"S M's"

FOR VAGINAL SUPPOSITORIES.

Claims use since Nov. 30, 1931.

Reg. No. 378,574. Registered June 11, 1940. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

ETHANOLEATE

FOR COMPOUND USED FOR FULLING AND SCOURING WOOLEN AND WORSTED GOODS, AND GENERAL TEXTILE SCOURING.

Claims use since Sept. 14, 1938.

Reg. No. 387,779. Registered May 27, 1941. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

HAMIGUM

FOR SODIUM MANNURONATE USED IN THE TEXTILE INDUSTRY FOR SIZING WARPS AND FOR GENERAL TEXTILE FINISHING.

Claims use since Jan. 4, 1941.

Reg. No. 388,119. Registered June 10, 1941. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

STEARAMINE

FOR COMPOUND USED FOR SOFTENING, FILLING, AND WEIGHTING OF COTTON FABRICS IN THE FINISHING OPERATION.

Claims use since Jan. 29, 1941.

Reg. No. 394,959. Registered May 5, 1942. THE PINEX COMPANY, Fort Wayne, Ind., a firm. Republished by registrant.

Pinnex

FOR COUGH BALSAM.

Claims use since Sept. 30, 1941.

Reg. No. 397,577. Registered Sept. 8, 1942. BESSIE G. O'NEILL, doing business as Southwest Chemical Co., Eagle Rock, Calif. Republished by registrant.

GOPHER-GO

FOR POISONED RAISIN AND BARLEY MIXTURE FOR THE CONTROL OF GOPHERS, PRAIRIE RATS, SQUIRRELS, AND MICE.

Claims use since Dec. 24, 1931.

Reg. No. 399,438. Registered Jan. 5, 1943. WM. P. POYTHRESS & COMPANY, Inc., Richmond, Va., a corporation of Virginia. Republished by registrant.

merpectogel

FOR PHARMACEUTICAL PREPARATION FOR USE IN THE TREATMENT OF HUMAN VAGINAL INFECTIONS.

Claims use since Aug. 14, 1942.

Reg. No. 409,843. Registered Oct. 24, 1944. FLORIDA CHEMICAL INDUSTRIES, INC., Sparr, Fla., a corporation of Florida. Republished by registrant, present address Ocala, Fla.

HELMINEX

FOR PREPARATION FOR USE IN THE ELIMINATION OF WORMS IN ANIMALS AND POULTRY.

Claims use since Oct. 1, 1941.

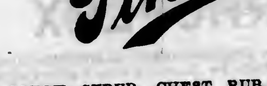
Reg. No. 412,115. Registered Feb. 20, 1945. FLORIDA CHEMICAL INDUSTRIES, INC., Sparr, Fla., a corporation of Florida. Republished by registrant, present address Ocala, Fla.

SMEAREX

FOR PREPARATION FOR THE PREVENTION AND TREATMENT OF SCREWWORM INFESTATION IN LIVESTOCK.

Claims use since Oct. 1, 1940.

Reg. No. 414,197. Registered May 29, 1945. J. WARREN BULLEN, doing business as The Bullen Chemical Co., Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.



FOR LIQUID COMPOUNDS USED FOR DISINFECTANT PURPOSES.

Claims use since Apr. 7, 1919.

Reg. No. 416,764. Registered Sept. 25, 1945. ROBERT E. PARRISH, Fort Worth, Tex. Republished by registrant.

-NEO-KERAZOLE

FOR PREPARATION FOR THE TREATMENT OF BOVINE KERATITIS (PINK EYE) AMONG CATTLE AND OTHER LIVE STOCK.

Claims use since July 1941.

Reg. No. 418,938. Registered Jan. 15, 1946. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

AQUATAIN

FOR SOFTENING AND HYGROSCOPIC AGENT TO BE ADDED TO SIZING MIXTURES, FOR THE PURPOSE OF ABSORBING AND RETAINING MOISTURE IN TEXTILE SIZES.

Claims use since May 3, 1945.

Reg. No. 423,766. Registered Sept. 10, 1946. THE PINEX COMPANY, Fort Wayne, Ind., a firm. Republished by registrant.

Pinex

FOR COUGH SYRUP, CHEST RUB, LAXATIVE, MOUTH WASH, HAND LOTION, AND DEODORANT.

Claims use since Aug. 17, 1897.

Reg. No. 424,742. Registered Oct. 22, 1946. HAAS-MILLER CORPORATION, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

HAMISEAL

FOR DISPERSED SYNTHETIC RUBBER, USED FOR BACKFILLING CARPETS AND RUGS, WHERE IT ACTS AS A BINDER AND SEAL.
Claims use since Nov. 15, 1945.

Reg. No. 431,849. Registered Aug. 12, 1947. HARRY SHAPIRO, New York, N. Y. Republished by registrant.

DEL

FOR INSECTICIDAL SHAMPOO.
Claims use since June 1944.

Reg. No. 433,260. Registered Sept. 30, 1947. MALLON CHEMICAL CORP., New York, N. Y., a corporation of New York. Republished by registrant.

RECTALGAN

FOR LIQUID PREPARATION FOR RELIEF OF PAIN, INFLAMMATION, AND DISTRESS IN THE RECTUM AND SURROUNDING REGIONS, ALSO FOR TOPICAL APPLICATION IN LOCALIZED IRRITATION.
Claims use since Sept. 16, 1946.

Reg. No. 434,379. Registered Nov. 18, 1947. LUCIEN LELONG, INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

Orgueil

FOR PERFUMES.
Claims use since Oct. 10, 1946.

Reg. No. 435,557. Registered Dec. 30, 1947. ROHM & HAAS COMPANY, Philadelphia, Pa., a corporation of Delaware. Republished by registrant.

RHOPLEX

FOR RESIN SUSPENSIONS OR DISPERSIONS SUITABLE FOR USE IN PRODUCING PERMANENT FINISHES ON TEXTILES AND OTHER FIBROUS MATERIALS.
Claims use since May 20, 1946.

Reg. No. 435,664. Registered Jan. 6, 1948. THE NATIONAL DRUG COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

CARDIGIN

FOR TABLET CONTAINING DIGITOXIN USED IN THE TREATMENT OF HEART AFFECTIONS WHEREVER DIGITALIS THERAPY IS INDICATED.
Claims use since Aug. 18, 1945.

CLASS 9

EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES

Reg. No. 67,233. Registered Jan. 28, 1908. THE HAZARD POWDER COMPANY, Hazardville, Conn. Republished by E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware.

HAZARD

FOR EXPLOSIVE POWDER.
Claims use since 1854.

Reg. No. 196,278. Registered Mar. 17, 1925. THE KILGORE MANUFACTURING COMPANY, Westerville, Ohio, a corporation of Ohio. Republished by registrant.

Kilgore

FOR AMMUNITION, PARTICULARLY PAPER CAPS FOR TOY PISTOLS.
Claims use since July 1, 1912.

Reg. No. 285,869. Registered Aug. 11, 1931. THE KILGORE MANUFACTURING COMPANY, Westerville, Ohio, a corporation of Ohio. Republished by registrant.

Peppy

FOR PAPER CAPS FOR TOY FIREARMS.
Claims use since Oct. 16, 1930.

CLASS 10

FERTILIZERS

Reg. No. 292,830. Registered Mar. 29, 1932. NAAMLOOZE VENNOOTSCHAP AMSTERDAMSCHE SUPERFOSFAATFABRIEK, Utrecht, Netherlands, a company incorporated under the laws of the Netherlands. Republished by registrant.

ASF

FOR FERTILIZERS.
Claims use since Aug. 28, 1907.

Reg. No. 297,281. Registered Sept. 6, 1932. NAAMLOOZE VENNOOTSCHAP AMSTERDAMSCHE SUPERFOSFAATFABRIEK, Utrecht, Netherlands, a company incorporated under the laws of the Netherlands. Republished by registrant.

ASF

ULTRA SUPER

FOR FERTILIZERS.
Claims use since Mar. 30, 1932.

Reg. No. 298,720. Registered Nov. 1, 1932. NAAMLOOZE VENNOOTSCHAP VERENIDGE CHEMISCHE FABRIEKEN, Utrecht, Netherlands, a company incorporated under the laws of Holland. Republished by registrant.

ALBATROS

FOR MANURE.
Claims use since Sept. 26, 1924.

CLASS 12

CONSTRUCTION MATERIALS

Reg. No. 69,554. Registered June 23, 1908. THE PARAFFINE PAINT CO., San Francisco, Calif. Republished by The Paraffine Companies, Inc., San Francisco, Calif., a corporation of Delaware.

Cronolite

FOR WATERPROOF MATERIAL MADE FROM PAPER OR FELT, OR A COMBINATION OF BOTH, AND ADAPTED FOR USE IN BUILDINGS FOR VARIOUS PURPOSES.
Claims use since Jan. 1, 1904.

Reg. No. 81,479. Registered Apr. 11, 1911. THE PARAFFINE PAINT CO., San Francisco, Calif. Republished by The Paraffine Companies, Inc., San Francisco, Calif., a corporation of Delaware.

FLOATINE

FOR REFINED ASPHALT.
Claims use since October 1906.

Reg. No. 178,196. Registered Jan. 8, 1924. THE PARAFFINE COMPANIES, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

FLOATOID

FOR COMPOSITION FOR COATING ROOFS, CONSISTING PRINCIPALLY OF ASPHALT AND ASBESTOS FIBER.
Claims use since Jan. 1, 1922.

Reg. No. 224,568. Registered Mar. 1, 1927. SOCIETE FRANCAISE DE L'EVERITE, La Plaine St-Denis, France. Republished by Societes Reunies Everite-Sitube Produits en Amiante, Ciment et en Beton, Paris, France, a joint stock company of France.

FOR SLATES, TILE, PLATES, CORRUGATED PLATES, PAVING BRICKS, FLAGSTONES OF ARTIFICIAL MATERIAL USED FOR CEILINGS, WALLS, AND COVERINGS.
Claims use since May 2, 1924.

SIDINGS AS STRIPS, UNITS, AND ROLLS—NAMELY,

Reg. No. 224,569. Registered Mar. 1, 1927. SOCIETE FRANCAISE DE L'EVERITE, La Plaine St-Denis, France. Republished by Societes Reunies Everite-Sitube Produits en Amiante, Ciment et en Beton, Paris, France, a joint stock company of France.

FOR SLATES, TILE, PLATES, CORRUGATED PLATES, PAVING BRICKS, FLAGSTONES OF ARTIFICIAL MATERIAL USED FOR CEILINGS, WALLS, AND COVERINGS.
Claims use since May 2, 1924.

Reg. No. 224,570. Registered Mar. 1, 1927. SOCIETE FRANCAISE DE L'EVERITE, La Plaine St-Denis, France. Republished by Societes Reunies Everite-Sitube Produits en Amiante, Ciment et en Beton, Paris, France, a joint stock company of France.

EVERITE

FOR SLATES, TILE, PLATES, CORRUGATED PLATES, PAVING BRICKS, FLAGSTONES OF ARTIFICIAL MATERIAL USED FOR CEILINGS, WALLS, AND COVERINGS.
Claims use since May 2, 1924.

Reg. No. 236,475. Registered Dec. 13, 1927. SCHUMACHER WALL BOARD CORPORATION, Wilmington, Del., Seattle, Wash., and Los Angeles, Calif. Republished by The Paraffine Companies, Inc., San Francisco, Calif., a corporation of Delaware.

KEYHOLD

FOR PLASTER BOARD.
Claims use since Nov. 14, 1924.

Reg. No. 239,740. Registered Mar. 13, 1928. THE DENVER FIRE CLAY COMPANY, Denver, Colo., a corporation of Delaware. Republished by registrant.

LATITE

FOR REFRACTORY CEMENT OR MORTAR FOR USE IN THE BUILDING OF FURNACES, STACKS, AND OTHER STRUCTURES REQUIRING FIRE-CLAY REFRACTORIES.
Claims use since about March 1927.

Reg. No. 240,656. Registered Apr. 3, 1928. THE DENVER FIRE CLAY COMPANY, Denver, Colo., a corporation of Delaware. Republished by registrant.

HIFIRE

FOR FIRE BRICK AND FIRE CLAY TILE AND HIGH-TEMPERATURE CEMENT OR MORTAR.
Claims use since about April 1918.

Reg. No. 240,711. Registered Apr. 3, 1928. THE DENVER FIRE CLAY COMPANY, Denver, Colo., a corporation of Delaware. Republished by registrant.

IBEX

FOR FIRE BRICK AND FIRE-CLAY TILE.
Claims use since February 1919.

Reg. No. 240,712. Registered Apr. 3, 1928. THE DENVER FIRE CLAY COMPANY, Denver, Colo., a corporation of Delaware. Republished by registrant.

CHAMPA

FOR FIRE BRICK AND FIRE-CLAY TILE.
Claims use since December 1918.

Reg. No. 248,211. Registered Oct. 16, 1928. THE PARAFFINE COMPANIES, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

HYDROSEAL

FOR PLASTIC CEMENT IN WHICH ASBESTOS FIBER IS INCORPORATED.
Claims use since 1910.

Reg. No. 248,241. Registered Oct. 16, 1928. SCHUMACHER WALL BOARD CORPORATION, Los Angeles, Calif. Republished by The Paraffine Companies, Inc., San Francisco, Calif., a corporation of Delaware.

SCHUMITE

FOR CONSTRUCTION MATERIAL—NAMELY, WALL BOARD, PLASTER BOARD, LATH BOARD, BUILDING PAPER, AND ROOFING PAPER.
Claims use since Mar. 22, 1928.

Reg. No. 269,699. Registered Apr. 15, 1930. PLIBRICO JOINTLESS FIREBRICK COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DEMON

FOR HIGH TEMPERATURE CEMENT.
Claims use since on or about July 1, 1920.

Reg. No. 344,616. Registered Mar. 30, 1937. PLIBRICO JOINTLESS FIREBRICK COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HYRATE

FOR REFRACTORY CEMENT.
Claims use since July 21, 1936.

Reg. No. 356,821. Registered May 10, 1938. THE DENVER FIRE CLAY COMPANY, Denver, Colo., a corporation of Delaware. Republished by registrant.

KROMTITE

FOR CHROME NEUTRAL HIGH TEMPERATURE BONDING MORTAR.
Claims use since Dec. 9, 1937.

Reg. No. 372,811. Registered Nov. 14, 1939. LEWIS BOLT & NUT COMPANY, Minneapolis, Minn., a corporation of Minnesota. Republished by registrant.

LIFE LINE

FOR GUARD RAIL CABLES, POSTS, OFFSETS, EXPANSION TAKEUPS, AND MISCELLANEOUS FITTINGS USED IN CONNECTION WITH HIGHWAY GUARD RAILS.
Claims use since Aug. 1, 1938.

Reg. No. 398,771. Registered Nov. 24, 1942. PITTSBURGH-CORNING CORPORATION, Pittsburgh, Pa., a corporation of Pennsylvania.

FOAMGLAS

FOR CELLULAR STRUCTURAL MATERIAL COMPOSED OF RIGID CELLULATED SLABS, BLOCKS, LUMPS, OR THE LIKE, SUITABLE FOR USE AS INSULATION OR STRUCTURAL ELEMENTS IN BUILDINGS, FLOATS, LIFE RAFTS, LIFE PRESERVERS, AND FOR VARIOUS OTHER PURPOSES.
Claims use since Nov. 7, 1941.

Reg. No. 406,114. Registered Mar. 14, 1944. THE CELOTEX CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

FOR SATURATED FELT BASE ROOFING AND SIDING PRODUCTS IN THE FORM OF SHINGLES AND SIDINGS AS STRIPS, UNITS, AND ROLLS—NAMELY, ASPHALT SHINGLES, ASPHALT SIDINGS, MINERAL SURFACED ROLL ROOFINGS, AND SMOOTH SURFACED ROLL ROOFINGS.
Claims use since Aug. 30, 1938.

Reg. No. 419,962. Registered Mar. 19, 1946. THE CELOTEX CORPORATION, Chicago, Ill., a corporation of Delaware. Republished by registrant.

CELO-SIDING

The word "Siding" is disclaimed apart from the mark as shown.
FOR SIDING—NAMELY, GRANULAR SURFACE SIDING COMPRISING A WATERPROOFED FIBER BOARD SHEET FORM BACKING MATERIAL PROVIDED WITH AN ADHERED GRANULAR WEATHER RESISTING MINERAL AGGREGATE.
Claims use since May 8, 1942.

CLASS 13

HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES

Reg. No. 138,128. Registered Dec. 14, 1920. STAPLES & SEEFELD, Milwaukee, Wis. Republished by Lewis Bolt & Nut Company, Minneapolis, Minn., a corporation of Minnesota.

LOKTITE

FOR ATTACHING MEMBERS FOR VEHICLE NON-SKID TREAD MEMBERS.
Claims use since Aug. 21, 1919.

Reg. No. 338,443. Registered Sept. 8, 1936. CLAMP NAIL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

DUBLE VEE

FOR MITER JOINT FASTENERS.
Claims use since June 4, 1932.

Reg. No. 422,209. Registered July 9, 1946. GLOBE AUTOMATIC SPRINKLER COMPANY, Philadelphia, Pa., a corporation of Pennsylvania. Republished by registrant.

GLOBE

FOR AUTOMATIC FIRE SPRINKLER APPARATUS, FOR USE BOTH INSIDE AND OUTSIDE OF BUILD-

INGS, AND CONSISTING OF AUTOMATIC SPRIN-

Reg. No. 311,852. Registered Apr. 10, 1934. HUDSON

Reg. No. 178,187. Registered Jan. 8, 1924. STANDARD CARBON COMPANY, Monroe, La. Republished by United

Reg. No. 324,496. Registered May 21, 1935. JOSEPH WARREN BULLEN, doing business as The Bullen Chemical

INGS, AND CONSISTING OF AUTOMATIC SPRINKLERS, OPEN, WINDOW AND EAVE SPRINKLERS, ALARM VALVES, RETARDING CHAMBERS, ELECTRIC CIRCUIT CLOSERS, WATER MOTOR OPERATED MECHANICAL GONGS, DRY PIPE VALVES, QUICK OPENING DEVICES, CHEMICAL AND SOLDER FUSIBLE LINKS, AND DETECTOR CHECK VALVES.
Claims use since July 16, 1918.

CLASS 14

METALS AND METAL CASTINGS AND FORGINGS

Reg. No. 281,177. Registered Mar. 10, 1931. P. R. MALLORY & CO. INCORPORATED, Indianapolis, Ind. Republished by P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware.

ELKALOY

FOR ELECTRODE MATERIAL FOR MANUAL SPOT WELDING.
Claims use since Oct. 21, 1930.

Reg. No. 327,547. Registered Aug. 27, 1935. P. R. MALLORY & CO., INCORPORATED, Indianapolis, Ind. Republished by P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware.

MALLORY 3

FOR ALLOYS COMPRISING COPPER ALLOYS AND METAL ALLOYS GENERALLY HAVING A BASE OF A HIGHLY CONDUCTIVE METAL.
Claims use since Apr. 13, 1935.

Reg. No. 347,282. Registered June 22, 1937. THE RAIL JOINT COMPANY, Chicago, Ill., assignor to Poor & Company. Republished by Poor & Company, Chicago, Ill., a corporation of Delaware.

RAJO

FOR RAILWAY TRACK JOINTS.
Claims use since July 1, 1926.

CLASS 15

OILS AND GREASES

Reg. No. 292,319. Registered Mar. 15, 1932. ULTRA-PENN REFINING COMPANY, Butler, Pa., a corporation of Pennsylvania. Republished by registrant, present address Bruin, Pa.

ULTRA-PENN

The word "Penn" is disclaimed apart from the mark as shown.
FOR LUBRICATING OIL, LUBRICATING GREASE, GASOLINE, BENZINE, AND PARAFFIN.
Claims use since June 13, 1931.

Reg. No. 311,852. Registered Apr. 10, 1934. HUDSON MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

HUDSONITE

FOR LUBRICATING OILS AND GREASES ADAPTED FOR THE PURPOSES OF LUBRICATING CLUTCHES.
Claims use since Sept. 26, 1933.

Reg. No. 417,457. Registered Oct. 30, 1945. LANAIR CHEMICAL CORPORATION, Chicago, Ill., a corporation of Illinois. Republished by registrant.

LANCO OIL SLUDGE EMULSIFIER

The words "Oil Sludge Emulsifier" are disclaimed apart from the mark as shown.
FOR OIL SLUDGE EMULSIFIER, A FLUSHING OIL FOR BREAKING UP AND HOLDING SLUDGE IN SUSPENSION.
Claims use since Oct. 23, 1942.

CLASS 16

PAINTS AND PAINTERS' MATERIALS

Reg. No. 93,418. Registered Sept. 16, 1913. CONSTANT BENOIT, New York, N. Y. Republished by Permatex Company, Inc., New York, N. Y., a corporation of New York.

FOR READY-MIXED ADHESIVE SHELLAC.
Claims use since September 1910.

Reg. No. 170,445. Registered July 17, 1923. THE UNITED OIL & NATURAL GAS PRODUCTS CORPORATION, Monroe, La. Republished by United Carbon Company, Inc. (Maryland), Charleston, W. Va., a corporation of Maryland.

The word "Brand" is disclaimed apart from the mark as shown.
FOR HYDROCARBON BLACK USED AS A BASE IN THE MANUFACTURE OF PAINTS, VARNISH, AND SIMILAR COLORING MATTER.
Claims use since December 1918.

Reg. No. 178,187. Registered Jan. 8, 1924. STANDARD CARBON COMPANY, Monroe, La. Republished by United Carbon Company, Inc. (Maryland), Charleston, W. Va., a corporation of Maryland.

STANCO

FOR CARBON BLACK.
Claims use since May 24, 1923.

Reg. No. 206,946. Registered Dec. 15, 1925. THE PARAFFINE COMPANIES, INC., San Francisco, Calif., a corporation of Delaware. Republished by registrant.

FUMENAMEL

FOR PAINT ENAMELS FOR USE ON SMOKE-STACKS AND INSIDE WOODWORK.
Claims use since Nov. 1, 1923.

Reg. No. 249,072. Registered Nov. 6, 1928. UNITED CARBON COMPANY, Charleston, W. Va. Republished by United Carbon Company, Inc. (Maryland), Charleston, W. Va., a corporation of Maryland.

DIXIE

FOR CARBON BLACK.
Claims use since December 1918.

Reg. No. 257,873. Registered June 18, 1929. JEWEL PAINT & VARNISH CO., Chicago, Ill., a corporation of Illinois. Republished by registrant.

JEWEL
DOUBLEQUICK

The word "Doublequick" is disclaimed apart from the mark as shown.
FOR PAINT, ENAMELS, AND VARNISHES.
Claims use since Nov. 12, 1928.

Reg. No. 324,496. Registered May 21, 1935. JOSEPH WARREN BULLEN, doing business as The Bullen Chemical Company, Folcroft, Pa. Republished by The Bullen Chemical Company, Inc., Folcroft, Pa., a corporation of Pennsylvania.

SI-ZO-KOTE

The word "Kote" is disclaimed apart from the mark as shown.
FOR WALL COATING OR PAINT FOR INTERIOR AND EXTERIOR USE.
Claims use since January 1931.

CLASS 17

TOBACCO PRODUCTS

Reg. No. 240,953. Registered Apr. 10, 1928. LAMBERT PHARMACAL COMPANY, Wilmington, Del., a corporation of Delaware. Republished by registrant, present address St. Louis, Mo.

LISTERINE

FOR CIGARETTES.
Claims use since about Nov. 11, 1927.

CLASS 19

VEHICLES

Reg. No. 110,022. Registered May 2, 1916. HUDSON MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

SUPER-SIX

The word "Six" is disclaimed apart from the mark as shown.
FOR AUTOMOBILES.
Claims use since Oct. 2, 1915.

Reg. No. 111,825. Registered Aug. 8, 1916. HUDSON MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

HUDSON

FOR AUTOMOBILES.
Claims use since July 1909.

Reg. No. 163,045. Registered Jan. 2, 1923. CRAWFORD MANUFACTURING CO., INC., Richmond, Va., a corporation of Virginia. Republished by registrant.

CRAWFORD

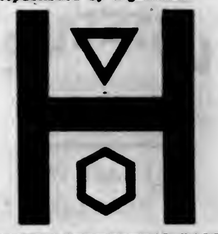
FOR COVERS FOR VEHICLE SEATS.
Claims use since November 1919.

Reg. No. 271,819. Registered June 17, 1930. HUDSON MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

The numeral "8" is disclaimed apart from the mark as shown.

FOR GASOLINE PASSENGER AUTOMOBILES.
Claims use since Jan. 9, 1930.

Reg. No. 283,898. Registered June 9, 1931. HUDSON MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.



FOR AUTOMOBILE STRUCTURAL PARTS.
Claims use since Nov. 6, 1930.

Reg. No. 347,933. Registered July 13, 1937. STANDARD STEEL WORKS COMPANY, Burnham, Pa. Republished by The Baldwin Locomotive Works, Eddystone, Pa., a corporation of Pennsylvania.

FREEDOM

FOR RAILWAY WHEELS AND TIRES.
Claims use since Dec. 3, 1930.

Reg. No. 360,457. Registered Sept. 20, 1938. HUDSON MOTOR CAR COMPANY, Detroit, Mich., a corporation of Michigan. Republished by registrant.

The drawing is lined for the colors red and blue, but the mark is not limited to such colors.
FOR PASSENGER AUTOMOBILES.
Claims use since Aug. 19, 1937.

CLASS 21

ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES

Reg. No. 231,001. Registered Aug. 9, 1927. KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Republished by The May Department Stores Company, St. Louis, Mo., a corporation of New York.

KELSWORTH

FOR BATTERIES, RADIO RECEIVING SETS, AND PARTS THEREFOR.
Claims use since about Jan. 15, 1926.

Reg. No. 351,285. Registered Oct. 26, 1937. HARVEY-WHIPPLE, INCORPORATED, Springfield, Mass., a corporation of Massachusetts. Republished by registrant.

BORKONTROL

FOR ELECTRIC DEVICE FOR CONTROLLING THE OPERATION OF A PUMP MOTOR OF FUEL-BURNING APPARATUS.
Claims use since Jan. 1, 1936.

CLASS 22

GAMES, TOYS, AND SPORTING GOODS

Reg. No. 111,915. Registered Aug. 8, 1916. JOHN WANAMAKER NEW YORK, New York, N. Y., a corporation of New York. Republished by registrant.

BLUE FLASH

The word "Blue" is disclaimed apart from the mark as shown.
FOR GOLF BALLS.
Claims use since about Feb. 8, 1916.

Reg. No. 227,073. Registered Apr. 26, 1927. UNITED STATES WHIP COMPANY, doing business as U. S. Line Company, Westfield, Mass., a corporation of Maine. Republished by registrant.

FOR FISHING LINES.
Claims use since Aug. 1, 1923.

Reg. No. 238,278. Registered Jan. 31, 1928. THE KILGORE MANUFACTURING COMPANY, Westerville, Ohio, a corporation of Ohio. Republished by registrant.

FOR TOYS—NAMELY, TOY TRUCKS, BUSSES, AUTOMOBILES, TRACTORS, GASOLINE PUMPS, COMPUTING SCALES, REPEATING CANNONS, REPEATING CAP PISTOLS, COIN BANKS, ALL OF METAL.
Claims use since on or about Feb. 15, 1927.

Reg. No. 352,547. Registered Dec. 7, 1937. THE KILGORE MANUFACTURING COMPANY, Westerville, Ohio, a corporation of Ohio. Republished by registrant.

The drawing is lined for red and blue.
FOR TOY FIREARMS.
Claims use since Oct. 23, 1934.

Reg. No. 435,987. Registered Jan. 20, 1948. THE SPORTSPACER CORPORATION, New York, N. Y., a corporation of New York. Republished by registrant.

SPORTSPACER

FOR BASEBALLS, SOFTBALLS, FOOTBALLS, BASKET-BALLS, SOCCER-BALLS, VOLLEY-BALLS, TENNIS-BALLS, PLAY-BALLS, MEDICINEBALLS, BEACH BALLS, PUNCHING BAGS, BOXING GLOVES, BASEBALL GLOVES AND MITTS, SOFTBALL GLOVES AND MITTS, BASEBALL BATS, SOFTBALL BATS, FOOTBALL HELMETS, FOOTBALL SHOULDER PADS, TENNIS RACKETS, BADMINTON RACKETS, AND SHUTTLECOCKS.
Claims use since July 15, 1946.

CLASS 23

CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF

Reg. No. 68,487. Registered Apr. 14, 1908. WARREN AXE AND TOOL COMPANY, Warren, Pa., a corporation of Pennsylvania. Republished by registrant.

FOR AXES.
Claims use since 1893.

Reg. No. 70,454. Registered Sept. 1, 1908. WARREN AXE AND TOOL COMPANY, Warren, Pa., a corporation of Pennsylvania. Republished by registrant.

SAGER

FOR AXES.
Claims use since 1893.

Reg. No. 131,749. Registered May 25, 1920. FARREL FOUNDRY & MACHINE COMPANY, Ansonia, Conn. Republished by Farrel-Birmingham Company, Incorporated, Ansonia, Conn., a corporation of Connecticut.

FARREL

FOR HYDRAULIC RUBBER PRESSES, HOSE-MAKING MACHINES, RUBBER CALENDERS, RUBBER MIXERS, RUBBER GRINDERS, RUBBER REFINERS, RUBBER CRACKERS, RUBBER WASHERS, BELT PRESSES, MATTING PRESSES, HEEL PRESSES, EMBOSSING CALENDERS, DOUBLING MACHINES FOR RUBBER MANUFACTURE, RUBBER-TUBING MACHINES, RUBBER-STRAINING MACHINES, RUBBER-SHOE MACHINES, LINOLEUM CALENDERS, LINOLEUM MIXERS, LINOLEUM GRINDERS, LINOLEUM SCRATCHERS, LINOLEUM PRESSES, WIRE-INSULATING MACHINES, STRANDING MACHINES, INSULATING CALENDERS, INSULATION MIXERS, INSULATION WASHERS, INSULATION STRAINERS, CELLULOID GRINDERS, CELLULOID PRESSES, CHILLED-IRON ROLLS, GRAY-IRON ROLLS, ROLLING MILLS, STRIP-STRAIGHTENING MACHINES, CINDER GRINDERS, METAL CUTTING AND SLITTING MACHINES, SLAB MOLDS, LEAD-PIPE PRESSES, SUGAR-CANE CRUSHERS, SUGAR-CANE-GRINDING MILLS, GEARING, STONE AND ORE CRUSHERS, CRUSHING ROLLS, FELT-HARDENING MACHINES, PAPER CALENDERS, BOARD CALENDERS, ROLL-GRINDING MACHINES, STONE PLANERS, SHAFTING, SHAFT COUPLINGS, ROPE WHEELS, BALANCE WHEELS, HYDRAULIC ACCUMULATORS, AND HYDRAULIC REGULATORS.
Claims use since on or about July 1, 1878.

Reg. No. 141,349. Registered Apr. 19, 1921. ECLIPSE MACHINE COMPANY, Elmira Heights, N. Y. Republished by Bendix Aviation Corporation, Elmira Heights, N. Y., a corporation of Delaware.

Eclipse-Bendix

FOR DRIVES OR TRANSMISSION MECHANISM FOR STARTERS FOR INTERNAL-COMBUSTION ENGINES.
Claims use since Jan. 12, 1914.

Reg. No. 230,297. Registered July 19, 1927. KAUFMANN DEPARTMENT STORES, INC., Pittsburgh, Pa. Republished by The May Department Stores Company, St. Louis, Mo., a corporation of New York.

KELSWORTH

FOR VACUUM CLEANERS.
Claims use since about Jan. 15, 1926.

Reg. No. 234,666. Registered Nov. 1, 1927. RELIANCE MACHINE & STAMPING WORKS, INC., New Orleans, La. Republished by Reliance Machine & Stamping Works, Inc., Dallas, Tex., a corporation of Texas.

FOR GREASE-GUN FILLER NECKS, GREASE-CUP FITTINGS, GREASE GUNS AND PUMPS, AND PARTS THEREOF.
Claims use since Dec. 4, 1926.

Reg. No. 241,287. Registered Apr. 24, 1928. ACME STEEL COMPANY, Chicago, Ill., a corporation of Illinois. Republished by registrant.

FOR STRETCHERS AND SEALERS EMPLOYED IN THE ACME METHOD OF LOADING FREIGHT CARS AND THE LIKE.
Claims use since Mar. 17, 1927.

Reg. No. 244,413. Registered July 17, 1928. THE HENKEL-CLAUSS CO., Fremont, Ohio, a corporation of Ohio. Republished by registrant, present address Fremont, Ohio, and New York, N. Y.

RED SNAPPER

FOR MEAT, VEGETABLE, AND FOOD CHOPPERS; PRUNERS; TINNER, JEWELER, RUBBER, AND AUTOMOBILE SNIPS; SCISSORS, SHEARS, RAZORS, HAND KNIVES.
Claims use since Dec. 1, 1927.

Reg. No. 347,901. Registered July 13, 1937. BUFFALO FIRE APPLIANCE CORPORATION, Buffalo, N. Y., a corporation of New York. Republished by registrant, present address Dayton, Ohio.

The words "Buffalo, N. Y." are disclaimed apart from the mark as shown.
FOR COMPLETE AND PARTS OF VEHICULAR AND PORTABLE HAND MECHANICAL FIRE EXTINGUISHERS CAPABLE OF BEING CHARGED WITH WATER, CARBON TETRACHLORIDE, SODA AND ACID, CARBON DIOXIDE AND FOAM PRODUCING CHEMICALS; FIRE LADDERS AND STRAPS THEREFOR; MOTOR DRIVEN VEHICULAR FIRE FIGHTING APPARATUS COMPRISING PUMPERS, SERVICE TRUCKS, QUADRUPLES, COMBINATIONS, LADDER TRUCKS AND PARTS THEREOF; AND AXES.
Claims use since 1922.

Reg. No. 381,733. Registered Oct. 1, 1940. WILLIAM PETERSEN, doing business as Petersen Manufacturing Co., De Witt, Nebr. Republished by Petersen Manufacturing Company, Inc., De Witt, Nebr., a corporation of Nebraska.

FOR WRENCHES.
Claims use since Nov. 6, 1922.

Reg. No. 394,463. Registered Apr. 7, 1942. JOHN E. SHAW, Los Angeles, Calif. Republished by registrant.

The representation of the end of a bit is disclaimed apart from the mark as shown.
FOR DRILLS, BITS, AND REAMERS APPLICABLE TO MACHINE SHOP EQUIPMENT.
Claims use since Sept. 2, 1941.

Reg. No. 432,214. Registered Aug. 26, 1947. LATHAM COMPANY, INC., San Francisco, Calif. Republished by Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware.

UNI-VAC

FOR BOOSTER UNITS FOR HYDRAULIC OR PNEUMATIC BRAKE SYSTEMS FOR GENERAL USE ON MACHINERY AND ON VEHICLES.
Claims use since September 1940.

Reg. No. 434,167. Registered Nov. 11, 1947. JEFFERSON ISLAND SALT COMPANY, Louisville, Ky., assignee of Jefferson Island Salt Company. Republished by Jefferson Island Salt Company, Louisville, Ky., a corporation of Delaware.

BRINEMASTER

FOR SALT DISSOLVERS COMPRISED OF A TANK FITTED WITH WATER LINE, A HOPPER FOR ADMISSION OF SALT AND ATTACHED BRINE FILTER.
Claims use since July 19, 1946.

CLASS 24

LAUNDRY APPLIANCES AND MACHINES

FOODS AND INGREDIENTS OF FOODS

Reg. No. 23,464. Registered Aug. 8, 1893. ILLINOIS CANNING CO., Hoopeston, Ill. Republished by The Illinois Canning Co., Hoopeston, Ill., a corporation of Illinois.

The statement includes the following language: "Our trade-mark consists of the arbitrary word-symbol 'Baby Bunting.' This has generally been arranged as shown in the accompanying facsimile, in which it appears in blank letters on a horizontal line with the representation beneath of two ears of partially husked corn crossing each other, with a child sitting thereon at the point of intersection. Beneath this ear of corn again appears the word-symbol 'Baby Bunting.' The representation of the child, and ear of corn may be changed or altered or entirely omitted without materially altering the character of our trade-mark, the essential feature of which is the word-symbol 'Baby Bunting.'"
FOR CANNED CORN.
Claims use since 1886.

Reg. No. 23,481. Registered Aug. 15, 1893. ILLINOIS CANNING CO., Hoopeston, Ill. Republished by The Illinois Canning Co., Hoopeston, Ill., a corporation of Illinois.

The statement includes the following language: "Our trade-mark consists of the arbitrary word-symbol 'Pride of Illinois.' This has generally been arranged as shown in the accompanying facsimile, in which it appears in black letters on a horizontal line, and beneath which are arranged the words 'Sugar Corn.' Between these two lines of letters is represented a partially husked ear of corn. At the right of this ear of corn is represented a flower, supported by a leaved stem, and to the right of this leaved stem, is represented a young girl with a wreath of flowers in her hair. At the right of this latter representation, are shown several disconnected leaves, beneath which are arranged the words 'Packed by the Illinois Canning Co.' The representation of the ear of corn, flower, girl, leaves, and the words 'Packed by the Illinois Canning Co.,' and the words 'Sugar Corn' may be arranged or altered at pleasure or entirely omitted without materially altering the character of the trade-mark, the essential feature of which is the word-symbol 'Pride of Illinois.'"
FOR CANNED CORN.
Claims use since 1891.

FOR CANDY.

Claims use since on or about August 1931.

Reg. No. 398,038. Registered Oct. 6, 1942. TEAGUE-MCKEVETT ASSOCIATION, Santa, Paula, Calif., a corporation of California. Republished by registrant.

LEVEL

FOR FRESH CITRUS FRUIT.

Claims use since Jan. 16, 1942.

Reg. No. 399,937. Registered Feb. 9, 1943. H. H. SCHUMACHER, Alhambra, Calif. Republished by registrant.

Bee-kissed

FOR HONEY.

Claims use since Sept. 28, 1920.

Reg. No. 403,587. Registered Oct. 5, 1943. MID CITY WHOLESALE GROCERS, INC., Cicero, Ill., a corporation of Illinois. Republished by registrant, present address Chicago, Ill.

FOR CANNED FRUITS, CANNED BERRIES, CANNED VEGETABLES, CANNED FRUIT AND VEGETABLE JUICES, CANNED APPLE SAUCE, CANNED CRANBERRY SAUCE, TOMATO PUREE, CANNED SWEET POTATOES, CANNED FRENCH FRIED POTATOES, CANNED PUMPKIN, CANNED SAUER KRAUT, CANNED SAUER KRAUT JUICE, CANNED MUSHROOMS, CANNED HOMINY, CANNED PIMIENTOS, CANNED AND BOTTLED OLIVES, CANNED CHILI CON CARNE, CANNED CORNED BEEF HASH, CANNED EVAPORATED MILK, BAKED BEANS WITH PORK, DRIEF BEEF, BONED CHICKEN, EGG NOODLES, SPAGHETTI, MACARONI, SALAD DRESSING, SANDWICH SPREAD, SEA FOOD COCKTAIL SAUCE, CHILI SAUCE, PEP SAUCE, HOT SAUCE, TOMATO CATSUP, PICKLES, FRUIT PRESERVES, MARMALADE, HONEY, PEANUT BUTTER, TABLE SYRUP, MARSHMALLOW CREME, BARBECUE SAUCE, BARLEY, COCOANUT, MAYONNAISE, RICE, ROLLED OATS, VINEGAR, GELATINE, MARASCHINO CHERRIES, MINT SAUCE, MINCEMEAT, MARSHMALLOWS, MUSTARD, POP CORN, SPLIT PEAS, PARSLEY FLAKES, BLACK PEPPER, WHITE PEPPER, CINNAMON, ALLSPICE, CLOVES, TEA, AND WORCESTERSHIRE SAUCE.

Claims use since 1899.

Reg. No. 409,021. Registered Sept. 12, 1944. H. H. SCHUMACHER, Alhambra, Calif. Republished by registrant.

The representation of a label and the words "Pure Wild Blossom" are disclaimed apart from the mark as shown.

FOR HONEY.

Claims use since July 1943.

Reg. No. 410,804. Registered Dec. 19, 1944. G. O. MCDANIEL, Edcouch, Tex. Republished by registrant.

HOUSE of GEORGE

FOR FRESH CITRUS FRUITS, FRESH VEGETABLES,, CANNED CITRUS JUICES, AND CANNED VEGETABLE JUICES.

Claims use since October 1941.

Reg. No. 410,805. Registered Dec. 19, 1944. G. O. MCDANIEL, Edcouch, Tex. Republished by registrant.

YARDSTICK

FOR FRESH CITRUS FRUITS AND FRESH VEGETABLES.

Claims use since October 1941.

Reg. No. 411,130. Registered Jan. 2, 1945. G. O. MCDANIEL, Edcouch, Tex. Republished by registrant.

GOMAC

FOR FRESH CITRUS FRUITS, FRESH VEGETABLES—NAMELY, TOMATOES AND CANNED CITRUS JUICES.

Claims use since October 1941.

Reg. No. 415,300. Registered Aug. 7, 1945. EUCLID AVENUE ORANGE ASSOCIATION, Upland, Calif., a firm. Republished by registrant.

UPLAND PRIDE

The word "Upland" is disclaimed apart from the mark as shown.

FOR FRESH CITRUS FRUITS.

Claims use since Oct. 26, 1948.

Reg. No. 415,848. Registered Aug. 21, 1945. ROSENBERG BROS. & CO., San Francisco, Calif., a corporation of California. Republished by registrant.

ENSIGN

"KERNELS OF SUNSHINE"

The word "Kernels" is disclaimed apart from the mark as shown.

FOR ALMONDS.

Claims use since 1909.

Reg. No. 418,088. Registered Dec. 4, 1945. NEDICK'S STORES, INC., New York, N. Y. Republished by Nedick's Inc., New York, N. Y., a corporation of New York.

Nedick's

FOR MEAT PRODUCTS—NAMELY, COOKED FRANKFURTERS AND FRANKFURTER SANDWICHES, RAW HAMBURGERS, COOKED HAMBURGERS, AND HAMBURGER SANDWICHES, BAKERY PRODUCTS—NAMELY BREADS, DOUGHNUTS, ROLLS, CAKES AND PASTRIES; COFFEE, TEA, CHOCOLATE FOR BEVERAGE PURPOSES AND CANDY.

Claims use since May 10, 1944.

Reg. No. 418,991. Registered Jan. 15, 1946. CHARLES M. ZILEN doing business as Zilen Citrus Company, Riverside, Calif. Republished by registrant.

Riverside Prince

The name "Riverside" is disclaimed apart from the mark as shown.

FOR FRESH CITRUS FRUITS.

Claims use since Aug. 17, 1941.

Reg. No. 419,057. Registered Feb. 5, 1946. NEDICK'S STORES, INC., New York, N. Y., now by change of name to Nedick's Inc. Republished by Nedick's Inc., New York, N. Y., a corporation of New York.

FOR MEAT PRODUCTS—NAMELY COOKED FRANKFURTERS AND FRANKFURTER SANDWICHES, RAW HAMBURGERS, COOKED HAMBURGERS, AND HAM-

BURGER SANDWICHES; BAKERY PRODUCTS—NAMELY, BREADS, DOUGHNUTS, ROLLS, CAKES, AND PASTRIES; COFFEE, TEA, CHOCOLATE FOR BEVERAGE PURPOSES AND CANDY.
Claims use since May 10, 1944.

Reg. No. 419,650. Registered Feb. 26, 1946. CHARLES M. ZILEN, doing business as Zilen Citrus Company, Riverside, Calif., Republished by registrant.

Riverside Queen

The word "Riverside" is disclaimed apart from the mark as shown.
FOR FRESH CITRUS FRUITS.
Claims use since Aug. 17, 1941.

Reg. No. 424,603. Registered Oct. 15, 1946. E. J. BRACH & SONS, Chicago, Ill., a corporation of Illinois. Republished by registrant.

HITCH-HIKE

FOR CANDY.
Claims use since July 23, 1945.

Reg. No. 425,756. Registered Dec. 3, 1946. E. J. MUTCHLER, Sinton, Tex. Republished by registrant.

HI-SIGN

FOR FRESH VEGETABLES.
Claims use since Nov. 12, 1945.

Reg. No. 428,388. Registered Mar. 25, 1947. E. J. BRACH & SONS, Chicago, Ill., a corporation of Illinois. Republished by registrant.

Nubbins

FOR CANDY.
Claims use since 1931.

Reg. No. 435,717. Registered Jan. 6, 1948. RICH-LAND CANNING CORPORATION, Friesland, Wis., a corporation of Wisconsin. Republished by registrant.

BROOK BOURN

FOR CANNED PEAS AND CANNED CORN.
Claims use since Aug. 22, 1945.

CLASS 47

WINES

Reg. No. 432,454. Registered Sept. 2, 1947. ITALIAN SWISS COLONY, San Francisco, Calif., a corporation of California. Republished by registrant.

FOR WINES.
Claims use since 1889.

CLASS 48

MALT BEVERAGES AND LIQUORS

Reg. No. 90,587. Registered Mar. 4, 1913. JOS. SCHLITZ BREWING COMPANY, Milwaukee, Wis. Republished by Jos. Schlitz Brewing Company (1933), Milwaukee, Wis., a corporation of Wisconsin.

FOR LAGER BEER.
Claims use since May 15, 1894.

Reg. No. 232,606. Registered Sept. 13, 1927. THE BUCKEYE PRODUCING CO., Toledo, Ohio. Republished by The Buckeye Brewing Co., Toledo, Ohio, a corporation of Ohio.

GREEN SEAL

FOR MALT SIRUP.
Claims use since Dec. 2, 1926.

Reg. No. 244,967. Registered July 31, 1928. M. K. GOETZ BREWING COMPANY, St. Joseph, Mo., a corporation of Missouri. Republished by registrant.

"COUNTRY CLUB"

The word "Special" is disclaimed apart from the mark as shown.
FOR NONALCOHOLIC, CEREAL, MALT BEVERAGES.
Claims use since Dec. 29, 1921.

Reg. No. 304,472. Registered July 11, 1933. BERGHOFF BREWING CORPORATION, Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

Berghoff

FOR MALT BEVERAGE WITH NOT MORE THAN THE LEGAL ALCOHOL CONTENT.
Claims use since 1877.

Reg. No. 312,693. Registered May 8, 1934. BERGHOFF BREWING CORPORATION, Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

FOR MALT BEVERAGES.
Claims use since 1885.

Reg. No. 357,495. Registered June 7, 1938. OSHKOSH BREWING COMPANY, Oshkosh, Wis., a corporation of Wisconsin. Republished by registrant.

"B'gosh it's good"

The words "Its Good" are disclaimed apart from the mark as shown.
FOR BEER.
Claims use since Nov. 15, 1929.

Reg. No. 393,963. Registered Mar. 10, 1942. BERGHOFF BREWING CORPORATION, Fort Wayne, Ind., a corporation of Indiana. Republished by registrant.

FOR MALT BEVERAGES.
Claims use since Oct. 17, 1941.

CLASS 49

DISTILLED ALCOHOLIC LIQUORS

Reg. No. 309,450. Registered Jan. 16, 1934. THE J. KRAMER COMPANY, COMMISSION MERCHANTS INC., New York, N. Y. Republished by Ripy Bros. Distillers Incorporated, Lawrenceburg, Ky., a corporation of Kentucky.

OLD HARDIE

FOR WHISKEY AND OTHER POTABLE DISTILLED LIQUORS.
Claims use since about 1905.

Reg. No. 368,238. Registered June 13, 1939. JULIUS LOESER & CO., INC., Chicago, Ill., a corporation of Illinois. Republished by registrant.

SCOT'S LORE

FOR SCOTCH TYPE WHISKEY.
Claims use since Nov. 19, 1936.

Reg. No. 430,949. Registered July 1, 1947. WESTERN UNITED DISTRIBUTORS, San Francisco, Calif., a corporation of California. Republished by registrant.

NORTHERN CUSTOM

FOR BRANDY.
Claims use since Jan. 31, 1946.

Claims use since Aug. 22, 1945.

Claims use since Dec. 29, 1921.

CLASS 50

MERCHANDISE NOT OTHERWISE CLASSIFIED

Reg. No. 396,455. Registered July 21, 1942. SEWALL & SON, INC., Auburn, Maine, a corporation of Maine. Republished by registrant.

The representation of insoles and the word "Insoles" are disclaimed apart from the mark as shown.

FOR STRIPS OF COMPOSITE MATERIAL FROM WHICH INSOLES MAY BE CUT.

Claims use since Oct. 5, 1939.

Reg. No. 396,456. Registered July 21, 1942. SEWALL & SON, INC., Auburn, Maine, a corporation of Maine. Republished by registrant.

FOR STRIPS OF COMPOSITE MATERIAL FROM WHICH INSOLES MAY BE CUT.

Claims use since Oct. 5, 1939.

REISSUES

FEBRUARY 8, 1949

23,083

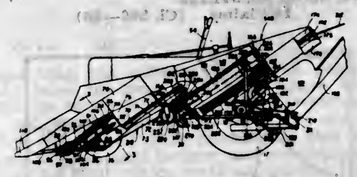
CORN HARVESTER

Norman F. Andrews, Moline, Ill., and Russell L. Dort, Davenport, Iowa, assignors to Deere & Company, Moline, Ill., a corporation of Illinois

Original No. 2,347,871, dated May 2, 1944, Serial No. 394,806, May 23, 1941. Application for reissue January 19, 1946, Serial No. 642,209

41 Claims. (Cl. 56—18)

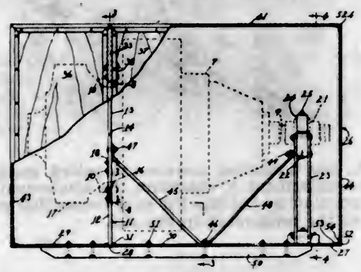
39. In combination, a tractor having a body, a mounting member secured thereto and having a slot, a lifting member pivotally mounted on the mounting member, an implement having a connecting portion engageable with the mounting member and receivable in the slot therein, means for angularly moving the lifting member to shift the implement between an operative position in which it is raised and mounted upon the tractor with the connecting portion thereof positioned in the slot in the mounting member and an inoperative position in which it rests upon the ground, and means for fixing the lifting member to the mounting member in raised position of the implement to maintain the implement in this position by holding the said connecting portion of the implement in the slot.



PATENTS

GRANTED FEBRUARY 8, 1949

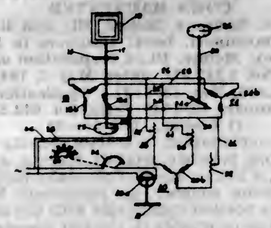
2,460,797
ENGINE SHIPPING CASE
George H. Allington, Rockford, Ill., assignor to The Weiman Company, Rockford, Ill., a corporation of Illinois
Continuation of application Serial No. 564,572, October 1, 1942. This application June 19, 1944, Serial No. 541,123
14 Claims. (Cl. 206—46)



1. In an engine shipping case for a radial aircraft engine having a generally cylindrical crank case portion projecting from the center of the group of cylinders, said shipping case comprising a lower generally rectangular case section and a hollow generally rectangular cover section adapted to be assembled on the lower case section to enclose an engine supported on the latter, an engine of the kind mentioned, and engine supporting means comprising a rectangular panel made in two rectangular halves, namely, a lower panel half rigidly secured to the lower case section and cut out to receive and being rigidly secured to a portion of the crank case of the engine for support, and an upper panel half also cut out to receive and being rigidly secured to another portion of the crank case of the engine for support, the panel halves being held together in coplanar relationship by the engine secured thereto, whereby to form an integral panel, and means including grooves in the lower case section and hollow cover section closely receiving edge portions of said panel halves to support the panel in rigid relation to the assembled case.

2,460,798
RADIO DIRECTION FINDER
Thomas O. McCarthy, United States Navy
Original application May 13, 1944, Serial No. 535,529. Divided and this application March 12, 1946, Serial No. 653,921
13 Claims. (Cl. 343—114)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a radio direction-finder system subject to a cyclic deviation error characterized by predetermined values of amplitude, phase and frequency and including rotatable directional antenna means and a radio direction indicator, a direction transmission system comprising transmitter and repeater units, means conductively connecting said transmitter and repeater units, said transmitter unit being coupled to said antenna means and said repeater unit being coupled to said direction indicator, whereby said direction indicator is normally movable in synchronism with said antenna means to indicate the instant bearing of said antenna means, and means conductively connected in parallel with

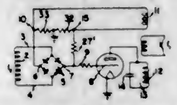


said conductive connecting means for producing a cyclic asynchronous relationship between said units of an amplitude, phase, and frequency substantially equal and opposite to said deviation error, whereby said direction indicator will indicate substantially correct radio direction.

2,460,799
PRODUCTION OF ORGANOPOLYSILOXANE RESINS WITH THE AID OF ALUMINUM ALKOXIDE
Arthur J. Barry, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Application February 21, 1947, Serial No. 730,211
9 Claims. (Cl. 260—46.5)

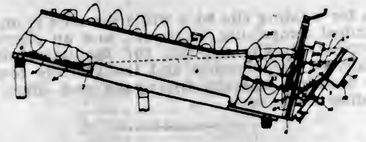
1. The method of making an organopolysiloxane resin which comprises reacting an organosiloxane polymer, having an average of from 1 to 2 hydrocarbon radicals, attached directly to silicon atoms, per atom of silicon, which organosiloxane polymer is initially in liquid state, with an aluminum alkoxide at temperatures between room temperature and 300° C., the aluminum alkoxide being employed in amount between 0.01 per cent of the weight of the organopolysiloxane and a maximum proportion which is varied inversely with the temperature in accordance with values of 5 per cent of the aluminum alkoxide at 300° C. and 20 per cent at 150° C.

2,460,800
FRACTIONAL FREQUENCY GENERATOR
Laurence Batchelder, Cambridge, Mass., assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass., a corporation of Delaware
Application December 27, 1945, Serial No. 637,415
12 Claims. (Cl. 250—36)



1. Means for obtaining a fractional frequency output in an electronic circuit comprising a vacuum tube oscillatory circuit having a tuned output circuit, an input circuit adapted to receive the signal of which a fractional frequency output is to be obtained, a feed back of the regenerative type connected between the tuned output and the input circuit including a bridge circuit having one branch only formed as a rectifier coupling said input circuit to the oscillatory circuit.

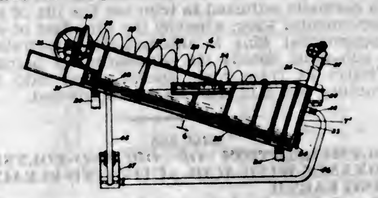
2,460,801
METHOD AND MEANS FOR HINDERED SETTLING CLASSIFICATION
Edmund C. Bitzer, Golden, Colo., assignor to Colorado Iron Works Company, Denver, Colo., a corporation of Maine
Application April 21, 1944, Serial No. 532,180
17 Claims. (Cl. 209—18)



1. A hydraulic classification method, which comprises the treatment of a body of solids in mixed sizes in two pools which lie within a common horizontal plane and in adjoining vertical planes maintained in physically separated relation with a countercurrent restricted flow from the bottom of one said pool into the bottom of the other pool, one of said pools having its surface at a substantially higher elevation than the surface of the other pool, feeding a pulp containing solids in mixed sizes into one said pool at a point horizontally distant and at a higher elevation than the restricted flow, maintaining a hindered settling action in the pool in which the pulp is fed by directing upward flowing currents across substantially the entire area of the pool between the point of feed introduction and said restricted flow, passing solids in the larger size ranges countercurrent to said upward currents in a horizontally ranging course into and through the restricted flow to the other said pool, feeding wash water into the conveying pool at a rate sufficient to maintain the level of the conveying pool above the level of the first mentioned pool, flowing the wash water containing fine particles from the conveying pool to the first mentioned pool for further impeding said countercurrent settling conveying settled solids through said last-mentioned pool to an elevated point of discharge, and overflowing solids in the finer size ranges from the first said pool.

2,460,802
METHOD OF STARTING A FINE HEAVY MEDIA SEPARATION PLANT
Edmund C. Bitzer, Golden, Colo., assignor to Colorado Iron Works Company, Denver, Colo., a corporation of Maine
Application January 9, 1945, Serial No. 571,999
2 Claims. (Cl. 209—173)

1. In a heavy-media ore concentration treatment, in which the normally suspended solids constituents of a mixture of ore, heavy media and a carrying liquid have settled into a bed within a pool having an inclined bottom, by being allowed to remain in a quiescent state for a substantial time interval, the improvement which comprises initially subjecting the bed to a raking action directed at the top of the settled solids and moving said raking action downwardly through the bed as it loosens, and portions of its solids content are again suspended in said liquid, directing said raking action through the pool so as to move the contents of the bed progressively along the inclined bottom and out of said pool along an extension of the inclined course to a point of discharge substantially

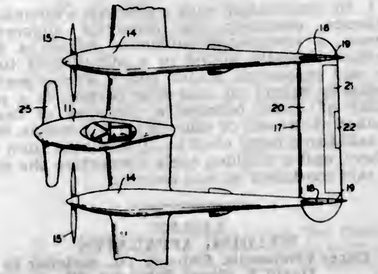


higher than the surface of the pool, removing liquid from the pool at a point below but in proximity to its surface, washing the surface of the bed moving upwardly away from said pool in the raking action by discharging said withdrawn liquid on said surface, and continuing said circulation and raking until equilibrium is established in the pool.

2,460,803
DISUBSTITUTED DESOXYALDITOLS AND PROCESS FOR THEIR PREPARATION
William Andrew Bonner, Hubbard Woods, and Charles D. Hurd, Evanston, Ill., assignors to Corn Products Refining Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 31, 1945, Serial No. 638,584
13 Claims. (Cl. 260—618)

2. The process of preparing disubstituted desoxyalditols which comprises contacting, under substantially anhydrous conditions and at elevated temperature, not exceeding 100° C., a 1-R-1-desoxyglycose, wherein R represents a radical selected from the group consisting of alkyl, aryl and aralkyl, and an aromatic hydrocarbon in the presence of sufficient anhydrous aluminum chloride to effect the desired reaction.

2,460,804
AUXILIARY CONTROL SURFACE FOR HIGH-SPEED AIRCRAFT
Samuel R. Brentnall, Washington, D. C.
Application May 22, 1944, Serial No. 536,660
4 Claims. (Cl. 244—13)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In an airplane, a main wing structure, a tail structure, two fuselages parallelly spaced apart in fixed position on said wing and tail structures, a nacelle fixed to said wing structure intermediate

said fuselages, whereby said tail structure is subject to blanketing by turbulent wake at trans-sonic speed, a supplemental wing carried by said nacelle forward of said main wing structure at a predetermined positive angle adapted to provide lift to the forward end of said airplane, a trim tab carried on said tail structure said trim tab normally adjusted to trim out the lift of said supplemental wing, whereby the lift effect of said supplemental wing is automatically neutralized at sub-sonic speeds but automatically becomes effective at trans-sonic speeds when said tail structure and said trim tab are blanketed.

2,460,805

POLYMERIZATION OF ORGANO-POLYSILOXANES WITH ACID-ACTIVATED BLEACHING EARTH

Edgar C. Britton, Halbert C. White, and Clarence L. Moyle, Midland, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Application December 6, 1945, Serial No. 633,258

8 Claims. (Cl. 260—46.5)

1. In the condensation of organo-siloxane polymers to form polymers of higher molecular weight, the step which comprises contacting a liquid hydrocarbon substituted siloxane polymer with an acid-activated bleaching earth at a reaction temperature between 50° and 300° C. to effect further polymerization of the hydrocarbon substituted siloxane.

2,460,806

DIRECTION FINDER

Herbert G. Carter, Dayton, Ohio

Application August 10, 1945, Serial No. 610,179

5 Claims. (Cl. 250—33.67)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In combination with a receiver, a directional antenna comprising a dielectric supporting means, a continuous conductor having a first portion helically wound in a plurality of turns on said supporting means and a second portion coaxially wound on said first portion in a plurality of turns forming a plurality of layers banked at one end of said supporting means, each of said turns being electrically insulated from the others, and a shielded cable connecting the ends of said conductor to said receiver.

2,460,807

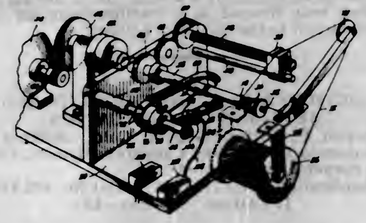
WELDING APPARATUS

Harry Chanowitz, Chicago, Ill., assignor to David T. Siegel, Wheaton, Ill.

Application March 5, 1945, Serial No. 581,088

13 Claims. (Cl. 219—4)

1. A wire coil manufacturing apparatus comprising a rotatable mandrel adapted to support a core member, means for rotating the mandrel, means for guiding a wire from a source of supply onto the core during mandrel rotation whereby to form a coil thereon, and welding mechan-



ism for welding the wire while the core is on the mandrel comprising a support, and an electrode mounted on the support for manual shifting axially of the mandrel and transversely toward the mandrel whereby to engage and effect the welding of the wire.

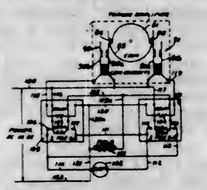
2,460,808

TORQUE AMPLIFIER AND REVOLUTION ACCUMULATOR

Benjamin Cooper, Neteong, and Albert F. Hohmann, Teaneck, N. J.; said Hohmann assignor to said Cooper

Application February 14, 1944, Serial No. 522,314

12 Claims. (Cl. 318—8)



12. In combination, a differential mechanism, a pair of inputs therefor and an output therefor, an electric motor connected to one of the inputs, means actuated by the output to cause said motor to bring the input to which the motor is connected into phase with the other input, and including a rotary member, a circuit controlling the motor and including means controlled by rotation of said rotary member, and means interconnecting said output with said rotary member for rotating said rotary member through one revolution for a multiple of revolutions of said output, the interconnecting means being so arranged that when said rotary member is in normal position, initial movement of said output will result in initial movement of said rotary member away from normal, whereas continued movement of said output will cause alternating non-movement and movement of said rotary member.

2,460,809

METHOD OF PREPARING GELATIN

Rudolph E. Damschroder and Marie E. Kauffman, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey

No Drawing. Application February 7, 1946, Serial No. 646,211

6 Claims. (Cl. 260—118)

1. A method of obtaining gelatin from collagen-containing parts of the animal body which

comprises subjecting such parts to the dissolving action of an aqueous solution of 1–30% concentration of an aliphatic amine selected from the group consisting of methylamine, dimethylamine, ethylamine, ethylene diamine, ethanolamine, propanolamine, and propylene diamine, whereby the collagen is dissolved and converted into gelatin.

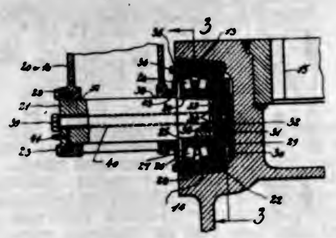
2,460,810

SELF-ALIGNING CONICAL ROLLER

Trevor O. Davidson, Milwaukee, Wis., assignor to Bucyrus-Erie Company, South Milwaukee, Wis., a corporation of Delaware

Application November 1, 1944, Serial No. 561,464

9 Claims. (Cl. 308—226)



1. In a roller assembly for turn tables, the combination of: the roller proper, having a central cavity; a self-aligning anti-friction bearing within this cavity; an axle; means for securing the axle to the inner race of the bearing, said means comprising a central hole in the inner race, a cooperating tightly fitting external conformation on the axle, a nut to bear against the inner race to force it onto the axle, and a bolt passing through the axle and engaging the nut; and means for securing the outer race of the bearing to the roller proper.

2,460,811

PROCESS FOR PREPARING PELLETED IRON-OXIDE TYPE CATALYSTS

Elwyn P. Davies, Alameda, and Frank T. Eggertsen, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application August 26, 1944, Serial No. 551,421

3 Claims. (Cl. 252—259.2)

1. The process for preparing iron-oxide-type catalysts in the form of pellets affording a high selectivity of catalytic action which comprises mixing the catalytic material consisting mainly of powdered iron oxide with water, the amount of water being sufficient to form a moist mass which upon normal extrusion forms pellets which stick together upon contact but are sufficiently stable to hold their extruded shape temporarily, extruding said moist mass while rapidly drying the surface of the extrudate to below the point of stickiness, thereby to produce an extrudate containing a greater concentration of water in the interior than on the surface, cutting the surface-dried extrudate still containing substantially the original amount of water within five seconds of its formation into lengths suitable for catalyst pellets, and then subsequently drying the cut pellets to remove the remaining main portion of water.

2,460,812

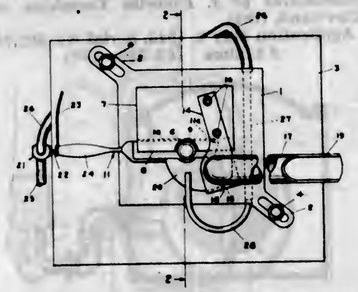
SEMIAUTOMATIC JIG

Ralph S. De Martini, San Leandro, Calif.

Application March 12, 1946, Serial No. 653,919

5 Claims. (Cl. 77—62)

(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a machine tool fixture of the class described, the combination of a base, a gravity operated feed tube adapted to support a plurality of workpieces and feed said workpieces to said base, a plate secured to said base, an arm pivoted to said base and adapted to individually receive said workpieces from said tube and position them against said plate for work thereon, a second plate mounted on said arm and disposed in offset relation to said tube when said arm is in the position in which it receives a workpiece from said tube and said second plate being adapted to close the lower end of said tube when said arm is moved from said position and toward said first mentioned plate, and pneumatic means cooperable with said aforementioned elements for expelling said workpieces from said fixture when the work thereon is completed, said pneumatic means including a valve adapted for operation by said arm, said valve being closed when said arm is against said first mentioned plate and said valve being open during the first part of the motion of said arm away from said plate.

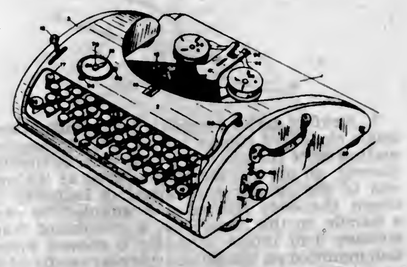
2,460,813

PLATENLESS TYPEWRITER

Charles W. Dohn, Glendale, N. Y.

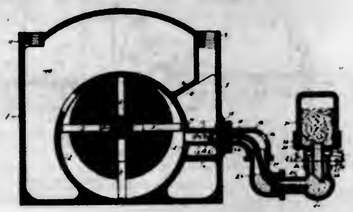
Application June 24, 1946, Serial No. 678,942

11 Claims. (Cl. 197—2)



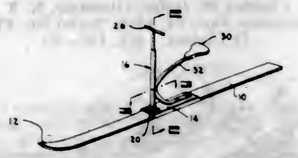
1. In a typewriter movable over the material receiving the writing, the combination with supporting spheres for the typewriter, of means for revolving the spheres to move the typewriter laterally and longitudinally under actuation of the keys and line spacing lever, respectively, of the typewriter.

2,460,814
PUMP LUBRICATING MEANS
Carl F. Duerr, Jr., Gates Mills, Ohio, assignor, by mesne assignments, of thirty one-hundredths to Ralph R. Roemer, thirty-five one-hundredths to Louise E. Roemer, twenty-five one-hundredths to William E. Kiefer, and ten one-hundredths to J. Everette Tompkins, all of Cleveland, Ohio
Application May 9, 1945, Serial No. 592,787
3 Claims. (Cl. 230—207)



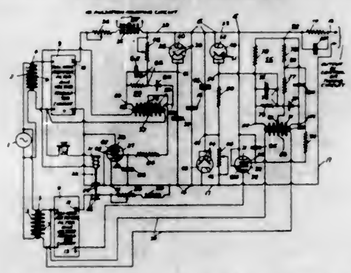
1. A lubricator for an air pump having a vacuum chamber, comprising: an oil-containing walled enclosure; means to maintain oil in the enclosure at a constant predetermined level; a capillary element having a lower portion contacting the oil and an upper portion to which it raises oil by capillarity to a level above the predetermined level; an air flow conduit communication between the interior of the enclosure and the pump vacuum chamber; an air flow restriction in said conduit communication; a substantially unrestricted atmospheric air inlet to the enclosure interior; whereby vacuum developed in the pump vacuum chamber causes air to enter the enclosure at the air inlet and flow out of the enclosure to the chamber through the restriction; and the said upper portion of the capillary element being disposed in the line of air flow between the enclosure interior and the restriction.

2,460,815
SKI-SCOOTER
Otto H. Dunkel, Detroit, Mich.
Application November 21, 1946, Serial No. 711,349
3 Claims. (Cl. 280—23)



1. A skiing device comprising, in combination, a single elongated runner having a width approximating twice the width of a shoe worn by the rider thereof, an upright member secured at its lower end to the runner approximately half-way between the ends thereof and adapted to carry a handle on the upper end, a cylindrical frame member bent into a generally U-shaped formation mounted on the ski-scooter rearwardly of the upright member in the vertical plane of the longitudinal median line of the runner and with the end sections thereof projecting rearwardly in vertically spaced apart relationship, means connecting the closed end of the frame member to the upright member intermediate the height of the latter, and means securing the lower horizontal end section of the frame member to the runner rearwardly of the upright member, the diameter of the frame member being considerably less than the width of the runner whereby a rider may with both of his feet on the runner straddle the frame member and guide the movement of the device.

2,460,816
ELECTRONIC TIMING SYSTEM
Donald P. Faulk, Waltham, Mass., assignor to Raytheon Manufacturing Company, Newton, Mass., a corporation of Delaware
Application October 15, 1947, Serial No. 780,040
19 Claims. (Cl. 320—1)

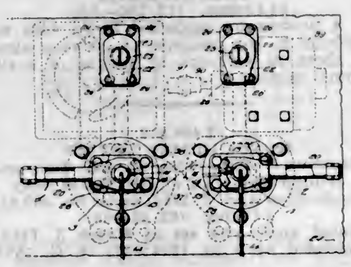


1. A timing system including, in combination, a first capacitance, means for charging said capacitance with a predetermined polarity, a second capacitance and a unilateral conducting device connected in series across said first capacitance, said device being so poled that it will conduct only in such a direction as to charge said second capacitance with said predetermined polarity, means for charging said first capacitance with a polarity opposite to said predetermined polarity through a circuit having a short time constant to thereby reverse the polarity of the voltage across said first capacitance and begin the time interval, impedance means connected across said device to provide a series discharge circuit consisting of said impedance means and said first and second capacitances, whereby the reversed voltage across said first capacitance and the voltage across said second capacitance are connected in series aiding in said discharge circuit and whereby said capacitances will discharge through said discharge circuit during said time interval, and means for utilizing the discharge of said capacitances to measure the time interval.

2,460,817
ALLOY SUITABLE FOR USE AT HIGH TEMPERATURES
Sidney O. Fisher, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
No Drawing. Application May 5, 1942, Serial No. 441,863
2 Claims. (Cl. 75—171)

1. An alloy which in normal operation is subject to stress at temperatures in the neighborhood of 815° C., said alloy containing about 16 to 18% molybdenum, 10 to 14% iron, 5 to 7% tungsten, 5 to 7% cobalt, 4 to 6% chromium and a small quantity but not more than 0.15% carbon with the remainder substantially all nickel, said alloy being characterized by its stable properties at said temperature.

2,460,818
ELECTRIC SWITCH
Joseph F. Frese, Baltimore, Md., assignor to The Monitor Controller Company, Baltimore, Md., a corporation of Maryland
Application April 27, 1944, Serial No. 533,010
7 Claims. (Cl. 200—48)

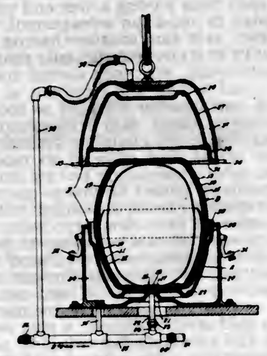


1. A high voltage switch comprising a supporting frame, stand-off insulators mounted on said frame, contact members mounted on said stand-off insulators, axially rotatable stand-off insulators mounted on said frame in spaced relation to the aforesaid stand-off insulators, movable switch arms mounted on said last mentioned stand-off insulators, said switch arms carrying contactors coacting with said contact members, and means for rotating said last mentioned stand-off insulators and said switch arms in opposite angular directions in coplanar relation through approximately 90° to open and close the circuit through the contactors on said switch arms and said contact members.

2,460,819
ELECTRIC SWITCH
Joseph F. Frese, Baltimore, Md., assignor to The Monitor Controller Company, Baltimore, Md., a corporation of Maryland
Original application April 27, 1944, Serial No. 533,010. Divided and this application June 5, 1945, Serial No. 597,668
5 Claims. (Cl. 200—166)

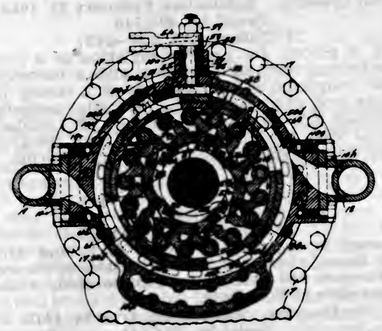
4. An electric switch comprising an axially rotatable rod-like member formed from insulation material, a metallic cap member having a recess therein engageable over the end of said rod-like member, a screw-threaded recess in said metallic cap member and a screw-threaded headed plug engageable with the recessed end of said metallic cap member, a flexible conductor extending into said headed plug, a metallic fitting embracing said cap member, an electric switch arm carried by said metallic fitting, a shoulder projecting from said metallic fitting offset from said axially rotatable rod-like member, and a screw member screw-threaded through said shoulder and abutting against the headed end of said screw-threaded plug for interlocking said metallic fitting with respect to said axially rotatable rod-like member.

2,460,820
METHOD OF MAKING CONTAINERS
Vahan Hagopian, New York, N. Y.
Application March 18, 1944, Serial No. 527,035
6 Claims. (Cl. 93—36)



1. The method of making a container, which comprises forming cup-shaped elements, overlapping the edges of at least two of said elements with their concave sides in opposed relation with adhesive at least at said overlapped edges of said elements, enclosing an elastic bag between said elements, said bag having an adherent outer surface when heated, and applying pressure internally of the rudimentary container thus formed by inflating said bag with heated fluid while exteriorly confining the overlapped edges thereof to thereby cause said adhesive to secure said overlapped edges together and cause said bag to adhere to the inner surface of said container to serve as the permanent liner therefor.

2,460,821
OSCILLATING VANE ROTARY PUMP
Joseph O. Hamren, Minneapolis, Minn.
Application September 3, 1942, Serial No. 457,129
4 Claims. (Cl. 103—140)



1. A pump having in combination, a casing having an inlet chamber therein, a shaft jour-

nalled in and extending through said casing, a cam member surrounding said shaft and having a chamber therein communicating with said inlet chamber and adapted to receive fluid therefrom, a rotor in said casing secured to said shaft and comprising a plurality of swinging vanes carried thereon, each vane having a free end with a surface adapted to rotate in engagement with said cam member, said cam member having a plurality of equally and circumferentially spaced openings therethrough, an inner casing closely surrounding said vanes and forming a chamber about said cam member adapted to receive fluid through said openings, said first mentioned casing having an outlet chamber extending about said inner casing and adapted to receive fluid therefrom, said inner casing having equally and circumferentially spaced discharge openings into said outlet chamber equal in number to the openings through said cam member, a valve member disposed in each of said openings through said cam member adapted to be oscillated for variably restricting said openings through said cam member to vary the torque of said pump, pivot members secured to said valve members, arms secured to said pivot members, a ring secured to said arms and rotatable for swinging said arms and means at the outer side of said first mentioned casing for rotating said ring.

2,460,822
ACYLATING FURAN
Howard D. Hartough, Pitman, N. J., and Alvin I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application January 18, 1946, Serial No. 642,112
17 Claims. (Cl. 260—345)

1. A process for nuclear acylation of an acylatable furan, comprising reacting an acylatable furan with an acylating agent selected from the group consisting of acyl halides and anhydrides of carboxylic acids in the presence of an iodine catalyst.

2,460,823
ACYLATING FURANS
Howard D. Hartough, Pitman, N. J., and Alvin I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application February 23, 1946, Serial No. 649,740
20 Claims. (Cl. 260—345)

1. A process for nuclear acylation of a furan comprising reacting the same with a carboxylic acid anhydride in the presence of a strong hydroxy acid characterized by an initial ionization constant greater than about 1.0×10^{-3} containing at least one element selected from the group consisting of sulfur, phosphorus, and fluorine.

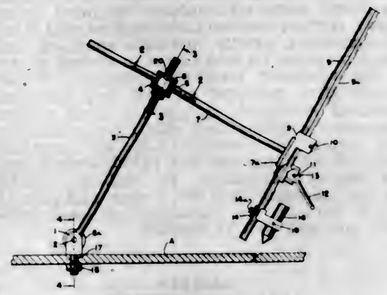
2,460,824
ACYLATING FURANS
Howard D. Hartough, Pitman, N. J., and Alvin I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application April 24, 1946, Serial No. 664,714
20 Claims. (Cl. 260—345)

1. A process for nuclear acylation of a furan, comprising reacting the same with a carboxylic acid in the presence of phosphorus pentoxide.

2,460,825
ACYLATING FURAN
Howard D. Hartough, Pitman, N. J., and Alvin I. Kosak, Columbus, Ohio, assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application June 20, 1946, Serial No. 678,158
14 Claims. (Cl. 260—345)

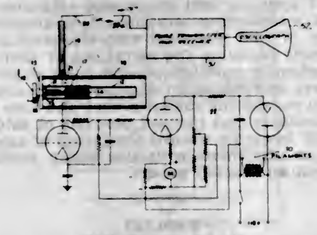
1. A process for acylating furan with acetic anhydride in the presence of between about 1 and about 25 per cent by weight of a silica-alumina catalyst.

2,460,826
HOLE CUTTING DEVICE
Hartman D. Hooser, Big Springs, Tex., and William Vomacka, United States Navy
Application April 3, 1946, Serial No. 659,418
1 Claim. (Cl. 33—30)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



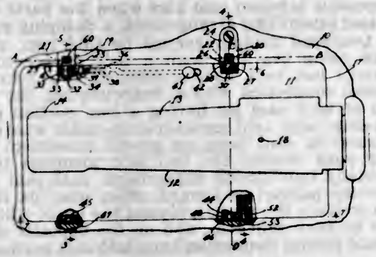
In a hole cutting device of the class described, a standard having an eye at one end, a yoke bracket receiving said eye with a pivot pin extending through said eye and mounted in said yoke bracket, said pivot pin having a clamping head engaging the yoke bracket for clamping the pivoted standard in angularly adjusted position, said yoke bracket having a stud portion provided with a nut and adapted to be adjustably secured to a work member such as a plate or the like for rotary adjustment of the direction of said yoke bracket, a sleeve on said standard, means for adjustably fixing said sleeve longitudinally on said standard, a rotatable bracket having an eye receiving said sleeve, said sleeve providing a bearing for rotation of said rotatable bracket thereon, said rotatable bracket having a second eye or bore at right angles to the first eye, a transverse bar slidably received in said second eye or bore and being disposed at right angles to said standard, means for fixing said transverse bar in transverse adjusted position at right angles to said standard, a fork bracket mounted at the outer end of said transverse bar, a tool-carrying bar received in said fork bracket and disposed in parallelism with said standard, said tool-carrying bar having a rack thereon, pinion means mounted in said fork bracket in engagement with said rack, and a crank for operating said pinion means to advance or retract said tool-carrying bar in respect to the plate or the like, and a tool-carrying bracket mounted at the lower end of said tool-carrying bar.

2,460,827
TESTING RADIO ECHO EQUIPMENT
Frank C. Isely, Washington, D. C.
Application May 4, 1942, Serial No. 441,730
22 Claims. (Cl. 343—5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



13. A method of testing a radio wave type object detector which comprises the steps of launching a pulse of wave energy from said detector into space, intercepting said energy relatively near said detector and reradiating a version of it over a period which is longer than the duration of said pulse, and receiving and utilizing a portion of said reradiated energy at said detector.

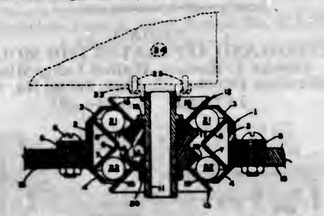
2,460,828
SEWING MACHINE
Matthew G. Ivandick, Rockford, Ill., assignor to Free Sewing Machine Co., Rockford, Ill., a corporation of Illinois
Application March 24, 1944, Serial No. 527,864
21 Claims. (Cl. 112—258)



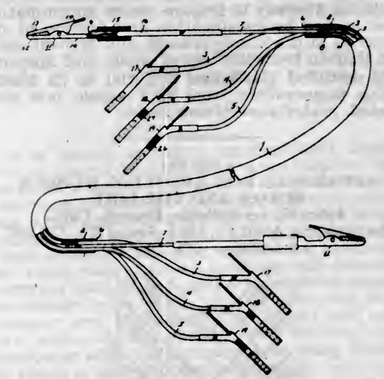
1. In a sewing machine, the combination with a support, of a substantially rectangular bedplate rigidly supporting a sewing machine head, and two-way hinge means hingedly connecting said bedplate to said support providing portions adapted to pivot on two axes that are in transverse relation and both substantially in the horizontal plane of said bedplate, whereby said plate is adapted to be tilted about a longitudinal axis relative to said support or the plate may be tilted about a transverse axis relative to said support.

2,460,829
VIBRATION INSULATING DEVICE
Nicholas Ivanovic, Philadelphia, Pa.
Application August 1, 1945, Serial No. 608,232
9 Claims. (Cl. 248—358)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A vibration insulator comprising an annular fixed support structure having interiorly thereof angularly disposed annular surfaces arranged at an acute angle with respect to one another, a floating support assembly disposed substantially coaxially within said annular fixed support structure and having angularly disposed annular surfaces respectively associated with said angularly disposed surfaces of the fixed support structure, and a plurality of resilient elements interposed between the respective angularly disposed surfaces of the fixed and floating supports to vibrationally insulate the floating support assembly from said fixed support structure.



2,460,830
MULTICONDUCTOR ELECTRIC HARNESS
Francis E. Knam, Cleveland, Ohio, assignor, by mesne assignments, of thirty one-hundredths to Ralph R. Roemer, thirty-five one-hundredths to Louise E. Roemer, twenty-five one-hundredths to William R. Kiefer, and ten one-hundredths to J. Everette Tompkins, all of Cleveland, Ohio.
Application March 31, 1945, Serial No. 585,895
2 Claims. (Cl. 174—70)



1. An electric connection device for making connections to the pin type and sleeve type sockets of aircraft instruments comprising three flexible wires unitarily associated in parallel relation inwardly of their ends, providing three free end portions at each end of the device and one of said wires comprising two branches near its opposite ends providing a fourth free end portion at each end of the device; like terminals on each of the three free end portions at each end of the device comprising a metal sleeve open at one end and a metal pin telescoped into the other end of the sleeve and projecting therefrom and secured therein, the said free end portions of said wires joined each to a pin inwardly of its projecting end, and extending laterally therefrom, a tubular cover of flexible insulating material telescoped on the sleeve and over the wire and pin

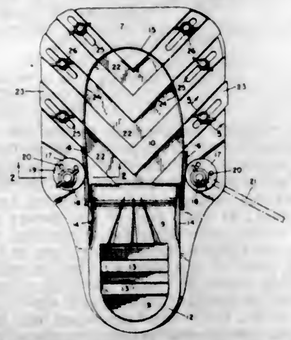
2,460,836

juncture and over the adjacent portion of the joined wire, the pin projecting through a perforation in the side wall of the cover; and a clamp device connected to each of the fourth free end portions.

2,460,831
METHOD AND APPARATUS FOR MOLDING
George J. Kovacs, Walled Lake, Mich.
Application October 23, 1944, Serial No. 559,979
5 Claims. (Cl. 18—30)

1. The method of continuously injecting a thermosetting material into a mold heated at least at the polymerizing temperature of said material which comprises pressure feeding said material into a chamber, heating said material in said chamber to a plasticizing temperature below the setting temperature and cooling said material to its plasticizing temperature whenever the temperature of the chamber rises above the plasticizing temperature of the material therein, pressure feeding said material from said chamber into and through an ejecting nozzle in the form of a substantially restricted passage whereby to further densify the material in its passage through said nozzle, removing heat from said nozzle whenever the temperature of the nozzle rises above the plasticizing temperature of said material whereby to remove excess accumulating heat caused by densification and friction of the material in the nozzle passage and by heat leakage thereto from the heated mold, and injecting said densified plasticized material at its plasticizing temperature from said nozzle into said heated, material-receiving mold.

2,460,832
APPARATUS FOR RESOLING RUBBER BOOTS AND THE LIKE
John W. La Follette, Denver, Colo.
Application April 21, 1944, Serial No. 532,097
5 Claims. (Cl. 18—34)



5. In apparatus for resoling rubber boots and the like, a mold element comprising a heat conductive plate having heel, instep and sole tread forming surfaces upon which a boot rests; means on said plate providing heel and instep outlining portions; a tread outlining flexible strip loosely mounted on said plate and disposed in sole embracing relation to the boot with the ends thereof extending rearwardly at the instep position, stiffening members disposed alongside said strips adjacent the rear ends thereof, said members being provided with serrations on the sides thereof opposite said strip; and rotatable cams having interlocking serrations and disposed exteriorly of said members with the serrations of said cams engaging the serrations of said members, whereby rotation of said cams draws said members and said strip rearwardly to cause said strip to engage the sole of a boot and also moves said members and the end portions of said strip laterally inwardly toward the instep of said boot and into alinement with the instep portion of said heel and instep means.

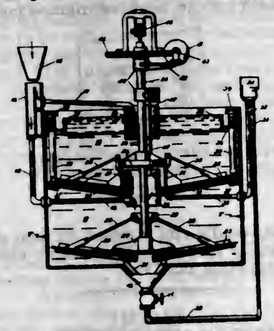
2,460,833
HOSE COUPLING
Lucy A. Lamb, Cleveland Heights, Ohio
Application February 28, 1946, Serial No. 650,838
4 Claims. (Cl. 285—171)

1. A hose connector comprising a pair of complementary coupling members, each such member having an axial bore, said members being adapted to be placed in interfitting arrangement so that their respective bores are aligned in fluid transmitting relationship, one said member having affixed thereto a pair of opposed lugs the other said member having a transverse shoulder disposable between said lugs when the parts are in said interfitting arrangement, a clamping yoke of U-shaped contour carried by said lugs, said yoke being provided with a pair of generally parallel legs each having, near its extremity, a pivotal connection with a respective lug, the tip end of each said leg having a cam portion engageable with said transverse shoulder whereby rotation of said cams by pivotal movement of said yoke presses the two said members into mutually tight fitting engagement, each said leg member having an inward offset near its free end to place the portion beyond the offset within and between said lugs, and on the opposite side of said pivotal connection from said cam portions.

2,460,834
SETTLING METHOD AND APPARATUS
Leland H. Logue, Denver, Colo., assignor, by mesne assignments, to Mining Process and Patent Company, a corporation of Delaware
Original application January 26, 1937, Serial No. 122,371. Divided and this application August 13, 1945, Serial No. 610,412
15 Claims. (Cl. 210—55)

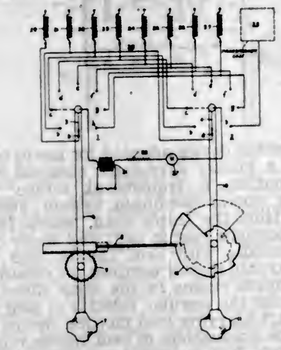
1. Apparatus for settling solids from fluid suspensions, comprising a tank divided by a partition into upper and lower compartments; means providing an open passage through the partition and between the compartments; means for introducing a measured feed into each compartment; a weir in the upper compartment providing an overflow for clarified liquid; a launder at a side of the weir to receive the overflow; a conduit extending upwardly through the tank and into the launder, having its inlet at the top of the lower compartment and having its outlet at an elevation above the overflow weir, thereby creating a

pressure in the open passage in opposition to the hydrostatic pressure acting thereon; and means



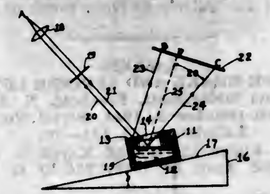
for separately discharging thickened matter collecting in each of said compartments.

2,460,835
ELECTRICAL INSULATION TESTING APPARATUS
Samuel G. Lutz, Washington, D. C.
Application November 21, 1945, Serial No. 630,114
2 Claims. (Cl. 175—183)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. In a device for testing the electrical insulation between a plurality of points; the combination of a pair of similar multi-position switches each having a single rotatable contactor and a plurality of fixed contacts, means electrically connecting each individual fixed contact of the first of said switches to a different one of said points, means also electrically joining each of said fixed contacts, except the first, of said first switch with the next preceding fixed contacts of the second switch, a stop mechanism associated with the rotatable contactor of the first switch and operable therewith, rotational limit means associated with the contactor of the second switch and operable therewith to engage said stop mechanism whereby the rotatable contactor of said second switch is prevented from coming into engagement with the fixed contact next preceding the fixed contact currently engaged by the contactor of said first switch, and means including a series combination of a voltage source and a current indicating device connected across said rotatable contacts of said switches.

2,460,836
LEVEL DEVICE EMPLOYING A LIGHT REFLECTING LIQUID SURFACE AS A HORIZONTAL REFERENCE SURFACE
Gerald H. Lovins, Silver Spring, Md., assignor, by mesne assignments, to American Instrument Co., Inc., a corporation of Maryland
Application June 4, 1946, Serial No. 674,271
1 Claim. (Cl. 88—1)



An optical level device for use with an autocollimator comprising an opaque hollow member having a plane bottom surface and a plane mirror on its top surface, said plane mirror being parallel to said bottom surface, said top surface being apertured, and a quantity of fluent material in said hollow member, the surface of said fluent material having substantial reflectivity.

2,460,837
SNAP SWITCH
Homer E. Malone, Milwaukee, Wis., assignor to Perfex Corporation, Milwaukee, Wis., a corporation of Wisconsin
Application May 4, 1945, Serial No. 591,950
8 Claims. (Cl. 200—67)

8. A switch including an apertured housing having spaced fixed contacts and a magnet therebetween, a bracket for said housing spaced from said magnet and provided with a pivotal mounting, a bell crank pivotally secured to said bracket and provided with an armature arm and an apertured actuator arm, said arms being disposed at an angle embracing an actuator and a contact carrying contact bar, and a shouldered actuator extending reciprocably into the apertures in the housing and through the apertured bell crank arm with a shoulder in operative relation to said apertured arm, said armature arm being disposed to swing to and from the magnet.

2,460,838
SHOE OUTSOLE
Meyer Margolin, Elgin, Ill.
Application September 3, 1943, Serial No. 501,047
3 Claims. (Cl. 36—33)

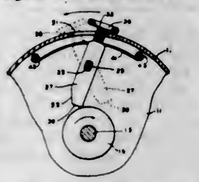
1. An outsole comprising joints of a substantially rigid material, the upper surface of said

said platform, a compressor normally held by

2,460,845
FORM FOR BUILDING HOLLOW ARTICLES

outsole being recessed, a resilient insert disposed in said recess, said resilient insert comprising means for securing said joints to one another, openings in said outsole extending vertically and completely through said outsole, and resilient plugs disposed into said openings said resilient plugs being of sufficient length and positioned so as to be in direct contact with the resilient insert at their upper end and to extend to the outer surface of the outsole at their lower or opposite end.

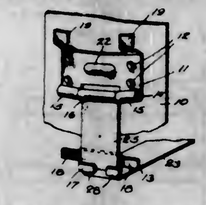
2,460,839
ROTOR BRAKE AND SPINNER LEVER
Carl McDermott, Freehold, N. J.
Application October 3, 1944, Serial No. 557,044
3 Claims. (Cl. 171—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



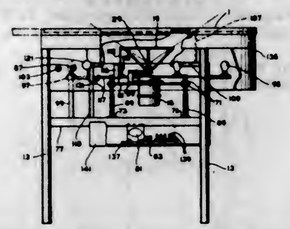
1. An "on-off" control for a flashlight having a cylindrical case and a rotatable cylindrical generator member concentric with said case, comprising a pivot pin secured within said case, parallel to the axis of said generator member, and intermediate the case and the said member, an aperture through said case, a control lever extending through said aperture; a control button attached to one end of the lever outside said case, a friction surface on the other end of the lever inside said case, a transverse pivot hole in said lever, said pivot hole having a greater diameter longitudinally of the lever and a lesser diameter athwart of the lever, said pivot pin being positioned in said pivot hole so that said lever may pivot about said pivot pin and may move longitudinally a limited distance, spring means to urge the lever longitudinally toward the generator member, said friction surface being frictionally engageable with the generator member during part of its pivotal movement, stop means to limit the pivotal motion of said lever in one direction so that the friction surface is in frictional engagement with the generator member at the end of its pivotal movement in that direction, second stop means to limit the pivotal motion of said lever in the opposite direction so that the friction surface loses frictional engagement with the generator member at the end of its pivotal movement in that direction.

2,460,840
HANDLE LOCK FOR HINGED HANDLE UTENSILS
John W. Mockabee, United States Army, Washington, D. C.
Application September 26, 1944, Serial No. 555,865
6 Claims. (Cl. 16—110)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a canteen cup or other utensil having a handle, and a hinge for pivotedly connecting said handle to said utensil, means for locking the handle in cup supporting position comprising a fixed locking element and slideable locking element engageable with said fixed element for disengageably supporting said handle in cup supporting position, and means spaced from said fixed locking element and located in the line of travel of said handle, said last-named means acting on said handle and opposed by said elements for frictionally locking said slideable element in handle supporting position.

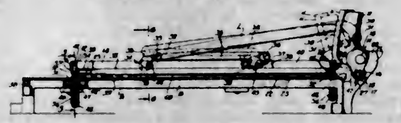


2,460,841
PROJECTION AND PLOTTING DEVICE
William L. Morey, Melrose, and Robert A. Taylor, Newburyport, Mass.
Application March 15, 1945, Serial No. 582,963
7 Claims. (Cl. 88—24)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A plotting device adapted for use in connection with a master gyroscopic compass having, in combination, a translucent screen having thereon a polar coordinate system graduated clockwise from the ship's head, means for projecting a compass rose in light and shade on said screen coaxially with said system, and means actuated by said master compass for rotating said last mentioned means in the same direction as but at double the angular velocity of said screen when a craft carrying said plotting device turns, whereby the graduations of said system represent true bearings, true courses are indicated by said system opposite to the zero of said rose, and relative bearings are indicated on said rose opposite to true bearings on said system.

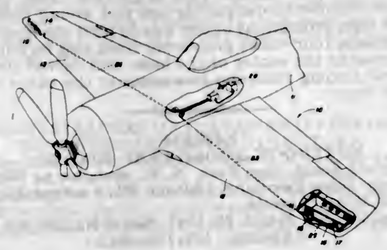
2,460,842
PAPER TRIMMER
Edward B. Murphy, Linden, N. J., and Samuel Segal, New York, N. Y., assignors to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application April 25, 1945, Serial No. 590,236
21 Claims. (Cl. 164—45)



1. In combination, a platform for supporting sheet material, balancing spring means above

said platform, a compressor normally held by said spring means above and away from said platform for removably clamping said material against said platform, guide means linearly shiftable relative to said platform for movably directing the displacement of said compressor to clamp or unclamp said material, means operative during the clamping relation of said compressor against said material for displacing said guide means bodily in a direction away from said compressor and platform for increasing said clamping relation, and shearing means for severing said material in the clamped relation of the latter.

2,460,843
AIRPLANE FLIGHT SAFETY DEVICE
Statton R. Ours, United States Navy
Application March 26, 1946, Serial No. 657,316
5 Claims. (Cl. 244—113)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

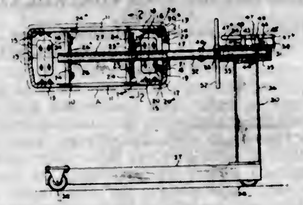


1. In an aircraft, a safety device including a tapering member elongated in the direction of the span of a wing of the aircraft, means mounting said tapering member in the wing adjacent the tip for movement between retracted and extended positions, said tapering member in retracted position being housed within the wing and in extended position projecting from the wing surface to reduce the lift of the wing, said tapering member adapted to reduce the lift of the wing progressively from wing tip to wing root as projected, means mounted within the aircraft and operatively connected with said mounting means for moving said member between retracted and extended positions, and means mounted within the aircraft for actuating said second named means when load on the wing exceeds a predetermined value.

2,460,844
ACRYLONITRILE-VINYLIDENE CHLOROFLUORIDE COPOLYMERS
Frank G. Pearson, Delaware County, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application July 29, 1943, Serial No. 496,587
1 Claim. (Cl. 260—84)

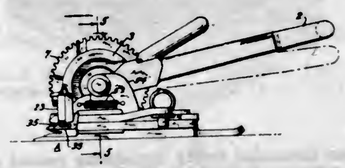
A material comprising a copolymer of vinylidene chlorofluoride and acrylonitrile in which for every five mols of acrylonitrile there are combined two mols of vinylidene chlorofluoride, said copolymer having a softening point of about 170° C.

2,460,845
FORM FOR BUILDING HOLLOW ARTICLES
Dietrich G. Rempel, Akron, Ohio, assignor to The Sun Rubber Company, Barberton, Ohio, a corporation of Ohio
Application July 14, 1944, Serial No. 544,859
6 Claims. (Cl. 18—45)



5. A form for building hollow articles having an opening therein, comprising a hollow segmental shell having an opening therein corresponding to said openings of the articles, releasable means for securing said segments in assembled relation to form the shell, said segments having inwardly extending portions adapted to be cooperatively arranged at spaced points within the shell, a plurality of apertured bearing members, means for releasably securing said bearing members to said inwardly extending portions at said spaced points, a supporting element receivable through said opening of the shell and through the apertures of said bearing members, means for securing said supporting element against relative rotational movement in said bearing members, a base, an upright on said base, a spindle mounted on said upright to be rotatable on a substantially horizontal axis, gripping means for rotating said spindle on said upright, means for removably mounting said supporting element on said spindle, and releasable means for locking said spindle against rotation in different positions on said upright.

2,460,846
WIRE TYING MACHINE
Kurt Eric Schulze, San Francisco, Calif., assignor to Ernest Roe, doing business as Coast Wire Company, San Francisco, Calif.
Application October 5, 1946, Serial No. 701,530
15 Claims. (Cl. 140—93)



1. In a wire tying machine having a wire twisting gear and means to rotate said gear to twist wires together to form a tie, the combination of means to cut the ends of said wires twisted together to form a tie comprising a member having at least two wire receiving portions and a member having a single wire receiving portion arranged side by side adjacent to each end of said twisting gear, and means to move one of said members relative to an adjacent said member to produce a scissor action therebetween, one of said wire receiving portions arranged with respect to another said portion and said single

wire receiving portion so that wire disposed in

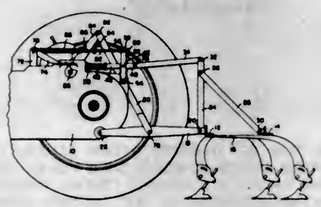
2,460,849

2,460,851

methylcyclopentane and benzene from a liquid fraction comprising cyclohexane free of any sub-

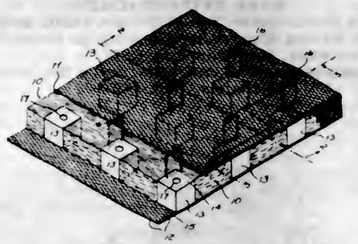
wire receiving portion so that wire disposed in one said portion is cut but not wire disposed in another said portion upon movement of said members relative to one another.

2,460,847
IMPLEMENT BALANCE CONTROL LINK SPRING
Harold W. Schwarz, Mercedes, Tex.
Application April 12, 1946, Serial No. 661,834
1 Claim. (Cl. 97—50)



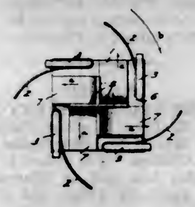
A device of the character described for varying the compression in a balance spring of a hydraulic linkage system for a tractor, comprising a pair of vertically disposed parallel links connected to said linkage system, a disc pivotally mounted between said links, an adjusting screw mounted in said disc, a plate threadably mounted on said screw, hook bolts carried by said plate on opposite sides of said screw, parallel springs connected at one end to said hooks and at the other end to the tractor, said links being connected to the hydraulic linkage system rearwardly of the connection of said springs to the tractor.

2,460,848
INSULATING BLANKET
Richard H. Rover, Roselle, N. J., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application July 14, 1944, Serial No. 544,957
4 Claims. (Cl. 154—44)



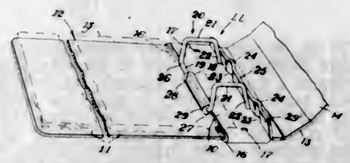
1. An insulating lining comprising spaced metallic screens, a layer of fibrous insulation between said screens, means extending between the screens and through the insulation for securing the insulation and the screens together to form a blanket, and a plurality of blocks of solid insulating material, said blocks being arranged between the screens in spaced rows and spaced from one another in said rows, the blocks having a substantially flat surface at opposite sides thereof, one of said surfaces engaging one of the screens and the opposite of said surfaces engaging the other screen thereby limiting movement of the screens toward one another and insulating said screens from one another.

2,460,849
CONSTANT SPEED ROTOR FOR TURBINES
Jurg A. Senn, Milwaukee, Wis., assignor to the United States of America as represented by the Secretary of War
Application July 16, 1945, Serial No. 605,449
3 Claims. (Cl. 170—159)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



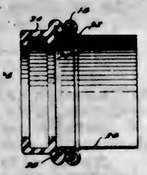
1. A rotor for a turbine comprising a rectangular base, rectangular legs projecting from the base, flexible blades having one end wound about the legs, projections of the legs to hold the blades in place, four vanes projecting from and forming a cross at the center of the base, and curved surfaces sloping from the free edges of the vanes to the base.

2,460,850
NOTEBOOK LOOSE-LEAF BINDER
Samuel Segal, New York, N. Y., assignor to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application March 25, 1947, Serial No. 736,969
5 Claims. (Cl. 129—24)



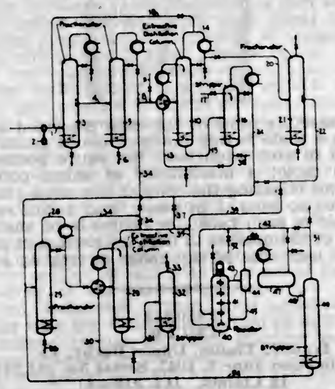
1. A loose leaf binder; comprising, a relatively elongated strap embodying a rectilinear body having a bearing disposed along one longitudinal margin thereof, an upstanding rectilinear abutment flange biased relative to said body and defining an acute angle therewith and spaced from and leaning in a direction towards said bearing and including spaced indent means, and a stay having means movably guided by said bearing and including spaced prong means embodying intermediate rectilinear bridge portions and depending rectilinear portions defining with said bridge portions obtuse angles and sloping outwardly and downwardly towards said flange and including free terminals only wedgeably coacting with said flange when said prong means are arranged fully across said strap and out of alignment with said indent means to preclude rotational displacement of said prong means upwardly and rearwardly away from said flange and said depending rectilinear portions adapted on voluntary bodily linear displacement of said stay relative to said bearing to be arranged in alignment with said indent means to permit swinging of said prong means bodily rearwardly fully clear of said indent means and flange.

2,460,851
BAG COUPLING FOR SUCTION CLEANERS
William L. Sheppard, Farmington, Mich., assignor to Eureka Williams Corporation, a corporation of Michigan
Application January 26, 1946, Serial No. 643,820
7 Claims. (Cl. 285—71)



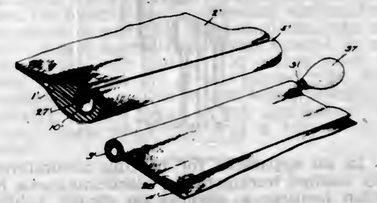
1. In a suction cleaner, a tubular air conducting part, a ring of resilient material detachably connected thereto, a member arranged within said ring and a bag having the walls defining its mouth clamped by and between said member and said ring, said ring being constructed and arranged so that at least the portion thereof clamping the mouth of said bag to said member is axially movable relative to said member to release the connection of the mouth of said bag with said member.

2,460,852
ISOMERIZATION OF CYCLOPARAFFINS OF NONHYDROAROMATIC STRUCTURE
Russell N. Shiras, Oakland, Alan C. Nixon, Berkeley, and Carl H. Deal, Jr., Alameda, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application October 18, 1946, Serial No. 703,992
8 Claims. (Cl. 260—666)



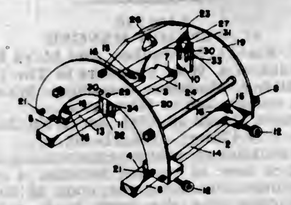
1. The process for the production of cyclohexane free of any substantial amount of benzene from naphthenic gasoline which comprises separating a fraction comprising methylcyclopentane and cyclohexane in admixture with close boiling open chain paraffins and benzene from said gasoline, subjecting said fraction to extractive distillation in a first extractive distillation zone, separating a raffinate fraction comprising paraffins from an extract fraction comprising methylcyclohexane, cyclohexane and benzene in said first extractive distillation zone, passing said extract fraction from said first extractive distillation zone into a cycloparaffin fractionating zone, separating a vapor fraction comprising methylcyclopentane and benzene from a liquid fraction comprising cyclohexane free of any substantial amount of benzene in said cycloparaffin fractionating zone, passing said vapor fraction from said cycloparaffin fractionating zone into a second extractive distillation zone, separating a raffinate fraction comprising methylcyclopentane free of any substantial amount of benzene from an extract fraction comprising benzene in said second extractive distillation zone, contacting said raffinate from said second extractive distillation zone with an isomerization catalyst at methylcyclopentane isomerizing conditions in a conversion zone, thereby converting methylcyclopentane to cyclohexane in said conversion zone, passing effluence from said conversion zone into said cycloparaffin fractionating zone, and withdrawing said liquid fraction consisting essentially of cyclohexane free of any substantial amount of benzene from said cycloparaffin fractionating zone.

2,460,853
WATERPROOF FASTENING DEVICE
Paul A. Siple, United States Army, Arlington, Va.
Application June 27, 1945, Serial No. 601,906
5 Claims. (Cl. 24—207)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



2. A fastening device comprising a tubular element of resilient material provided with a slot extending throughout its length, an inflatable tubular element adapted to be inserted in said slotted element, and means for inflating said insertible element.

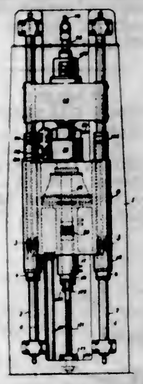
2,460,854
SHAFT TAPER GAUGE
William L. Smith, Bremerton, Wash.
Application July 6, 1945, Serial No. 603,569
4 Claims. (Cl. 33—174)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A taper gauge comprising a pair of oppositely disposed bars having inner edge faces of substantial depth inclined at a desired taper in respect to the outer edges of the bars, plate members overlying said bars, a pair of spaced bridge members fixed to the ends of said plates, and dis-

posed in planes perpendicular to said plates, contact members mounted on said bridge members for slidable adjustment inwardly or outwardly of said bridge members, and means mounting said bars on said plates for slidable adjustment of said bars toward or away from each other inwardly or outwardly of said plates.

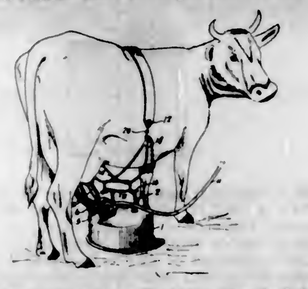
2,460,855
ELECTROMAGNETIC INDUCTION HEAT-TREATING APPARATUS
Howard E. Semes, Detroit, Mich., assignor, by mesne assignments, to The Ohio Crankshaft Company, Cleveland, Ohio, a corporation of Ohio
Application January 11, 1945, Serial No. 572,316
17 Claims. (Cl. 219—13)



1. In an apparatus for heating circumferentially toothed workpieces by electromagnetic induction heating, a support for rigidly holding the toothed workpiece to be heated, an energizable helical inducing coil having circumferential teeth corresponding in number and spacing to the teeth of the workpiece, the teeth of one of the coil and workpiece being external and the teeth of the other being internal, means for effecting relative axial movement between said support and the workpiece to register the teeth of said workpiece and the coil with each tooth of the workpiece disposed between and spaced from a pair of adjacent teeth of said coil, and means for effecting rapid relative reciprocatory movement between the teeth of the workpiece and coil while in registration and during energization of said coil.

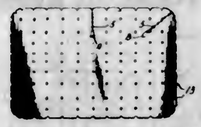
2,460,856
SUSPENSION HANGER
Frank W. Stanke, Milwaukee, and Lloyd F. Bender, Waukesha, Wis., assignors to The Universal Milking Machine Company, Waukesha, Wis., a corporation of Wisconsin
Application March 13, 1941, Serial No. 383,192
4 Claims. (Cl. 31—58)

1. In a milking apparatus, a suspensory hanger including a bow to extend beneath a cow, a surcingle interconnecting the ends of the bow and extending over the cow's back, relatively spaced suspension supports upon the bow disposed in aligned relation transversely thereof, a milk receiver having double point suspension upon the spaced supports for transverse oscillatory motion in opposite directions from vertical about a fore and aft axis, teat cups and flexible milk tubes interconnecting the swinging milk receiver with the cow's teats, and a pulsator mechanism for imparting suction influence to the teat cups at one side of the axis of oscillation alternately with the imparting of like suction influence to the teat cups at the opposite side of the axis of oscillation, the construction and arrangement being such



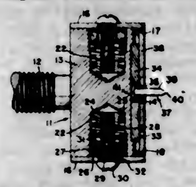
that swinging motion will be transmitted to the milk receiver first in one direction past vertical position and then in the opposite direction past vertical position, wherein the milk receiver will describe a swinging movement in an arc of short radius, the swinging movement of the milk receiver operating to impart a tugging action alternately to different portions of the cow's teats.

2,460,857
OPERATING TABLE
Max L. Sweat, Salt Lake City, Utah
Application April 26, 1944, Serial No. 532,854
1 Claim. (Cl. 119—103)



A dissecting table of the class described comprising a table having notches spaced apart and formed in and throughout the entire perimeter of the table; a multiplicity of sharp pointed hooks for engaging the body of the carcass being dissected to hold it in place; and a ball chain attached to each hook, the chains to be engaged in any of the notches to hold the carcass in place and at least one of the hooks serving as a retractor.

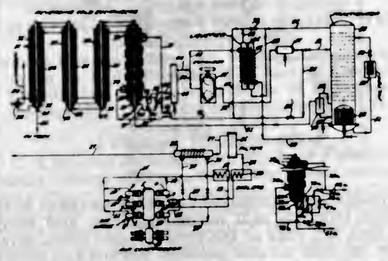
2,460,858
CHUCK
Ivan V. Thulin, Upper Darby, Pa.
Application June 2, 1947, Serial No. 751,943
10 Claims. (Cl. 279—4)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A chuck comprising a body, a plurality of jaws disposed about the periphery of said body

at one end thereof, said jaws being disposed in opposed relation and extending beyond the end of said body, and means for securing at least one of said jaws to said body, said means for at least one jaw including a spring to secure yieldingly said jaw to said body for yieldingly gripping a workpiece, and means for adjusting the force exerted by said spring to adjust the gripping force of said jaws relative to a workpiece.

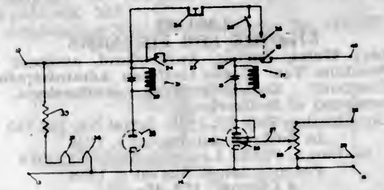
2,460,859
METHOD OF GAS SEPARATION INCLUDING IMPURITY REMOVING STEPS
Paul R. Trumpler, Westfield, N. J., assignor to The M. W. Kellogg Company, Jersey City, N. J., a corporation of Delaware
Application May 1, 1944, Serial No. 533,608
17 Claims. (Cl. 62—175.5)



4. In a method of separating a gaseous mixture into its components, wherein a compressed gaseous stream of said mixture, the components of which differ in boiling points in their liquid states, is passed in one direction of flow through a reversing heat-exchange zone along a path therein progressively decreasing in temperature from end to end to effect cooling of the stream and resultant precipitation of a component of higher boiling point in a colder portion of said path and wherein a second gaseous stream free of the last mentioned component and at lower temperature than said colder portion is passed subsequently through the same path in the opposite direction of flow after the first stream has ceased flow; the step of increasing the temperature of the second mentioned stream before such passage by diverting a portion thereof through a separate parallel path in said heat interchange zone disposed in heat exchange relation with the colder portion of said path to increase the temperature of the said diverted portion of said second mentioned stream, then combining the latter with the remaining portion of said second mentioned stream, and then effecting said subsequent passage of the second mentioned stream in the opposite direction and over the precipitate and thereby causing removal thereof.

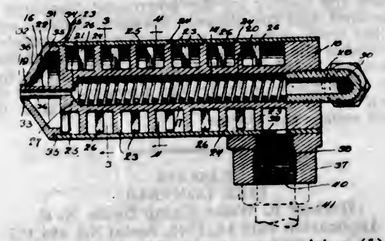
2,460,860
ELECTRONIC CIRCUIT BREAKER
Americo Volpigno, Providence, R. I.
Application October 25, 1945, Serial No. 624,622
3 Claims. (Cl. 175—294)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An electronic circuit breaker adapted to be inserted in the power supply of electrical apparatus comprising, a pair of leads for conveying current from the power source to said apparatus, a relay having its contacts connected in series with one of said leads and having one end of its coil connected to one of said leads, said relay contacts being closed by current through said coil, an electron tube having its plate connected to the other end of said relay coil and its cathode connected to the other of said leads, a second pair of leads, one of said second pair of leads being connected in the grid circuit of said electron tube and the other of said second pair of leads being connected to one of said first mentioned pair, said second pair of leads being adapted to be connected to points in said apparatus to transmit any voltage change arising in said apparatus due to shorts or improper connections therein and bias said grid beyond cutoff and thereby open said re-



lay contacts, a second relay having its contacts connected in series with said first mentioned lead and having one end of its coil connected to one side of second contacts associated with said first mentioned relay, said second set of contacts being closed when said first mentioned contacts are open, the other side of said second contacts being connected to said first mentioned lead, the contacts of said second relay being opened by current through the coil of said second relay, the other end of the coil of said second relay being connected to the other of said leads, whereby the contacts of said second relay are opened and remain open when said grid is biased beyond cutoff.

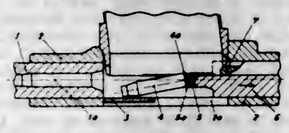
2,460,861
LIQUID SPRAYER
Harold G. Walters, United States Army, Richmond, Ind.
Application January 18, 1945, Serial No. 573,399
3 Claims. (Cl. 299—87)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



1. A liquid atomizing device comprising (1) a conduit communicating with a liquid reservoir, said conduit having an elongated straight tubular wall of large cross-section for the conveyance of said liquid, (2) spiral means coaxial with and interiorly of said conduit and in heat exchange relation with the tubular wall of said conduit for agitating and heating the liquid conveyed through said conduit, (3) a tubular outlet of small cross-section communicating with said conduit, (4) an elongated tubular housing for the conveyance of atomizing fluid under pressure, said housing surrounding said conduit and communicating with a source of supply of said atomizing fluid,

(5) said housing having a constricted outlet portion surrounding said first-named outlet and terminating in the same plane as said first-named outlet in aspirating relation therewith, and (6) heat conductive means exteriorly on said conduit and extending into said housing for defining a path of flow for said atomizing fluid through said housing to said aspirating outlet from side to side of the housing and around said conduit to effect maximum contact between said atomizing fluid and said conduit and to obtain optimum heating thereof and of the liquid passing through said conduit.

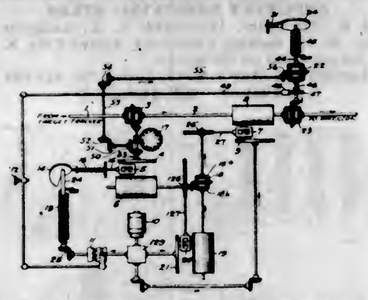
2,460,862
EJECTOR FOR FIREARMS
Albert Weiss, Zurich, Switzerland, assignor to Machine Tool Works Oerlikon Administration Company, Zurich-Oerlikon, Switzerland, a company of Switzerland
Application July 27, 1939, Serial No. 286,785
In Switzerland August 5, 1938
Section 3, Public Law 690, August 8, 1946
Patent expires August 5, 1958
4 Claims. (Cl. 42—25)



1. In a fire-arm, a breech casing, a barrel supported in said casing and having a cartridge chamber dimensioned to receive a cartridge of a given shell length, a breech-block movable toward and away from said chamber, said breech-block having means for releasably engaging a cartridge shell, an ejector spaced rearwardly of the chamber by a distance considerably greater than the length of the cartridge shell, and a cross-piece positioned behind the cartridge chamber and parallel to the longitudinal axis of the barrel and transversely to the direction of ejection of the cartridge shell for supporting the forward edge of the latter as it is withdrawn by the breech-block, there being an opening at the bottom of the breech casing to the rear of the cross-piece and below the ejector for the downward discharge of the shell, and the distance between the rear edge of the cross-piece and the ejector being sufficient to enable the cartridge shell to fall through said opening, but being of such reduced extent that the cross-piece underlies the forward edge of the shell up to substantially the moment that the shell strikes the ejector.

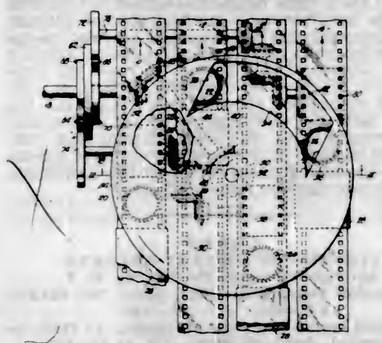
2,460,863
FIRE CONTROL
Herbert K. Weiss, Camp Davis, N. C.
Application July 10, 1943, Serial No. 494,175
9 Claims. (Cl. 235—61.5)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. In a smoothing device connected to the output tracker shaft of a tracking device and the smoothed rate input shaft of a director, the combination of a differential gearing connected between the said shafts, said gearing having a third shaft, a variable speed drive having an input disc connected to the third shaft and having a driven output member and an interposed ball cage, a constant speed motor, a cam connected to said ball cage, yielding means engaged with the cam tending to hold it at a normal initial position, a releasable connection between the cam and motor, the normal position of the cam and the connected ball cage being such that the latter is adjacent the rim of the input disc whereby maximum motion is then transmitted to the output member, a second similar variable speed drive the input disc of which is operatively connected to the motor, the output member of the second variable speed drive being connected to drive the said smoothed rate shaft, the ball cage of said second variable speed drive being connected for operation by the said output member of the first said variable speed drive, and means to engage



said releasable connection to cause the cam to be turned from its said normal position and move the said ball cage of the first variable speed drive from its said normal position toward the center of the disc, whereby the first said variable speed drive transmits motion to adjust said second variable speed drive at a progressively decreasing rate whereby said second variable speed drive operates said smoothed rate shaft at a rate proportionate to a mean of the rates of the output shaft, with diminished fluctuations proportionate to the rate differences between the input and output shafts and the time the motor is connected to the cam.

2,460,864
MOTION-PICTURE PROJECTING SYSTEM
Fred Howard Whiteley, Kansas City, Kans.
Application September 17, 1945, Serial No. 616,678
5 Claims. (Cl. 88—16.6)



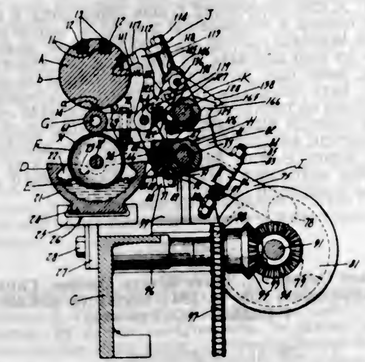
1. In a motion picture projecting system of the character described, a plurality of independent picture films arranged in pairs, the films of each pair having been simultaneously made of the same subject, said films being divided into frames and arranged in side-by-side relation with

stretches thereof in a common plane; a projecting lens to one side of each film respectively; mechanism for applying step-by-step movement to the films to draw the same past their respective lenses; a single rotatable opaque shutter plate, having an aperture formed therethrough, mounted in front of the lenses and of a size great enough to intercept light passing through all of said lenses, said films of each pair being offset one frame, the aperture of the shutter being formed to progressively cover the lens of one film of a pair of films as the lens of the other film of the pair is uncovered, said covering action of the shutter being such as to intercept and uncover respectively, like portions of the images being projected from the frames behind the lenses of the pairs of films.

2,460,865
MANUFACTURE OF TRICHLOROMETHYL DIARYLMETHANES
Charles Eugene Wilson, Jr., Denver, Colo., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 14, 1944, Serial No. 568,210
4 Claims. (Cl. 260—649)

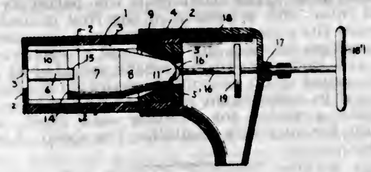
1. A process for the manufacture of a trichloromethyl diaryl methane which comprises condensing a chloral yielding compound with an aromatic compound having replaceable nuclear hydrogen in the presence of both sulfuric acid and an added quantity of the sulfonic acid of said aromatic compound.

2,460,866
CAN BODY SOLDER FLUXING MECHANISM
Delbert E. Wobbe, Maywood, and Walter F. Pillnik, Harvey, Ill., assignors to American Can Company, New York, N. Y., a corporation of New Jersey
Application November 6, 1944, Serial No. 562,154
9 Claims. (Cl. 113—95)



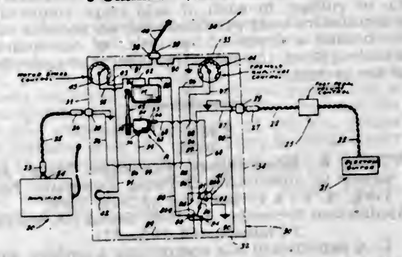
1. In a solder fluxing mechanism for applying fluxing material to the side seam of a container body, the combination of a machine frame, a horn carried on said frame for supporting container bodies passing therealong into fluxing position, a flux applying roller located adjacent said supporting horn for engaging can bodies and for applying fluxing material to the side seams of the bodies, a flux pot mounted on said frame for holding a supply of liquid fluxing material, a flux supply roller rotatable in said liquid flux and disposed in engagement with said flux applying roller for transferring flux from said flux pot to said flux applying roller, a common pivotal mounting in said frame for both of said rollers, and floating means operable at right angles to the said common pivotal mounting for uniformly engaging said flux applying roller along the entire length of the container body being fluxed.

2,460,867
VALVE CLOSURE
Charles F. Zimmerman, Braddock Heights, Md., assignor of one-half to Walter J. Davis, Frederick, Md.
Application May 31, 1945, Serial No. 596,873
4 Claims. (Cl. 251—27)



1. In a valve closure, the combination with a valve casing having a cylindrical bore provided with a plurality of spaced longitudinal inwardly projecting ribs, a frusto-conical bore and a reduced cylindrical bore; of a pressure-responsive float valve of resilient material having a cylindrical body slidably engaging said ribs, a frusto-conical end portion of a flare less than that of said frusto-conical bore to provide an annular space communicating with the spaces between said ribs for passage of fluid, and a rounded nose the arcuate elements of which merge into the straight elements of said frusto-conical end portion, said valve being driven forward and resiliently deformable under fluid pressure to compress and elongate said rounded nose and the adjoining smaller end of said frusto-conical end portion to contact and plug a circular valve seat zone of said reduced cylindrical bore, said rounded nose serving to center the valve with respect to said reduced bore.

2,460,868
TREMOLO PRODUCING DEVICE
Andrew L. Appel, St. Louis, Mo.
Application June 13, 1946, Serial No. 676,512
5 Claims. (Cl. 84—1.25)



5. Apparatus adapted to be interposed between the sound source and the amplifier of a stringed musical instrument of the electric type, said apparatus including a casing with top, bottom, side, front and rear walls, a socket in one side wall to receive a plug on one end of a shielded conductor leading from said sound source, a socket in the opposite side wall to receive a plug on one

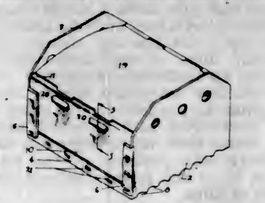
end of a shielded conductor leading to said amplifier, and a tremolo-producing device of the character described mounted on the bottom wall of said casing interiorly thereof, said device including a U-shaped frame member, aligned bearing openings in the legs thereof for supporting a transverse rotary shaft, a brush assembly in the web portion of the frame, another brush assembly in one of said legs, a rotor of non-conductive material secured to said shaft between said legs, a circular series of resistor elements each imbedded in a hole provided in said rotor, a contact projecting beyond one face of the rotor secured to one end of each resistor, spring means included in the first-named brush assembly for maintaining the brush thereof in engagement with at least one of said projecting contacts, a bronze ring press-fitted onto the periphery of said rotor with a portion of the ring projecting beyond the other face of the rotor, a permanent connection between the other end of each resistor and said ring, spring means included in the last-named brush assembly to maintain the brush thereof in engagement with said ring, means including a motor for rotating said shaft, and means for manually regulating the speed of said motor.

2,460,869
ANTENNA
Rene A. Braden, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application March 14, 1946, Serial No. 654,276
1 Claim. (Cl. 250—33.65)

A directive antenna comprising a reflector, a radiator element adjacent said reflector in cooperative relationship therewith, and a plurality of traps surrounding said reflector and adjacent the edge thereof, and separated from each other by bodies of material exhibiting electrical losses of substantially the same order as those characteristic of rubber, in each of said traps comprising a conductive body provided with an annular cavity having a depth of the order of one-quarter wavelength at the mean frequency of operation of the system.

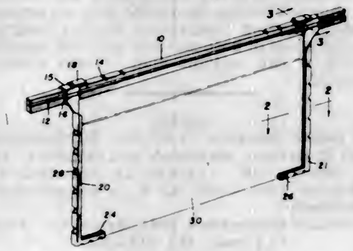
2,460,870
BOX
William K. Bruckhauser, Brookline, Mass., assignor to International Paper Company, New York, N. Y., a corporation of New York
Application November 13, 1945, Serial No. 628,205
3 Claims. (Cl. 229—23)

1. A paperboard box comprising a bottom, side walls, end walls, and a removable lid, at least two opposite of said walls being double-ply and consisting of an outer wall portion, a laterally projecting flange portion substantially at right angles to said outer wall, and an inner wall portion depending from said flange, said lid being provided on two opposite edges with tabs extending outwardly in the plane thereof, the flange and outer wall portions of said double-ply walls being provided with apertures located to define downwardly and outwardly extending tab-receiving passages whereby upon application of said lid the tabs thereof may be inserted through said



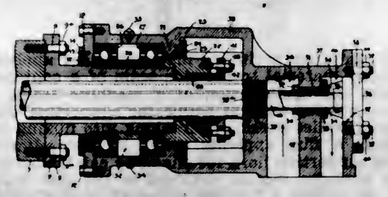
passages and forces applied by edge portions of the material defining said passages against the tabs of said lid will both hold said tabs in position and effect a substantially uniform upward arching of said lid.

2,460,871
FILM SUPPORTING FRAME
Dominick L. Caldarulo, Falls City, Nebr.
Application May 21, 1947, Serial No. 749,495
2 Claims. (Cl. 95—100)



1. A film supporting frame comprising a base bar having a longitudinal groove, a pair of slidable brackets carried by said base bar, channel ribs in said brackets for engaging the groove in said base bar, substantially L-shaped channel side bars integrally formed with said brackets adapted to receive the lower edge and side edges of a sheet of film, said side bars having openings to prevent air bubbles forming therein, and locking means carried by each of the brackets for sliding adjustment of the side bars toward and away from each other.

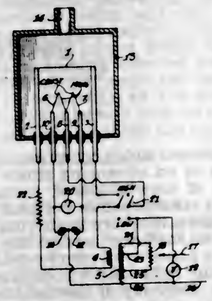
2,460,872
STEAM JOINT
Russell Carpenter, Three Rivers, Quebec, Canada
Application July 16, 1945, Serial No. 605,292
7 Claims. (Cl. 285—10)



5. A steam joint attachment for a rotary steam heated cylinder comprising a casting affording

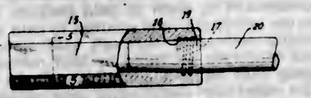
a steam supply chamber and a condensate-receiving chamber separated by an intervening partition wall having a siphon pipe opening therein line with a larger steam supply opening provided in a side wall of the steam supply chamber, a steam supply pipe having one end supported in said steam supply opening and adapted to extend therefrom into the interior of the steam heated cylinder, a siphon pipe passing through said steam supply pipe and having one end extending through said siphon pipe opening, a sleeve slidably fitted in said siphon pipe opening and rigidly secured to the siphon pipe, and means for releasably securing said sleeve in a stationary position in said opening.

2,460,873
VACUUM GAUGE
Dayton H. Clewell and David C. Pfeiffer, Dallas, Tex.
Application January 1, 1945, Serial No. 570,970
4 Claims. (Cl. 73—399)



2. An apparatus for measuring the pressure of gases and vapors including a filament, two thermo-junctions spaced optimum distances from said filament, two electrical impedances, a regulatable source of alternating current, an electrical meter sensitive to direct current, and switching means, said thermo-junctions and electrical impedances connected electrically so as to constitute the four arms of a balanced Wheatstone bridge, said meter connected to the output of the bridge, said switching means adapted to connect the source of alternating current alternatively to the filament and to the input to the bridge whereby the direct current flowing in the electrical meter will be a measure of the pressure of the gaseous environment of said filament and thermo-junctions over a wide range of pressure.

2,460,874
METHOD OF MAKING TOOL HANDLES
Clarence J. Coberly, Jr., San Marino, Calif., assignor, by mesne assignments, to Kobe, Inc., Huntington Park, Calif., a corporation of California
Application July 21, 1944, Serial No. 546,029
3 Claims. (Cl. 18—59)

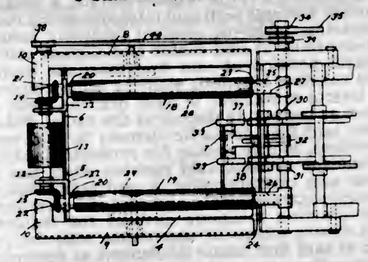


1. A method of forming a plastic article, including the steps of: forcing a coil of spring wire axially on a tapered mandrel so as to cause said coil to expand radially at a point where the coil snugly and inherently engages the mandrel; and molding a wall of plastic material around said coil and said mandrel so as to form a relatively hard plastic element having a bore of substantially the same diameter as said mandrel and having said coil embedded therein with the ends of said coil spaced from the ends of said bore.

2,460,875
COMBINED DYEING AND CREPING PROCESS FOR ORGANIC DERIVATIVE OF CELLULOSE FABRICS
Cyril M. Croft and Walter H. Hindle, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application August 2, 1945, Serial No. 608,610
9 Claims. (Cl. 8—17)

1. Process for the production of colored fabrics exhibiting crepe effects, which comprises mechanically impregnating a fabric containing yarns of filaments of organic derivative of cellulose, which yarns have been crepe twisted while being subjected to the action of a hot aqueous fluid, with an aqueous alcoholic solution of a dyestuff, said aqueous alcoholic solution comprising at least 70% by weight of a lower aliphatic alcohol which is a solvent for the dyestuff, washing said fabric and then treating the dyed fabric with a hot aqueous creping bath.

2,460,876
SHEET RECEIVING AND ALIGNING BIN
Albert Dager, Los Angeles, Calif., assignor of one-half to Elias Shaheen, Los Angeles, Calif.
Application December 27, 1946, Serial No. 718,701
3 Claims. (Cl. 271—89)

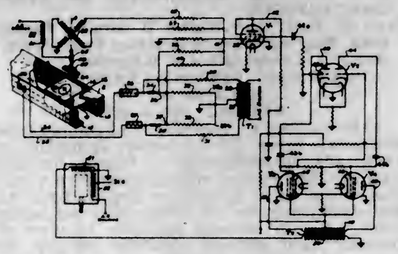


1. In apparatus of the character set forth, the combination with a paper sheet receiving bin, and means for delivering paper sheets to said bin, of means for aligning the edges of said sheets within the bin, said means comprising a pair of spaced-apart parallel rollers overlying the bin and extending the length of the bin, means for rotating both the said rollers simultaneously and in opposite directions, and in such a manner that a sheet, if delivered off center to the bin, will contact one of the rotating rollers and be directed into the bin.

2,460,877
CONTROL APPARATUS
Richard C. Dehmel, Summit, N. J.
Application May 1, 1945, Serial No. 591,320
19 Claims. (Cl. 25—10)

1. Control apparatus comprising a variably movable element, a follow-up member arranged to be actuated by said element through structure

having a variable mechanical advantage, electric motive means for providing auxiliary power for operating said follow-up member and electric control means operable only when the mechanical advantage of said structure has decreased to a predetermined minimum for energizing said motive means, said control means also being effective to increase the current supply to said motive means so as to increase in accordance with further decrease in magnitude of said mechanical advantage the auxiliary force acting on said follow-up member.



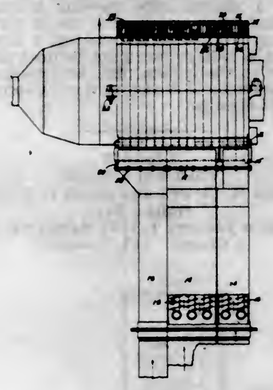
10. In aircraft training apparatus a charting element freely movable both radially and in azimuth about a given center representing a radio-range station to simulate the instant flight position of an aircraft, a control member rotatable about said center, means interconnecting said charting element and said member for causing rotation of said member as said element moves in azimuth, said interconnecting means movable radially of said member and having limited lateral movement with respect thereto, a magnetic element movable with said interconnecting means, a coacting magnetic element rotatably mounted substantially at said center and aligned with the central position of said first magnetic element, said coacting magnetic element being responsive to lateral movement of said first magnetic element in increasing degree as the radial distance from said first magnetic element to said center decreases, motive means for producing auxiliary torque for rotating said member when the moment arm corresponding to said radial distance is comparatively small, and means controlled by said coacting magnetic element for regulating said motive means in accordance with the position of said first magnetic element as determined by movement in said lateral and radial directions.

2,460,878
COATING COMPOSITION
Charles Di Battista and Bernard Lewis Di Battista, Cranford, N. J.
No Drawing. Application July 9, 1946, Serial No. 682,307
2 Claims. (Cl. 106—84)

1. A decorative coating composition for masonry surfaces comprising an aqueous solution of potassium silicate of 15 to 25° Bé., as a vehicle and containing about 8 to about 11 pounds, per gallon of the vehicle, of a composite pigment mixture composed of the following materials in proportions by weight within the indicated ranges:

	Per cent
Silica	40 to 70
Barium sulfate	25 to 40
Titanium oxide	5 to 20
Glycerine	1 to 4

2,460,879
DRYING AND CONDITIONING OF YARNS
William H. Furness, Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 24, 1945, Serial No. 590,084
13 Claims. (Cl. 34—24)

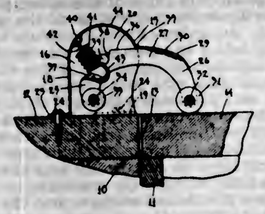


11. The process which comprises laying up yarn in the form of an advancing single helix with a multiplicity of closely spaced turns, supporting the turns at spaced points peripherally, blowing under pressure a moisture modifying gaseous medium into and inwardly beyond the periphery of the helix in a plurality of narrow zones transverse the axis of the helix, and withdrawing outwardly through the periphery of the helix in a plurality of narrow zones alternating with the zones first mentioned, the gaseous medium so blown into and through the periphery.

2,460,880
UNIVERSAL ATTACHMENT STAND
Harvey Edward Geiser, Mentor, and John C. Geiser, Jr., Cleveland, Ohio
Application February 20, 1946, Serial No. 648,923
1 Claim. (Cl. 287—87)

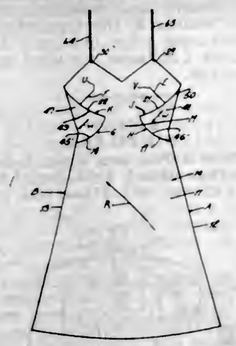
A universal connector comprising in combination, a pair of independently rotatable substantially tubular housing members disposed in a longitudinally aligned relation, abutting caps provided at the adjacent ends of said members, the remaining ends of said members forming substantially semi-spherical sockets and being provided with diametrically extending slots, a ball positioned in each of said sockets, laterally swingable extension rods secured to said balls and projecting outwardly through said slots, spring pressed followers provided in said members and engaging said balls, a coupling element separably and rotatably connecting said members together, and a compression spring associated with said element for normally urging said caps into the abutting relation.

2,460,881
DOOR CLOSER
Chester O. Geesrud, St. Paul, Minn.
Application December 23, 1944, Serial No. 569,564
7 Claims. (Cl. 292—79)



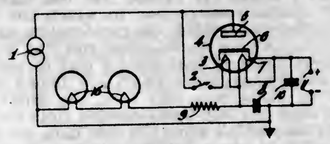
6. A door closer comprising a case having spaced side walls, a back and a base, a lever having a trip arm and a closing arm arranged to form a bight therebetween, said lever being disposed partly between said walls and with the closing arm extending outwardly beyond said walls, pivot means between said side walls and lever, spring means acting between said trip arm and case, said spring means being attached to the trip arm at a locality between the free end thereof and said pivot means and to the back of said case at a locality on the side of said pivot means opposite to said base to exclude the operation of said spring from the bight of said lever.

2,460,882
LADY'S GARMENT
Dorine Gourdon, New York, N. Y., assignor to The Barbizon Corporation, New York, N. Y., a corporation of New York
Application May 8, 1946, Serial No. 668,243
4 Claims. (Cl. 2—73)



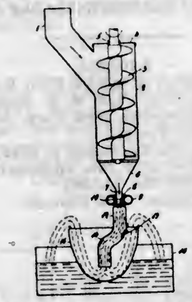
1. A lady's garment of three bias cut fabric panels combined together to form the garment comprising a front panel of bias cut fabric having a skirt portion, a midriff portion and an upper bust portion, the midriff portion having cut-out portions with curved lower edges extending inwardly from opposite side edges, and the upper portion having darts whose edges are joined to define upper curved edges for said cut-out portions, a rear panel of bias cut fabric corresponding substantially in shape with the skirt portion of said front panel and joined along its side edges to corresponding side edges of the skirt portion, and having upper curved edges, and a unitary bodice panel of bias cut fabric having a rear portion whose lowermost edges are substantially complementary with and joined to the upper curved edges of said rear skirt panel, and said bodice panel having oppositely extending flaps substantially complementary in shape to the cut-out portions of said front panel, said flaps being bent to fit into said cut-out portions and being joined to the latter along the upper and lower curved edges thereof.

2,460,883
MEANS FOR SAVING POWER
George D. Hanchett, Jr., Millburn, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application November 10, 1947, Serial No. 785,145
10 Claims. (Cl. 315—104)



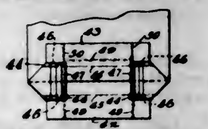
1. In combination an anode, an indirectly heated cathode, a filament arranged to heat said cathode initially to emission temperature, an auxiliary filament arranged to heat said cathode and a circuit connecting said auxiliary filament serially in the discharge path of said cathode and anode to maintain said temperature.

2,460,884
ART OF MIXING A PLASTIC MASS IN A LIQUID
Carl Ivar Fredrik Hjort, Djursholm, and Oscar Victor Emanuel Jansa, Nockeby, Sweden
Application April 5, 1944, Serial No. 529,694
In Sweden June 19, 1943
8 Claims. (Cl. 259—36)



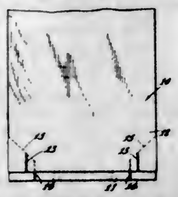
1. An apparatus for producing a uniform dispersion of clay in liquid which comprises in combination an extruding mouth piece, means for extruding raw clay through said mouth piece in the form of a coherent plastic string, means for compressing water under a pressure of the order of at least about 10 to 15 kg./cm.², nozzle means for forming a concentric high-velocity jet of said water and for directing it transversely against said string of clay in such fashion that a substantially uniform mixture of clay and water is produced, a common housing for said extruding mouth piece and said nozzle provided with an outlet for said mixture, a conduit for receiving said mixture from said outlet and means in said conduit for temporarily retaining any undispersed clay particles.

2,460,885
MULTIPLY PASTED END BAG WITH SEALED INNER PLY
Edgar B. Hoppe, New York, N. Y., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York
Application December 9, 1944, Serial No. 567,427
2 Claims. (Cl. 229—59)



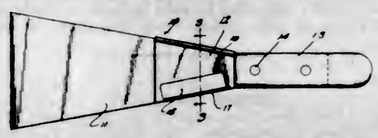
1. In a plural ply pasted end bag having a corner closure construction in which the inner ply is completely sealed, the construction at such corner comprising an inturned end flap adjoining along diagonal fold lines a pair of overlapping side flap portions which are folded in respectively along base fold lines, the inner portion of said end flap being divided from the side flaps by slits which when the side flaps are open, are positioned along outside said base fold lines so that the sides of said end flap extend out beyond said base fold lines and are folded in along such lines when the side flaps are folded in, lines of adhesive extending respectively continuously along the lengths of said slits on the inner surface of the inner ply of said end flaps and adhered to the inner surfaces of the inner plies of said side flaps, the inner ply of said end flap extending inwardly beyond the other ply or plies thereof, and a line of adhesive extending continuously from side to side of the end flap inner ply on the outer surface of its extending portion, said latter line of adhesive being adhered continuously along its length to inner ply flap portions which are folded over in contact therewith, whereby said lines of adhesive completely seal the inner ply of the corner construction against access of material in the bag to the other ply or plies.

2,460,886
MULTIPLY PASTED END BAG
Edgar B. Hoppe, New York, N. Y., assignor to St. Regis Paper Company, New York, N. Y., a corporation of New York
Original application December 9, 1944, Serial No. 567,427. Divided and this application December 3, 1946, Serial No. 713,801
2 Claims. (Cl. 229—59)



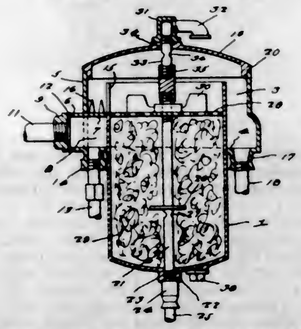
1. A plural ply pasted end bag, the end closure of which comprises a pair of inturned corner flap portions adjoining along diagonal fold lines a pair of side flap portions which are folded in along base fold lines to overlap, and to overlie the corner flaps, the inner ply of the underlying side flap protruding beyond the outer ply or plies thereof, the outer ply of the overlying side flap protruding beyond the inner ply or plies thereof, the inner ply of the corner flaps protruding inwardly beyond the outer ply or plies thereof, the end portions of the side flaps being divided from the end portions of the corner flaps by slits in each ply, the inner ply slits being spaced inwardly with respect to the outer ply slits and said diagonal fold lines of the inner ply extending inwardly beyond the ends of the slits of the outer ply, the sides of the inner ply of the corner flaps, when the side flaps are open, extending out beyond the outer ply of the corner flaps and beyond said base fold lines and being folded in along said lines when the side flaps are folded in, the inner ply flap margins, when the flaps are folded in, thus being free to contact with and being adhered to inner ply surfaces on other flaps along lines to completely seal the inner ply against access of the bag contents to the outer ply or plies of the end closure, and the outer ply flap margins being free to contact with and being adhered to outer ply surfaces on other flaps along other lines to seal the outer ply against access to the inner ply.

2,460,887
EGG BREAKER
Joseph J. Kriz, Jr., Chicago, Ill., assignor of one-half to Paul H. Bombach, Chicago, Ill.
Application January 10, 1946, Serial No. 640,256
1 Claim. (Cl. 146—2)



A spatula, a tapered shank having a flat upper surface bent at an angle to the spatula and an egg shell cracking member extending along one edge of the shank, and extending at an acute angle to the surface of the shank and having a blunt unobstructed edge overlying and spaced from the shank a distance less than the diameter of an average egg.

2,460,888
OIL FILTER
Walter J. Koinzan, Elgin, Nebr.
Application December 1, 1944, Serial No. 566,178
1 Claim. (Cl. 210—122.5)



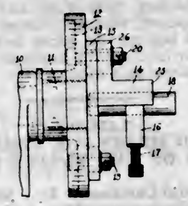
In an oil filter for internal combustion engines, a cylindrical open top casing adapted to be disposed upright and forming a filtering chamber, a filtering mass in the bottom of said chamber, a slot in the rim of said casing forming an overflow outlet for filtered oil, an axial oil inlet tube in said casing threaded through the bottom thereof for connection to an oil pump whereby oil may be forced into said casing to rise through said mass and overflow out of said slot, an annular trough surrounding the upper part of said casing for catching the overflow oil and having a bottom below the level of said slot and a side wall, an outlet nipple in the bottom of said trough for connection to a return line to the engine, a hollow heating dome rising from the bottom of said trough below said slot to heat the oil thereon issuing from the slot, for vaporizing water and gasoline contents of said oil, a nipple extending from said trough for receiving exhaust heat from the engine and opening into said dome to heat the same, a closure cap for said trough covering the top of said casing, and means to secure said cap to said side wall comprising a perforated tube extending through the top of said cap, a threaded sleeve coupling the perforated tube to the upper end of the oil inlet tube, a hollow wing nut threaded onto the upper end of the perforated tube and having a lateral tubular outlet tube therein, said perforated tube, wing nut and outlet tube forming an outlet passage for the vaporized water and gasoline.

2,460,889
EJECTOR TYPE WELDING ELECTRODE HOLDER
Earl I. Larsen, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application May 28, 1946, Serial No. 672,857
7 Claims. (Cl. 219—4)

1. An ejector type welding electrode holder comprising a hollow body, a socket therein for receiving a welding electrode, an ejector member adapted to move into engagement with said electrode to eject it from the socket, a piston disposed in said body and adapted to engage said ejector member, a cooling fluid inlet and a cooling fluid outlet, means for delivering cooling fluid from the inlet to the welding electrode and then returning the cooling fluid to said outlet, and means for applying fluid pressure to said piston to force it into engagement with said member to thereby eject said welding electrode, said piston and said member being constructed and arranged to close said cooling fluid inlet and said cooling fluid outlet when moved to said electrode ejecting position.

2,460,890
WORK-HOLDING MEANS
Carl O. Lassy, Plainville, Conn.
Application August 28, 1946, Serial No. 693,466
7 Claims. (Cl. 279—6)

1. The combination of a rotary face plate having a plurality of radial slots with pairs of slots diametrically aligned, and a work holder adjustably secured by fastening bolts adjacent its opposite ends in diametrically arranged slots at opposite sides of the face plate center, said work holder comprising a back plate lying against the face plate and through which said bolts pass, and a separate angle member set against the back plate and having in one of its legs a slot through which one of said bolts passes, the other

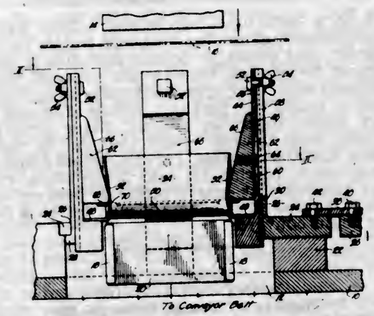


leg of the angle member being at right angles to the face plate and having on the outermost face of such other leg a longitudinal V-shaped recess, and means for clamping a workpiece in said recess.

2,460,891
SEPARATION OF PROTEINS FROM MILK PRODUCTS
Abraham Leviton, Washington, D. C., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Application October 8, 1946, Serial No. 701,856
1 Claim. (Cl. 127—31)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A process comprising mixing dried skim milk powder with a methanol-water solution having a methanol concentration of about from 40 to 62 percent by weight at a temperature about —16° C. to precipitate the proteins and dissolve the lactose in the methanol-water solution, immediately separating the protein precipitate from the solution, and separating the lactose from the remaining solution.

2,460,892
BOX SHAPING MACHINE
Wade H. Lisle, Kansas City, Mo., assignor to Crook Paper Box Company, North Kansas City, Mo., a corporation of Missouri
Application October 14, 1946, Serial No. 703,228
2 Claims. (Cl. 93—53)



1. In a paper box machine having a crimping assembly provided with means movable toward

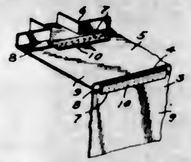
and away from a box to be crimped into and out of underlying relationship with a portion of said box, the improvement of which comprises a unitary triangularly-shaped guide block movable with said means into and out of engagement with the box, said block having releasable structure disposed remotely from the path of travel of said box as the latter is moved toward said means for holding the block at selected positions spaced above said means.

2,460,893

METHOD AND MEANS FOR ARRESTING THE CRACKING OF THE PLATES OF WELDED SHIPS

Edward M. MacCutcheon, Jr., Arlington, Va., Dwight F. Windenburg, Chevy Chase, Md., and Sidney K. Smith, Seattle, Wash.

Application May 3, 1945, Serial No. 591,658
9 Claims. (Cl. 114—79)



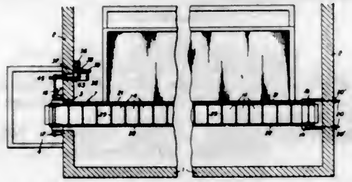
1. The herein described method of arresting cracks in the plates of welded ships which includes the forming of slots longitudinally of the deck and top sides of a ship and in providing a metal strap to cover each longitudinal slot and in riveting the strap to the plates on both sides of the slot.

2,460,894

AUTOMATIC MANURE CONVEYER

Nicholas Martinovich, Berlin Center, Ohio

Application July 8, 1947, Serial No. 759,495
7 Claims. (Cl. 214—89)



1. In a barn or stable having a floor with a longitudinally extending gutter or trough formed therein, said gutter or trough including a lower portion formed by transversely opposed longitudinally extending upper and lower steps, transversely extending partition blocks disposed on said upper steps, an endless chain conveyor formed with spaced chains having its upper reach operable on said partition blocks and its lower reach bearing on said lower steps, cross bars connected at spaced intervals between said spaced chains, and driving means for said endless chain conveyor.

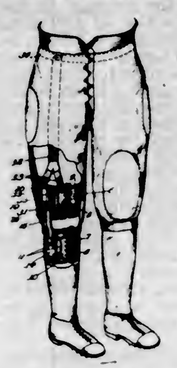
2,460,895

JOINT PROTECTOR

Thomas E. Meany, Chicago, Ill.

Application December 17, 1945, Serial No. 635,460
8 Claims. (Cl. 2—24)

1. In an athletic joint protector for a movable hinged joint, a pair of bands adapted to be tightly applied to the limb above and below the joint, a pair of braces, one for each side of the limb and having an offset therein to accommodate it to different sizes of the limb above and below the joint, means on one of the bands providing a fixed pivotal joint for each of the braces, and means



connecting the other end of each brace and the other band to provide a pivotal and sliding connection of the brace therewith, the braces being relatively movable to accommodate the limb hinging action and forming a guard against displacement of the joint transversely of the hinging action.

2,460,896

COMPOSITION FOR BLACKENING COPPER AND COPPER ALLOY SURFACES

Walter R. Meyer, Hamden, Conn., assignor, by mesne assignments, to Enthone, Inc., New Haven, Conn., a corporation of Connecticut

No Drawing. Application August 19, 1944, Serial No. 550,309
5 Claims. (Cl. 148—6.14)

2. As a composition of matter, a dry pulverulent mixture consisting essentially of sodium chlorite and sodium hydroxide, in proportions by weight within the range of about one part to two parts of the hydroxide per part of the chlorite.

2,460,897

RENDERING ALUMINUM AND ALUMINUM ALLOY SURFACES CORROSION RESISTANT

Walter R. Meyer, Hamden, Conn., assignor, by mesne assignments, to Enthone, Inc., New Haven, Conn., a corporation of Connecticut

No Drawing. Application September 14, 1944, Serial No. 554,147
10 Claims. (Cl. 148—6.20)

1. The method of treating a surface composed of aluminum or an aluminum alloy having a content of aluminum greater than about 60%, the surface having a thickness of at least 0.00005 inch when it represents a coating, which comprises contacting the surface with an aqueous solution consisting essentially of water and an alkali metal chlorite, an alkali metal chromate and an alkali metal carbonate containing from 1 to 20 grams per liter each of the chlorite and chromate and from 8 to 50 grams per liter of the carbonate, the temperature and duration of the treatment being such as to result in the formation of a corrosion resistant film on the surface.

2,460,898

PROCESS AND COMPOSITION FOR COLORING COPPER AND COPPER ALLOY SURFACES

Walter R. Meyer, Hamden, Conn., assignor, by mesne assignments, to Enthone, Inc., New Haven, Conn., a corporation of Connecticut

No Drawing. Application November 4, 1944, Serial No. 562,053
7 Claims. (Cl. 148—6.14)

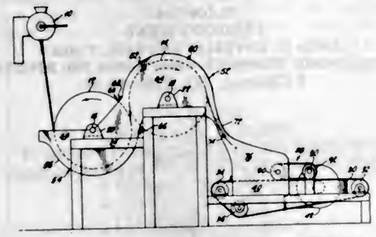
7. A solid composition in finely divided form for use in aqueous solution to color copper surfaces or surfaces of copper alloys containing not less than 60% copper, the composition consisting essentially of an alkali metal chlorite, an alkaline salt having an alkalinity equal to, or greater than, that of tetrasodium pyrophosphate but less than that of caustic soda or caustic potash, in proportions by weight within the range of 1 to 2.5 parts of the alkaline salt per part of the chlorite, and 0 to 50% based on the total weight of the chlorite and alkaline salt of a caustic alkali.

2,460,899

METHOD OF MAT FORMATION

Piero Modigliani, Manhasset, N. Y., and Harry E. Holcomb, Stratford, Conn., assignors to Johns-Manville Corporation, New York, N. Y., a corporation of New York

Application August 30, 1944, Serial No. 551,946
16 Claims. (Cl. 19—156)



16. In an apparatus for forming a fibrous material including means for supplying glass streams to be drawn out into filaments, the improvement comprising a surface adapted to be moved at a relatively high velocity and to be contacted by the filaments drawn from the glass streams, means for moving said surface, means for setting up a flow of air, means for directing said flow of air for a substantial distance along said surface and in contact with said filaments for said distance to longitudinally tension said filaments and thereby hold them in frictional contact with said surface during a substantial portion of travel thereof, and means for receiving said filaments from said surface.

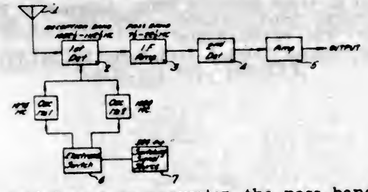
2,460,900

WIDE-BAND SUPERHETERODYNE RECEIVER

William H. Newbold, Langhorne, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania

Application December 31, 1943, Serial No. 516,479
4 Claims. (Cl. 250—20)

1. In a superheterodyne radio receiver, a frequency converter having a signal input circuit responsive to a reception band of predetermined width, local oscillator means for selectively generating local oscillations of N different frequencies, N being any small integer other than one, coupling means for applying said local oscillations to said frequency converter, an intermediate frequency amplifier connected to the output circuit



of said frequency converter, the pass band of said amplifier being only

$$\frac{1}{2N}$$

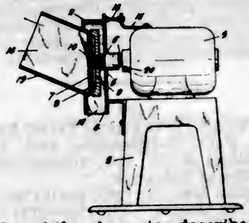
as wide as said reception band, and automatic means operatively associated with said local oscillator means for effecting, sequentially and at a rapid rate of repetition, cyclical selection of local oscillations at said N different frequencies, the frequencies of said local oscillations being so related to the frequency limits of said reception band that said reception band is effectively divided into N primary band segments and N image band segments, all of said band segments being converted by said frequency converter into one common intermediate frequency band, said intermediate frequency band being substantially identical to the said pass band of said intermediate frequency amplifier.

2,460,901

VEGETABLE AND FRUIT SHREDDING DEVICE

Joseph MacRae Newman, Toronto, Ontario, Canada

Application March 26, 1946, Serial No. 657,250
1 Claim. (Cl. 146—177)

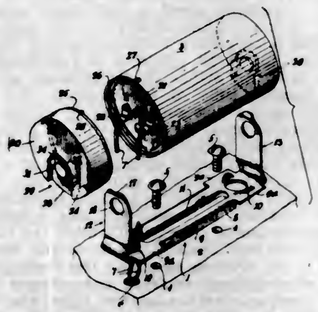


In a device of the character described, a vertical disc rotatable about a horizontal axis and against which vegetables or fruit are pressed to be shredded, shredding teeth carried by the disc, a housing in which the disc is contained and formed with an orifice in its bottom, an open ended feeding tube of substantially the same diameter as the disc protruding upwardly from the housing at an angle and having its inner face adjacent to and concentric with the toothed face of the disc and through which vegetables are fed to bear against the teeth, a dividing web in the tube to retain the material passing therethrough against rotation, a feeding plunger adapted to be manually moved inwardly through the feeding tube to press food against the shredding disc and having a slot therein in which the feeding tube web is received and whereby the plunger is retained against rotation in the tube, the inner face of the plunger being in a vertical plane when in the tube so that such face is parallel to the face of the vertical disc irrespective of the position of the plunger in the feeding tube.

2,460,902
PROPELLER
Ralph K. Odor, Edmond, Okla., assignor to The Vornado Trust, Oklahoma City, Okla., a fiduciary trust of Oklahoma
Application March 9, 1945, Serial No. 581,740
8 Claims. (Cl. 170—159)

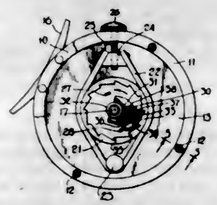
1. In a propeller, a blade having a thrust face which substantially defines an area of the curved surface of a right cone, the main body of the blade including the portions more remote from the propeller axis having an outline appearing as a circle inscribed on said surface from a center in the latter, and the root portion of the blade appearing on said surface as a projection from an arc of the circumference of said circle and having edges merging smoothly into said circumference and converging toward a point on the said conical surface located closer than said center to the apex of the said cone, said blade being disposed with respect to the propeller axis so that a plane normal to said axis will intersect both the said point of convergence and the said center; the line on the surface of the cone which corresponds to the intersection of said plane with the said face of the blade, and the line on the surface of the cone which corresponds to the intersection with said conical surface of a plane containing both the axis of the cone and the said center, diverging from said center at an angle in excess of zero and not exceeding forty-five degrees, whereby the blade will have curvature in directions both radially of the blade and transversely between the leading and trailing edges of the latter.

2,460,903
MOTOR STARTING CAPACITOR ASSEMBLY
Gordon V. Peck, Indianapolis, Ind., assignor to P. R. Mallory & Co., Inc., Indianapolis, Ind., a corporation of Delaware
Application May 21, 1945, Serial No. 594,835
10 Claims. (Cl. 175—315)



1. An electrolytic condenser assembly comprising a moulded plastic cylindrical housing with an open end; condenser electrodes and electrolyte in said housing; a sealing disc in said open end of said housing having terminals for said electrodes mounted thereon; a cap on said housing covering said open end and said electrode terminals, said cap having a side wall opening; assembly formations on the base of said housing and on the end face of said cap, said formations each comprising a stepped arch-like recess with the shallower step at the top of the arch and an upstanding pin located at the line of division of said steps, the base of said cap arch being peripherally aligned with said cap side wall opening; interfitting tongue and recess formations on said cap and housing aligning said cap and base assembly formations; and a mounting bracket with an elongated body of inverted U channel formation extending substantially the length of said housing and cap, a central elongated opening in the base of said U channel through which said bracket may be secured to a support, and a wire lead opening adjacent each end of said central opening, with one of said lead openings aligned with said cap side wall opening; said bracket further having upstanding and resilient end arms located in and substantially fitting said cap and base assembly formations, with central openings containing said cap and base upstanding pins, and turned back top portions; whereby said cap and housing are together resiliently held by said bracket arms.

2,460,904
FISHING REEL
John R. Reyburn, Fairfield, Conn.
Application March 23, 1945, Serial No. 584,277
5 Claims. (Cl. 242—84.5)



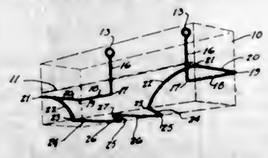
1. A brake mechanism for a fishing reel having a spool mounted on a shaft for rotation including, a drum mounted for rotation on the spool shaft and having ratchet teeth on its interior and a braking surface on its exterior, a pawl having a forked portion straddling said shaft, said pawl being engageable with the ratchet teeth, and means transmitting rotational movement of the spool to the pawl.

2,460,905
GARMENT HANGER
Fred Bernard Saunders, Tarpon Springs, Fla.
Application November 28, 1945, Serial No. 631,248
1 Claim. (Cl. 223—95)

A garment hanger including a hook support, opposed resilient arms diverging therefrom, said arms being extended from the hook support downwardly and outwardly to points adjacent their free ends, and being bent downwardly from said points to their ends so as to provide end portions in substantially vertical and parallel planes, whereby to permit movement of the free ends of the end portions in arcuate paths deviating only slightly from the horizontal, one of said end portions being formed as a fork, garment-engaging fingers on the ends of the fork, extended in direction away from the hook support, and substantially at a right angle to the fork, said fingers being insertable in separate loops at the front of a garment to be supported respectively positioned

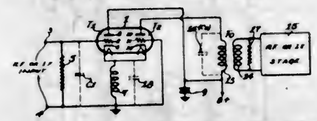
above the front creases of said garment, the other end portion being bent at its end into a garment-engaging eye, said eye being extended in a direction away from the hook support and substantially at a right angle to said latter end portion, and being engageable beneath the binding at the back of the garment to be supported.

2,460,906
PACKAGE HOLDER
Fredrick W. Schmiedeberg, Portland, Oreg.
Application August 30, 1946, Serial No. 694,046
2 Claims. (Cl. 248—311)



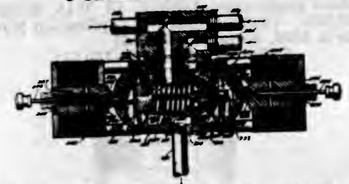
1. A holder for a tissue box and the like having a horizontal tissue withdrawal opening extending across a vertical side thereof, comprising a single strip of resilient material formed to snugly engage five sides of said box, said strip having a mid portion extending transversely and longitudinally in a horizontal plane to form a bottom support embracing a substantial area of the bottom of said box, portions of said strip extending upwardly and laterally from said bottom support to embrace and confine the front of said box adjacent the ends of said opening, portions of said strip extending across the ends of said box at approximately mid height and thence laterally toward each other across the back side of said box, said last named portions being formed to spring together by the resilience of said bottom support to grip the ends of said box, straight vertical ends on said last named portions extending upwardly across the back side of said box, and deformed eyes constituting hooks in the ends of said strip for suspending said holder, said single strip of material constituting the sole supporting and confining member in said holder.

2,460,907
CATHODE-COUPLED WIDE-BAND AMPLIFIER
Alfred C. Schroeder, Feasterville, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application December 28, 1944, Serial No. 570,176
6 Claims. (Cl. 179—171)



1. A wide-band high-frequency amplifier comprising a cathode-follower stage coupled to a cathode-input, grounded-grid stage, the coupling means between said stages being constituted by an inductance having an impedance at the frequencies to be amplified which is high compared to the internal input impedance of the grounded-grid stage.

2,460,908
VALVE MECHANISM
William M. Scott, Jr., Bryn Mawr, Pa., assignor to I. T. E. Circuit Breaker Company, Philadelphia, Pa., a company of Pennsylvania
Application March 4, 1943, Serial No. 477,911, now Patent No. 2,426,243, dated August 26, 1947, which is a division of application Serial No. 373,051, January 3, 1941, now Patent No. 2,405,454, dated August 6, 1946. Divided and this application November 24, 1943, Serial No. 511,526
3 Claims. (Cl. 137—144)

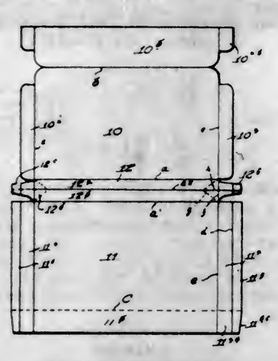


2. In a valve structure, a first line; a second line; a flexible diaphragm operated valve having a connecting position for connecting said first and second lines and a disconnecting position for disconnecting said first line from said second line, both faces of said diaphragm being under equal pressure in both its connecting and disconnecting positions; spring means normally urging and holding said diaphragm valve to its disconnecting position; means for venting one side of said diaphragm valve to cause a drop of pressure on said one side, said diaphragm valve being thereupon operable by the pressure on its other side for operation to the position for connecting said first and second lines; and means controlled by pressure in said second line for maintaining said diaphragm in valve connecting position against the action of said spring means; said means comprising a second flexible diaphragm controlled by pressure in said second line.

2,460,909
BELLOWS TYPE ENVELOPE HAVING ALL EDGES OF MOUTH REINFORCED
Morton J. Shaffer, New York, N. Y.
Application March 8, 1946, Serial No. 652,940
1 Claim. (Cl. 229—68)

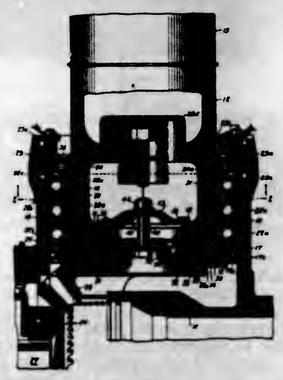
In an expansible envelope of the bellows type, a front wall, a rear wall of greater height than

the front wall, bellows means connecting the side and bottom edges of said walls, extensions on the top edges of said walls folded inwardly and secured adhesively to the respective walls, said extensions when so folded having their free



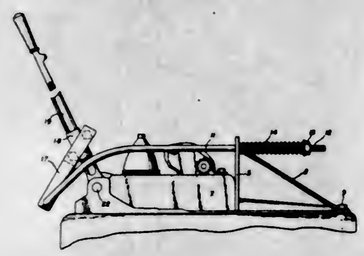
transverse edges in the same horizontal plane, and tabs integral with the ends of the rear wall extensions adhesively secured to the bellows means connecting the sides of the front and rear walls.

2,460,910
PROPELLER HUB AND ASSOCIATED BLADES
Jack H. Sheets and Maurice E. Cushman, Verona, N. J., assignors to Curtiss-Wright Corporation, a corporation of Delaware
Original application January 19, 1944, Serial No. 519,064. Divided and this application November 6, 1944, Serial No. 562,167
5 Claims. (Cl. 170—160.58)



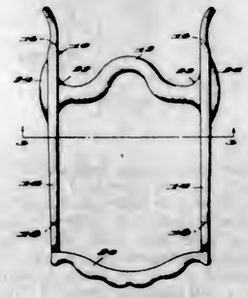
1. In combination, a propeller hub having a socket, a propeller blade having its shank journalled in said socket, said shank having a bore extending thereinto from its end, a balance plug secured in said bore, a driving member interiorly of said bore and secured in driving relation within and engaging said shank, said member having a passage through which access may be had to said balance plug, pitch-changing means engaging said driving member, and readily detachable means engaging said pitch changing means and driving member for holding said pitch-changing means in driving relation with respect to said member, said detachable means comprising a closure which, when in operative position, closes said passage and, when detached, opens said passage.

2,460,911
CLUTCH LEVER ATTACHMENT
Sherman E. Shullaw, Peoria, Ill.
Application June 13, 1947, Serial No. 754,413
5 Claims. (Cl. 74—97)



1. A clutch lever attachment comprising a pull rod connected at one end to a lever, means slidably supporting the other end of the rod, and spring means between the rod and the supporting means and exerting a pulling force on the rod, said rod being movable by the lever past the pivotal center of the lever against the tension of said spring means to hold the lever in one position.

2,460,912
BRIDLE BIT
Arthur E. Wagner and Ford E. Camp, Meadville, Pa., assignors to Plas-Tk-Bits, Inc., Meadville, Pa., a corporation of Delaware
Application September 5, 1946, Serial No. 694,878
4 Claims. (Cl. 54—6)

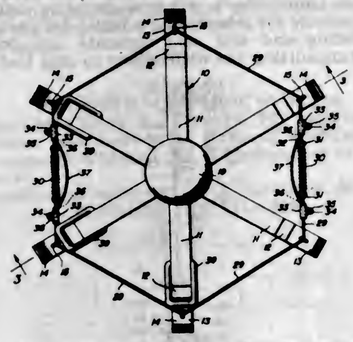


1. A unitary, rigid bridle bit of solid construction composed of molded polymeric plastic and including a mouthpiece and an elongated cheek piece extending from each end of the mouthpiece and formed to provide spaced bridle and rein openings.

2,460,913
SHIP FENDER
Zack B. Wasson, Dallas, Tex.
Application January 22, 1946, Serial No. 642,639
6 Claims. (Cl. 114—219)

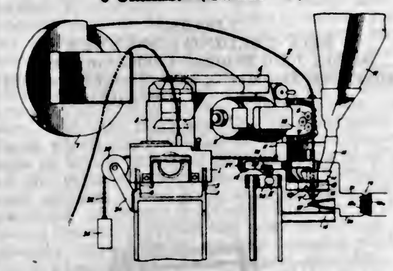
1. A ship's fender comprising a plurality of intersecting arcuate spring members, tensioning

means connecting the end portions of said mem-



bers, and means for intermediately connecting said members.

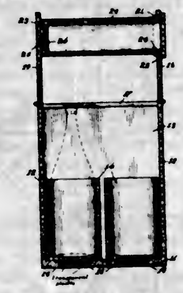
2,460,914
WELDING GUIDE
Ben W. Wright, Boonton, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application October 24, 1945, Serial No. 624,145
6 Claims. (Cl. 219—8)



1. Welding apparatus comprising a support for the work, a second support, means carried by said second support for feeding a welding rod toward the work, means for effecting relative movement between the supports to attach a layer of weld metal to the work, a cam secured to said work support, guiding mechanism carried by said second named support for cooperation with said cam, and means for adjusting the positional relation of said mechanism to said carriage to thereby vary the positional relation of said welding rod with respect to the work whereby successive side-by-side layers of weld metal may be deposited on the work.

2,460,915
COLLAPSIBLE HANDLE FOR CONTAINERS
John S. Allen, Montgomery, Ala.
Application August 22, 1946, Serial No. 692,294
2 Claims. (Cl. 220—94)

2. In a device of the class described, a body including a bottom, side walls and end walls, a pair of upwardly extending members hingedly attached to said side walls, one of said members having a circular aperture, the opposite member having a threaded boss on its inner face in axial alignment with said aperture, a handle grip comprising a beverage receptacle having a closed end and an open end, a closure for the open end, a flange on said closure, said receptacle being adapted to extend through said circular aperture with the flange on the closure engaging the outer face of the apertured member and a shallow



threaded recess in said closed end of said beverage receptacle to detachably receive said threaded boss.

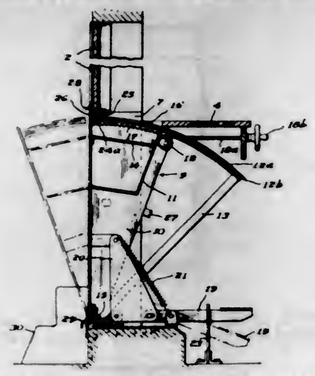
2,460,916
CLOTHESLINE PROP
William L. Baumeler, Eggertsville, N. Y.
Application January 26, 1946, Serial No. 643,674
3 Claims. (Cl. 248—353)

2. An attachment for clothes props, comprising a holder composed of two spaced bars secured together intermediate their upper and lower ends to provide lower prop-attaching portions and upper line-engaging portions, the latter being in parallel spaced relation and relatively yieldable and adapted to contract about the line in clamped-like fashion to prevent relative displacement of the prop on the line.

2,460,917
SAFETY BOOTH
John W. Beretta, San Antonio, Tex.
Application August 8, 1947, Serial No. 767,551
9 Claims. (Cl. 109—19)

1. In a booth for tellers or cashiers having a bullet-resistant wall, a bullet-resistant window framed in said wall and a wall opening through said wall adjacent said window, the combination of a movable bin adapted to be moved to outer and inner positions, a pivotal mounting for said bin within said wall opening, said bin comprising bullet-resistant front, side, and rearward protective plates extending rearwardly from said front

plate, and a bullet-resistant cover member slidably mounted on said bin and selectively movable



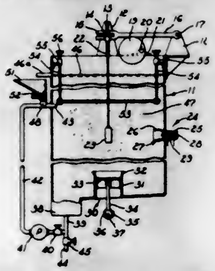
to cover and uncover said bin in either of its said outer and inner positions.

2,460,918

METHOD OF AND APPARATUS FOR CUTTING AND THE LIKE

Albert G. Bodine, Jr., Burbank, Calif.

Application December 12, 1942, Serial No. 468,802
24 Claims. (Cl. 51—7)



1. A method of surface finishing the surface of an article, which includes the steps of: immersing such surface in a fluid; selectively oscillating the fluid adjacent such surface by applying pressure pulses to the fluid remote from such surface to propagate in the fluid waves characterised by their travel through the fluid under conditions of resonance with the speed of sound; supporting by the fluid a plurality of solid surface finishing elements adjacent such surface; and so relating the amplitude and frequency of such pressure pulses, the distance between the locus of their application and such surface, the mass of such elements, and the drag of the fluid upon such elements as to oscillate such elements with surface finishing momentum in contact with such surface.

2,460,919

METHOD OF AND APPARATUS FOR CUTTING MATERIALS

Albert G. Bodine, Jr., Burbank, Calif.

Application December 12, 1942, Serial No. 468,803
18 Claims. (Cl. 51—59)

17. In an apparatus for removing material from a solid body: a tool comprising a rod-shaped element having a free end; means for setting the element into sustained longitudinal vibration causing said end to oscillate at high frequency and minute amplitude; a separate operative tool portion; means for interposing a liquid between said oscillating end and said separate tool portion for transmitting the oscillations to said tool por-

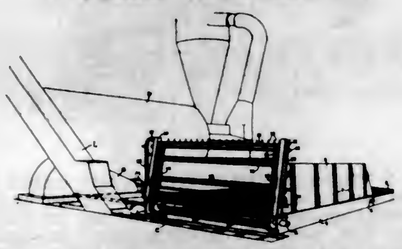
tion; a fluid body interposed between said tool portion and said solid body; and surface treating elements in and supported by said fluid body for oscillation in contact with said solid body under influence of oscillations received and transmitted by said tool portion.

2,460,920

SELF-FEEDING CONVEYER

Arthur John Brinker, Lexington, Nebr.

Application January 2, 1946, Serial No. 638,611
5 Claims. (Cl. 198—102)



1. In association with an alfalfa dehydrating plant having an elevator and a horizontally disposed endless conveyor adapted to introduce alfalfa deposited on said conveyor into the dehydrator plant, a feeding device comprising in combination a platform arranged at right angles to and with one end adjacent the dehydrator conveyor, side walls rigidly connected with said platform, spaced, parallel endless chains mounted to have their upper reaches pass above and adjacent the sides of the platform, spaced sweeper rods extending transversely of said chains and secured adjacent their ends thereto, upright standards at one end of the platform adjacent the conveyor, spaced parallel shafts having their ends journaled in said standards, sprockets mounted on said shafts, endless elevator chains, one adjacent each standard carried by said sprockets, spaced transverse rods rigidly associated with and connecting said elevator chains, each rod provided with a plurality of spaced outwardly directed fingers, means for driving the endless chains carrying the sweeper rods to advance their upper reaches toward the end standards, means for driving the chains carried by the end standards to advance the finger carrying rods downward on the side facing the platform, whereby material advanced

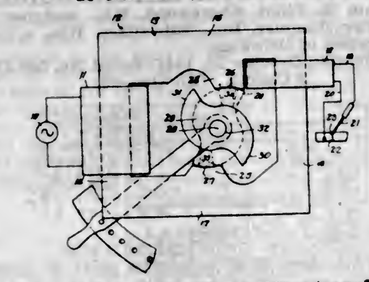
over the platform by the sweeper rods will be raked downwardly and out from the platform onto the dehydrator plant conveyor in a uniform thin layer.

2,460,921

MAGNETIC CONTROL SYSTEM

Albert M. Candy, La Grange, Ill., assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill., a corporation of Delaware

Application August 17, 1946, Serial No. 691,357
15 Claims. (Cl. 171—119)



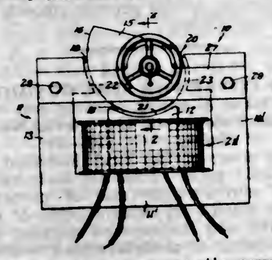
1. For combination with a welding transformer having a magnetic core and primary and secondary windings thereon with the primary winding connected to a source of alternating current and the primary winding connected to a welding circuit, means for varying the magnetic flux interlinking said windings comprising, a magnetic rotor for mounting in cooperative relation to said core, said core and rotor having juxtaposed surfaces which are involutes of a base cylinder the axis of which coincides with the axis of rotation of the rotor whereby, on rotation thereof from one position to another, said surfaces are at a constant distance from one another, the distance depending upon the position of the rotor, thereby providing an air gap between said surfaces of constant length at any operative position of the rotor and uniform distribution of the magnetic flux thereacross.

2,460,922

MAGNETIC CORE WITH VARIABLE AIR GAP

Albert M. Candy, La Grange, Ill., assignor, by mesne assignments, to National Cylinder Gas Company, Chicago, Ill., a corporation of Delaware

Application December 22, 1947, Serial No. 793,158
6 Claims. (Cl. 171—119)



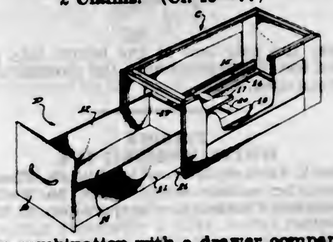
1. In combination, a magnetic core structure comprising a central leg and end legs on opposite sides thereof, and a relatively rotatable member for coacting with said legs to change the lengths of the air gaps therebetween, the surface of said member constituting one terminus of each air gap being an involute of a base cylinder whose longitudinal axis coincides with the axis of relative rotation of said legs and member and the surface of each leg constituting the other terminus of each air gap substantially coinciding with the juxtaposed surface of said member whereby on relative rotation of said legs and said member the length of each air gap is uniform and equal over the area of the juxtaposed surfaces at any relative position of said legs and member; and an electrically energizable winding on said core structure.

2,460,923

PROGRESSIVE DRAWER SUPPORT

Raymond Christopherson, Long Beach, Calif., assignor to National Cabinet Company, Long Beach, Calif., a limited partnership

Application August 21, 1944, Serial No. 550,431
2 Claims. (Cl. 45—77)



1. In combination with a drawer compartment having a bottom rail across the forward end thereof and a drawer in the drawer compartment, means providing upper and lower rails at the sides of the compartment, cross bars extending across the compartment one of which carries rollers adapted to roll on said rails, runners connecting the cross bars intermediate the ends thereof, said runners being pivotally connected to the cross bars, rollers on the lower rail at the front of the compartment adapted to rollingly support the runners, the drawer being longitudinally movable over the runners, rollers on the drawer for rollingly supporting the drawer on the runners, means limiting forward movement of the runners with relation to the bottom rail, and means limiting forward movement of the drawer with respect to the runners.

2,460,924

STOCK SUPPORTED PEASHOOTER

Roy Daily, Racine, Wis., assignor to Robert H. Wendt, Chicago, Ill.

Application February 1, 1946, Serial No. 644,898
2 Claims. (Cl. 124—12)

1. In a toy gun, the combination of an elongated stock provided with a shoulder-engaging portion and with an upper groove for receiving a barrel, with a barrel member of heat deformable plastic material in said groove, and comprising a member having a laterally turned end portion and provided with a bore extending through the full length of the barrel for passing a missile from the mouth of the user through the barrel when the stock is held to the shoulder and the end of the barrel is held to the mouth, the stock supporting a partially cylindrical upper member at the rear end of said groove forming a bore which is enlarged relative to the size of said groove, and said barrel being surrounded by an annular plug having a frictional fit in the bore formed by said upper member and said groove, the barrel being frictionally held by the plug and the barrel being rotatably adjustable relative to the stock to turn

concave arc of said curve, the mutual point of tool to cooperate alternately with the anvil at a

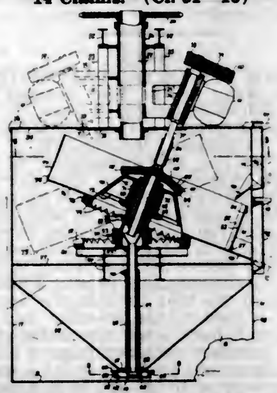
the bent end of the barrel to the left or right for left-handed or right-handed users, or to elevate

or lower the rear end of the barrel into proper position for engagement with the mouths of users of various sizes.

2,460,925
WHITE WRITING INK
William E. Decker, Melrose Highlands, Mass., assignor, by mesne assignments, to Technical Specialties Company, a corporation of Massachusetts
No Drawing. Application September 6, 1946, Serial No. 695,287
6 Claims. (Cl. 106—26)

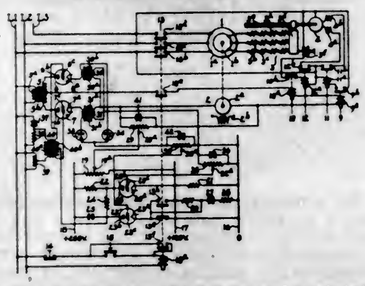
1. An ink adapted to become opaque and white when dry and suitable for application by pen or brush, consisting essentially of a solution in a volatile organic solvent of a cellulose ester and a soluble organic crystalline compound having a melting point above ordinary atmospheric temperatures and which is inert to the other ingredients.

2,460,926
SCOURING APPARATUS
Charles A. Dreisbach, Yonkers, N. Y.
Application July 2, 1946, Serial No. 680,917
14 Claims. (Cl. 51—13)



1. A scouring apparatus, including in combination: a gyratory container constructed and arranged to contain a plurality of articles to be scoured; gyrating-means constructed and arranged to progressively tilt the said gyratory container in diverse directions to cause the articles contained therein to change position with respect to each other; cleaning-media-projecting means for projecting cleaning-media against the contents of the said gyratory container as the said contents change position as a result of the gyration of the said container; and means for progressively tilting the said cleaning-media-projecting means as the said container progressively tilts in different directions.

2,460,927
SPEED CONTROL FOR ELECTRIC MOTORS
William H. Elliot, Shorewood, Wis., assignor to Cutler-Hammer, Inc., Milwaukee, Wis., a corporation of Delaware
Application October 26, 1944, Serial No. 560,377
9 Claims. (Cl. 318—45)



1. In a system for obtaining and maintaining a preselected speed of a prime mover subjected to a varying load, in combination, a prime mover, means to supply power to said prime mover, means to regulate such power between given limits in a predetermined number of equal steps, an auxiliary dynamo electric machine coupled to said prime mover to coact with said prime mover and automatic control means for said dynamo electric machine, comprising, a source of energy supply for said dynamo electric machine to afford a flow of energy between said source and said dynamo electric machine in varying amounts according to departures of the speed of said prime mover from the preselected speed, and means responsive to flow of energy between said dynamo electric machine and said energy source but only when in excess of the power change afforded by one of said steps, to effect adjustment of said power regulating means, following gradual return of said motor toward the preselected speed by the coaction of said dynamo electric machine, whereby said power regulating means and said dynamo electric machine jointly provide smooth continuous speed regulation.

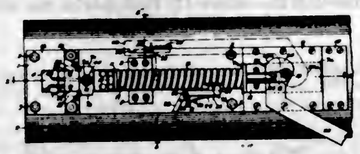
2,460,928
SLIP COVER FOR SEAT CUSHIONS
Isaac A. Evans, Muncie, Ind.
Application February 6, 1947, Serial No. 726,746
2 Claims. (Cl. 155—182)

1. A slip cover of the kind described, consisting of a body piece of textile material quadrilateral in conformation and of predetermined length, the main part thereof being of predetermined width and its opposed parallel side portions each being of predetermined width, one of said side portions being greater in width than the other, the frontal corner portion of said main part and the adjacent side edges of the wider of said side portions being of the conformation of a reversed curve having arcs with acute central angles, and of a tangent extending from the

concave arc of said curve, the mutual point of tangency of said arcs coinciding with the line of juncture of said main part and the wider side portion of said body piece, and wall pieces trapezoidal in shape each having one of its end edges

equal to the width of the narrower side portion of said body piece, and having a top edge equal in length to the sum of the lengths of the side edge of the main part of said body piece and the edge of the convex arc of said reversed curve, and the other of its end edges of the same conformation as the aforesaid concave arc and tangent, the said end edges and top edge of each of said end wall pieces being bound to a side edge of said body piece.

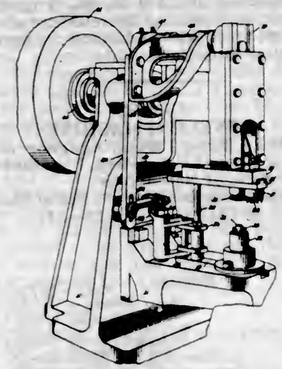
2,460,929
ROCKET HOLDING DEVICE
Milton R. Goff, Rochester, N. Y., assignor to the United States of America as represented by the Secretary of War
Application December 2, 1946, Serial No. 713,574
7 Claims. (Cl. 89—1.7)



6. A device for holding a rocket in a launching tube comprising holding means on said tube for yieldingly engaging a complementary means on said rocket to hold same in firing position when said rocket is inserted from either end of the tube, manually operated latch means for locking said holding means on said complementary means against accidental release, and means operable upon rocket discharge to unlock said latch means whereby an engaged rocket may release itself from its yielding engagement with said holding means.

2,460,930
FASTENER ATTACHING MACHINE
Sylvester L. Gookin, Quincy, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application May 3, 1946, Serial No. 666,991
10 Claims. (Cl. 218—14)

1. A fastener-attaching machine comprising a fastener-supporting anvil, a ram movable up and down, a tool-carrier mounted on the ram and shiftable relatively thereto, a work-engaging presser and a fastener-setting tool both carried by said tool-carrier, power-driven means arranged to reciprocate the ram up and down, and mechanism operable by said power-driven means for causing said presser and said fastener-setting tool to cooperate alternately with the anvil at a cyclic rate one-half that of the ram, said presser



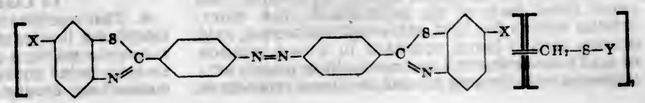
being adapted to impale a work-piece on a fastener seated on the anvil.

2,460,931
OCARINA
William W. Gretsch, Forest Hills, N. Y., assignor to The Fred. Gretsch Manufacturing Company, Brooklyn, N. Y., a corporation of New York
Application December 4, 1944, Serial No. 566,611
5 Claims. (Cl. 84—380)

1. In an ocarina, in combination, a pair of complementary interiorly concave elements forming a tonal chamber, a complementary interiorly concave extended mouthpiece portion carried by each of said elements, a duct formed in one of said mouthpiece portions having an entirely enclosed air passage passing therethrough and extending from its exterior end portion into the tonal chamber.

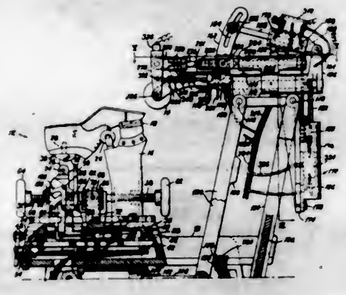
2,460,932
YELLOW AZO DYESTUFFS
Norman Hulton Haddock and Clifford Wood, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application April 13, 1945, Serial No. 588,238. In Great Britain May 8, 1944
7 Claims. (Cl. 260—158)

1. The process of manufacturing a di-methosulfate of an azobenzene which comprises making a mixture of a di-alkyl sulfate having 1 to 4 carbons and a compound of the group consisting of the chloro derivative of di-(methylmercapto)-4,4'-di(6-methylthiazyl)-(2)-azobenzene which contains 1.3 atoms of chlorine per molecule and the compounds represented by the formula



in which X is one of the group consisting of hydrogen, methyl and methoxy, and Y is one of the group consisting of alkyl having 1 to 4 carbons and benzyl; and heating the mixture at reaction temperature until there is formed the corresponding methyl methosulfate.

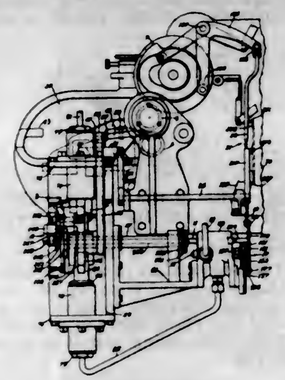
2,460,933
LEVELING MACHINE
Fred V. Hart, Lynn, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application November 1, 1947, Serial No. 783,542
28 Claims. (Cl. 312—34)



8. In a leveling machine, a shoe support, a leveling roll mounted for movements lengthwise of a shoe on the support to cause the roll to operate progressively along the shoe bottom, a pair of operating handles near the opposite ends of the rolls, means mounting said handles for unitary movement by the operator in directions lengthwise of the shoe on the support and also for unitary rocking movements laterally of the shoe on the support, power-operated means for moving the roll lengthwise of the shoe on the support, power-operated means for tipping the roll laterally of the shoe on the support, and means for operating both of said power-operated means in response to movements of the handles by the operator whereby the roll is moved into positions corresponding to the positions of the handles relatively to the shoe on the support.

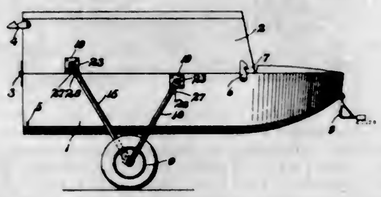
2,460,934
SPLITTING MACHINE
George Haselton, Leicester, England, assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 14, 1948, Serial No. 2,162
In Great Britain February 8, 1947
15 Claims. (Cl. 69—15)

1. In a machine of the class described, a splitting knife, means for feeding a work piece past said knife, a carrier for said knife mounted for movement lengthwise of the edge of said knife, fluid-operated means for moving said carrier alternately in opposite directions, said means comprising a reversing valve movable between two positions to control the direction of movement of said carrier, valve-setting means for moving said valve from each of its positions to the other, driving means for said valve-setting means, said driving means being operated in timed relation to said feeding means, and controlling means acting upon said driving means in timed relation to the movement of said knife to cause successive driving movements of said driving means to



operate said valve-setting means in opposite directions.

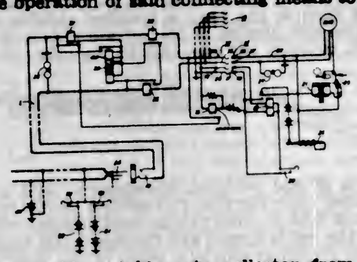
2,460,935
BOAT TRAILER COMBINATION
Emanuel Jack Henningsen, Grand Rapids, Mich.
Application December 17, 1945, Serial No. 635,467
7 Claims. (Cl. 9—2)



1. In a structure as described, a front boat section having a rear closed end, a rear boat section having a closed front end, means hingedly connecting said boat sections at the rear end of the front and the front end of the rear section, a post connected at the outside of each side of the front boat section, a wheel carried at the lower end of each post, and a second post connected at the outside of each side of the rear boat section each of said second posts extending to and having a pivotal connection with the unattached end of the other post on the common side of said sections, as and for the purposes described.

2,460,936
PORTABLE COIN COLLECTOR FOR TELEPHONE SYSTEMS
Walter P. Jackman, Boonton, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application June 14, 1946, Serial No. 676,610
14 Claims. (Cl. 179—6.3)

9. The combination in a telephone system of a telephone line extending from a central office to a remote point, a portable coin collector at said remote point including a coin disposal magnet, connecting means for connecting said portable coin collector to said line, and means responsive to the operation of said connecting means to dis-

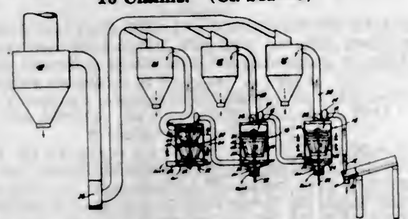


connect said portable coin collector from said line for operating said coin disposal magnet.

2,460,937
PIPE SMOKER'S DIBBLER
Ralph G. Kaufman, New York, N. Y.
Application February 4, 1946, Serial No. 645,272
1 Claim. (Cl. 131—243)

A smoker's tool comprising a handle having a relatively sharply pointed spoon-shaped member at one end and having at the other end a tamping plate, said spoon-shaped member terminating in a relatively blunt point for removing dross from the recess of a smoker's pipe, an arcuate scraping flange of diameter not exceeding the internal diameter of the bowl of said smoker's pipe, disposed around substantially the semi-circumference of the edge of said plate, said flange being of relatively stiff material and disposed substantially at right angles to said tamping plate, and a plurality of conical projections mounted on the tamping surface of said tamping plate.

2,460,938
METHOD AND APPARATUS FOR CLEANING ASBESTOS
Frank J. Keehne, Martinsville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application August 5, 1944, Serial No. 548,295
16 Claims. (Cl. 241—4)

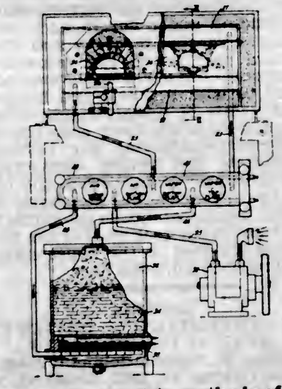


1. The method of treating asbestos fibers to separate coarse and fine impurities adhering thereto comprising, introducing the fibers to be cleaned into an upwardly spiralling vortex of a gaseous fluid, maintaining a high volume ratio of gas to fiber to provide a thin suspension of fibers, maintaining a high ratio of rotational movement in relation to gravitational movement of fibers whereby to develop a path of fiber travel of such length that the fibers are combed into longitudinal alignment with the rotational direction of their movement, periodically deflecting the rotational gas flow inwardly at spaced points adjacent the periphery of the vortex, thereby developing components of gas movement which are transverse to the direction of fiber rotation and causing flexing and bending of the fibers whereby to loosen and scour impurities from the fiber surfaces, and finally separating the clean fibers from heavy granular impurities and from light dust impurities by removing the fibers peripherally from the vortex while entraining the dust in the upwardly moving gas and removing heavy impurities by gravitational settling.

2,460,939
METHOD OF MAKING YOKES FOR GARMENT HANGERS
Walter Ludwig, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich.
Application August 24, 1946, Serial No. 692,766
9 Claims. (Cl. 93—1)

1. The method of conforming the garment supporting arms of a yoke member of tubular cross section and of fibrous material, comprising the steps of cutting a pair of parallel slits through and longitudinally of the bottom wall of each yoke arm and upwardly collapsing the bottom wall on the outer sides of the pair of slits to form an opening through the yoke arm for receiving means for dependingly supporting a garment from beneath the yoke member.

2,460,940
METHOD OF AND APPARATUS FOR TREATING SHOES WITH STEAM AND HOT AIR
Mieth Maeser, Beverly, Mass., assignor to United Shoe Machinery Corporation, Flemington, N. J., a corporation of New Jersey
Application January 14, 1948, Serial No. 2,268
8 Claims. (Cl. 12—1)



1. That improvement in methods of treating a partially fabricated shoe having a thermoplastic

toe-stiffener, which consists in flowing steam on the outer surface of the vamp until the toe-stiffener covered thereby is rendered limp, and simultaneously flowing hot air on the bottom of the insole in sufficient volume and with sufficient velocity to prevent the steam from wetting the insole.

2,460,941
REACTION OF STILBOESTROL WITH CAMPHOR
Robert Henry Marriott, London, and William Whalley Myddleton, New Malden, England
No Drawing. Application August 31, 1945, Serial No. 613,960. In Great Britain August 11, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires August 11, 1964
5 Claims. (Cl. 260—588)

2. Process of combining stilboestrol and camphor by dissolving them in an organic solvent.

2,460,942
COLLAPSIBLE HEADREST
Angela Marshall, Adel, Iowa
Application February 21, 1947, Serial No. 730,020
2 Claims. (Cl. 155—174)

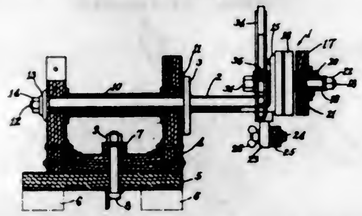
1. A headrest for the back of a seat having a cushion and including a pair of brackets spaced apart and adapted to be simultaneously mounted on the seat back, a pair of upwardly-extending apertured lugs secured upon each bracket, a pair of collapsible frames having the cushion secured to the upper portions thereof and each frame consisting of a plurality of bars connected together in lazy tongs fashion, the lowermost bars of each collapsible frame having holes in the lower ends thereof, bolts serving to extend through the apertured lugs on the brackets and the holes in the bars to secure the collapsible frames to the brackets, a rearwardly-extending horizontal top bar pivotally connected at the forward end thereof to the front end of the forwardly-extending upper bar on each collapsible frame, the upper end of the corresponding rearwardly-extending upper bar in each collapsible frame being connected pivotally and slidably to the rearward portions of the respectively adjacent horizontal top bar, a transverse horizontal bar secured to both brackets and holding them apart, and a pair of upwardly-projecting bracing bars mounted at the lower ends thereof upon the transversely-horizontal bar independently of said brackets and having transversely-open eyes upon the upper ends thereof, the rear ends of the rearwardly-extending horizontal top bars having holes therein, and bolts extending through the latter holes in the rear ends of the horizontal top bars and the eyes on the upper ends of said upwardly-projecting bracing bars.

2,460,943
NECK STRAIGHTENING DEVICE FOR MUSICAL INSTRUMENTS
William W. Nelson, Belmont, Mass.
Application October 30, 1947, Serial No. 783,204
3 Claims. (Cl. 84—293)

1. A device of the type specified comprising rods normally arranged to lie nested parallelly disposed in superposed relation, means for connecting the inner ends of the rods, a member slidable upon the free end portion of one of said rods and with which member the free end of the other of said

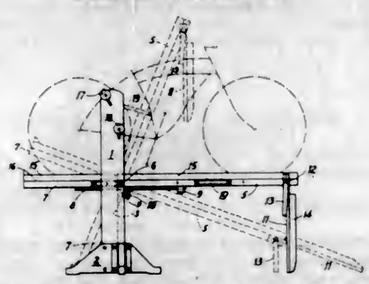
rods is in end abutting engagement, and a nut threaded upon the free end portion of said one of the rods with bearing against said member whereby as the nut is turned and tightened said member will be displaced and said other of the rods bent.

2,460,944
BICYCLE HOLDING FIXTURE
George Edward Nighthart, Lewistown, Pa.
Application June 28, 1946, Serial No. 680,277
1 Claim. (Cl. 81—32)



A bicycle holding fixture comprising a clamping vise adapted to clamp frame members of a bicycle and hold the same for repair work and provided with a single clamping bolt and nut, a horizontal vise supporting shaft provided with a pressure disc and a single locking stud and nut, a fixture stand for said supporting shaft and provided with a friction disc in cooperative relation to said pressure disc and located between said pressure disc and said locking stud and nut, and a fixture base provided with a single vertical bolt and nut, said fixture stand being rotatable on said fixture base about said vertical bolt, said supporting shaft being rotatable in said fixture stand, and said vise being operated by said clamping bolt and nut.

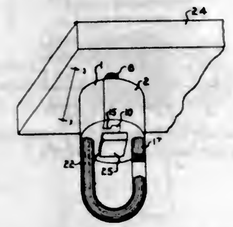
2,460,945
BICYCLE SERVICING FIXTURE
George E. Nighthart, Lewistown, Pa.
Application March 7, 1947, Serial No. 733,059
4 Claims. (Cl. 211—17)



1. As a bicycle servicing fixture the combination comprising an upright member, means on

said upright member for securing and supporting one end of a bicycle frame in elevated position, and an articulated bicycle runway comprising sections, one end of an intermediate section of said runway being pivotally supported by said upright member below said securing and supporting means, one end of a ramp section of said runway being pivotally connected to the outboard end of said intermediate section, and one end of a drop-leaf section of said runway being pivotally connected to the end of said intermediate section supported by said upright member, said intermediate section being adapted to be pivotally inclined for loading or unloading a bicycle and raised to horizontal position to support at least one end of the bicycle, said ramp section being adapted to be pivotally extended as an entering runway section and lowered as a supporting leg for the outboard end of said intermediate section, and said drop-leaf section being adapted to be pivotally extended as a rear runway section and lowered to an out-of-the-way position, and means to hold said drop-leaf section in the same plane as said intermediate section.

2,460,946
HANGER
John W. Reynolds, Albion, Mich.
Application July 17, 1946, Serial No. 684,296
10 Claims. (Cl. 248—62)

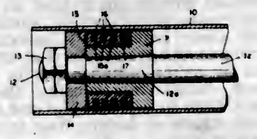


3. A hanger which comprises a body portion which is longitudinally divided its full length into male and female members, elongated shank hook means depending from said male and female members and cooperating with each other to form an elongated closed eye when the hanger is assembled, and means for fastening said male and female members together, said fastening means being engageable by moving said body members together while offset endwise a short distance relative to each other and then moving one of said members endwise to assembled position.

2,460,947
PROCESS FOR THE PRODUCTION OF YEAST
Sven Olof Rosenqvist, Rotebro, Sweden, assignor to Svenska Jästfabriks Aktiebolaget, a joint-stock company of Sweden
No Drawing. Application January 23, 1946, Serial No. 642,985. In Sweden November 25, 1943
6 Claims. (Cl. 195—91)

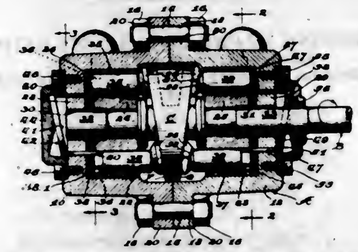
1. In a process for the production of yeast, useful as foodstuffs and for other nutritive purposes, the step of propagating the yeast in a nutrient medium containing a mixture of molasses wort and still residues from fermented sulphite waste liquor obtained as residue after alcoholic fermentation of sulphite waste liquor and subsequent distillation of the alcohol wherein the pentoses contained in said still residues will be fermented during said propagation of said mixture.

2,460,948
PUMP PISTON
Hans C. Sander, Denver, Colo., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Application July 17, 1945, Serial No. 605,505
2 Claims. (Cl. 309—4)



2. A piston construction comprising a cylindrical body having an external radial shoulder at one end, a piston rod rigidly secured to said body in axial alignment therewith, an end plate having an outside diameter substantially the same as the outside diameter of said shoulder, means for removably securing said end plate to the end of said body remote from said shoulder and in axial alignment with said body, a multiple piston ring unit-assembly including an axially removable annular cage on said body between said shoulder and end plate, axially spaced circumferential grooves in said annular cage, and piston rings in said grooves, said annular cage having an axial extent such that it has a sliding fit in a radial direction between the opposed faces of said shoulder and end plate and having an inside diameter sufficiently greater than the outside diameter of said body to permit it to become substantially eccentric with respect to said piston rod as the latter may become eccentric with respect to the cylinder with which said piston operates.

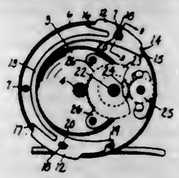
2,460,949
PRESSURE PUMP
Joseph M. Schmied, Chicago, Ill.
Application November 23, 1945, Serial No. 630,272
5 Claims. (Cl. 103—173)



1. In a multicylinder pump, the combination of a casing having a cylindrical bore, a cylinder body and barrel plate fitting in the cylindrical bore, cylinders in said cylinder body which are axially extending cylinder bores located at radii of equal lengths from the cylinder body axis, reciprocable pistons in the cylinders, a transfer conduit in the cylinder body connecting said cylinders, a partition between two adjacent cylinders, an inlet in communication with one of the two adjacent cylinders and an outlet in communication with the other of the two adjacent cylinders, said inlet and outlet also passing through the casing wall, thereby providing inlet and outlet ports clearance grooves in said barrel plate in axial alignment with said cylinders, a confined wobble plate housed within said casing, a push pin for each piston mounted for reciprocable movement in aligned bores in the barrel

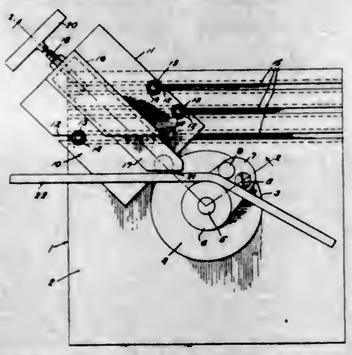
plate and casing end wall, and acted upon by said wobble plate to move said pistons in one direction, a cam shaft rotatably mounted in the end wall of said casing, and a driving inclined wobble plate fixed for rotation on said shaft and having its inclined face adjacent the ends of said pistons in parallel relationship with the plane of the confined wobble plate face so as to impart a progressive reciprocating motion to said pistons and their respectively associated push pins in a direction opposite to that imparted to the pistons by said confined wobble plate, the pistons each successively closing the transfer conduit for a time interval at the end of the piston pressure stroke to insure flow from the inlet to the outlet port.

2,460,950
FISHING REEL
William Shakespeare, Jr., Kalamazoo, Mich., assignor to Shakespeare Company, Kalamazoo, Mich., a corporation of Michigan
Application December 26, 1945, Serial No. 637,196
9 Claims. (Cl. 242—84.1)



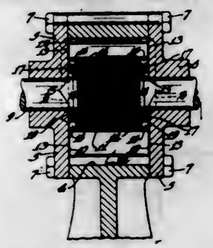
9. In a fishing reel, the combination of a frame, an end member, supporting posts for said end member supported by said frame, catches having finger pieces projecting from the periphery of said end member, and spring means acting to urge said catches outwardly, said posts being provided with keepers with which said catches coact to detachably secure said end member.

2,460,951
BENDING MACHINE ABUTMENT GUIDE
Horace M. Shuff, Tampa, Fla.
Application February 25, 1944, Serial No. 523,860
1 Claim. (Cl. 153—40)



A rod bending machine including a work table, a turntable within the work table, a bending die and a bending pin carried by and rotatable with said turntable, an abutment for abutting a side portion of a rod to be bent, a base plate having guiding means supported thereon for slidably mounting said abutment, opposite edge portions of said base plate having slots extending inwardly from the edges, said work table having on its surface a plurality of slots in spaced parallel relationship and parallel to the direction of initial movement of the rod to be bent, a plurality of bolts whose heads are slidable in said last mentioned slots, said bolts having means for fastening said base plate in any selected position along the direction of said last mentioned slots, manually operated screw-threaded means for adjustably sliding said abutment along said guiding means toward or away from said bending die but confined along a radial line at an angle of the order of forty-five degrees with respect to a radius extending to the initial point of bending of the rod on said bending die so that the distance between such initial point of bending and the rod contacting point of said abutment will bear a substantially constant ratio to the diameter of rod for varying rod diameters.

2,460,952
ROTARY PUMP WITH ELASTIC ROTOR SEALING RIB
Jerome Simer and Ernest E. Cook, Minneapolis, Minn., assignors to Paddle Pumps, Inc., Minneapolis, Minn., a corporation of Minnesota
Application July 28, 1945, Serial No. 607,618
2 Claims. (Cl. 103—117)

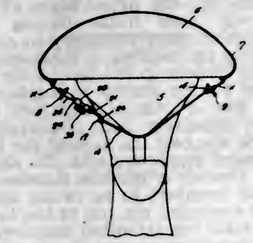


1. In a fluid pump including a housing member having a cylindrical wall, spaced parallel side walls having smooth inner surfaces, spaced inlet and outlet ports, a shaft extending through at least one of said side walls and journalled for rotation therein, a rotor member mounted on said shaft for rotation within said housing member, said rotor member having side surfaces adjacent said surfaces of the side walls; the improvement which comprises pressure sealing means between the housing member and rotor member and which includes a resilient endless rib projecting laterally from one of said members in surrounding relation to said shaft, said rib having a concave face in yieldable bearing engagement with an adjacent surface of the other of said members with the rib under compression, and said rib having an undercut side wall defining between same and said concave face a feathered edge in sealing engagement with said surface of the other of said members.

2,460,953
COVER HOLDER FOR PRESSING MACHINES
Manford Spicer, Jr., Kansas City, Mo., assignor of twenty-five per cent to George Johnson, Kansas City, Kans.
Application November 6, 1944, Serial No. 562,146
2 Claims. (Cl. 38—66)

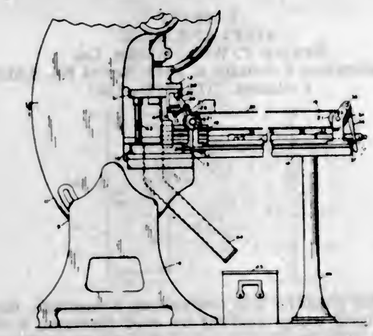
1. In a pressing machine cover-holding device, the combination, which comprises a pad, a cover

adapted for positioning over said pad, longitudinally disposed rigid strips associated with the opposite sides of said pad and cover, hooks pivotally attached to said rigid strips for removably holding the edges of said cover, flexible elements pivotally atached to the strips at one side of the pad extending under the pad, threaded sockets



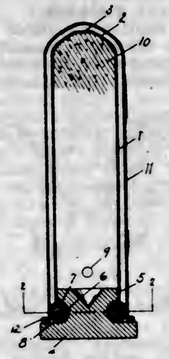
aligned with said flexible elements rotatably mounted in the strips on the other side of the pad, threaded studs extending from said sockets, links providing connecting means between said flexible elements and studs, means pivotally connecting the links at one end to said studs, and means pivotally connecting the other ends of said links to said flexible elements.

2,460,954
CUTTING MACHINE
Joseph Stuart, II, Wilmington, Del., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application September 5, 1945, Serial No. 614,547
7 Claims. (Cl. 164—48)



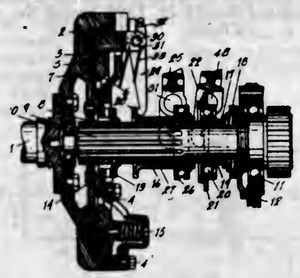
7. In a cutting machine having a work support with a plurality of guide strips adapted to guide a plurality of cruciform plastic sticks the combination of a power press with a single blade cutter rigidly attached to the ram, a die adapted to guide and hold a plurality of plastic sticks while being cut, said die being adjacent to the path of travel of the cutter, at least one push bar supported between parallel strands of endless chain advanced incrementally behind the cruciform plastic sticks to push said sticks forward in synchronism with the actuation of the cutter, means for stopping the actuation of the cutter and in turn the push bar as the ends of the cruciform plastic sticks are approached, and manual means for starting the actuation of the cutter and push bar.

2,460,955
INHALER
Paul H. Todd, Kalamazoo, Mich.
Application May 17, 1946, Serial No. 670,623
1 Claim. (Cl. 128—200)



An inhaler comprising a base member having a cylindrical portion thereon and defining an annular groove therearound, a generally cylindrical container having one end pressed into said annular groove, an annular ring of elastic material positioned in said groove and a generally cylindrical cover member arranged to fit over said ring and be held in place thereby.

2,460,956
COMBINED FRICTION AND JAW CLUTCH
Herbert H. Trail, Kalamazoo, Mich., assignor to Fuller Manufacturing Company, Kalamazoo, Mich.
Application July 10, 1944, Serial No. 544,276
17 Claims. (Cl. 192—53)



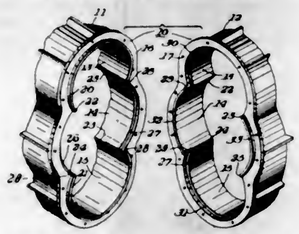
14. In a structure of the class described, the combination with a driven shaft, of a friction clutch comprising driving and driven members, the driven member having driving connection to said shaft, a jaw clutch comprising a driving jaw clutch member and a coacting driven jaw clutch member having driving connections with said driven shaft, a friction clutch releasing lever operatively associated with said friction clutch, a jaw clutch releasing lever operatively associated with said jaw clutch common means for operating both said clutch releasing levers to release the friction and jaw clutch members, said common means including a lost motion connection to permit either the friction clutch members or the jaw clutch members to be actuated first whichever offers the lesser resistance, and auto-

mounted in the frame, an angle arm rotatably

2,460,962
PLASTIC INSULATION AND METHOD OF

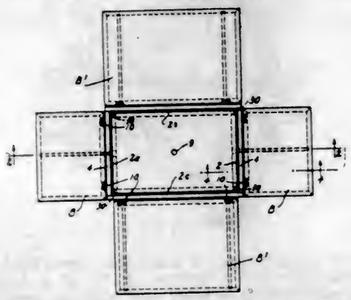
matic means for effecting re-engagement of the jaw clutch after re-engagement of the friction clutch when said actuating means is returned to its initial position.

2,460,957
HOUSING JOINT
Joseph E. Whitfield, Hamilton, Ohio
Application December 20, 1944, Serial No. 569,082
3 Claims. (Cl. 285—130)



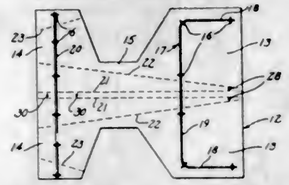
1. A partible housing comprising a plurality of sections, each section having a plurality of cavities complementary to the cavities of another section, the open ends of the cavities in a section are provided with transversely disposed flat surfaces arranged to mate in engagement with a complementary transverse surface of an adjacent section, and an axially disposed complementary flange bordering a cavity on one section and a groove bordering a complementary cavity on another section adjacent the flat surfaces, adjacent cavities of a section being alternately provided with flanges and grooves.

2,460,958
CAMPER'S BOX HAVING REMOVABLE TABLE-CLOSURE AND PIVOTED TABLE-TOP-EXTENSION LEAVES
Walter R. Williams, Jonesboro, Ark.
Application January 10, 1947, Serial No. 721,405
1 Claim. (Cl. 190—12)



In a combination box and table adapted to be supported in spaced relation to the ground, a rectangular bottom box member of relatively heavy construction, four box side members of relatively light construction extending respectively upwardly from the edges of said bottom member, four external brace members bordering the joint between said side and bottom members for securing said members together, four external brace members bordering the upper edges of said side members to secure said members in rectangular relation, a vertical brace member positioned in each of the interior corners formed by said side members and terminating in spaced relation to the upper edges of said side members, a flat table top member of relatively light construction having a finger receiving aperture therein, an inner frame supported on said interior corner braces and serving to reinforce said side members, said inner frame being of relatively heavy construction and of slightly less depth than the distance between the upper ends of said interior corner braces and the upper edges of said side members, said inner frame having a rabbet around its upper inner periphery to receive and to support said top member in substantially flush relation with respect to the top of the box, said inner frame having means to support shelves within the box, a pair of table top extension members of relatively light construction and each equal to one half the area of the top of the box and hinged respectively to the short brace members at the top of the box thereby adapting the extension members to be swung into end to end relation enclosing the top of the box, a second pair of table top extension members of relatively light construction and each equal to the area of the top of the box and hinged respectively in different horizontal planes to the long brace members at the top of the box thereby adapting the second pair of extension members to be swung to horizontal positions one above the other to enclose the upper end of the box, each of said extension members having a brace member secured to the underside thereof adjacent the edge opposite the hinged edge thereof, a plurality of removable brace arms adapted to be angularly interposed between the brace members on said extension members and the bracing members at the lower end of the box to rigidly support the extension members in horizontal position, and means for releasably retaining the extension members in said box enclosing positions thereof to facilitate transport of the box and table combination.

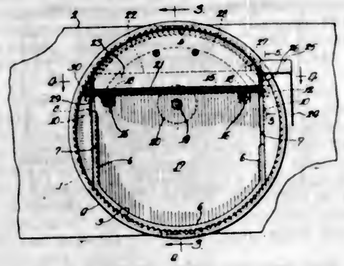
2,460,959
AIRPLANE KITE
Reuben P. Wills, Macon, Ga.
Application February 6, 1948, Serial No. 6,619
4 Claims. (Cl. 244—154)



1. An airplane kite comprising a fuselage, flexible front wings carried by said fuselage, a resilient wire secured to said front wings and fuselage and extending transversely across the kite, said wire having forwardly extending arms adjacent the side edges of the wings, and a laterally winged substantially rigid tail carried at the rear end of said fuselage.

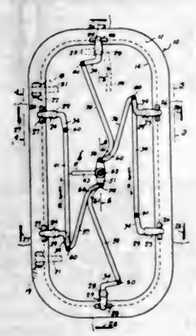
2,460,960
DRAFT CONTROL DAMPER
Robert Wilson, Holland, Mich., assignor to Holland Furnace Company, Holland, Mich., a corporation of Delaware
Application May 7, 1945, Serial No. 592,509
10 Claims. (Cl. 236—45)

10. A draft control damper comprising a frame adapted to be mounted in an opening leading to a furnace smoke pipe, a damper swingably mounted in the frame, an angle arm rotatably mounted with relation to said frame and said damper and having an extension loosely contacting the inner face of the damper above its axis



of rotation whereby upward movement of the free end of the arm will cause the extension to move the upper part of the damper free from further opening by suction in the smoke pipe.

2,460,961
QUICK-ACTING SECURING MEANS FOR WATERTIGHT DOORS
Donald G. Wilson, Stratford, Conn., assignor to The Wilson Manufacturing Company, Stratford, Conn., a partnership
Application September 29, 1944, Serial No. 556,447
2 Claims. (Cl. 292—48)



1. In a device of the character described a door adapted to be mounted on a frame to close an opening therein, a plurality of bearing sleeves mounted on the door at spaced points adjacent the periphery thereof and extending at right angles to the door, a clamping dog including a stud mounted to turn in each sleeve and each adapted to cooperate with an inclined surface on the door frame to clamp the door closed, an arm extending laterally from each dog, a bearing sleeve mounted at right angles to the door adjacent the center thereof, a shaft mounted in said latter sleeve and extending through the door, a lever mounted on said shaft, rigid links pivotally connected directly to the lever at permanent points at permanent distances from the axis of the shaft and also directly to the arms of the dogs to positively operate the dogs in either of two directions, and an operating handle on the shaft on each side of the door.

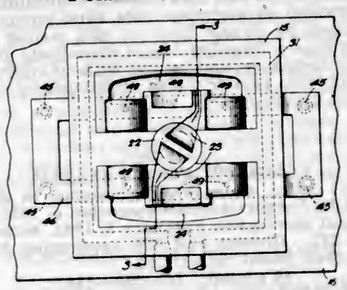
2,460,962
PLASTIC INSULATION AND METHOD OF MANUFACTURE
Manuel R. Ximenes, Fanwood, John H. Ferguson, Somerville, and Stanley C. Bunce, Plainfield, N. J., assignors to Johns-Manville Corporation, New York, N. Y., a corporation of New York
No Drawing. Application August 17, 1945, Serial No. 611,250
10 Claims. (Cl. 260—17.2)

1. A plastic insulating composition comprising heat insulating particles individually coated with a pressure sensitive, slightly tacky condensation product of zinc chloride heat treated drying oil and oil-soluble p-tertiary alkyl phenol-formaldehyde resin with 4–10 carbon atoms in the alkyl group, said composition being free of volatile solvents and being moldable by manual pressure at normal temperature to form a permanently cohesive and adhesive insulation mass.

2,460,963
CASING CLOSURE
Irvin L. Young, Chicago, Ill.
Application September 29, 1943, Serial No. 504,327
4 Claims. (Cl. 24—30.5)

1. A clip for the gathered end portion of a sausage casing where such end portion presents flat opposite sides comprising a plate of flexible sheet material formed with an opening for the passage of said portion, and a pair of extensions arranged on opposite sides of said plate, said extensions bent back toward the opening in said plate to press against the gathered end portion of the casing.

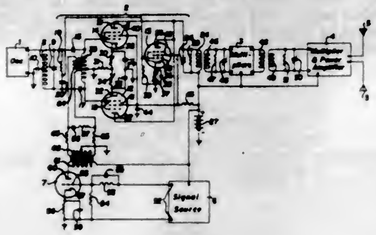
2,460,964
APPARATUS FOR MOLDING
Frank M. Adair, Berwyn, Anton J. Brunner, Congress Park, and Bruno M. A. Trebes, Berwyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 29, 1942, Serial No. 460,064
1 Claim. (Cl. 18—30)



An apparatus for molding thermosetting resinous material which comprises an extrusion cylinder, a mold having a mold cavity, a runner extending laterally from the base of the extrusion cylinder to said mold cavity, said runner having a width substantially equal to the diameter of said extrusion cylinder at the entrance end thereof, tapering to a narrower width at its

outlet end to the mold and having a thickness relatively small in relation to its width, and means for heating said extrusion cylinder, runner and mold to a temperature between 300° F. and 400° F., said runner being of such length as to bring the material to substantially the curing temperature in its passage therethrough.

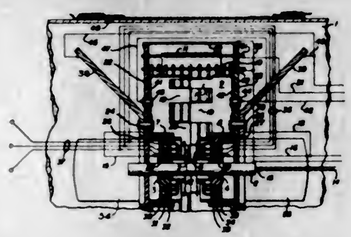
2,460,965
PHASE MODULATION SYSTEM
Robert Adler, Chicago, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Application September 10, 1945, Serial No. 615,394
4 Claims. (Cl. 179—171.5)



1. In combination, a carrier wave source, a frequency multiplier for multiplying the frequency of the carrier wave from said course, a modulating signal source, the signals from said signal source lying in a band of frequencies including a first and a second range contiguous with each other, said second range including higher frequencies than said first range, a modulator connected between said carrier wave and signal sources and constructed to vary the phase of the carrier wave from said carrier wave source as a function of the instantaneous amplitude of the signal from said signal source, said modulator including a filter circuit constructed to cause the maximum phase excursion of said carrier wave to be substantially inversely proportional to the frequency of modulating signals lying within said first range of frequencies and to be less than one radian for modulating signals lying in said second range, said carrier wave having an unmodulated frequency, and a tuned circuit connected between said modulator and said frequency multiplier and constructed to attenuate side band components produced by signals lying in said second range directly as a function of the magnitude of such signal frequency, and to pass without substantial modification carrier waves modulated by signals in said first range.

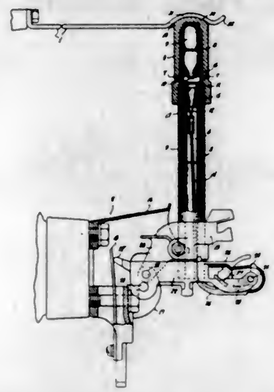
2,460,966
COMMUNICATIONS SYSTEM
Robert Adler, Chicago, Ill., assignor to Zenith Radio Corporation, a corporation of Illinois
Original application February 5, 1945, Serial No. 576,227. Divided and this application March 13, 1946, Serial No. 654,049
19 Claims. (Cl. 250—156)

1. An electron discharge device having an envelope, a cathode, at least three control electrodes, at least one other electrode having a plurality of spaced conducting areas, each of said control electrodes having a plurality of electron controlling areas regularly spaced from each other and effective upon application of multiphase potentials thereto to cause an electron density wave to progress at uniform velocity successively and continuously over said conducting areas, and a magnetic flux carrying member having a flux emitting end positioned adjacent the space between said cathode and said other elec-



trode, said member being oriented to direct flux through said space substantially at right angles both to the motion of said wave and to the paths of individual electrons flowing from said cathode to said other electrode.

2,460,967
HIGH-VOLTAGE CIRCUIT INTERRUPTER
Roald H. Amundson, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a corporation of Delaware
Application February 25, 1944, Serial No. 523,788
15 Claims. (Cl. 200—120)

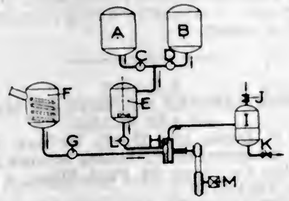


1. A circuit interrupter comprising means providing an arc channel, closure means for one end of said channel, the other end of said channel being open, gas liberating means adapted to liberate gas when acted upon by an arc, said gas liberating means being located adjacent said closure means, a fuse link within said channel having a fusible section in proximity to said gas liberating means, means adjacent the closure means for anchoring one end of said fuse link, said fuse link extending out of the open end of said channel, and fuse link extracting means located externally of said channel for extracting any remaining portion of said fuse link upon rupture of the fusible portion, said fuse link extracting means being arranged to exert tension on said fuse link which is transmitted to the anchored end of said fuse link.

2,460,968
METHOD FOR THE OBTAINMENT OF ALIPHATIC SULFONIC ACIDS AND ESTERS THEREOF
Léonce Bert, Michel Procofieff, and Vsevolod Blinoff, Paris, France, assignors to Societe Anonyme dite: Societe d'Innovations Chimiques dite: Sinnova ou Sadic, Meaux-Beauval, France
No Drawing. Application July 20, 1945, Serial No. 606,276. In France September 28, 1943
3 Claims. (Cl. 260—400)

1. A method of sulfonating an aliphatic acid containing at least six carbon atoms with chlorosulfonic acid comprising dissolving the acid in a solvent which is indifferent with regard to the sulfonating agent, admixing the said solution to chlorosulfonic acid at a ratio of 1 molecule of the initial substance to about 1.1 molecules of chlorosulfonic acid, sulfonating the mixture and removing the solvent by distillation after the gas evolution has ceased.

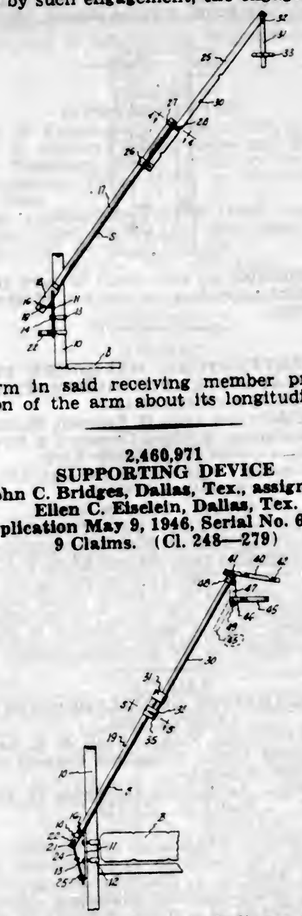
2,460,969
METHOD FOR PRODUCING HIGHER MOLECULAR ALCOHOLS
Vsevolod Blinoff, Paris, France, assignor to Societe Anonyme d'Innovations Chimiques dite: Sinnova ou Sadic, Meaux-Beauval, France
Application December 11, 1946, Serial No. 715,391
In France June 28, 1946
4 Claims. (Cl. 260—638)



1. In a continuous method for the production of a high molecular alcohol by the reaction of a water-free alcoholic solution of an ester with metallic sodium continuously conducting separate closed streams of the ester solution and of the molten sodium into a small reaction vessel completely filled by the reactants, grinding the said two components in said vessel into a dispersion at a temperature from about 100° to 200° C. while maintaining a continuous high rate of flow of the reactants through said vessel and removing the reaction products continuously from the same.

2,460,970
SUPPORTING DEVICE
John C. Bridges, Dallas, Tex., assignor to Ellen C. Eiselein, Dallas, Tex.
Application June 18, 1945, Serial No. 600,180
7 Claims. (Cl. 248—279)

1. A support including, a base member, a pivot shaft mounted on the base member and spaced from and extending substantially parallel to the face of the base member, an elongate supporting arm having a lost motion connection with the pivot shaft permitting said arm to swing on said shaft and also to move through an arc in the plane of the axis of the pivot shaft, a receiving member at the upper end of the base member, said arm being adapted to engage in the receiving member to be maintained in an elevated position by such engagement, the engagement of



the arm in said receiving member preventing rotation of the arm about its longitudinal axis.

2,460,971
SUPPORTING DEVICE
John C. Bridges, Dallas, Tex., assignor to Ellen C. Eiselein, Dallas, Tex.
Application May 9, 1946, Serial No. 668,599
9 Claims. (Cl. 248—279)

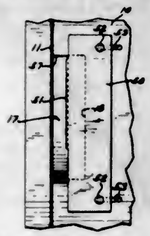
1. A supporting device including, a base member, a pivot plate carried by said base member, a hinge member swingably mounted on and supported by the upper surface of the pivot plate and projecting beyond the edge of said plate, an elongate supporting arm swingably secured on the projecting end of the hinge member, and adjustable means mounted on the base member and engageable with the supporting arm for swingably maintaining said arm in an elevated position.

2,460,972
CABLE REEL WITH ADJUSTABLE DRUM PORT
Arthur A. Bureau, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 8, 1946, Serial No. 708,586
6 Claims. (Cl. 242—77)

2. A reel for supporting cables thereon of various diameters comprising reel heads, a drum to which the reel heads are secured and which has an aperture therein, and means on said drum

selected from the group consisting of aromatic

cooperating with a portion of said aperture to define a port through which an end of the cable wound on the drum may be passed, said means



being adjustable on said drum to vary the size of said port according to the size of the cable on the drum.

2,460,973

LOW-TEMPERATURE, HYDROGEN FLUORIDE CATALYZED POLYMERIZATION OF CONJUGATED DIOLEFINS

John D. Calfee and John H. Pearson, Manhasset, N. Y., assignors to Allied Chemical & Dye Corporation, a corporation of New York

No Drawing. Application June 21, 1946, Serial No. 678,362
13 Claims. (Cl. 260—93)

1. The process of preparing hydrocarbon polymers comprising polymerizing a conjugated aliphatic diolefin at a temperature below 0° C., employing anhydrous hydrogen fluoride as the catalyst in the presence of a halogenated aliphatic hydrocarbon solvent for both the diolefin and the hydrogen fluoride, which solvent is inert to the reactants and to the resulting polymer.

2,460,974

PREPARATION OF MOLYBDENUM COMPOUNDS

Michael C. Carosella, Niagara Falls, N. Y., assignor to United States Vanadium Corporation, a corporation of Delaware

No Drawing. Application December 28, 1944, Serial No. 570,218
3 Claims. (Cl. 23—51)

3. A method of treating an ore material containing both molybdenum and tungsten compounds to recover a molybdenum compound therefrom, which method comprises digesting such ore material at a steam pressure of about 130 to 200 pounds per square inch with an aqueous solution of an alkali metal having a strong basic reaction, thereby producing an alkaline solution containing both molybdenum and tungsten compounds, adjusting the pH of said solution to a value between 5 and 7.5 by adding a mineral acid thereto, and adding calcium chloride to the said solution in an amount at least 80% of that theoretically sufficient to react with all of the molybdenum in said solution, thereby precipitating molybdenum as calcium molybdate therefrom without precipitating any substantial quantity of tungsten.

2,460,975

RECOVERY OF MOLYBDENUM COMPOUNDS

Michael C. Carosella, Niagara Falls, N. Y., assignor to United States Vanadium Corporation, a corporation of Delaware

No Drawing. Application December 28, 1944, Serial No. 570,219
6 Claims. (Cl. 23—51)

1. Process which comprises adjusting the pH of an aqueous solution containing molybdenum and tungsten compounds to a value between 5 and 7.5 and adding a mineral acid salt selected from the group consisting of sulfate, chloride and nitrate of a divalent metal selected from the group consisting of iron, nickel, cobalt and manganese to the said solution, thereby precipitating a molybdate of the selected metal therefrom without precipitating any substantial quantity of tungsten.

2,460,976

METHOD OF MAKING PLASTIC POLYSTYRENE

John W. Church, Mount Lebanon, Pa., assignor to Falk & Company, Carnegie, Pa., a corporation of Pennsylvania

No Drawing. Application August 15, 1944, Serial No. 549,633
2 Claims. (Cl. 260—8)

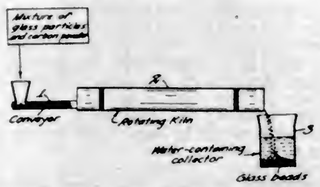
1. The method of making plastic masses by subjecting monomeric styrene in reactive condition to heat reaction in water emulsion with a protective colloid formed by a protein selected from the group of proteins consisting of casein and glycinin, continuing heat polymerization until a solid sponge-like reaction product of macromolecular structure comprising high polymers of styrene and protein of the colloid forms and settles in the reaction liquid, forming a fine aqueous suspension of the said separated reaction product by milling, and recovering the said finely particulate reaction product from the said aqueous suspension in a plastic mass by admixture of a non-evaporative solvent plasticizer and removal of water.

2,460,977

CARBON POWDER METHOD OF MAKING GLASS BEADS

Edward P. Davis and Harry Heltzer, St. Paul, Minn., assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware

Application August 29, 1945, Serial No. 613,432
2 Claims. (Cl. 49—77)



1. A method of making glass beads comprising heating a mixture of glass particles and carbon powder sufficiently to cause combustion of the carbon powder and fusion of the glass particles into non-adhering spheres formed by surface tension, and terminating the heating and combustion to avoid coalescence of the spheres, and then cooling the spheres; the proportion of carbon being sufficient to prevent the spheres from sticking together.

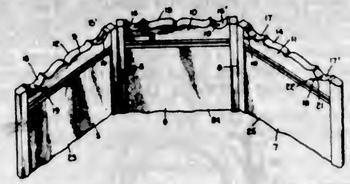
2,460,978

GARMENT HANGING SCREEN

Harry Derman, Great Neck, N. Y.

Application January 17, 1947, Serial No. 722,643
4 Claims. (Cl. 160—127)

1. A screen of the character described, said screen comprising hingedly coupled sections, each section having, at its upper end, a rail terminating in an upper curved surface, said rail centrally of a curved surface having a vertical aperture, a hanger hook comprising a part fitting in the aperture of said rail, and a curved finger con-



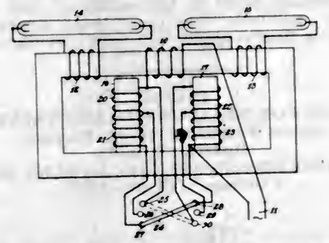
forming generally to the contour of the curvature of said surface and frictionally engaging the surface to retain the hook against accidental displacement therefrom within the side boundaries of said rail.

2,460,979

MEANS FOR CONTROLLING THE OPERATION OF A PLURALITY OF GASEOUS DISCHARGE LAMPS

William Foerste, Pelham Manor, N. Y.

Application July 30, 1945, Serial No. 607,749
7 Claims. (Cl. 315—257)



1. The combination with a plurality of gaseous discharge lamps operating at a substantially constant ionization voltage; of means to vary jointly the power supplied to the lamps to alter the respective intensities of illumination thereof, including a transformer having a closed magnetic core, only one primary and at least two secondary windings thereon, the latter being connected respectively to the lamps; and high reluctance variable reactors magnetically positioned between the primary and its corresponding secondary in single-acting shunt magnetic relationship with said closed magnetic core and separated therefrom by a non-magnetic gap for shunting from the said secondaries a portion of the flux generated by the said primary, and including respective coils and switching means for dividing variably between the lamps the outputs of the respective secondary windings.

2,460,980

PROCESS FOR THE PREPARATION OF ISOCYANATE DERIVATIVES OF PROTEINS

Heinz L. Fraenkel-Conrat and Harold S. Olcott, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Application September 27, 1945, Serial No. 619,011
10 Claims. (Cl. 260—112)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

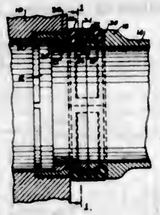
1. A process of preparing a protein derivative comprising reacting a protein with an isocyanate selected from the group consisting of aromatic isocyanates and long chain aliphatic isocyanates under anhydrous conditions, in the presence of pyridine, and at an elevated temperature.

2,460,981

PIPE CONNECTION

William H. Francisco, Jr., Bloomfield, N. J., Edward C. Steiner, Dallas, Tex., and Henry C. Hill, Pasadena, Calif., assignors to Wright Aeronautical Corporation, a corporation of New York

Original application June 6, 1944, Serial No. 538,964. Divided and this application November 25, 1947, Serial No. 787,938
4 Claims. (Cl. 285—129)



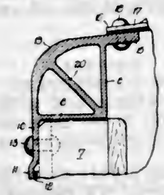
1. In combination with a pair of pipes adapted to be secured together in end-to-end relation; each of said pipes having an annular external bead adjacent its end facing the other of said pipes; a pair of semi-circular rigid members of inwardly opening channel-shaped cross-section adapted to be disposed about and bridging across the adjacent ends of said pipe members with said beads disposed between the inwardly extending channel sides of said members, the channel sides of said members terminating in spaced relation to said pipes and each having an internal diameter less than the maximum diameter of the adjacent one of said beads; resilient rubber-like means having at least a portion adapted to be disposed between said semi-circular members and said pipes, said resilient means having preformed internal groove means adapted to receive said beads; and a flexible band also bridging the adjacent ends of said pipes and having a width approximately equal to the width of said semi-circular members, said band being adapted to tightly draw said semi-circular members and said resilient means about said pipes.

2,460,982

EXTRUDED FRAME MEMBER

Garth G. Gilpin, Chicago, Ill., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware

Application August 12, 1944, Serial No. 549,203
3 Claims. (Cl. 105—404)



1. A structural member adapted for use as a railway car side plate, side sill or corner post comprising an extruded hollow metallic section

having angularly disposed arms and an arch be-

2,460,989

bead at the end facing the other pipe and a sec-

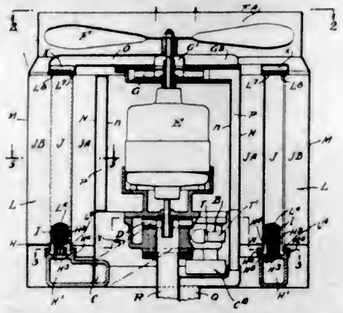
having angularly disposed arms and an arch between said arms formed on a radius, whereby a box structural member is provided, said arch being thicker at one end than at the other end thereof and flanges extending from said arch beyond said arms, said flanges providing means for attachment of cooperating parts of a railway car structure, the flange extending from the thicker end of said arch being of greater cross sectional area than the other, to provide additional strength to support a cooperating load bearing car part.

2,460,983

AIRPLANE HEATER WITH ALTITUDE CONTROLLED COMBUSTION AIR FEED

Frederic O. Hess, Germantown, Pa., assignor to Selas Corporation of America, a corporation of Pennsylvania

Application October 5, 1942, Serial No. 460,801
5 Claims. (Cl. 126—110)



1. For use in an airplane, a heating system comprising a heat radiating unit including means forming a combustion space, structure communicating with the space to continuously supply to the latter for combustion therein during flight of the airplane a combustible mixture of fuel and air which normally decreases in density with increase in altitude of the airplane, said structure including means providing a path of flow for the air and a fuel line through which liquid fuel is adapted to be supplied under pressure, the fuel being discharged under pressure from the fuel line into the presence of the air to produce a combustible mixture, flow regulating means adjustable to regulate the volumetric rate at which air of varying density is supplied to said space, and means responsive to the pressure of the ambient atmosphere to adjust said regulating means and thereby vary the volumetric rate at which air of varying density is supplied to the space so as to maintain a weight ratio of air to fuel which will provide satisfactory combustion conditions in the space during flight of the airplane irrespective of change in density of the air supplied to the space.

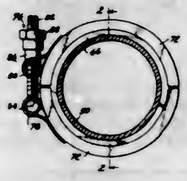
2,460,984

PIPE CONNECTION

Henry C. Hill, Montclair, and William H. Francisco, Bloomfield, N. J., assignors to Wright Aeronautical Corporation, a corporation of New York

Application June 6, 1944, Serial No. 538,964
3 Claims. (Cl. 285—86)

1. In combination with a pair of pipes adapted to be secured together in end-to-end relation, each of said pipes having a first external annular bead at the end facing the other pipe and a second annular bead spaced from said first bead, an annular member of resilient rubber-like material having a plurality of preformed internal annular grooves, said annular member being disposed about and bridging the junction of said pipes with said beads extending into said grooves, a pair of semi-circular rigid members of inwardly opening channel-shaped cross-section disposed about said annular member with said annular member filling the space between the channel sides of



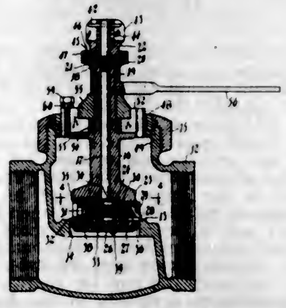
said semi-circular members, the channel sides of said semi-circular members terminating in spaced relation to said pipes and each of said channel sides having an internal diameter less than the maximum diameter of the adjacent second bead, and a flexible band also bridging the adjacent ends of said pipes and having a width substantially equal to the width of said semi-circular members, said band being adapted to be tightly drawn about said semi-circular members.

2,460,985

TOOL FOR RECONDITIONING VALVES

James Wellman Jackson, Toronto, Ontario, Canada

Application November 23, 1945, Serial No. 630,475
5 Claims. (Cl. 90—12.5)



1. In a tool for reconditioning valve seats, an elongated body for insertion downwardly into a valve to the seat thereof, said body having an axial bore and having an aperture extending through its lower end at right angles to its axis, a spindle mounted in said bore for rotation and held against endwise movement, the lower end of said spindle being provided with peripheral teeth, a holder slidably mounted in said aperture and held against rotative movement, said holder having a cylindrical section provided with circumscribing screw threads, a bevel gear in mesh with said peripheral teeth of said spindle and held against endwise movement in said aperture, said bevel gear having a bore threadedly engaged with said screw threads for feeding holder transversely of said body upon movement of said spindle, a cutting tool carried by said holder, and means for turning said body.

2,460,986

DRYING EGGS

George Josh, Crown Point, Ind., and Louis A. Harriman, Chicago, and Ervin W. Hopkins, Hinsdale, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois

No Drawing. Application December 21, 1944, Serial No. 569,260
7 Claims. (Cl. 99—210)

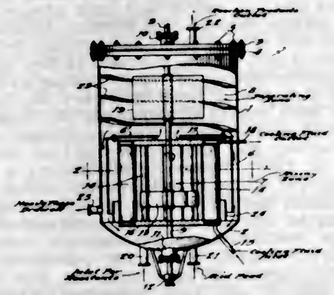
1. A process for preparing dried egg products comprising inoculating an egg white liquid with *Saccharomyces cerevisiae*, fermenting the inoculated mixture, and drying the fermented mixture.

2,460,987

MIXING AND SEPARATING APPARATUS

Elmer R. Kanhofer, Riverside, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of Delaware

Application February 23, 1945, Serial No. 579,441
6 Claims. (Cl. 23—285)



1. A mixing and centrifuging apparatus comprising a cylindrical chamber, a circular baffle disposed horizontally within said chamber and dividing the chamber into a lower section and an upper section, said baffle terminating short of the inner wall of the chamber and having a central opening, a cylindrical shell depending from said baffle adjacent the outer periphery of the latter into said lower section and terminating above the bottom of the lower section, a rotatable drive shaft extending vertically through the chamber and through the central opening of said baffle, the drive shaft being of smaller cross-sectional area than said opening, a mixing rotor secured to the shaft in said lower section, and a centrifuging blade secured to the shaft in said upper section.

2,460,988

WELDING FLUX

Kenneth H. Koopman, Kenmore, N. Y., assignor to Union Carbide & Carbon Corporation, a corporation of New York

No Drawing. Application October 27, 1945, Serial No. 625,112
5 Claims. (Cl. 148—26)

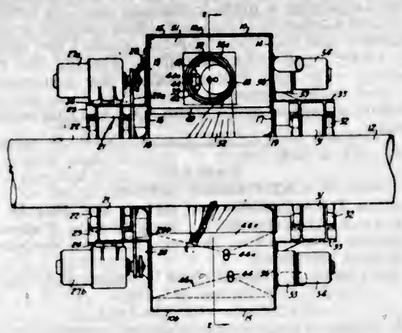
5. In the art of welding ferrous alloys containing substantial quantities of chromium by fusion-deposition methods, the improvement which comprises conducting such fusion-deposition operation under a molten flux composed of the fusion product of a mixture containing 5% to 15% borax glass; 5% to 15% titanium dioxide; 5% to 15% calcium oxide; 25% to 40% sodium carbonate; the remainder essentially all silica, the silica content being 25% to 40%.

2,460,989

PIPE-CLEANING MACHINE

Warren A. Kraner, San Francisco, Calif., assignor to General Paint Corporation, San Francisco, Calif., a corporation of Nevada

Application June 2, 1947, Serial No. 751,816
10 Claims. (Cl. 51—9)



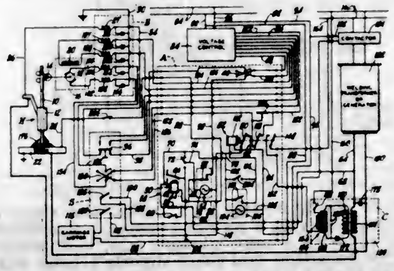
1. In a pipe cleaning machine, a housing adapted to surround a pipe to be cleaned, a grit blasting unit carried by said housing and adapted to discharge grits upon the sides of the pipe, means for rotating the housing about the pipe and for simultaneously advancing the same longitudinally about the pipe, and means for supplying grits to said unit.

2,460,990

AUTOMATIC ELECTRIC FUSION WELDING APPARATUS AND PROCESS

John A. Kratz, Yonkers, N. Y., and Henry G. Thoma, Rutherford, N. J., assignors to The Linde Air Products Company, a corporation of Ohio

Application February 5, 1946, Serial No. 645,648
9 Claims. (Cl. 219—8)



8. An automatic electric fusion welding process involving high-frequency starting and automatic timing, which is especially suitable for plug welding, intermittent welding, and production line welding, which comprises generating and applying a high-frequency potential between the work and a welding electrode connected to a welding current source while slowly feeding such electrode toward the work, automatically discontinuing the generation of such high-frequency potential and starting relative traverse motion between the electrode and work as soon as the welding voltage drops when the welding operation starts, carrying out such welding operation for a desired period of time, stopping the welding operation without discontinuing the relative traverse motion between the electrode and work for a desired

interval, and automatically repeating the cycle beginning with the high-frequency potential generation.

9. A submerged-melt electric plug welding process, which comprises feeding a welding rod at a relatively slow rate into a mass of non-conductive granular material toward a plug weld site on the work, applying a high-frequency starting potential and a potential from a welding current source between said rod and the work to start the welding action, and automatically increasing the rod feeding rate and discontinuing the generation of such high-frequency current as soon as the welding potential drops when such welding action starts.

2,460,991

ATOMIZED METAL

Gordon J. Le Brasse, Ann Arbor, and Harold E. Francis, Detroit, Mich., assignors to Federal-Mogul Corporation, Detroit, Mich., a corporation of Michigan

No Drawing. Application February 6, 1946, Serial No. 645,948

2 Claims. (Cl. 75—163)

1. A new article of manufacture comprising an atomized copper alloy in the form of a loose mass of particles of no greater size than that capable of passing through a 100 mesh screen, said alloy consisting of 5% to 50% lead, up to 2% nickel, up to 12% tin, up to 6% zinc, up to 0.5% phosphorus, and the balance copper, characterized by the fact that the oxygen inclusion in said alloy is no greater than 0.5%.

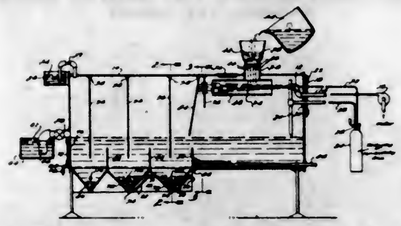
2,460,992

METHOD OF ATOMIZING METAL

Gordon J. Le Brasse, Ann Arbor, and Harold E. Francis, Detroit, Mich., assignors to Federal-Mogul Corporation, Detroit, Mich., a corporation of Michigan

Application February 6, 1946, Serial No. 645,947

2 Claims. (Cl. 18—47.3)



1. In the atomization of metal, the steps of flushing air from a confined space and replacing such air with a non-oxidizing gas, maintaining a pressure within said space slightly greater than atmospheric by the continued introduction into said space of a non-oxidizing gas, introducing a stream of water flowing at a relatively high velocity into said space, introducing a relatively fine stream of molten metal into said high velocity stream of water within said space, partially obstructing the flow of said high velocity stream of water after the introduction of said molten metal thereto whereby to dissipate the force of said stream of water, creating a unidirectional flow of water in the lower portion of said space for receiving particles of said molten metal broken up and solidified by said high velocity stream of water, and effecting gravitational separation of said particles into a plurality of different sizes under the effects of said unidirectional flow of said water.

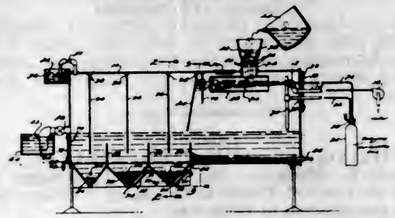
2,460,993

APPARATUS FOR ATOMIZING METAL

Gordon J. Le Brasse, Ann Arbor, and Harold E. Francis, Detroit, Mich., assignors to Federal-Mogul Corporation, Detroit, Mich., a corporation of Michigan

Application February 6, 1946, Serial No. 645,946

9 Claims. (Cl. 18—2.5)



7. Metal atomizing apparatus comprising, in combination, a relatively elongated tank, means for introducing a relatively high velocity stream of water into one end of said tank adjacent the upper portion thereof and directed toward the opposite end of said tank, baffle means between the ends of said tank in the path of flow of said high velocity stream of water serving to break up said stream and direct it toward the bottom of said tank, means intermediate the first two mentioned means for introducing molten metal in a relatively fine stream into said high velocity stream of water, means for introducing a non-oxidizing gas into said tank, means sealing said tank against the entrance of air thereto, means including an overflow at the opposite end of said tank for maintaining a substantially constant water level therein, means for introducing an additional stream of water into the first mentioned end of said tank providing with said high velocity stream a body of water in the bottom portion of said container flowing from the first mentioned end thereof toward said opposite end for the purpose of carrying particles of metal broken up by said high velocity stream in a rearward direction in said tank, a plurality of troughs in the bottom of said tank extending transversely of the path of flow of said body of water therein serving to receive and retain said particles of metal carried by said body of water, and means for agitating particles of said metal deposited in said trough whereby to aid in effecting a separation of said particles in accordance with the size thereof.

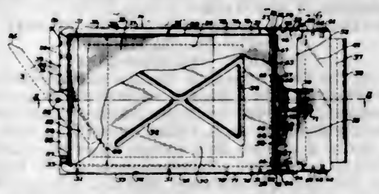
2,460,994

PHOTOGRAPHIC FILM PACK ADAPTER

Alfred E. Little, Chicago, Ill., assignor to Busch Precision Camera Corporation, Chicago, Ill., a corporation of Illinois

Application October 23, 1946, Serial No. 705,047

7 Claims. (Cl. 95—22)



1. A photographic film pack adapter comprising a frame member having means forming a

light free chamber therein and adapted to receive therein a photographic film pack, means for permitting photographic images to be exposed by the film members of said pack, said frame having an open end permitting introduction of said pack from one end of said adapter in sliding movement into said chamber, and means for latching said pack in exposable position whilst excluding light from said chamber, comprising a member movable from a position out of the path of said pack while same is engaged in sliding movement into the chamber to a position against the end of said pack and over said open end after said pack has been seated, said frame member having means for ejecting said pack when said movable member is positioned out of the path of said pack, said ejecting means comprising a spring-opposed lever movable into engagement with said pack for moving same and operable from externally of said adapter, said frame member having means permitting access by said lever, said access means being light-insulated by said opposing spring.

2,460,995

POLYVINYL ALCOHOL PLASTICIZED WITH AN AMINE ADDUCT OF BUTADIENE CYCLIC SULFONE

Carl Walter Mortenson, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Application December 22, 1944, Serial No. 569,429

6 Claims. (Cl. 260—30.2)

1. A polyvinyl alcohol article containing as a plasticizer therefor an amine adduct of butadiene cyclic sulfone.

2,460,996

PRODUCTION OF 3-CHLORO METHACRYLONITRILE

Jerome L. Mostek, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine

No Drawing. Application August 1, 1945, Serial No. 608,354

1 Claim. (Cl. 260—465.7)

In a process for producing 3-chloromethacrylonitrile, the improvement which consists of reacting 2,3-dichloroisobutyronitrile with liquid anhydrous ammonia in proportions approximating 8 to 10 moles of ammonia to 1 mole of nitrile at a temperature approximating 20° to 25° C. and thereafter recovering 3-chloromethacrylonitrile by removing unreacted ammonia from the reaction mixture, then extracting the residue with a solvent, and recovering 3-chloromethacrylonitrile from the extract by distillation.

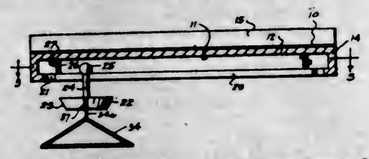
2,460,997

CLOTHES HANGER ASSEMBLY

Donald C. Myers, Dallas, Tex.

Application June 18, 1947, Serial No. 755,285

4 Claims. (Cl. 211—123)



1. A clothes hanger assembly including, a longitudinal supporting member having a bottom, the bottom of the supporting member having a longitudinal slot therein with an enlarged opening at one end thereof, a hanger bracket having an upstanding shank provided with a supporting ball at its upper end, said ball being insertable through the enlarged opening into the interior of the member and having a diameter larger than the slot, whereby the hanger bracket is suspended from the member while being rotatable and movable longitudinally with respect thereto, and a clothes hanger removably and rotatably suspended from the bracket.

2,460,998

METHOD OF COATING PAPER

Harley E. Nelson, Park Ridge, Ill., assignor, by mesne assignments, to Stein, Hall & Co., Inc., a corporation of New York

No Drawing. Application March 20, 1944, Serial No. 527,337

3 Claims. (Cl. 117—76)

1. A method of coating paper which comprises coating the paper in a wet way with a coating color composition comprising an acid deflocculated clay and a starchy polysaccharide film forming binder, drying the paper to produce a preformed set coating, thereafter treating said preformed coating in a separate step with a resinous condensation product from the class consisting of water dispersible film forming urea-formaldehyde resins and melamine-formaldehyde resins, and heating the resultant products sufficiently to insolubilize the resultant coating.

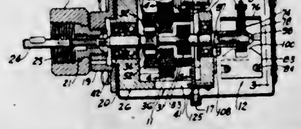
2,460,999

TACHOMETER GENERATING APPARATUS

James H. Nilson, Wilmette, and Vernon C. Westberg, Chicago, Ill., assignors to Sun Electric Corporation, Chicago, Ill., a corporation of Delaware

Application August 2, 1947, Serial No. 765,744

14 Claims. (Cl. 171—209)



1. Apparatus for generating a voltage wave having voltage impulses separated by intervals of substantially zero voltage with a rapid rate of change from zero voltage to said impulses comprising, a stationary magentic structure, windings associated therewith, and an inductor rotatable relative thereto, said inductor comprising one pair of diametrically opposed sectors having a constant radius and another pair of diametrically opposed sectors in alternation with said one pair, said other pair of sectors having uniformly varying radius.

2,461,000

DISPENSER SUPPORT

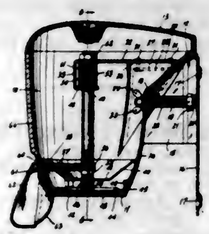
George H. Packwood, Jr., St. Louis, Mo.

Original application June 9, 1941, Serial No. 397,158. Divided and this application September 15, 1944, Serial No. 554,185

5 Claims. (Cl. 248—203)

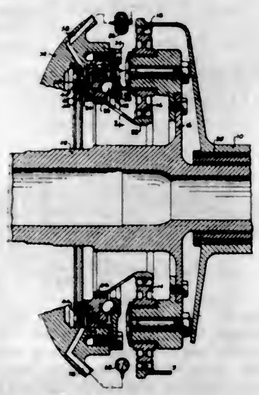
1. In a dispenser, a bowl, spaced flange walls extending backwardly from the bowl and having exposed edges, an attaching means engageable

across the edges of said flange walls over a substantial area and adapted to be secured to a wall or the like, said attaching means and the flanged walls being shaped to provide an enclosure, means on the attaching means to receive removable securing means, said means on the attaching means



being disposed within the enclosure between the flange walls and the bowl when the dispenser is attached to be accessible only when the bowl and attaching means are disengaged, and means accessible only from within the bowl for securing the bowl to the attaching means.

2,461,001
TORQUE METER
Peter H. Palen, Paterson, N. J., assignor to Wright Aeronautical Corporation, a corporation of New York
Application October 6, 1945, Serial No. 620,719
4 Claims. (Cl. 73—136)

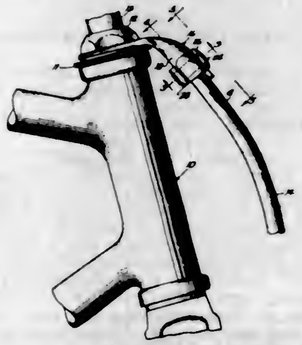


1. In combination, means providing a chamber, a piston-like member closing one end of said chamber and movable relatively thereto, a passage through which a fluid under pressure is adapted to be supplied, a restricted opening between said passage and chamber, a fluid bleed opening communicating with said passage on the side of said restricted opening remote from said chamber, means operative to exert a force on said piston-like member against the fluid pressure in said chamber, said piston-like member being movable by said force and the opposing force of the fluid pressure in said chamber to adjust the magnitude of said bleed opening, a fluid pressure responsive indicator, and a passage establishing communication between said indicator and said chamber on the chamber side of said restricted opening.

2,461,002
QUICK-CHANGE BATTERY SUPPORT
Harold C. Riggs, Langhorne Manor, Pa., assignor to The Electric Storage Battery Company, a corporation of New Jersey
Application February 2, 1944, Serial No. 520,793
7 Claims. (Cl. 136—171)

6. In combination, a battery box having blocks projecting from opposite sides, conducting strips on the upper faces of said blocks, a pair of horizontally disposed slideways having upper and lower flanges, said lower flanges slidably supporting said blocks, contact springs having end portions fixed to said upper flanges and free ends terminating in hooks, said hooks normally clearing said blocks, terminal lugs electrically connected with the fixed ends of said springs, and levers pivoted to said slideways and engageable with said springs to force said hooks into engagement with said blocks and thereby retain the battery box in fixed position relative to the slideways and electrically connect said terminal lugs with said conducting strips.

2,461,003
TRUSS ROD BRACKET
Frank W. Schwinn, Chicago, Ill.
Application May 14, 1945, Serial No. 593,565
1 Claim. (Cl. 287—54)



A truss tube rod and bracket assembly for connection to the steering tube of a bicycle and comprising a metal bracket provided with a body portion having a centrally located bore at one end for receiving the steering tube, said bracket having a forwardly and downwardly extending truss rod securing flange, said flange being provided on each side with downwardly extending and substantially straight partially cylindrical portions and being provided with a through bore between said partially cylindrical portions, a bolt of a size to fit said through bore, a pair of truss rods each having a substantially straight upper end portion of a length substantially greater than that of said partially cylindrical portions, said end portions of the truss rods being engaged on their outer sides by said partially cylindrical portions of the flange, said truss rods also being provided with transversely extending partially cylindrical grooves provided by deformation of the adjacent

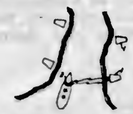
side walls thereof for receiving said bolt located in said through bore, said partially cylindrical portions of the securing flange having axes angularly disposed to diverge downwardly for holding said upper end portions of the truss rods in diverging relationship to one another, and a threaded member for engaging the end of said bolt for securing the truss rods to said bracket, said threaded member being substantially trapezoidal in shape so that it extends over the middle portion of each truss rod when the truss rods are disposed in said diverging relationship relative to one another.

2,461,004
TREATMENT OF HYDROCARBON RESINS AND PRODUCTS THEREOF
Frank J. Soday, Baton Rouge, La., assignor to The United Gas Improvement Company, a corporation of Pennsylvania
No Drawing. Application June 20, 1944, Serial No. 541,266
7 Claims. (Cl. 260—80)

1. A process for producing unsaturated resin-forming hydrocarbon material comprising heating in a heating zone in attenuated form in the presence of steam and under temperature conditions between 400° C. and and 800° C. and for a period of time sufficient to effect depolymerization to unsaturated resin-forming material a solution in an aromatic hydrocarbon solvent substantially inert under the conditions obtaining of mixed hydrocarbon resin polymer selected from the group consisting of heat resin polymer and catalytic resin polymer of polymerizable hydrocarbons contained in a hydrocarbon oil which has been physically separated from tar produced in the vapor phase pyrolysis of petroleum oil and which is free from and of greater volatility than the pitch of said tar, said hydrocarbon oil when separated and when subjected to polymerization containing in addition to hydrocarbons boiling between 210° C. and 450° C. which are not polymerizable by the application to said oil of heat alone but which are polymerizable to catalytic resin polymer by treating said oil with a resin-producing catalyst, other hydrocarbons boiling between 210° C. and 450° C. which are polymerizable to catalytic resin polymer by treating said oil with a resin-producing catalyst but which last-mentioned hydrocarbons are also polymerizable to heat resin polymer by the application to said oil of heat alone, said last-mentioned hydrocarbons being present in said hydrocarbon oil in amount greater than approximately 5% of the total hydrocarbon oil boiling between 210° C. and 450° C., while removing the resulting depolymerized material from said heating zone and cooling said removed material substantially as rapidly as formed, said steam being present in said heating zone in a proportion between 1 part steam to 10 parts resin polymer by weight and 5 parts steam to 1 part resin polymer by weight; and thereafter repolymerizing said removed depolymerized products in liquid phase.

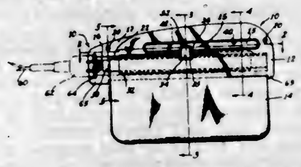
2,461,005
ULTRA HIGH FREQUENCY TRANSMISSION
George C. Southworth, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 5, 1940, Serial No. 327,988
12 Claims. (Cl. 343—5)

1. A course marking system comprising a plurality of radio reflectors geographically spaced apart to outline a course, a vehicle having a transmitter for launching radio waves of a plurality of frequencies toward said reflectors, and means adjacent said transmitter for receiving the radio waves returned from said reflectors, said reflectors having respectively different frequency-reflection characteristics whereby they may be severally identified by the character of the waves returned to said receiver.



10. A hollow metallic wave guiding passage for electromagnetic waves, said passage flaring from one end thereof to the other, and the transverse dimensions of said passage being so proportioned that at every point along the length of said passage the impedance presented to waves guided therethrough is substantially the same.

2,461,006
TROUSER PRESSER
Ivan P. Sowers, Los Angeles, Calif.
Application February 24, 1945, Serial No. 579,538
11 Claims. (Cl. 219—19)



1. In combination in a heated hand-type fabric presser: a handle enclosing a cavity; movable fabric pressing plates having portions disposed in said cavity and portions lying beyond said handle; means carried by said handle to separate said plates; and heating means for said plates carried within said cavity in operative relation with and between said portions of said fabric pressing plates within said cavity, said handle being extended beyond said heating means at the opposite ends of said plates sufficiently to engage fabric being pressed and prevent entrance of said fabric into said cavity and into engagement with said heating means when said plates are separated.

2,461,007
PROCESS FOR REFINING TURPENTINE
George H. Splittgerber, Whiting, Ind., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
No Drawing. Application June 6, 1946, Serial No. 674,931
2 Claims. (Cl. 260—675.5)

1. A process which comprises heating turpentine over barium oxide to reflux temperature of the turpentine to remove or inactivate oxygen impurities contained in the turpentine.

2,461,008
MAGNETIC SEPARATOR
Roswell H. Stearns, Wauwatosa, Wis., assignor to Stearns Magnetic Mfg. Co., Milwaukee, Wis., a corporation of Wisconsin
Application May 31, 1945, Serial No. 596,910
3 Claims. (Cl. 209—228)

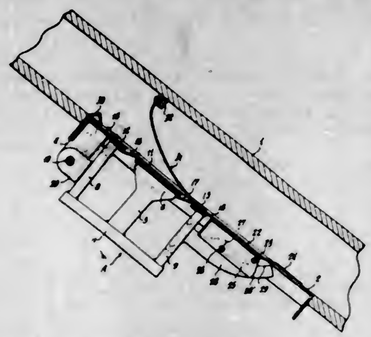
1. A permanent magnet spout type separator comprising a downwardly slanting spout down

which a mixture of magnetic and nonmagnetic

2,461,012

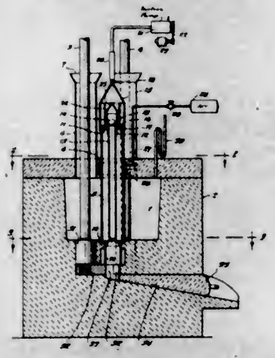
with said supporting links and said straight links

which a mixture of magnetic and nonmagnetic material is adapted to slide, a plurality of soft steel pole pieces of magnetizable material permanently mounted in said spout in position for the material to pass thereover, a magnet structure comprising in combination a permanent magnet and a U-shaped yoke of magnetizable material hingedly supported from and below said spout and bodily movable as a composite unit upwardly into and out of contact with said pole pieces to respectively energize and deenergize said pole



pieces, a trap gate carried by said spout for discharging magnetic material, and means for mechanically connecting said magnet structure and said trap gate to positively close and open said trap gate when said magnet structure is respectively moved into and out of contact with said pole pieces, the weight of said magnet structure being temporarily overcome by the magnetic attraction of said magnet structure to thereby hold said magnet structure temporarily in position against the action of gravity.

2,461,009
PREPARATION OF MAGNESIUM FROM ITS ORES
Lucien C. Sturbelle, New York, N. Y.
Application October 12, 1942, Serial No. 461,654
8 Claims. (Cl. 75—67)

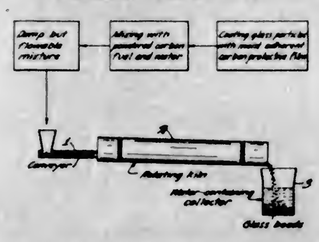


1. The method of producing metallic magnesium from its ore, which comprises smelting said ore with carbon, removing the carbon monoxide and magnesium vapor released thereby into a separate chamber, there oxidizing the carbon monoxide to carbon dioxide and the metallic magnesium to magnesia, separating the carbon dioxide and magnesia, reducing the separated magnesia so obtained to magnesium by reaction with that part of the reduced smelted ore including the silicon thereof which will reduce magnesia under conditions which vaporize the magnesium so obtained, and condensing the magnesium vapors so obtained with a minimum of oxidation thereof.

2,461,010
PROCESS FOR THE RECOVERY OF AMMONIA
John W. Teter, Chicago, Ill., and Robert H. Stookey, Whiting, Ind., assignors to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application December 29, 1942, Serial No. 470,450
1 Claim. (Cl. 260—585)

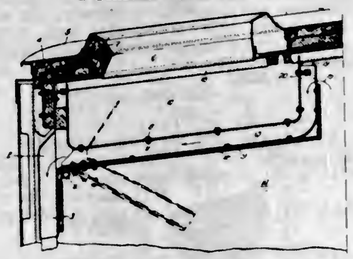
In the amination of propylene wherein a mixture of propylene and ammonia is brought at an elevated temperature and pressure into contact with a catalyst capable of selectively aminating the propylene, the improvement which comprises stabilizing the resulting mixture to recover the aminated propylene and to produce a gaseous mixture of the unreacted components consisting predominantly of ammonia, propane and propylene, cooling the gaseous mixture to a temperature of about 0° F. under sufficient pressure to establish substantially liquid phase conditions at such temperature, effecting settling of the cooled liquid mixture with resulting formation of two distinct layers one of which comprises predominantly the ammonia and the other comprises predominantly the propane and propylene, separating the layer comprising predominantly the ammonia and the layer comprising predominantly the propane and propylene and returning the ammonia to the amination operation.

2,461,011
CARBON POWDER METHOD OF MAKING GLASS BEADS
Nelson W. Taylor, White Bear Lake, and Robert C. Murray, Bald Eagle Lake, Minn., assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn., a corporation of Delaware
Application August 29, 1945, Serial No. 613,434
8 Claims. (Cl. 49—77)



1. A method of making glass beads comprising heating a mixture of glass particles, each of which is coated with a protective film of ash-free carbon in a finely divided state, and a small proportion of powdered carbon fuel having an appreciable ash content, the heating being sufficient to cause combustion of the carbon fuel and fusion of the glass particles into non-adhering spheres but insufficient to burn off the carbon protective films, terminating the heating and combustion to avoid coalescence of the spheres, and then cooling the spheres.

2,461,012
ASSEMBLY FOR SUPPORTING REFRIGERANT CONTAINERS IN REFRIGERATOR CARS
Alfred L. Thompson, Munster, Ind., assignor to Standard Railway Equipment Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application April 12, 1947, Serial No. 741,101
4 Claims. (Cl. 62—17)



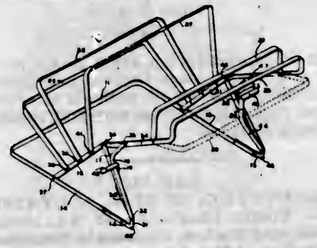
1. A refrigerant container assembly for a railway refrigerator car having a wall, a vertical flue forming a part of said wall, a roof and a hatch opening in said roof, said assembly comprising a refrigerant container below said hatch opening, beams extending across the bottom and one side of said container and secured thereto, said beams being removably secured to said roof, a drip catcher supported by said beams and spaced from said container to form ducts between said beams which communicate with said flue at one end thereof and with the interior of the car at the other end thereof, and a hinge swingably supporting one side of said assembly to said wall, so that upon removal of removable means said assembly may be swung downwardly from said roof.

2,461,013
ARYLMETHYLMERCAPTO ALDEHYDES
William Howells Vinton, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 23, 1944, Serial No. 550,857
4 Claims. (Cl. 260—609)

3. An aldehyde having, on the carbon beta to the aldehyde carbon, an arylmethylthio group $ArCH_2S\cdot$ wherein Ar is an aryl radical, the molecule, apart from the aryl radical, the one oxygen, and the one sulfur, being saturated aliphatic hydrocarbon.

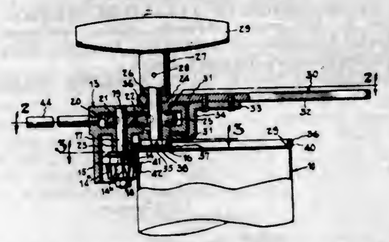
2,461,014
CANOPY FRAME
Matilda D. Welsh, Ladue, Mo.
Application March 22, 1946, Serial No. 656,259
4 Claims. (Cl. 135—7.1)

1. A collapsible canopy frame comprising a main bow having a first and a second arm, a first and second mechanism supported on said arms each comprising first and second supporting links carrying a plurality of fabric supporting bows, first and second straight links connected at one end with said supporting links, first and second curved links and first and second levers pivoted for movement about points supported on said arms of said main bow, said first and second levers receiving respectively an end of said first and second straight links and the same being pivotally attached thereto at points above a point of connection between said curved links and said levers with said main bow, a shield bow connected with said supporting links and said straight links at their points of connection and arranged to pivot thereabout, said shield bow having arms with which said first and second curved links connect, and stop means carried on said first and second levers movable against said first and said second



curved links to lock said shield bow in an erected position, said first and second levers being movable from their locking position to cause said shield bow to pivot about points characterized by its connection with said curved links to move the same into superposition with said main bow.

2,461,015
CAN OPENER AND RESHAPER
Andrew H. Withrow, Cincinnati, Ohio
Application April 10, 1946, Serial No. 661,010
2 Claims. (Cl. 7—14.2)



1. A can opener comprising; a supporting body structure, a pair of gripping rolls, said rolls mounted in said supporting structure on parallel axes and substantially adjacent each other, one of the gripping rolls adapted to engage the internal periphery of the end seam of a can and the other adapted to engage the external periphery of the can just below the end seam of the can, means for rotating said gripping rolls, a cutter fixed to the axis of rotation of the external gripping roll and adapted to sever the side wall of the can on a circumferential line below said last-named gripping roll to provide a depending flange for the cap portion, and a forming roll mounted on the cutter axis below the cutter for tapering the upper portion of the can just below the cut so that it will receive the severed lid portion.

2,461,016
PRODUCTION OF ENOL ACETATES
Frank G. Young, Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application July 27, 1946, Serial No. 686,714
7 Claims. (Cl. 260—488)

1. In the process for producing enol acetates, the step which comprises intimately mixing and condensing at an elevated temperature successive

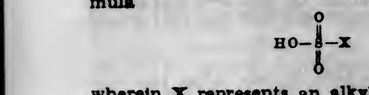
portions of ketene with a ketone having at least

2,461,019

charge of an intimate mixture in finely divided form of tantalum oxide and a metal containing

2,461,022
VARIABLE POWER AND SPEED

portions of ketene with a ketone having at least three hydrogen atoms connected with the carbon atoms alpha to a keto carbon atom, in the presence of a catalyst corresponding to the formula

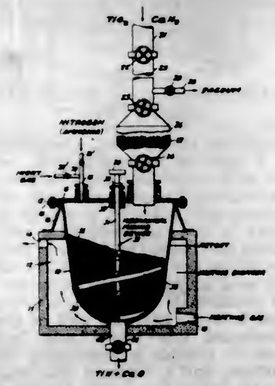


wherein X represents an alkyl group having at least one hydrogen atom thereof substituted by a corresponding number of radicals selected from the class consisting of the carboxyl radical, and the halogen radicals.

2,461,017
PRODUCTION OF ENOL ACETATES
Frank G. Young, Charleston, W. Va., assignor to Carbide and Carbon Chemicals Corporation, a corporation of New York
No Drawing. Application July 27, 1946, Serial No. 686,715
6 Claims. (Cl. 260—488)

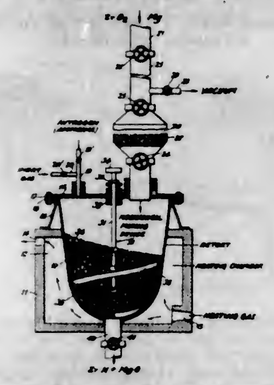
1. In the process for producing enol acetates, the step which comprises intimately mixing and condensing successive portions of ketene with a ketone having at least three hydrogen atoms connected with the carbon atoms alpha to a keto carbon atom, at an elevated temperature, in the presence of an alkane disulfonic acid as catalyst.

2,461,018
PRODUCTION OF TITANIUM NITRIDE
Peter P. Alexander, Beverly, Mass., assignor to Metal Hydrides Incorporated, Beverly, Mass., a corporation of Massachusetts
Application March 2, 1945, Serial No. 580,688
5 Claims. (Cl. 23—191)



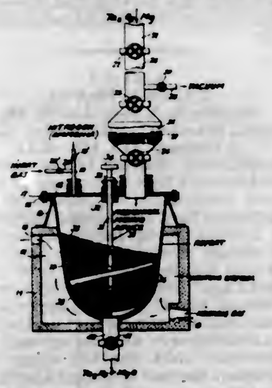
1. A method for producing titanium nitride which comprises confining in a reaction zone a charge of an intimate mixture in finely divided form of titanium oxide and a metal containing reducing agent capable of forming a refractory metal oxide by reduction of the titanium oxide, heating the charge sufficiently high to reduce the titanium oxide by reaction with said reducing agent and form a reaction mass in which finely divided particles of titanium metal are distributed and held in a mass of particles of refractory oxide, then admitting to the reaction zone a gas selected from the group consisting of nitrogen and ammonia, and converting the titanium metal to titanium nitride while distributed and held in the protective refractory oxide.

2,461,019
PRODUCTION OF ZIRCONIUM NITRIDE
Peter P. Alexander, Beverly, Mass., assignor to Metal Hydrides Incorporated, Beverly, Mass., a corporation of Massachusetts
Application March 2, 1945, Serial No. 580,689
5 Claims. (Cl. 23—191)



1. A method for producing zirconium nitride which comprises confining in a reaction zone a charge of an intimate mixture in finely divided form of zirconium oxide and a metal containing reducing agent capable of forming a refractory metal oxide by reduction of the zirconium oxide, heating the charge sufficiently high to reduce the zirconium oxide by reaction with said reducing agent and form a reaction mass in which finely divided particles of zirconium metal are distributed and held in a mass of particles of refractory oxide, then admitting to the reaction zone a gas selected from the group consisting of nitrogen and ammonia, and converting the zirconium metal to zirconium nitride while distributed and held in the protective refractory oxide.

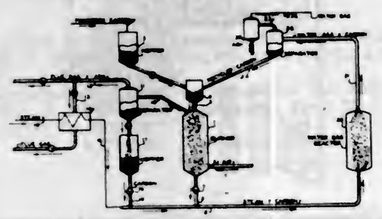
2,461,020
PRODUCTION OF TANTALUM NITRIDE
Peter P. Alexander, Beverly, Mass., assignor to Metal Hydrides Incorporated, Beverly, Mass., a corporation of Massachusetts
Application March 2, 1945, Serial No. 580,690
5 Claims. (Cl. 23—191)



1. A method for producing tantalum nitride which comprises confining in a reaction zone a

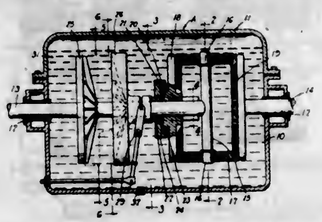
charge of an intimate mixture in finely divided form of tantalum oxide and a metal containing reducing agent capable of forming a refractory metal oxide by reduction of the tantalum oxide, heating the charge sufficiently high to reduce the tantalum oxide by reaction with said reducing agent and form a reaction mass in which finely divided particles of tantalum metal are distributed and held in a mass of particles of refractory oxide, then admitting to the reaction zone a gas selected from the group consisting of nitrogen and ammonia, and converting the tantalum metal to tantalum nitride while distributed and held in the protective refractory oxide.

2,461,021
MANUFACTURE OF WATER GAS
Harold V. Atwell, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application July 24, 1943, Serial No. 496,012
4 Claims. (Cl. 48—206)



1. A continuous method of producing carbon monoxide and hydrogen from a solid carbonaceous material which comprises converting said material to finely powdered form, introducing said powder to a vertical combustion zone, introducing to the lower portion of said zone a stream of oxygen-containing gas, passing said gas upwardly through the combustion zone in contact with said powder so that powder is maintained dispersed in gas within said zone, effecting partial combustion of said powder with accompanying decrease in particle size and formation of ash, discharging from the upper portion of said zone a stream of hot combustion gas containing entrained hot carbonaceous particles and ash, separating entrained hot carbonaceous particles from said discharged gas and ash, passing said residual hot gas stream in indirect contact with a stream of steam, injecting said separated hot particles in the resulting heated stream of steam, continuously withdrawing hot carbonaceous particles from the bottom of said combustion zone, injecting said withdrawn hot carbonaceous particles into said heated stream of steam, passing the resulting hot mixture of steam and injected particles upwardly through a vertical reaction zone, reacting said carbonaceous particles with steam at a temperature of about 1500° F. and above in said reaction zone so as to form carbon monoxide and hydrogen, removing from the upper portion of said reaction zone an effluent steam of carbon monoxide and hydrogen containing entrained particles of unconsumed carbonaceous material and ash, separating entrained unconsumed carbonaceous material from said carbon monoxide, hydrogen and ash, recycling separated unconsumed carbonaceous material to said combustion zone and separating ash from said effluent stream of gas so as to provide a gaseous mixture comprising mainly carbon monoxide and hydrogen.

2,461,022
VARIABLE POWER AND SPEED TRANSMISSION
Henry C. Barnack, West Springfield, Mass.
Application March 14, 1945, Serial No. 582,746
1 Claim. (Cl. 74—681)



A transmission consisting of a fluid-tight casing, fluid therein, driving and driven shafts axially aligned with each other and rotatable mounted in opposite ends of and extending into said casing, the ends of said shafts being axially spaced a predetermined distance from each other in said casing, a cross-shaft secured to said driving shaft, a pair of bevel gears journalled on said cross-shaft, a first bevel gear fixed to said driven shaft and meshing with said pair of bevel gears, a second bevel gear rotatably mounted on said driving shaft and meshing with said pair of bevel gears, a fluid impact driven member having a series of radially-disposed grooves and slidably journalled upon said driving shaft, means extending from said impact driven member slidably keying the same to said second bevel gear for driving the same while allowing relative axial movement between said impact driven member and said gear, a driving impact member having radially-disposed fins complementary to said radially-disposed grooves and adapted to be received thereby, said driving impact member being fixed to said driving shaft, means slidably engaging said driven impact member for shifting the same relative to said driving impact member.

2,461,023
PHOTOGRAPHIC SILVER HALIDE EMULSIONS
Carl E. Barnes, Belvidere, N. J., and William O. Ney, Jr., Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application October 25, 1944, Serial No. 560,359
12 Claims. (Cl. 95—7)

1. A light-sensitive photographic emulsion which comprises a silver halide dispersed in gelatin and a thermal-reversible gel comprised of the interpolymer of an acrylic acid with an acrylic acid amide, the amount of said interpolymer being at least 4% of the amount of gelatin, and said interpolymer containing at least 25% of said acid and at least 25% of said amide.

2,461,024
COUPLING DEVICE
Earl J. Baumgardner, Marion, Iowa, assignor to H. A. Douglas Mfg. Co., Bronson, Mich., a corporation of Michigan
Application December 12, 1944, Serial No. 567,814
16 Claims. (Cl. 285—173)

1. In a device of the kind described, a conduit, a tube having one extremity anchored in said conduit and its other extremity extending free beyond the end of said conduit, a flange pro-

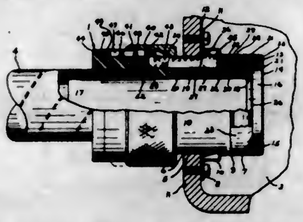
vided adjacent the free end of said tube, a non-metallic body rotatably mounted on said tube,

said third bellows through an exhaust passage to atmosphere, said exhaust passage being in a mem-

drive and said driven shafts, a double friction coupling splined to each shaft, each coupling

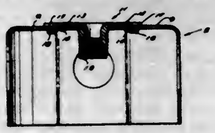
the primary coils of both said core sections, and shunt core means with included air-gaps posi-

vided adjacent the free end of said tube, a non-metallic body rotatably mounted on said tube, said body being provided with a recess at one extremity receiving the end of a conduit and a recess at its other extremity receving the flange of the tube whereby to hold said body against



axial movement with respect to said tube, a recess provided in said body and elongated latch means disposed in said recess, means for securing one end of the latch to the body, and means movable with respect to the body cooperable with the opposite extremity of the latch means for operating the latch means.

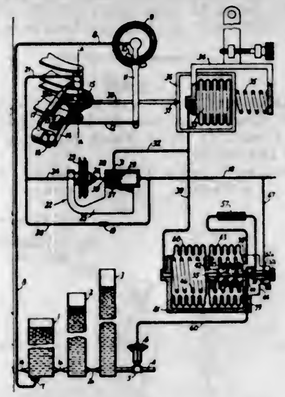
2,461,025
FIXTURE ACCOMMODATING AND HANGER STUD
Frederick R. Beck, Houston, Tex.
Application October 28, 1944, Serial No. 560,846
5 Claims. (Cl. 248—343)



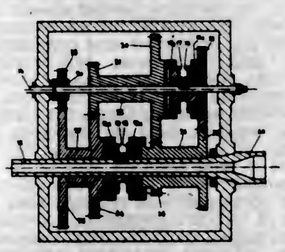
1. In a structural assemblage of the class described, in combination, a conventional outlet box having a stud hole centrally arranged in its top and a plurality of keeper holes coordinated therewith, an internally and externally screw-threaded stud projecting into the box by way of said stud hole, said stud being provided on its outer end with an adapter bracket, the adapter bracket being in turn provided with radial arms having L-shaped keeper-hooks insertable and anchored in said keeper holes.

2,461,026
DIFFERENTIATOR
Gerald I. Bilyeu, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts
Application January 6, 1944, Serial No. 517,261
1 Claim. (Cl. 137—153)

A relay valve for producing a control pneumatic output pressure, comprising in combination, a bellows responsive to a variable pneumatic pressure, a second bellows opposing the force of said first bellows, a third bellows inside said second bellows also opposing the force exerted by said first bellows, a spring system biasing said bellows to a neutral position, and the sum of the effective areas of said second and third bellows being equal to the effective area of said first bellows, a source of air supply, a valve body controlling flow of air from said source of air supply through an inlet passage into said third bellows, a restricted passage connecting said second and third bellows, a second valve body fixed with respect to said first valve body and controlling exhaust of air from said third bellows through an exhaust passage to atmosphere, said exhaust passage being in a member movably carried by the opposing ends of said bellows and the inner end of said exhaust passage being so positioned with reference to said valve bodies and inlet passage that bellows movement in one direction causes it to be engaged and closed by said second valve body and further bellows movement in the same direction causes it to move said first valve body from its seat to permit ingress of air into said third bellows, and bellows movement in the opposite direction causes it to move said first valve body to close said inlet passage and further bellows movement causes said member to move away from said second valve body to permit egress of air from said third bellows, whereby the pressure in said third bellows is varied by supply and exhaust of air through said inlet and exhaust passages in response to change of pressure in said first bellows, and said control output pneumatic pressure being that in said third bellows.



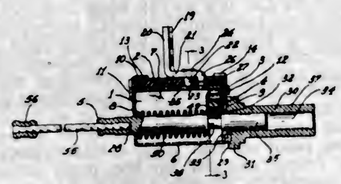
2,461,027
CHANGE-SPEED TRANSMISSION FOR AUTOMATIC LATHES
Ernest Bodmer, Geneva, Switzerland
Application June 10, 1944, Serial No. 539,754
In Switzerland July 23, 1943
2 Claims. (Cl. 74—359)



1. In an automatic single spindle lathe, a change-speed-transmission including a gear housing, a pair of parallel shafts journaled in the housing, one of said shafts being a constant speed drive shaft and the other of said shafts being a variable speed driven shaft, sets of parallel constantly meshing gears loosely mounted on said

drive and said driven shafts, a double friction coupling splined to each shaft, each coupling comprising a friction clutch, one of said double couplings being carried by a drive shaft and the other by a driven shaft, said shafts being connected together by said gear sets, each gear set having a part of one clutch of its respective double coupling integral therewith, each gear set being loosely mounted on its shaft and including two gears each in mesh with the opposite gears of another set of gears mounted parallel thereto, one gear of each set being in mesh with a gear which carries a part of one of the said friction clutches of each of the double couplings, said parts of the friction clutches being loose on their respective shifts when uncoupled from the adjacent side of their respective double coupling, a one-way coupling mounted for rotation on said drive shaft, and a gear carried by said coupling in mesh with a gear of one of said gear sets on the driven shaft.

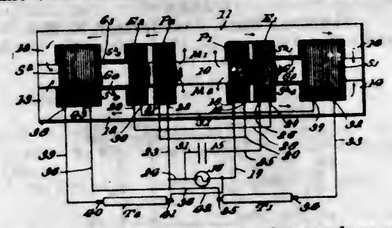
2,461,028
ELECTRIC SWITCH
Hershel C. Bolley, Clawson, Mich., assignor to H. A. Douglas Mfg. Co., Bronson, Mich., a corporation of Michigan
Continuation of application Serial No. 391,906, May 5, 1941. This application June 15, 1946, Serial No. 676,882
9 Claims. (Cl. 200—163)



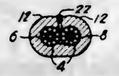
6. A switch including, a casing having an open side, a contact plate extending across said open side electrically connected to opposite walls of the housing and preventing spreading of said walls, an insulator disposed on said plate carrying contact means insulated from said plate, bridge means in said casing, and means connected to the bridge means whereby the bridge means may be moved to engage the contact plate and the contact means.

2,461,029
LUMINESCENT TUBE SYSTEM AND APPARATUS
Charles Philippe Boucher, Fostoria, Ohio, and Frederick August Kuhl, Ridgewood, N. J., assignors, by mesne assignments, to National Inventions Corporation, a corporation of New Jersey
Original application July 14, 1941, Serial No. 402,410. Divided and this application April 12, 1943, Serial No. 482,802
6 Claims. (Cl. 171—119)

1. A high leakage reactance autotransformer comprising, in combination, a core including two main magnetic core sections each forming a closed magnetic circuit, two primary coils connected together and individually mounted on the main core sections, two secondary coils individually mounted on the main core sections and each connected in autotransformer relationship with the primary coils of both said core sections, and shunt core means with included air-gaps positioned between the primary and secondary coils of each of said core sections.

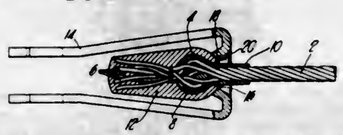


2,461,030
METHOD OF MAKING TORPEDO NETS
Alan E. Brickman, New Haven, Conn., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application March 6, 1945, Serial No. 581,311
1 Claim. (Cl. 140—11)



The method of making a torpedo net having intersections, each intersection having a pair of stranded wire structures connected by a slip clip having two abutting relatively smooth openings therethrough of substantially the same size as the stranded wire structure, which method comprises placing a clip around a pair of stranded structures and cold pressing it into relatively tight contact with the stranded structures substantially throughout their periphery with a pressure sufficient to normally hold the stranded structures and clip against relative movement but insufficient to prevent slippage at applied loads, and then welding the upper part of the two arms together while the clip and stranded structures are so assembled.

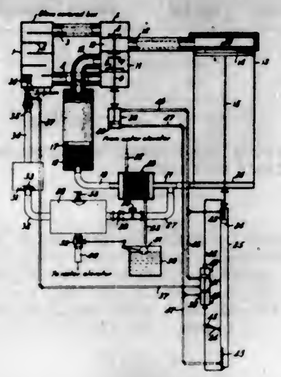
2,461,031
TERMINAL FITTING
Alan E. Brickman, New Haven, Conn., assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application October 4, 1945, Serial No. 620,285
1 Claim. (Cl. 287—82)



A terminal fitting for stranded wire structures comprising a member attached to said wire structure, said member having a spherical portion, a one-piece clevis member freely slidable over the wire structure, said clevis member having two spaced apart arms and a connecting portion, said connecting portion having an opening therein for passage of said wire structure, and a frusto-conical flange surrounding said opening and extending radially toward the center of the spherical portion on the wire structure, the rim of said flange bearing against the end of said spherical portion and the base of said flange being spaced from said arms.

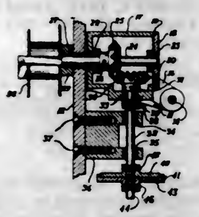
named piston rods and positioned between said

2,461,032
THERMAL APPARATUS FOR COMPRESSING GASES
Vannevar Bush, East Jaffrey, N. H.
Application January 31, 1944, Serial No. 520,501
18 Claims. (Cl. 230—1)



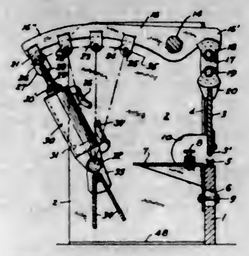
1. A direct thermal compressor of the type including a cylinder having a piston therein, passage means connecting the opposite ends of said cylinder and comprising a cooler in series with a regenerator, means for reciprocating said piston to transfer gas back and forth through said passage means in repeated cycles, and heating means to establish and maintain a temperature gradient along said regenerator, characterized by the fact that said heating means comprises a gas-filled closed box exposed to solar radiations, and conduit means for passing solar-heated gas from said closed box in heat exchange relation to said regenerator.

2,461,033
WEIGHT CONTROLLED REEL DRIVE
Don Canady, Cincinnati, Ohio, assignor to Dayton Acme Company, Cincinnati, Ohio, a corporation of Ohio
Application September 19, 1946, Serial No. 698,073
3 Claims. (Cl. 242—55)



1. A weight controlled reel drive comprising a frame, a driving member, a driven member, clutch faces between said members, a shaft extending from said driven member, a housing supported on said shaft, a pair of arms extending from said frame, a second pair of arms secured to said housing and having pivoted connection with said frame arms, a cross-shaft in said housing having geared connection with said first named shaft, and a reel on said cross-shaft.

2,461,034
PRESS BRAKE DRIVE
James B. Castle, Oakland, Calif., assignor to Reconstruction Finance Corporation, San Francisco, Calif., a corporation of the United States
Application August 29, 1945, Serial No. 613,245
2 Claims. (Cl. 74—110)



1. In a press brake having a frame including a pair of spaced side walls and a vertically movable press jaw extending transversely of the press at the forward edges of said walls, the improvement which comprises an overhead shaft extending across between said walls and provided with bearing support on said walls, a pair of levers spacedly mounted on said shaft each having a short and a long arm, the short arms extending over said movable jaw, link connections between the short arms and the movable jaw for raising and lowering the jaw as the arms are operated, the long arms extending overhead rearwardly of the press, a transversely extending rigid yoke pivotally connected at its ends respectively to said long arms, an upwardly extending double-acting hydraulic power cylinder positioned at the rear of the press with a piston rod at its upper end, said piston rod rigidly secured at its end to a central point on said yoke, a transversely extending frame member on the press structure rigidly connecting its side walls, and means pivotally connecting the lower end of said cylinder to said frame member.

2,461,035
ELECTROLYTIC STAINLESS STEEL POLISHING
Irvine C. Clingan, Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation, a corporation of Ohio
No Drawing. Application February 23, 1944, Serial No. 523,572
8 Claims. (Cl. 204—140)

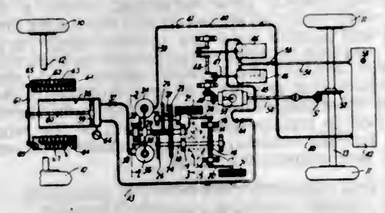
1. In the polishing of hardenable stainless steel containing about 10% to 35% chromium, about 0.25% to 1.2% carbon, and the remainder essentially iron, the art which comprises subjecting the hardenable steel to anodic electrolytic treatment in a bath including by weight at least about 50% but not more than about 70% concentrated ortho-phosphoric acid (sp. gr. 1.7), at least about 10% but not more than about 30% concentrated sulphuric acid (sp. gr. 1.84), at least one ingredient of the group consisting of about 0.5% to 3.5% methyl alcohol, about 1% to 10% ethyl alcohol, about 1% to 4% methyl amyl alcohol, about 0.25% to 20% isopropyl alcohol, about 5% to 20% propyl alcohol, about 1% to 4% secondary amyl alcohol, about 1% to 20% butyl Carbitol, about 0.25% to 20% butyl alcohol and about 0.5% to 4% octyl alcohol, and any balance substantially all water, at such current density, bath temperature and period of time as to achieve a lustrous polish.

7. An electrolytic solution for polishing stainless steel products, said solution consisting by weight of at least about 50% but not more than 70% ortho-phosphoric acid (sp. gr. 1.7), about 10% to 30% concentrated sulphuric acid (sp. gr. 1.84), at least one ingredient of the group consisting of about 0.5% to 3.5% methyl alcohol, about 1% to 10% ethyl alcohol, about 1% to 4% methyl amyl alcohol, about 0.25% to 20% isopropyl alcohol, about 5% to 20% propyl alcohol, about 1% to 4% secondary amyl alcohol, about 1% to 20% butyl Carbitol, about 0.25% to 20% butyl alcohol and about 0.5% to 4% octyl alcohol, and any balance substantially all water.

2,461,036
STAINLESS STEEL POLISHING
Irvine C. Clingan, Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation, a corporation of Ohio
No Drawing. Application March 31, 1944, Serial No. 528,959
3 Claims. (Cl. 204—140)

1. In the rapid and continuous production of polished stainless steel wire, rods, sheet and strip having about 10% to 35% chromium, at least about 0.25% carbon and the remainder essentially iron, the art which comprises, establishing anodic connection to the said wire, rods, sheet or strip, and lineally moving the same through an acid bath consisting, by weight, of about 50% to 70% concentrated ortho-phosphoric acid (sp. gr. 1.7), about 10% to 30% concentrated sulphuric acid (sp. gr. 1.84), about 1% to 20% diethylene glycol mono-butyl ether, and any remainder substantially all water, while maintaining a current density of at least about 5 amperes per square inch of product surface and a bath temperature between about 125° F. and 165° F.

2,461,037
FLUID POWER MACHINE
James H. Crumble, Brooklyn, N. Y.
Application May 27, 1944, Serial No. 537,595
1 Claim. (Cl. 138—31)

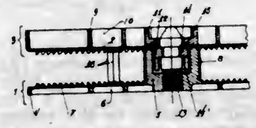


An accumulator comprising a fluid storage cylinder having an opening through the head end thereof, said cylinder having a piston slidable therein, said piston having a rod extending through the rear end of said cylinder, the free end of said rod having a beam secured thereon at right angles thereto, a pair of cylindrical housings mounted adjacent opposite sides of said cylinder with their axes parallel with the axis of said cylinder, said housings being positioned with their rear ends extending beyond the rear end of said cylinder and their front ends positioned intermediate the front and rear ends of said cylinder, pistons slidably mounted in said housings and having piston rods extending beyond the rear ends thereof, said last-named piston rods being secured to the ends of said beam, coiled springs in said housings surrounding said last-named piston rods and positioned between said last-named pistons and the rear ends of said housings, said cylinder being adapted to have a fluid pass through said opening.

2,461,038
CHEMICAL COMPOSITIONS AND THE PREPARATION THEREOF
John W. Cusic, Skokie, Ill., assignor to G. D. Searle & Co., Skokie, Ill., a corporation of Illinois
No Drawing. Application May 15, 1947, Serial No. 748,333
12 Claims. (Cl. 260—570)

1. A tertiary-aliphatic-aminoalkyl ether of a polynuclear carbinol of the group consisting of 9-xanthenol, 10-thiaxanthenol, 9-fluorenol, and 9,10-dihydro-9-anthrol, and salts thereof.

2,461,039
DEVELOPING SPOOL FOR FILMS
Andre Victor Leon Clement Debrie, Paris, France
Application November 1, 1945, Serial No. 626,062
In France January 3, 1945
5 Claims. (Cl. 242—77)



1. Developing spool for film strips of small length, and more particularly for microfilms, comprising in combination a stationary disc, a spiral-shaped groove on said disc, a smooth disc with openings which is also stationary, the film being wound between said first disc and said smooth disc, and combs the teeth of which project through said openings after loading of the film, in order to hold said film between said teeth and the spiral-shaped groove of the first disc.

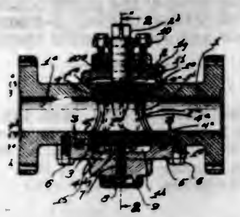
2,461,040
BOTTLE CAP REMOVER
Armand Di Geronimo, Ozone Park, N. Y.
Application December 13, 1945, Serial No. 634,670
1 Claim. (Cl. 81—330)

A bottle cap remover comprising two screws adapted for insertion into a supporting surface, and a jig arranged to properly guide said screws during the insertion thereof, said jig comprising a flat portion having a hole through which one of said screws is inserted to rigidly fasten said flat portion to the supporting surface, a second hole in said flat portion, an inclined portion extending away from said flat portion and in a line adjacent said second hole and having a lip at its outer end at substantially right angles to said inclined portion, said lip extending in the general direction of the first mentioned hole in the flat portion and spaced from said flat portion a distance sufficient to engage the lower edge of the cap to be removed and a hole in said lip which together with said second hole is adapted

to cover the region of the rear metatarsal joints

to guide the other screw during its insertion into said supporting surface the head of said one screw forming an abutment for said cap and cooperating with said lip to locate the bottle cap there between preparatory to its removal, the said other screw having a head engaging the outer surface of said lip to reinforce the same and to resist outward bending of the lip during the cap removing operation.

2,461,041
PLUG VALVE
John R. Donaldson, Ventura, Calif.
Application March 8, 1945, Serial No. 581,578
8 Claims. (Cl. 251—93)



1. In a valve of the class described, a valve body having a fluid conducting passage therethrough and a frusto-conical recess larger than said passage and intercepting the same, a frusto-conical plug rotatably mounted in the recess, the plug having a transverse passage adapted to register with the passage in the body, and an axially removeable frusto-conical sleeve in the recess of the body forming the seat for the plug, there being provided a film of normally semi-viscous material between the sleeve and the wall of the recess for tightly seating and sealing the sleeve within the body and to facilitate removal of the sleeve therefrom.

2,461,042
BOW DRAWING AND RELEASING DEVICE
Frank E. Eicholtz, San Diego, Calif., assignor to Warren Beckwith
Application April 17, 1944, Serial No. 531,355
4 Claims. (Cl. 124—35)

4. In a bow string drawing and releasing device, a body member having an index finger drawing groove on its front end adapted to accommodate the index finger of a person's hand, said body portion having a string engaging ledge adjacent said index finger groove parallel thereto, said body portion having a hand palm engaging portion extending transversely to the engaging surface of said string engaging ledge, said body provided with an arrow receiving groove at one end of said ledge at right angles to said ledge and said index finger drawing groove, said arrow groove being adjacent said index finger groove and permitting an arrow engaging the string on said ledge to be gripped between the thumb and index finger of a person's hand.

2,461,043
PROCESS OF CONDITIONING CELLULOSE ESTER FILAMENTS
John B. Eisen, Springfield, Pa., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application November 10, 1944, Serial No. 562,908
3 Claims. (Cl. 117—139.5)

1. The process of conditioning freshly dry spun continuous filaments containing a cellulose organic ester which comprises applying thereto in advance of their first collection, at a room temperature between about 15° C. to about 45° C., a non-volatile, non-aqueous conditioning medium which is liquid throughout said range of room temperature, comprising a solution in a mineral oil vehicle of about 5 to 20% of an ethylene oxide condensation product of a partial higher fatty acid ester of an inner ether of a hexitol and a higher fatty alcohol sulfate in a relatively small proportion compared to the vehicle for imparting antistatic properties to the filaments, and thereafter collecting the filaments by winding.

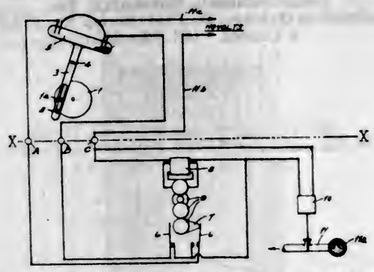
2,461,044
MUD OR SPLASH SHIELD FOR VEHICLES
Robert Ely, San Diego, Calif.
Application September 18, 1945, Serial No. 617,047
3 Claims. (Cl. 280—154.5)

1. In a splash guard securable to the suspension spring on the axle housing of a vehicle, the combination of an arm extending along the side of the vehicle wheel with an end portion bent substantially at a right angle to the remainder thereof in a horizontal plane, a flap of flexible material affixed to and depending from said end portion, said end portion being curved and said flap being concave-convex in transverse section behind the vehicle wheel, and strap clamps folded around said arm and having bolt holes extending through opposite ends thereof adapted to rigidly clamp said arm to the wheel axle housing structure of said vehicle associated with said suspension spring.

2,461,045
AUTOMATIC SAMPLING DEVICE
George C. Fairbairn, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application September 13, 1947, Serial No. 773,878
7 Claims. (Cl. 73—422)

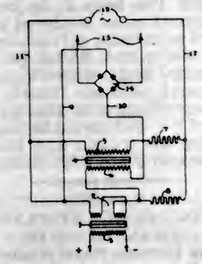
1. An automatic sampling device for use in obtaining samples of a fluid flowing through a pipe line at intervals the frequency of which vary in accordance with the flow rate through said pipe line, comprising a sample draw-off line connected to said pipe line, a valve in said draw-off line, electrical actuating means for said valve, a device responsive to the flow through said pipe line, a source of electricity, a pair of electrical circuits connected to said valve actuating means, a primary timing device actuated by said flow responsive device for connecting said source alternately

first to one and then to the other of said circuits and a secondary timing device for opening the



closed circuits at predetermined intervals after they are closed by said primary timing device.

2,461,046
MAGNETIC AMPLIFIER SYSTEM
Alan S. Fitz Gerald, Wynnewood, Pa.
Application May 3, 1946, Serial No. 666,867
13 Claims. (Cl. 323—60)

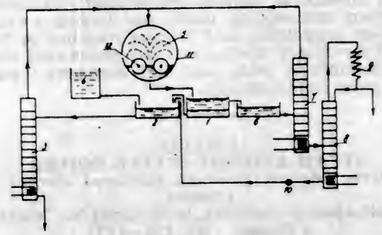


1. A magnetic amplifier comprising, in combination: a variable reactance device; a transformer having primary and secondary windings; said variable reactance device and said transformer primary being serially connected in a closed circuit containing a pair of additional impedances; an alternating current energizing circuit extending from a point between said reactance device and said transformer primary to a point between said additional impedances; and an output circuit including said variable reactance device and said transformer secondary in series.

2,461,047
FOOTPAD
Benjamin D. Freedman, Winthrop, and Samuel Freedman, Brighton, Mass.
Application April 28, 1945, Serial No. 590,944
2 Claims. (Cl. 128—153)

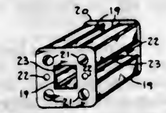
1. A callous pad to be used under the bottom of the foot but free therefrom having a shape to cover the region of the rear metatarsal joints of the foot and part of the front metatarsal joints, said callous pad comprising a thickness of soft felted material, a cover element covering the felted material, a pair of flexible tape members fixed between the cover and the felted material in face contact with the cover and extending outwards from the end of the pad in the direction of the toes, said pad adapted to be placed with the cover next to the bottom of the foot whereby the tapes extend from the cover near the toe junctions and may be drawn between the toes and tied over the same.

2,461,048
METHOD FOR SEPARATING AQUEOUS AZEOTROPIC MIXTURES
Jean Léon Maurice Fréjacques, Paris, France, assignor to Compagnie de Produits Chimiques et Electrometallurgiques Alais, Froges et Camargue, Paris, France, a corporation of France
Application April 24, 1945, Serial No. 590,107
In France February 19, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires February 19, 1962
5 Claims. (Cl. 202—57)



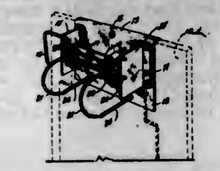
1. The method of treating the azeotropic mixtures of water with a compound taken from a group consisting of methylethylketone, propyl alcohol, isopropyl alcohol and acetonitrile, which comprises treating such an azeotropic mixture with ammonium carbonate, separating by decantation the two layers thus formed and distilling said layers separately to extract on the one hand the two components of the initial azeotropic mixture in the pure state and on the other hand carbon dioxide and ammonia.

2,461,049
BICYCLE PEDAL
Robert J. Gamble, Milwaukee, Wis.
Application October 30, 1947, Serial No. 783,073
4 Claims. (Cl. 74—594.4)



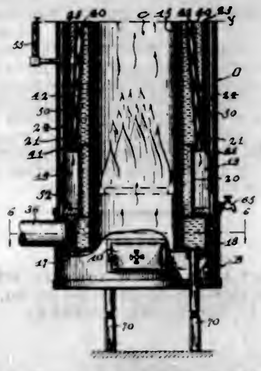
3. A pedal for bicycles and the like comprising a main frame, including a pair of parallel cross-arms and an elongated supporting member extending therebetween, an auxiliary frame, including a pair of end plates, four elongated tread blocks extending between said end plates, and bolts extending through said tread blocks and end plates to form a rigid unit, and bolts extending through said cross-arms and through said end plates for securing said auxiliary frame to said main frame.

2,461,050
LOOSE-LEAF BINDER
Joseph A. Gibson, Kimball, Nebr.
Application September 21, 1945, Serial No. 617,829
3 Claims. (Cl. 129—11)



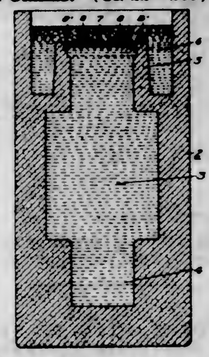
2. A loose leaf binder comprising: a base plate; leaf-receiving posts projecting from said plate; a pair of spaced bearing plates projecting from said plate; a rotatable channel member extending between said plates; pivot pins projecting from the extremities of said channel member through said bearing plates, said pins being placed adjacent one longitudinal edge of said channel member; arch members projecting from the other longitudinal edge of said channel member in alignment with said posts; a locking member having perforations slidably receiving said arch members; and a crank shaft extending between said bearing plates and having a crank portion supporting said locking member so that rotation of said crank shaft will cause said locking member to swing said arch members toward and away from said posts.

2,461,051
STEAM AND HOT-WATER BOILER
Hervé Adelard Girouard, Montreal, Quebec, Canada
Application October 31, 1946, Serial No. 706,887
5 Claims. (Cl. 122—182)



5. In a boiler, a combustion chamber, a water jacket surrounding said chamber having a perimetric recess intermediate the length thereof, flue pipes extending longitudinally through said jacket in communication at one end with said chamber and at the other end with said recess, a casing spacedly enclosing said jacket and chamber to form a concentric smoke flue, a ring plate between the casing and the jacket closing the space therebetween adjacent the recess, and a plurality of closely spaced parallel tubes open to the atmosphere near one end of the casing and extending longitudinally inside the same and outside the water jacket and penetrating through the said ring plate for admitting preheated air of combustion to said chamber.

2,461,052
METHOD OF CASTING
John Gombosh, Pittsburgh, Pa.
Application October 21, 1944, Serial No. 559,763
4 Claims. (Cl. 22—200)



2. The method of casting large metal bodies which comprises forming the top of the mold cavity in which the body is to be cast with a portion of reduced cross sectional area, the portion of reduced area being surrounded by a trough for receiving the metal, filling the mold cavity with molten metal and overflowing dross and impurities into said annular trough, interrupting the pouring operation and placing a separator plate on top of the cast metal in the mold cavity, and then filling the trough and the mold cavity above the separator plate with molten metal.

2,461,053
ALTERNATING CURRENT SYNCHRONOUS TRANSMISSION
Elie Granat, Paris, France
Application January 20, 1948, Serial No. 3,188
7 Claims. (Cl. 318—24)

1. In an alternating-current synchronous electric transmission, a metallic hoop mounted round the rotor of each of the receivers connected in parallel to form a magnetic screen between the stator and rotor windings of each of the said receivers.

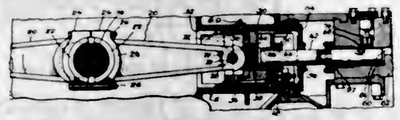
2,461,054
PLANT LABEL MOUNT
Beulah Miller Green, San Francisco, Calif.
Application September 1, 1944, Serial No. 552,224
3 Claims. (Cl. 40—10)

1. A plant label mount comprising a flattened tube of transparent material having an end portion folded over upon itself, the folded over portion having a pair of slots disposed therein, the opposite end of the tube also having a pair of similar slots, said slots being alined to receive a flat supporting stick.

2,461,055
CHAIR
Meyer Greitzer, Los Angeles, Calif.
Application June 30, 1945, Serial No. 602,531
6 Claims. (Cl. 155—194)

1. The combination with a chair including upstanding chair back supporting members, of a chair back comprising a frame, pins depending from the lower edge of said frame for engagement in said upstanding supporting members, braces within said frame, front and back panels for said back frame and hooks carried by said panels for engaging said braces to hold said panels on said chair back frame.

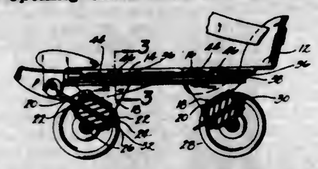
2,461,056
CONNECTING ROD AND PLUNGER CONNECTION
Reiza J. Hess, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a corporation of New Jersey
Application March 29, 1943, Serial No. 480,888
11 Claims. (Cl. 74—44)



1. In a device of the class described a frame, a crosshead slidably guided by said frame, a reciprocal connecting rod pivotally connected to said crosshead, a plunger actuated by said rod and having a portion in complementary arcuate thrust engagement therewith, and resilient means reacting against said crosshead and said plunger for maintaining the latter in tight engagement with said rod.

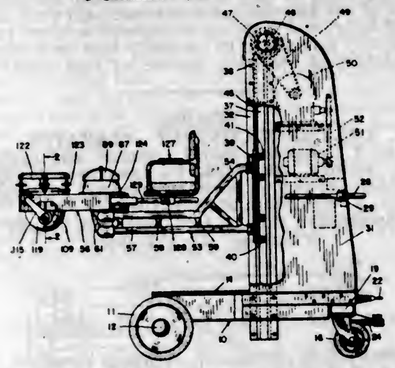
2,461,057
SKATE
Arthur Hirschman, Miami Beach, Fla.
Application January 31, 1947, Serial No. 725,602
3 Claims. (Cl. 280—11.27)

3. In a roller skate, a roller wheel supporting bracket composed of sheet metal bent into a tubular structure of substantially rectangular cross section and providing a pair of parallel side walls connected at the bottom by an inclined supporting wall and at the top by a horizontal supporting wall, said inclined bottom wall provided with downwardly turned fore and aft axle supporting ears for supporting a roller wheel axle assembly, and said horizontal top wall having the central longitudinal section thereof deformed to provide a depressed upwardly opening channel extending normally to



the roller axis of the axle assembly, the opposite side walls of the channel being spaced inwardly from the side walls of the bracket and extending vertically for the major portion of their height.

2,461,058
CAMERA DOLLY
Herbert W. Houston, Sherman Oaks, Calif., assignor to The Houston Corporation, Los Angeles, Calif., a corporation of California
Application March 1, 1947, Serial No. 731,880
6 Claims. (Cl. 248—129)



1. A motion picture camera dolly comprising a base, pivoted camera and cameraman support means pivotally mounted on the forward end of said base, controlled brake means operatively mounted between said pivoted support means and said base, differential drive means mounted to operate between the pivoted support means and said base, a pair of pedals pivotally connected to said differential drive means, and resiliently actuated friction drive means interconnecting said pedals in driving relation to said differential means, for controlled pivotal movement of said pivoted support means on an actuation of said pedals.

2,461,059
CHUCK
Norman H. Iversen, Birmingham, Mich., assignor to Production Broaching Corporation, a corporation of Delaware
Application April 11, 1945, Serial No. 587,666
2 Claims. (Cl. 279—82)

1. A chuck comprising a body member having a tool receiving socket in one end, tool locking means carried by said body member, means comprising a sleeve slidably mounted on the body member for actuating said locking means, an annular shield of greater diameter than the sleeve attached to the tool receiving end of said body member and overlying the adjacent end of

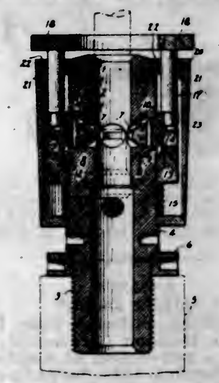
the sleeve, said shield having axial openings

of the energy supplied to said control conductors

aligned sheet openings and the peripheral edges

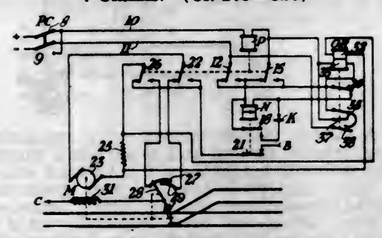
converting said synthesis gas into hydrocarbons and hydrocarbon derivatives by contact with a

the sleeve, said shield having axial openings aligned with the sleeve and a tubular skirt portion enclosing the sleeve, axially extending pins extending from said sleeve through said openings,



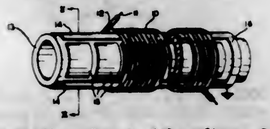
a disc fixed to said body and closing the inner end of the annular space between said skirt and said body, and a spring interposed between said disc and said sleeve to normally hold said sleeve against said overlying portion of said shield.

2,461,060
POLARIZED CONTROL APPARATUS
Allan T. Johnston, Mount Lebanon, and Arthur L. Jerome, Edgewood, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 31, 1946, Serial No. 687,482
7 Claims. (Cl. 175—320)



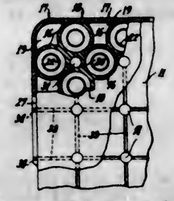
1. In combination, a pair of control conductors to which energy of one polarity is supplied at times and to which energy of the other polarity is supplied at other times, a polarized relay having one terminal of its winding connected to one of said control conductors, an auxiliary relay having normally released contacts which become picked up when and only when energy flows through the relay winding from its first to its second terminal, an asymmetric unit connected across the winding of the auxiliary relay by a back contact of said auxiliary relay and poled to permit energy to flow from the second to the first terminal of said winding, and means governed by polar contacts of said polarized relay for reversibly connecting the auxiliary relay winding and said asymmetric unit in multiple between the other terminal of the polarized relay winding and the other one of said control conductors, said means being arranged so that energy from said control conductors flows through the winding of said auxiliary relay from its first to its second terminal when and only when the position of the contacts of said polarized relay and the polarity of the energy supplied to said control conductors are in correspondence, said polarized and auxiliary relays being selected so that the contacts of the polarized relay will not be operated between their two positions in response to energy of the value supplied to the relay winding through the winding of said auxiliary relay but will be operated by energy of the value supplied through said asymmetric unit, and a circuit governed by a front contact of said auxiliary relay and by a polar contact of said polarized relay.

2,461,061
EQUALIZED DELAY LINE
Heinz E. Kallmann, New York, N. Y., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application February 7, 1946, Serial No. 646,163
6 Claims. (Cl. 178—44)



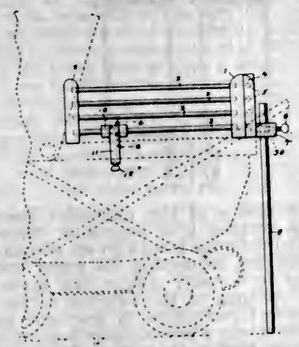
1. Compensation for a delay line of the distributed parameter type, said delay line including a helical coil of a conductor and means for providing distributed capacity between said coil and ground, said compensation comprising a plurality of insulatively mounted conducting patches, said patches capacitively coupling a number of turns of said coil of said delay line.

2,461,062
SANITARY MATTRESS
Catherine B. Kane, Greenwich, Conn.
Application October 21, 1946, Serial No. 704,709
1 Claim. (Cl. 5—353)



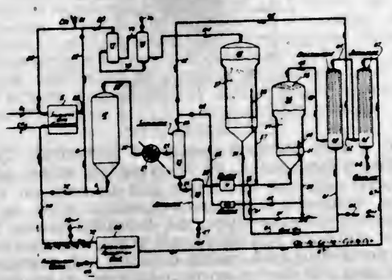
A mattress comprising a pair of resilient flat sheets mounted one upon the other and having a plurality of mutually aligned vertical openings therethrough, a pair of members of waterproof material mounted one on the upper of said sheets and the other against the lower of said sheets, said members having a plurality of spaced cylindrical walls formed therein, said cylindrical walls of one of said members being in vertical alignment with said walls of the other member, coiled springs mounted within said cylindrical walls, aligned vertical openings through said members in alignment with said aligned openings through said sheets, and a cover of waterproof material enclosing said mattress, said cover having openings therethrough in alignment with said aligned vertical openings, the mutually juxtaposed surfaces of said sheets having complementary semi-cylindrical channels therein extending between the opposed peripheral edges [illegible] sheets and intersecting said aligned sheet openings thereby providing cylindrical passages communicating between said aligned sheet openings and the peripheral edges of said sheets, said cover having openings in the side and end walls thereof in alignment with the outer extremities of said passages at the peripheral edges of said sheets, said cover having openings through the top and bottom walls thereof in alignment with said aligned vertical openings of said members.

2,461,063
GUARDRAIL FOR PERAMBULATORS
Samuel Karson, Cleveland, Ohio
Application February 12, 1947, Serial No. 728,181
4 Claims. (Cl. 296—36)



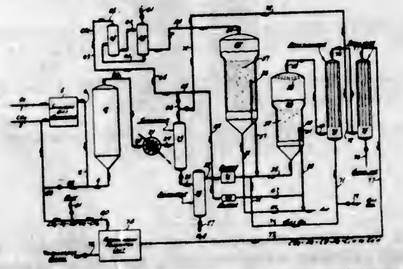
1. In an attachment for a perambulator, front end posts and rear end posts on each side of the attachment, side bars supported by said posts, blocks attached to the rear posts, rear rods passing through said blocks, a vertical block at the rear through which the rear rods pass, a block secured to the vertical block and having a hole, a staff passing through the hole, a wing bolt for holding the staff in the block, and means for clamping the lowermost side bars to a perambulator.

2,461,064
METHOD OF MANUFACTURING MOTOR FUEL
Lebbeus C. Kemp, Jr., Scarsdale, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application October 20, 1945, Serial No. 623,475
6 Claims. (Cl. 260—449.6)



1. In a catalytic conversion of a mixture of carbon monoxide and hydrogen into liquid hydrocarbons of high octane rating, the steps which comprise preparing synthesis gas comprising hydrogen and carbon monoxide in a gas generation zone by the oxidation of carbonaceous material, converting said synthesis gas into hydrocarbons and hydrocarbon derivatives by contact with a synthesis catalyst under conversion conditions of temperature and pressure, separating the reaction products into a normally liquid fraction and a normally gaseous fraction, continuously passing the liquid fraction in contact with a mass of finely divided, solid, hydrocarbon-conversion catalyst maintained at a temperature effective for catalytically cracking hydrocarbons, continuously discharging products of cracking from the cracking zone, continuously removing from the cracking zone used catalyst, subjecting removed catalyst to contact with an oxidizing gas in a zone of reactivation to effect combustion of carbonaceous material contained in the catalyst, thereby forming a flue gas containing carbon dioxide, separating carbon dioxide from said flue gas, subjecting said used catalyst prior to said combustion to contact with a stripping gas comprising a portion at least of the gaseous effluent from the catalytic conversion of carbon monoxide and hydrogen, in a stripping zone under conditions effective to strip adsorbed hydrocarbons from said catalyst, passing said stripping gas and resulting desorbed hydrocarbons from the stripping zone to said cracking zone, subjecting the combined products from the cracking zone to a separation process effective to recover normally liquid hydrocarbon products of reaction and deliver a normally gaseous stream containing the normally gaseous products from said cracking zone, supplying a substantial portion of said normally gaseous stream to said gas generation zone for the production of additional synthesis gas by the oxidation of carbonaceous materials therein, utilizing said additional synthesis gas in the production of additional hydrocarbons, and adding a second portion of said normally gaseous stream together with a portion at least of the said carbon dioxide separated from said flue gas, to the synthesis gas subjected to contact with said synthesis catalyst.

2,461,065
METHOD OF MANUFACTURING MOTOR FUEL
Lebbeus C. Kemp, Jr., Scarsdale, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application October 20, 1945, Serial No. 623,476
6 Claims. (Cl. 260—450)



1. In the catalytic conversion of a mixture of carbon monoxide and hydrogen into liquid hydrocarbons of high octane rating, the steps which comprise preparing synthesis gas comprising hydrogen and carbon monoxide in a synthesis gas generation zone by the oxidation of carbonaceous material, converting said synthesis gas into hydrocarbons and hydrocarbon derivatives by contact with a synthesis catalyst under conversion conditions of temperature and pressure, separating the reaction products into a normally

liquid fraction and a normally gaseous fraction,

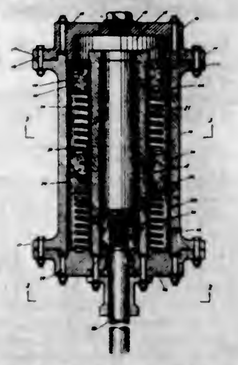
2,461,067
LIQUID FERTILIZER APPARATUS

space between the side walls of said partition means and said casing defines an annular

amino groups comprising reacting an alkaline dispersion of the protein with an alkylene oxide, thence adding the formaldehyde to the resulting

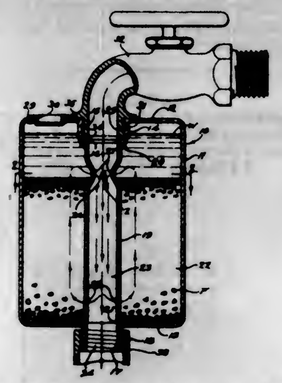
liquid fraction and a normally gaseous fraction, continuously passing the liquid fraction in contact with a mass of finely divided solid, hydrocarbon-conversion catalyst maintained at a temperature effective for catalytically cracking hydrocarbons, continuously discharging products of cracking from the cracking zone, continuously removing from the cracking zone used catalyst, subjecting removed catalyst to contact with an oxidizing gas in a zone of reactivation to effect combustion of carbonaceous material contained in the catalyst, thereby forming a flue gas containing carbon dioxide, separating carbon dioxide from said flue gas, subjecting said used catalyst prior to said combustion to contact with a stripping gas comprising a mixture of said separated carbon dioxide and a portion at least of the gaseous effluent from the catalytic conversion of carbon monoxide and hydrogen, in a stripping zone under conditions effective to strip adsorbed hydrocarbons from said catalyst, passing said stripping gas and resulting desorbed hydrocarbons from the stripping zone to said cracking zone, subjecting the combined products from the cracking zone to a separation process effective to recover normally liquid hydrocarbon products of reaction and deliver a normally gaseous stream containing the normally gaseous products from said cracking zone, supplying a substantial portion of said normally gaseous stream to said gas generation zone for the production of additional synthesis gas by the oxidation of carbonaceous materials therein, utilizing said additional synthesis gas in the production of additional hydrocarbons, and adding a second portion of said normally gaseous stream to the synthesis gas subjected to contact with said synthesis catalyst.

2,461,066
SHOCK ABSORBER
Henry John Kent, Toronto, Ontario, Canada
Application February 3, 1945, Serial No. 575,957
3 Claims. (Cl. 267—34)



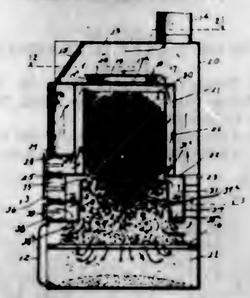
1. In shock absorbers, an outer cylinder, an inner cylinder, a cap enclosing said outer cylinder at one end thereof, a cover enclosing said outer and inner cylinders at the opposite end thereof, cylindrical members providing a cushioning means and located between said outer and inner cylinders, resilient springs encircling said inner cylinder and engaging with said cylindrical members, a piston located in said inner cylinder, a shaft secured to said piston, a fluid passage connecting the fluid chamber in said inner cylinder with the annular space formed between the latter and said outer cylinder.

2,461,067
LIQUID FERTILIZER APPARATUS
Richard O. Lewis, Los Angeles, Calif.
Application April 23, 1945, Serial No. 589,908
7 Claims. (Cl. 299—83)



1. In a device of the character described, a casing, a vertical tube extending through said casing and defining therewith an annular chamber, means for connecting the upper end of the tube bore to a water supply, the lower end of the tube opening to the exterior of the casing, a diametrical restriction in the tube bore and adapted to create a low pressure zone in said bore when water courses therethrough, there being a port near the restriction and opening from the chamber to the low pressure zone of the tube bore, and there being a port below the first mentioned port and opening from the tube bore to said chamber.

2,461,068
DOWNDRAFT STOVE
Lee Lockwood, Des Moines, Iowa
Application August 29, 1942, Serial No. 456,619
1 Claim. (Cl. 126—76)



In a fuel burning heater of downdraft type having a housing, a grate extended across said housing adjacent the lower end thereof, an upright vertically elongated casing carried in a spaced relation within said housing having its lower end open and above said grate, with the upper portion of said casing defining a fuel magazine and the lower portion thereof a combustion chamber, partition means having side walls supported in a spaced relation between said casing and said housing such that the space between said partition means and said housing is open to the space above said grate to constitute a passage for flue gases, and the space between the side walls of said partition means and said casing defines an annular air chamber whereby said air chamber is in a heat exchange relation with the casing and said partition means to provide for a heating of the air therein, a top wall for said partition means positioned horizontally above said casing and formed with a fuel inlet which is open to the upper end of said casing, a cover for said fuel inlet, with said cover and top wall of the partition means constituting a closure for the upper end of said air chamber, said partition means having the lower end thereof terminating substantially at the lower end of said casing, a perforated bottom wall connected between the lower ends of said casing and said partition means, with said casing having its upper end open to said air chamber and being formed with peripheral air openings therein at a first position adjacent its lower end and at a second position spaced from said lower end whereby a first portion of air from said air chamber is admitted into said casing through the upper end thereof, a second portion of air through said air openings, and a third portion of air through the perforations in said bottom wall into the space above said grate, an air inlet means for said air chamber, and means for directing the air flowing through said air inlet means into said air chamber such that said first portion of air enters the air chamber at a position spaced below the upper end of said casing and above the air openings in said second position prior to the admission thereof into the upper end of said casing, with said first and second portions of air, on admission thereof into said casing, being moved downwardly through the casing into the space above said grate and then into said flue passage with said third portion of air, by the draft in said heater.

2,461,069
SIMULTANEOUS CATALYTIC CRACKING AND DESULFURIZATION OF HYDROCARBONS
Milton M. Marisic, Woodbury, and Arthur C. Schmitt, Wenonah, N. J., and Frederick C. Frank, Philadelphia, Pa., assignors to Socony-Vacuum Oil Company, Incorporated, a corporation of New York
No Drawing. Application June 10, 1944, Serial No. 539,790
4 Claims. (Cl. 196—52)

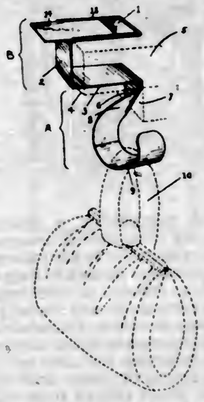
1. A process for simultaneous cracking and desulfurization of a high sulfur-content petroleum hydrocarbon stock, which includes the step of contacting vapors of said stock, in the absence of hydrogen, at catalytic cracking conditions of temperature and pressure with a three-component dried synthetic gel type catalyst consisting of a major proportion of silica, a minor proportion of alumina and approximately 0.5 per cent by weight of ferric oxide.

2,461,070
PROCESS TO PRODUCE A STABILIZED PROTEIN-FORMALDEHYDE DISPERSION
Leonard L. McKinney, Peoria, Ill., assignor to the United States of America as represented by the Secretary of Agriculture
No Drawing. Continuation of application Serial No. 443,319, May 16, 1942. This application November 26, 1946, Serial No. 712,337
6 Claims. (Cl. 106—146)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. The process for preparing a stable dispersion of formaldehyde and a protein containing free amino groups comprising reacting an alkaline dispersion of the protein with an alkylene oxide, thence adding the formaldehyde to the resulting dispersion.

5. A stable protein-formaldehyde dispersion comprising a mixture of formaldehyde and the reaction product of an alkylene oxide and milk casein in which the reaction between alkylene oxide and protein is carried out in an alkaline medium.

2,461,071
HANDBAG HOLDER OR THE LIKE
Michael W. Mettenleiter, New York, N. Y.
Application September 25, 1946, Serial No. 699,162
1 Claim. (Cl. 248—227)



As an article of manufacture, a handbag holding device comprising a section of resilient sheet material bent to form a C clamp having a top and bottom portion adapted to receive a projecting table edge between them, said bottom portion having a portion continuous with the end thereof, said continuous portion bent downwardly and rearwardly with respect to the end of the said bottom portion and twisted and bent to form a hook member set at right angles to the said C clamp.

2,461,072
METEOROLOGICAL BALLOON OR SIMILAR ARTICLE AND METHOD OF MAKING THE SAME
Donald J. Miller, Akron, Ohio, assignor to American Anode Inc., Akron, Ohio, a corporation of Delaware
Application January 27, 1945, Serial No. 574,915
7 Claims. (Cl. 244—31)

6. A rubber meteorological balloon or similar hollow rubber article comprising a body-member and an auxiliary inflation tube member, the body-member comprising an integral seamless thin-walled rubber balloon envelope of relatively large cross-sectional dimension terminating in an integral seamless tubular neck of a substantially smaller cross-sectional dimension but permissive of form removal, the auxiliary inflating tube member comprising a one-piece seamless tubular

rubber member having one end of substantially the same cross-sectional dimension as the neck

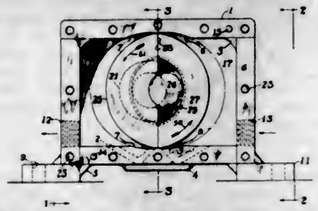
2,461,075
PRESSURE RESPONSIVE INDICATING DEVICE

pressure exists in said lubrication system, and means controlled by said high resistance coil to lock said normally closed switch in open position

carried by and coaxial with the lower end portion of the shaft, drive motor means operatively connected with the shaft, an agitator secured to the

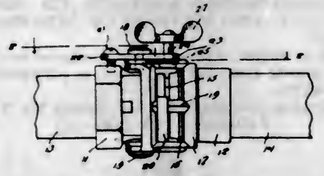
rubber member having one end of substantially the same cross-sectional dimension as the neck of the body-member and the other end thereof of a smaller dimension, the correspondingly-sized ends of the two members being joined in rolled adhesive relation, the smaller end of the inflating tube member extending in an outward direction away from said body-member.

2,461,073
MECHANISM APPLICABLE TO ROTARY PUMPS, MOTORS, ETC.
Reginald F. Moulton, Canton, Ohio
Application August 30, 1943, Serial No. 500,501
10 Claims. (Cl. 103—129)



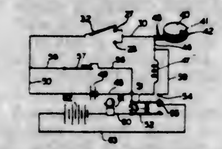
5. Mechanism comprising a casing, arcuate bores in the casing intersecting eccentrically with each other and which form an interial chamber in said casing, bearings in said casing which open into said chamber, certain of said bearings being concentric with certain of said arcuate bores, certain other of said bearings concentric with certain other of said arcuate bores, the axes of said bearings being laterally parallel and positioned relatively close together such that the bearing contours overlap when viewed from either lateral side of said casing and come into line when viewed from either end of said casing, openings which communicate said chamber with the exterior of said casing.

2,461,074
HOSE COUPLING
Guy K. Mozingo, Ashtabula, Ohio, assignor of twenty-five per cent to Orville T. Olden and twenty-five per cent to Robert Logston, both of Ashtabula, Ohio
Application October 19, 1945, Serial No. 623,272
2 Claims. (Cl. 285—170)



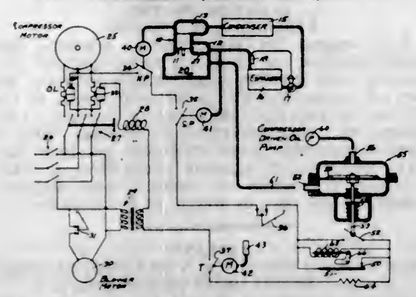
1. A hose coupling comprising a male member and a female member, a rib on the female member, a pair of gripping jaws hingedly mounted on the male member and adapted to be moved toward one another for engaging said rib and connecting said male and female member and away from one another for releasing said rib and disconnecting said members, yieldable means urging the jaws toward one another, a key mounted on the male member between said jaws and in one position providing for movement of the jaws into rib-engaging position and in another position actuating the jaws to rib-releasing position, and means for actuating the key.

2,461,075
PRESSURE RESPONSIVE INDICATING DEVICE
William E. Naylor, Ridgefield Park, N. J., assignor to Bendix Aviation Corporation, Teterboro, N. J., a corporation of Delaware
Application October 12, 1945, Serial No. 622,024
1 Claim. (Cl. 177—311)



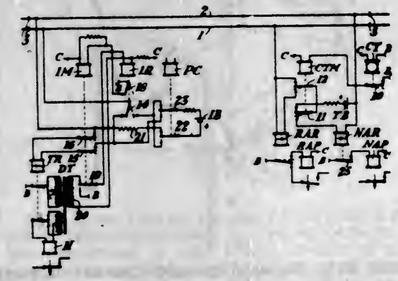
A pressure responsive device comprising, a pressure responsive member adapted to be actuated by varying pressures, a shaft adapted to be oscillated by said member, a wiper arm on said shaft, at least two electrical contacts spaced apart from each other adapted to be engaged by said wiper arm upon movement by said shaft, the spacing of said contacts being representative of different pressure conditions; an insulation disc rotated by said shaft, the angular displacement of said disc being greater than the angular displacement of said shaft by said members; an electrical conducting insert in said disc close to peripheral edge thereof, two peripheral grooves in said disc to expose two segments of said insert, a pair of brushes cooperating with said grooves adapted to engage simultaneously the exposed segments of said insert, an electrical circuit including said contacts, wiper arm, insert and brushes; a relay coil in said circuit adapted to be energized upon concurrent engagement of at least one of said contacts by said wiper arm and said insert by both of said brushes, and means actuated by the energized relay coil to indicate a pressure condition represented by the contact engaged by said wiper arm.

2,461,076
OIL PRESSURE SAFETY CONTROL
Charles R. Neeson, Oakwood, Ohio, assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Application March 20, 1946, Serial No. 655,874
8 Claims. (Cl. 230—206)



1. In a refrigerant compressor mechanism having a pressure lubrication system; a control system for said mechanism comprising a normally closed switch, a normally open switch in parallel therewith, a high resistance induction coil in parallel with said switches, a time-delay device for opening said normally closed switch a short time after current flows through the control system, a pressure-responsive device for closing said normally open switch as long as sufficient pressure exists in said lubrication system, and means controlled by said high resistance coil to lock said normally closed switch in open position if the pressure falls below a predetermined minimum.

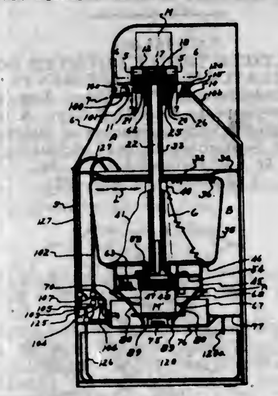
2,461,077
CODED SIGNALING SYSTEM
Frank H. Nicholsen, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application January 25, 1947, Serial No. 724,382
20 Claims. (Cl. 246—38)



2. In a coded signaling system, in combination, a first and a second conductor over which at times are supplied impulses of energy of the polarity in which the second conductor is positive with respect to the first conductor, a code following relay having a contact which is moved from a second to a first position when and only when energy flows through the relay winding from the second to the first terminal thereof, a source of direct current, a pole changing relay having contacts which at times occupy a first position and at other times occupy a second position, a movable contact which is recurrently operated between a first and a second position, said movable contact being effective when in its first position to establish a circuit for connecting the winding of said code following relay across said conductors with the first terminal of said winding connected to said first conductor, said movable contact being effective when in its second position and the contacts of said pole changing relay are in their first position to establish a circuit independent of the winding of said code following relay for connecting said source of direct current across said conductors with the positive terminal thereof connected to said first conductor, said movable contact being effective when in its second position and the contacts of said pole changing relay are in their second position to establish a circuit including in series therewith the winding of said code following relay for connecting said source of current across said conductors with the positive terminal of said source connected to said second conductor.

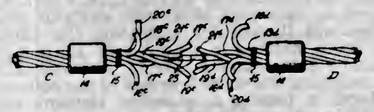
2,461,078
CLOTHES WASHING AND EXTRACTING MACHINE
Herbert E. Page, Alhambra, Calif.
Application July 11, 1944, Serial No. 544,347
6 Claims. (Cl. 68—23)

1. Washing apparatus comprising a casing, a drive shaft vertically disposed axially of the casing, means rotatably and resiliently suspending the shaft from the upper portion of the casing for lateral movement in the casing, a wash basket carried by and coaxial with the lower end portion of the shaft, drive motor means operatively connected with the shaft, an agitator secured to the shaft, a second motor disposed axially with the lower end of the shaft, means operatively connecting the second motor to the shaft, said means including a clutch permitting rotation of the second motor relative to the shaft in one direction,



means suspending the second motor from the basket, liquid-containing cups arranged symmetrically around the second motor, means responsive to lateral movement of the shaft to selectively release liquid from the cups, and means causing the second motor to operate in a direction reverse to the first-mentioned motor when the shaft is being rotated by the first-mentioned motor.

2,461,079
WIRE ROPE SPLICE
Vincent C. J. Peterson, York, and Harold M. Wilson, Bear Creek, Pa., assignors to American Chain & Cable Company, Inc., Bridgeport, Conn., a corporation of New York
Application February 10, 1948, Serial No. 7,406
4 Claims. (Cl. 57—142)



1. A splice for two rope ends comprising a laid inner portion of the same diameter as the rope ends and composed partly of strands of one rope end and partly of strands of the other rope end, an outer portion composed of strands lying in the valleys of the inner portion, said outer portion composed partly of strands of one rope end and partly of strands of the other rope end, and means forcing the outer strands into the valleys for part of their length.

2,461,080
ANTIOXIDANT FOR FATS
Michael M. Piskur and James W. Higgins, Chicago, Ill., assignors to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application June 9, 1945,
Serial No. 598,628
6 Claims. (Cl. 99—163)

1. The method of stabilizing animal fats against rancidity which comprises adding thereto

a small but effective amount of the comminuted

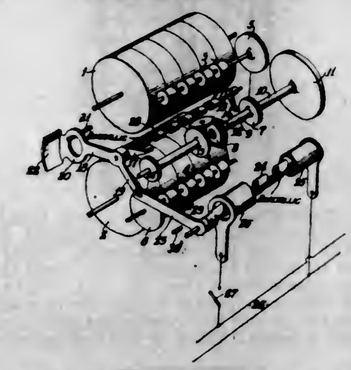
thereof relatively thin and another wall thereof

and back members adapted to rest adjacent each other when said clip is in latched position and

base including posts rising from said base, upper and lower crossheads slidable vertically on said

a small but effective amount of the comminuted fibrous portion of a citrus fruit, heating the mixture at a temperature of between about 100° C. and 200° C. for a time period sufficient for the fat to extract the antioxidant material from the fibrous portion of the citrus fruit and thereafter separating the spent fibrous portion of the citrus fruit from the treated fat.

2,461,081
MULTIPLE TARIFF COUNTER FOR MEASURING INSTRUMENTS
Richard Pudelko and Paul Moos, Zug, Switzerland, assignors to Landis & Gyr, A. G., Zug, Switzerland, a body corporate of Switzerland
Application September 23, 1943, Serial No. 503,469
In Switzerland July 7, 1942
3 Claims. (Cl. 235—92)

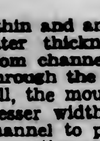


3. In a multiple rate meter, two counting trains, a driving gear for each train, a differential gearing having a planetary gear and two sun gears, means for coupling each driving gear to a sun gear to form two coupled units, means for driving said planetary gear in accordance with metered power, a rock shaft, a detent for each driving gear rigidly mounted on said rock shaft and being arranged so that only one detent can engage its driving gear at one time, a bell-crank carried by said rock shaft and carrying means at one end thereof for indicating the effective rate being metered, a second rock shaft having an arm rigidly coupled thereto, said last-named arm engaging the other free end of the bell-crank to form a toggle, a bi-metal element coiled around said second rock shaft and coupled thereto so that said second rock shaft may be turned one way or the other depending upon the condition of said bi-metal element, switch controlled heating means for controlling the condition of said bi-metal element thereby to select the detent for engaging its driving gear and a second bi-metal element coiled around the first rock shaft and secured thereto with said second bi-metal element being exposed to normal temperature conditions to compensate against varying atmospheric temperatures.

2,461,082
FURNITURE
Edward A. Purnell, Youngstown, Ohio, assignor to The General Fireproofing Company, Youngstown, Ohio, a corporation of Ohio
Application March 5, 1945, Serial No. 580,980
1 Claim. (Cl. 155—194)

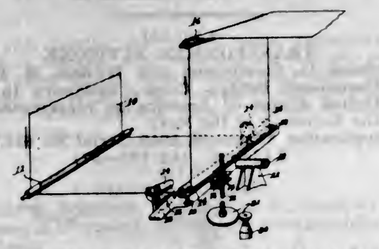
An article of metallic furniture including a tubular metallic element having certain walls thereof relatively thin and another wall thereof of materially greater thickness and provided with a closed-bottom channel having a mouth portion opening through the outer face of said last-mentioned wall, the mouth portion of said channel being a lesser width than the bottom portion of said channel to provide lips at the sides of said mouth portion overhanging the bottom side portions of said channel, and an ornamental strip disposed in said channel, opposite side portions of said strip being disposed in opposite side portions of said channel beneath and in contact with said lips and at least a portion of the bottom of said strip being in contact with the bottom wall of said channel, whereby said strip is retained securely in said channel, the outer face of said strip being exposed and serving in effect as a continuation of the outer face of the wall having said channel therein.

2,461,083
CLIP
Richard L. Rank, St. Louis, Mo.
Application February 21, 1944, Serial No. 523,242
7 Claims. (Cl. 24—250)



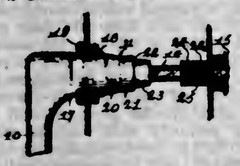
7. In a clip, a front member, a back member, a latch member, said front member having a main body with a transverse slot therein and including side flanges, said back member being bifurcated and including two arms bent back upon themselves, each arm including a lateral extension, means associated with the side flanges of said front member and pivotally engaged by the back member at the bend of its two arms, said latch member comprising a resilient strap bent back upon itself and including a looped end pivotally engaging said lateral extensions, the other end of said latch member extending through the transverse slot in said front member and engaging the edge thereof remote from the pivot bosses of said front member, the relationship of said remote edge, said pivot bosses and said pivot lateral extensions being such that an over-center action obtains between said latch member and said remote edge to provide a latching and holding action and a release action, and opposed clamping prongs near the free ends of said front and back members adapted to rest adjacent each other when said clip is in latched position and to be remote from each other when said clip is in unlatched position.

2,461,084
WEFT-STRAIGHTENING APPARATUS
John D. Robertson, Taunton, Mass., assignor to Mount Hope Machinery Company, Taunton, Mass., a corporation of Massachusetts
Application January 15, 1945, Serial No. 2,293
14 Claims. (Cl. 26—51)



1. In a weft-straightening apparatus, a frame, a web-engaging member having opposite end portions mounted on said frame, means at a mid-location along the frame in the general direction of extent of said member pivotally supporting the frame for movements of the opposite ends of said member in opposite directions away from a predetermined plane, and means carried on said frame for engaging opposite edge portions of a web approaching said web-engaging member and adapted to hold the opposite edge portions of the web against slippage on said member when the opposite ends of said member are moved in opposite directions away from said predetermined plane.

2,461,085
REPLACEMENT DOOR HANDLE
Louis P. Roy, Montreal, Quebec, Canada
Application November 14, 1945, Serial No. 628,578
2 Claims. (Cl. 292—347)



2. In a replacement door handle for motor vehicles, a shank constituted of a number of cylindrical sections arranged in diminishing stepped relation, tapered portions disposed between the sections, a square threaded-corners spindle axially secured to the small end of the shank, a nut engaged with the spindle for holding the handle relative to a door, and a tab washer on the spindle engageable with the nut for locking same.

2,461,086
DIVING BOARD
Edward G. Schumacher, Buffalo, N. Y.
Application May 9, 1946, Serial No. 668,564
13 Claims. (Cl. 272—66)

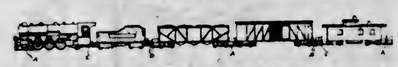
12. A diving apparatus comprising a board, a base, means whereby the rear end of the board is mounted on the base, means whereby the intermediate part of the board is mounted on the base including posts rising from said base, upper and lower crossheads slidable vertically on said posts and said upper crosshead supporting said board, means whereby said lower crosshead is adjusted on said posts, cushion means interposed between said crossheads and means whereby the

upward movement of said upper crosshead is limited relative to the lower crosshead including adjusting rods connected at their lower ends with said lower crosshead, cushions resting on said upper crosshead, and screw nuts arranged on the upper ends of said adjusting rods and bearing against said cushions.

2,461,087
ALTERNATING ELECTRIC CURRENT RECTIFIER OF THE DRY SURFACE CONTACT TYPE
Richard Geoffrey Sell and Leslie Ernest Thompson, London, England, assignors, by mesne assignments, to The Union Switch and Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application December 21, 1945, Serial No. 636,460
In Great Britain July 31, 1945
4 Claims. (Cl. 175—366)

1. A rectifier comprising two adjacent cooling members each provided with an annular rib which with the corresponding rib on the other element forms a cavity, and a rectifier sealed within said cavity in heat transfer relation with respect to said cooling members.

2,461,088
MAGNETIC TOY TRAIN
Charles R. Shortt, Stamford Township, Niagara Falls, Ontario, Canada
Application March 13, 1947, Serial No. 734,307
1 Claim. (Cl. 46—45)



A toy vehicle having a permanent magnetic bar secured thereto at each end thereof, one of said bar magnets having its north pole projecting beyond the end of the vehicle, the other of said bar magnets having its south pole projecting beyond the opposite end of the vehicle, each of said projecting ends having bevelled corners defining a narrow central flat end coupling surface to permit adjacent vehicles to be coupled in a straight train and defining flat coupling surfaces either side of and angularly inclined to said central coupling surface to permit adjacent vehicles to be coupled in angular relation, the common

edges joining the central and angularly inclined coupling surfaces providing fulcra at the dis-

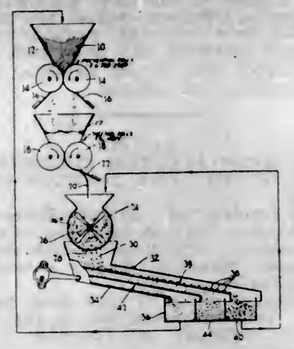
medium at a predetermined speed, drawing the yarns out of the medium at a predetermined

on opposite sides of the oar lock engaging portion of an oar, said plates having oppositely dis-

generally longitudinally thereof, a wet filamentary bundle of web-like sheet structure comprising continuous filaments in a plastic con-

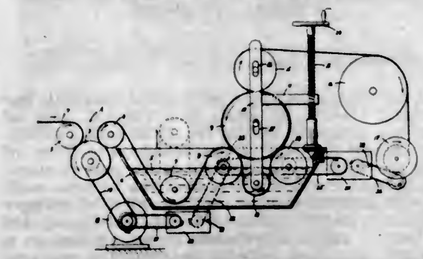
edges joining the central and angularly inclined coupling surfaces providing fulcra at the discontinuities of the coupling surfaces to permit coupled vehicles on the turning of one vehicle to swing abruptly and without dislodgement between in-line position and angularly inclined relation.

2,461,089
PROCESS OF FORMING GRANULATED SYNTHETIC RESIN COMPOSITIONS
Leonard Smidth, New York, N. Y.
Application June 22, 1944, Serial No. 541,616
4 Claims. (Cl. 241—3)



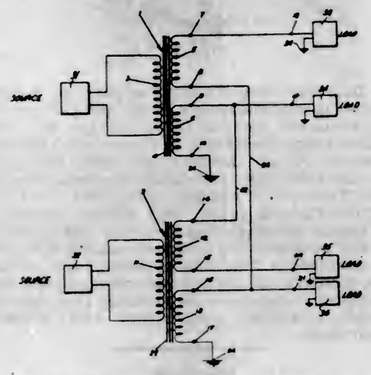
1. In a continuous process for making an improved granular aminoplast resin composition for molding, the steps comprising preheating a powdered aminoplast molding composition by passing the powder through a set of pressure rolls at an elevated temperature but at a relatively low pressure so that the material remains in loose, unsheeted form, thereafter passing the preheated material while hot through a second set of pressure rolls which are maintained at a relatively lower temperature but exerting a relatively higher pressure than said first set of pressure rolls to form said material into a self-sustaining sheet, and thereafter granulating said sheet material.

2,461,090
METHOD AND APPARATUS FOR SLASHING YARNS
Robert A. Smith, Ridley Park, and John S. Chaya, Springfield, Pa., assignors to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application February 17, 1945, Serial No. 578,522
4 Claims. (Cl. 28—28)



1. The method of slashing a warp of yarns which spontaneously elongate on wetting comprising delivering the yarns into an aqueous sizing medium at a predetermined speed, drawing the yarns out of the medium at a predetermined faster speed so related to that of delivery to the medium as to compensate entirely for the spontaneous elongation of the yarns upon wetting without substantially stretching the yarns, squeezing the yarns, drying the yarns, and collecting the dried yarns at a predetermined linear speed which is so related to that of withdrawal from the sizing medium as to compensate entirely for the contraction that occurs on drying, thereby preventing the imparting of internal strains to the dried yarns.

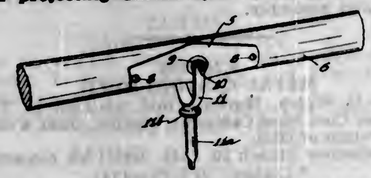
2,461,091
TRANSFORMER NETWORK
Richard G. Stephenson and William M. Bush, Poquonock Bridge, Conn., assignors to the United States of America as represented by the Secretary of the Navy
Application August 28, 1945, Serial No. 613,178
6 Claims. (Cl. 171—97)



6. Electrical transformer apparatus for converting a two-channel network into a four-channel network, comprising a first transformer having a first primary coil and a first pair of secondary coils, a second transformer having a second primary coil and a second pair of secondary coils, a first source of alternating-current signals coupled to said first primary coil to energize said first primary coil with a first signal voltage, a second source of alternating-current signals coupled to said second primary coil to energize said second primary coil with a second signal voltage, individual loads connected to individual ones of each of said secondary coils at a first terminal of each of said secondary coils, means connecting a second terminal of one of said first pair of secondary coils and said first terminal of one of said second pair of secondary coils, means connecting said first terminal of the other of said first pair of secondary coils and a second terminal of the other of said second pair of secondary coils, and means connecting the second terminal of said other of said first pair of secondary coils and the second terminal of the said one of said second pair of secondary coils to ground.

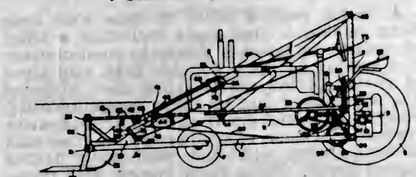
2,461,092
OAR PROTECTOR
George H. Sterling, Minneapolis, Minn.
Application November 17, 1945, Serial No. 629,269
1 Claim. (Cl. 9—26)

A pair of elongated oar protector side plates of arcuate shape in cross section adapted to fit on opposite sides of the oar lock engaging portion of an oar, said plates having oppositely disposed outwardly projecting bosses intermediate their ends, pivot studs mounted in said bosses and projecting outwardly therefrom, a forked



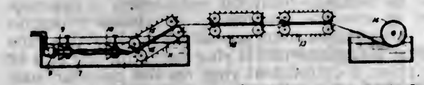
oar lock having its forked ends respectively pivotally engaged with said respective studs, and said plates having means near their ends permitting the same to be secured to the oar without any other securing means between the ends of the plates.

2,461,093
SHOVEL LOADER
Harold M. Stueland, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application May 16, 1946, Serial No. 670,259
7 Claims. (Cl. 214—140)



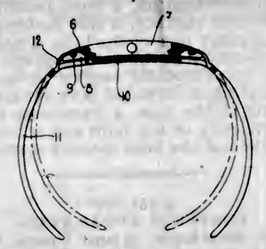
1. In combination, a mobile frame, a supporting arm swingably mounted on said frame by means providing for generally vertical movement relative thereto, lifting means, and a differential connecting means between said lifting means, said arm, and said frame, said connecting means comprising a member movably connected to each of said lifting means, arm and frame and so constructed and arranged that an application of lifting force through said lifting means to lift said arm through a first range of movement causes a movement of said lifting means relative to said arm and away from the latter and a relative movement of the connection between said connecting means and said frame toward said arm, thereby providing a mechanical advantage between said lifting means and said arm, and an application of said lifting force swinging said arm upwardly beyond a predetermined angle disables said connection to said frame, thereby connecting said lifting means directly with said arm.

2,461,094
METHOD OF MAKING LIGHTWEIGHT FILAMENTOUS STRUCTURES
Robert J. Taylor, Claymont, Del., assignor to American Viscose Corporation, Wilmington, Del., a corporation of Delaware
Application April 12, 1944, Serial No. 530,682
10 Claims. (Cl. 18—47.5)



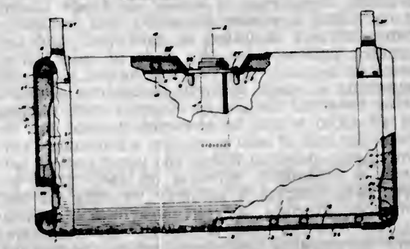
1. A method of producing filamentous products comprising the steps of stretching, in a direction generally longitudinally thereof, a wet filamentary bundle of web-like sheet structure comprising continuous filaments in a plastic condition mixed with continuous filaments in an elastic condition, collecting the sheet as such while still wet in the form of a multiple-layered winding, severing the winding across its width, drying the relaxed winding in the form of a band, and stretching the dried band out in the direction of its width while permitting it to expand in thickness.

2,461,095
ATTACHING MEANS FOR WATCHES
Andrew J. Truxell, Washington, D. C.
Application April 20, 1945, Serial No. 589,400
1 Claim. (Cl. 224—4)



A wrist watch comprising in combination a watch case having recesses with top walls in the end portions thereof at the underside of the case, transversely extending bars in said recesses, a resilient wrist attaching band including an intermediate portion adapted for positioning against the back of the watch case and outwardly struck tongues on said band forming hooks projecting toward each other and inserted in said recesses between said bars and walls to secure the case to said band, said band having flexible wrist engaging portions extending from said intermediate portion, and said hooks being movable out of said recesses clear of said bars by flexing of said wrist engaging portions of said band toward each other, whereby said band and watch may be disconnected by flexing of said wrist-engaging portions of said band together when said band is removed from the wrist.

2,461,096
SELF-SEALING GASOLINE TANK
Hans P. Wagner, Akron, Ohio
Application August 28, 1943, Serial No. 500,420
7 Claims. (Cl. 154—41)



5. In a tank construction an inner metallic tank, a flexible outer tank arranged in space surrounding relation with respect to the inner tank, a sealant under compression arranged between the tanks and endless resilient tubular elements

arranged between the tanks to maintain the tanks

in the end of said spool opposite said recess, means

ing therebetween; a telescoping member on said

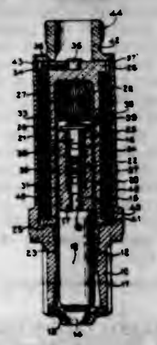
one-half the diameter of a typewriter platen and having a lip portion for engaging material for

arranged between the tanks to maintain the tanks in spaced relation and provided with slots forming passageways through which the sealant may pass.

2,461,097
NUT ANCHOR
Frank C. Wallace, Los Angeles, Calif., assignor to Herman H. Heibush, Los Angeles, Calif.
Application April 20, 1943, Serial No. 483,735
6 Claims. (Cl. 151—21)

1. An anchor nut of the class described comprising, in combination; a base having a work-engaging under surface, a nut housing disposed against the outer face of the base, a hole through the base opening into the bottom of the nut housing, a nut non-rotatably carried in the housing, said nut having a threaded bore concentric with the opening in the base, a transverse slot in the nut diametrically of the bore and a recess in the under surface of the base directly under the nut.

2,461,098
IGNITION APPARATUS
Morgan G. Weatherly, Mount Upton, N. Y., assignor to Bendix Aviation Corporation, New York, N. Y., a corporation of Delaware
Application July 4, 1944, Serial No. 543,476
16 Claims. (Cl. 315—57)

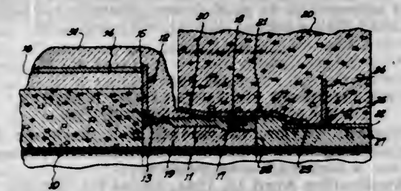


1. In ignition apparatus of the class described, a tubular shell having a tubular shielding barrel extending therefrom, a center electrode assembly including a center electrode and insulating means therefor mounted in said shell and terminating intermediate the ends of said barrel, a transformer coil unit in said barrel, said unit comprising a spool of rigid insulating material having external flanges at opposite ends thereof and an axial recess in one end thereof for receiving the end of said assembly, a laminated core of magnetic material filling the inner end of said recess, a secondary winding on said spool between said flanges, a primary winding on said secondary winding, a split sleeve of magnetic material around said windings, an insulating sleeve surrounding said sleeve, means for grounding said windings, means extending through the wall of said spool for connecting said secondary winding to said core, resilient means for electrically connecting said core and electrode when said unit is inserted into said barrel, a terminal in the end of said spool opposite said recess, means connecting said primary winding to said terminal, means secured in the open end of said barrel for holding said unit in said barrel, and insulating means filling the spaces in said barrel around said unit and assembly.

2,461,099
METAL-CASTING MOLD
Cline H. Welch, Marion, Ohio, assignor to The Alloy Cast Steel Company, Marion, Ohio, a corporation of Ohio
Application March 30, 1945, Serial No. 585,602
2 Claims. (Cl. 22—134)

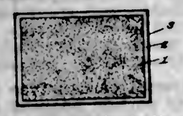
1. A metal casting mold of cope and drag sections having a sand body including a blind head cavity with passage means to communicate with a casting cavity, a pouring gate, said blind head cavity having said pouring gate disposed at the top thereof and in direct communication therewith and forming with said blind head cavity an upward extension of smaller volume than said blind head cavity, said blind head cavity having an upper region and a lower region, said upper region providing substantially perpendicular surfaces forming an expansion zone for metal introduced into the blind head cavity, the lower region having a greater diameter than the upper region, and the upper region having a greater diameter than the passage of the pouring gate, a core located at the juncture of the pouring gate passage and the blind head cavity and defining an annular shoulder, the lower region of the blind head cavity having a bottom defining a sump.

2,461,100
ADAPTER JOINT FOR PIPES
Harold L. White, San Marino, Calif., assignor to American Pipe and Construction Co., a corporation of Delaware
Application February 16, 1945, Serial No. 578,215
5 Claims. (Cl. 285—112)



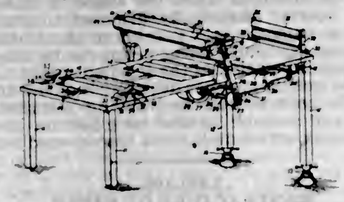
1. An adapter joint for connecting a concrete pipe to relative stationary structures comprising: an adapter member on the end of the pipe having a circular metal ring faced on the end of the pipe; a cylindrical ring on the circular ring extending over the end portion of the pipe and spaced apart therefrom adapted to receive caulking therebetween; a telescoping member on said circular ring; a telescoping member on the stationary structure; and a yieldable ring between the telescoping members.

2,461,101
HAIR-WAVING UNIT
Fred M. Winkel, Phillipsburg, Pa., assignor to Ralph L. Evans, New York, and Everett G. McDonough, Yonkers, N. Y.
Application March 12, 1937, Serial No. 130,585
Renewed August 7, 1939
4 Claims. (Cl. 132—36.2)



4. A hair waving unit including a normally stiff and dry absorbent sheet, metal affixed to one surface of said sheet, said sheet being impregnated with a chemical which, in solution, will attack the metal to react exothermocally, and a protective coating one surface of which is affixed to the surface of said metal remote from said absorbent sheet, to constitute a permanent laminated structure.

2,461,102
POSTURE SYSTEM
Dolletta M. Ackerman, Los Angeles, Calif.
Application December 21, 1944, Serial No. 569,114
4 Claims. (Cl. 128—57)

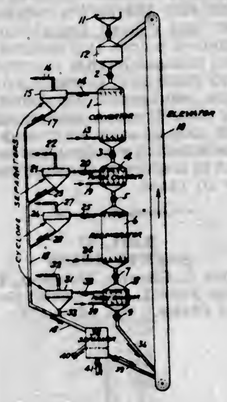


1. In a posture system, a table for the support of a person to be treated thereon and having apertures therein, a plurality of transverse rollers in said apertures, a plurality of transverse rollers spaced above said table, said rollers being mounted to be longitudinally reciprocable relative to the length of the table, and means to reciprocate said rollers, said last named rollers being moved forwardly when said first named rollers are moved backwardly and vice versa, said means including a pair of rock arms for supporting said last named rollers.

2,461,103
LABEL HOLDER
Lewis A. Amis, Dallas, Tex.
Application June 8, 1946, Serial No. 675,455
2 Claims. (Cl. 197—136)

1. As a new article of manufacture, a unitary paper retaining device of a length greater than one-half the diameter of a typewriter platen and having a lip portion for engaging material for typing, a transverse inward bend in the device adjacent the lip portion adapted to normally seat upon the platen, a substantially U-shaped cut-out in said device adjacent to said lip portion having its ends substantially terminating at the inward bend to weaken and lend flexibility to the device on each side of said cut-out, the portion defined by the cut-out being effective to displace said lip portion in relation to said platen through action on the fulcrum formed by said inward bend to receive and clamp the edge of said material.

2,461,104
METHOD OF CATALYSIS
John R. Bates, Swarthmore, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a corporation of New Jersey
Application September 14, 1945, Serial No. 616,169
3 Claims. (Cl. 23—1)



1. In a catalytic operation in which fluids are contacted with a mass of catalyst of solid particles which moves continuously in an endless stream into, through, out of, and back to, a treating zone and in which the particles are subjected to mechanical attrition forming powdered fines of a degree of fineness greatly exceeding that of the particles of the moving catalyst mass and in which fines leave the treating zone entrained in escaping fluids, the method of minimizing such attrition which comprises removing the fines from the escaped fluids, separating from the removed fines those which are larger than 150 mesh and returning a small percentage of the remaining fines to the moving catalyst mass in order to lubricate the mass and thereby minimize attrition.

2,461,105
BLEACHING OF CELLULOSIC MATTER
Rudolf Bloch, Jerusalem, Kurt Goldschmid, Tel Aviv, and Isaac Schnerb and Paul Goldschmidt, Jerusalem, Palestine
No Drawing. Application December 17, 1946, Serial No. 724,696. In Great Britain January 1, 1946
10 Claims. (Cl. 8—105)

1. Process of bleaching cellulosic material which comprises treating it with an aqueous hy-

pochlorite liquor having a pH of at least 7 and containing water-soluble bromide in an equiva-

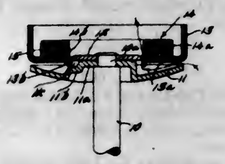
2,461,106
COMBINATION TOOL AND HANDLE

the moistening of the one side of the web and

in circuit therewith operable by a control travers-
ing a scale graduated in terms of the spacing of

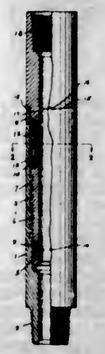
pochlorite liquor having a pH of at least 7 and containing water-soluble bromide in an equivalent amount smaller than the available chlorine content of the liquor.

2,461,106
PLUNGER STRUCTURE
Henry E. Brandt, North St. Paul, Minn.
Application April 18, 1947, Serial No. 742,297
11 Claims. (Cl. 309—4)



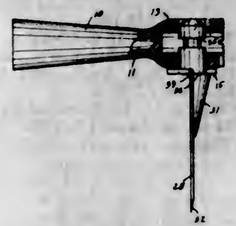
1. A plunger structure having in combination, a plunger rod, a member secured to said rod adjacent the end thereof, a washer overlying said member and spaced therefrom at circumferentially spaced points and secured to said rod, a cup-shaped plunger having a peripheral flange directed away from said member and having an apertured inner end extending about said washer adjacent the plane thereof, and a member engaging the outer side of said inner end and having a central portion with resilient parts constructed and arranged to engage under said washer to hold said plunger in place.

2,461,107
SAFETY JOINT
Walter L. Church, Houston, Tex.
Application June 1, 1945, Serial No. 597,009
1 Claim. (Cl. 287—125)



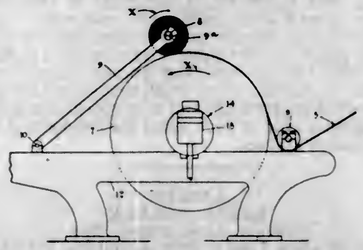
A safety joint comprising, a box section having internal threads and being internally blank between the threads and the end of the section, a pin section having external threads adapted to be screwed into the internal threads and being blank beyond the threads, co-operating portions for transmitting torsional strains between the sections, a plurality of friction members countersunk into the blank portion of the pin and elongated longitudinally with respect to the pin, yieldable means acting against said friction members to hold them in frictional contact with the opposing blank portion of the box.

2,461,108
COMBINATION TOOL AND HANDLE
Fredrick W. Coffing, Danville, Ill.
Application July 26, 1946, Serial No. 686,570
2 Claims. (Cl. 294—6)



1. In a universal garden type tool having an elongated body portion adapted at one end for connection to a handle substantially longitudinally aligned therewith, and a tool having an anchorable shank portion, the combination therewith of a socket formation at the other end of said body portion, a second socket formation disposed substantially transversely of the first socket formation, the two sockets intersecting, the sockets being substantially identical in cross-section and of cylindrical character, the face of each formation having a plurality of diametral notch formations therein, each being of parallel wall character, the shank being of cylindrical type and of a length greater than the length of the sockets from the notched face to the point of intersection, the shank having a cylindrical reduced neck portion registering with the said socket intersection when the shank is seated in either socket, diametrally disposed tongues on said tool adjacent said shank and simultaneously seatable in a diametral notch for locking the tool against rotation in the selected socket, and a slidable locking member disposed in a bore transverse to both sockets and having a socket exposed end seatable in the neck portion to prevent shank withdrawal from the selected socket.

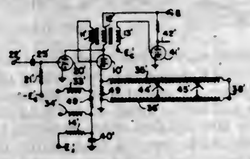
2,461,109
MANUFACTURE OF PAPER
Kay Crabtree, Crabtree Mills, Quebec, Canada
Application September 30, 1944, Serial No. 556,506
1 Claim. (Cl. 92—68)



The process of seasoning paper which comprises continually supplying the web as it comes from the dry end of the paper making machine to and and moving it in contact with a cold, moist, elongated surface and simultaneously chilling and moistening a substantial length and area of a side of the web during its contact with said surface, and then continually rolling up the so-moistened chilled web from said surface into a close coil and moistening the other side through transfer of moisture thereto by contact with the previously moistened side as the coil is formed,

the moistening of the one side of the web and the chilling of the web by said surface being prolonged by contact of the web therewith until removed from said surface and coiled and the moistening of the opposite side of the web being continuous with the coiling of the web and continuous with the chilling and moistening by said contact surface.

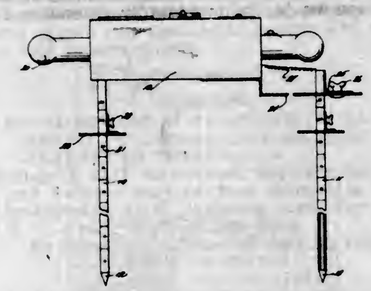
2,461,110
PULSE GENERATOR
Martin Fischman, Brooklyn, N. Y., assignor, by mesne assignments, to Hazeltine Research, Inc., Chicago, Ill., a corporation of Illinois
Application March 8, 1945, Serial No. 581,655
15 Claims. (Cl. 250—27)



5. A generator for generating a plurality of pulses having two characteristic time intervals corresponding respectively to pulse duration and pulse separation comprising, electron-discharge means including a plurality of electrodes, a first time-delay transmission line coupled between a pair of said electrodes and responsive to a conductance variation of said electron-discharge means in one sense for applying to said electron-discharge means a first delayed control signal effective to vary the conductance thereof in an opposite sense and complete a cycle of conductance variation, the time delay of said first line being such that said first control signal is delayed with reference to said conductance variation in said one sense by an interval equal to a desired value of one of said characteristic time intervals, and a second time-delay transmission line coupled between a pair of said electrodes and responsive to a conductance variation of said electron-discharge means for applying to said electron-discharge means a second delayed control signal effective to vary the conductance thereof in said one sense, the time delay of said second line being such that said second control signal is delayed with reference to said first control signal by an interval equal to a desired value of the other of said characteristic time intervals, whereby the conductance of said electron-discharge means is cyclically varied at spaced intervals to generate output pulses having a desired duration and time separation.

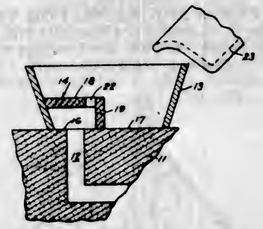
2,461,111
SOIL MOISTURE INDICATOR
Mack L. Flinspach and John H. Flinspach, Compton, Calif.
Application August 16, 1946, Serial No. 690,857
3 Claims. (Cl. 175—183)

3. A soil moisture indicator comprising a frame, a pair of electrodes supported from the frame in spaced relation with respect to one another, the electrodes being adjustable as to the distance therebetween, means adjustable along the electrodes serving to limit the depth to which the electrodes may be thrust into the soil, handles on the frame adapting the electrodes to be thrust into the soil by their lower ends, a source of electric current located on said frame and connectible to said electrodes, a resistance measuring means in the circuit having a variable resistance in circuit therewith operable by a control traversing a scale graduated in terms of the spacing of the electrodes, said variable resistance being



mounted on said frame and said resistance measuring means, scale and control being so mounted on said frame as to be readily visible and utilized.

2,461,112
SKIMMING DEVICE
Thomas W. F. Foster, Temple City, Calif., assignor to The Permanente Metals Corporation, Oakland, Calif., a corporation of Delaware
Application June 30, 1945, Serial No. 602,581
5 Claims. (Cl. 22—134)



1. A movable pouring basin comprising an enclosed wall portion, and a skimming device disposed within said basin and comprising a top wall portion spaced above the bottom of said basin and provided with an inlet perforation and side walls supporting said top wall portion and cooperating with a part of said enclosed basin wall portion to form an open-bottom enclosure.

2,461,113
FLUID TREATMENT EQUIPMENT
Arthur H. Friedman, Matawan, N. J., assignor to Hanson-Van Winkle-Munning Company, Matawan, N. J., a corporation of New Jersey
Application October 14, 1946, Serial No. 703,198
3 Claims. (Cl. 134—160)

1. In a fluid treating machine, mechanism for moving workpieces comprising: a horizontally extending arm, means for moving said arm in a horizontal direction and for halting movement of said arm in said horizontal direction, means for moving said arm in a vertical direction to a fluid treating work station, a workpiece supporting member, means for pivotally supporting said workpiece supporting member on said arm, means for oscillating said workpiece supporting member about said pivot in a plane which is transverse to the movement of said arm in said horizontal direction, said oscillating movement

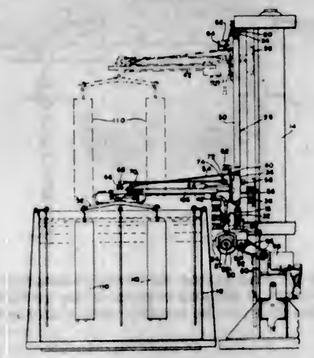
occurring only after said workpiece supporting

2,461,115

2,461,117
METHOD OF PRODUCING BUTTER BY

extending into the casing open ended portion for camming the twisted blade end in effecting said

occurring only after said workpiece supporting member has been moved vertically to its work station, said last-named means including a lever system, said lever system being mounted on said arm and having a downwardly extending free



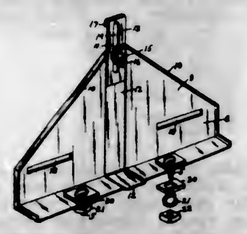
end, an upwardly extending track engageable by said free end when said arm and the workpiece supporting member have been moved to their work station, and means for oscillating said track.

2,461,114

LICENSE PLATE MOUNTING FOR VEHICLES

Abraham G. Goldberg, Chestnut Hill, Mass.

Application September 25, 1947, Serial No. 776,123
2 Claims. (Cl. 248—226)



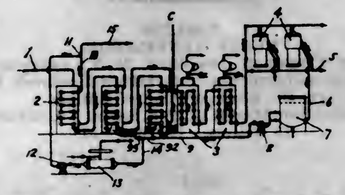
1. A mounting, for a vehicle license plate having slots parallel to the lower edge thereof, comprising an integral sheet metal bracket having a horizontal flange adapted to be connected to a plate extending horizontally forwardly or rearwardly from the vehicle at the junction of the body to the chassis thereof, said bracket having a vertical plate supporting section extending upwardly from said horizontal flange having a wide rectangular portion adjacent said flange and a truncated triangular portion continuing upwardly from said rectangular portion, a narrow rectangular offset extending outwardly from said truncated end of the triangular portion perpendicular to said flange forming a channel, slots in said rectangular portion spaced from and parallel to said frame complementary to the slots in said license plate adapted to receive bolts connecting the license plate to the bracket and a sheet metal member slidably fitting said channel having an outwardly reversely bent end adapted closely to embrace the upper edge of said license plate, and means for adjustably securing said clamping member in said slot thereby to clamp the license plate firmly to the bracket and upon said bolts.

2,461,115

METHOD OF DEWAXING OILS

Curt Filip Holm, Angby, and Bruno Knno Engel, Nockeby, Sweden, assignors to Aktiebolaget Separator-Nobel, Stockholm, Sweden, a corporation of Sweden

Application March 8, 1945, Serial No. 581,658
In Sweden March 16, 1944
2 Claims. (Cl. 196—18)



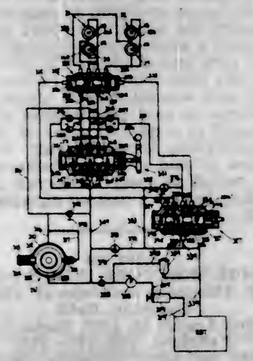
1. The process of dewaxing mineral oils which comprises chilling the wax-bearing oil in a plurality of stages in countercurrent heat-exchange relation to a flowing heat-absorbing liquid, separating from the chilled wax-bearing oil wax and substantially wax-free oil and utilizing the latter as a heat-absorbing liquid in all said stages, withdrawing wax-free oil from the heat-exchange system and separately cooling the wax-free oil so withdrawn and, at a point between two of said stages, mixing the so withdrawn and cooled wax-free oil with the wax-free oil flowing from the locus of separation.

2,461,116

HYDRAULIC SYSTEM FOR CONTROLLING THE OPERATION OF ROTARY HYDRAULIC MOTORS

Robert K. Jeffrey, deceased, late of Bexley, Ohio, by Florence H. C. Jeffrey, executrix, Bexley, Ohio, assignor, by mesne assignments, to The Jeffrey Manufacturing Company, a corporation of Ohio

Application July 7, 1944, Serial No. 543,788
5 Claims. (Cl. 60—53)



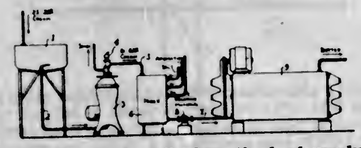
3. Apparatus of the class described comprising in combination means including a plurality of rotary hydraulic motors, valve mechanism for connecting said motors in series or in parallel, hydraulic motor mechanism for operating said valve mechanism, pilot valve mechanism for controlling said hydraulic motor mechanism to effect connection of said motors in series or in parallel, and reversing valve mechanism for controlling the direction of rotation of said rotary hydraulic motors.

2,461,117

METHOD OF PRODUCING BUTTER BY COOLING CREAM OF HIGH CONCENTRATION

Hans Olof Lindgren, Appelviken, Sweden, assignor to Aktiebolaget Separator, Stockholm, Sweden, a corporation of Sweden

Application October 10, 1942, Serial No. 461,628
In Sweden March 7, 1942
3 Claims. (Cl. 99—119)



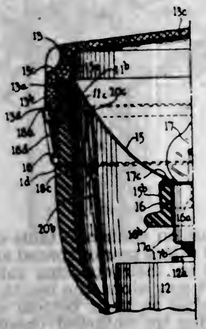
1. The herein described method of producing butter which comprises subjecting a milk fluid containing a relatively small percentage of butterfat to the action of centrifugal force to thereby separate the same into skim milk and a concentrated cream containing a percentage of butterfat approximating that which it is desired to obtain in the subsequently produced butter, conveying the separated concentrated cream, while maintaining it in the phase of a suspension of fat in serum, to a locus of cooling, maintaining said milk fluid during the separating process and the separated concentrated cream while conveying it to the locus of cooling out of substantial contact with atmospheric air, and by cooling in said locus effecting reversal of phase and conversion of the cream into butter.

2,461,118

FLASHLIGHT TORCH

Joshua Gordon Lippincott, Scarsdale, N. Y., assignor to Guth, Stern & Co., Inc., a corporation of New York

Application May 14, 1945, Serial No. 593,636
3 Claims. (Cl. 240—10.68)



3. In a flashlight torch having a casing formed with a bulbous open ended portion, a metallic reflector seated on the rim edge of said open ended portion, a one-piece lens cap removably mounted on said casing open ended portion firmly securing the reflector in seated position, a ring member encircling said casing open ended portion and retained for rotary movement thereon by said cap, a metallic spring blade with an intermediate twisted structure adjacent an extreme free end thereof secured to extend within said casing open ended portion, said extreme blade end forming a contact circuit making and breaking means with said reflector, said ring member having a shoe extending into the casing open ended portion for camming the twisted blade end in effecting said making of the electric circuit, said casing end portion being slotted for receiving said shoe so constructed and arranged to limit the rotary movement of said ring member in making and breaking said contact circuit.

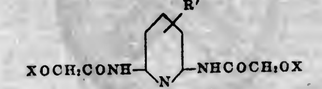
2,461,119

BIS-GLYCOLIC ACID AMIDES OF 2,6-DIAMINO-PYRIDINES AND METHOD OF PREPARING THEM

William A. Lott, Maplewood, and Jack Bernstein and Barbara Stearns, New Brunswick, N. J., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York

No Drawing. Application July 31, 1943, Serial No. 496,944
6 Claims. (Cl. 260—295)

1. A compound of the general formula



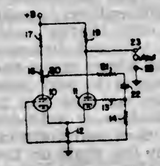
wherein R' represents a member of the group consisting of hydrogen, alkyl, and alkoxy, and X represents a member of the group consisting of hydrogen, alkyl, aryl and acyl radicals.

2,461,120

SIGNAL GENERATOR

Bernard D. Loughlin, Bayside, N. Y., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill., a corporation of Illinois

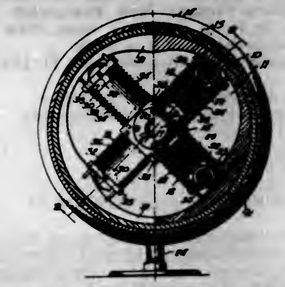
Application November 2, 1944, Serial No. 561,612
2 Claims. (Cl. 250—36)



1. A generator for generating a signal of periodic wave form and of variable periodicity comprising: a first electron tube having an anode-cathode space-current path and at least two operating conditions; a second electron tube having a control electrode-cathode space-current path; means including said second electron tube, a first time-constant circuit including an energy-storage device and said control electrode-cathode space-current path, and a second time-constant circuit including said energy-storage device and said anode-cathode space-current path for causing said first electron tube to alternate during succeeding time intervals from one of said conditions to the other to complete for successive pairs of said time intervals operating cycles; an impedance included in an energizing circuit of said first electron tube to develop an output potential having an amplitude varying with said two operating conditions thereof; and an adjustable contact engaging said impedance for connecting a different portion of said impedance in each of said first and second time-constant circuits and for applying to said means a selectable portion of said output potential while at the same time providing with adjustments of said contact an adjustment of the time constants of said first and second time-

constant circuits, whereby the duration of each of said succeeding time intervals is adjusted in substantially the same proportion while the periodicity of said operating cycles is adjusted over a relatively wide frequency range.

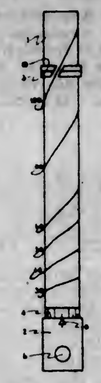
2,461,121
FLUID PUMP
Thomas A. Markham, Dallas, Tex., assignor of forty-nine per cent to Jack J. Smith, Garland, Tex.
Application March 12, 1945, Serial No. 582,271
2 Claims. (Cl. 230—177)



1. In an air compressor, a hollow stationary hub having an intake and an exhaust chamber uprights supporting said hub against rotation, a plurality of cylinders stationary with and grouped radially about said hub, each being in communication with the chambers of said hub, check valves in control of said communications, a piston in each of said cylinders having a bifurcated head, opposed bosses on the head of said piston, a shaft having its ends journaled in said bosses, spring loaded guide rods on opposite sides of said shaft at each end thereof, said rods being mounted in said hub and disposed parallel with said cylinders and whose upper ends are slidably disposed in apertures in said bosses, a housing rotatably mounted on said hub and embracing said group of cylinders, a multi-lobed cam track arranged on the inner periphery of said housing, a roller carried by the shaft on the head of said piston and receivable in the bifurcation thereof, said roller engageable with said track to effect reciprocation of said piston against the resistance of said springs when said housing is rotated to force passage of air through said hub.

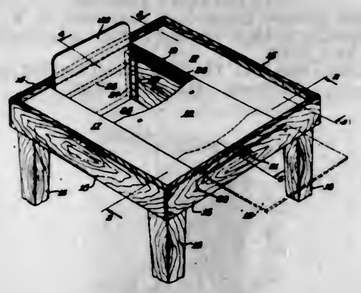
2,461,122
AIM INDICATOR
Roy M. McQuitty, Richmond Heights, Mo.
Application October 12, 1944, Serial No. 558,335
6 Claims. (Cl. 33—46)

1. In an instrument for locating points of aim under conditions wherein said points are remote from a target, an aim indicator comprising a sighting device having cooperative sights including a primary sight to be aimed at the target, and a series of secondary sights to be aimed at different points remote from the target, so as to find the points of aim, for different arrow velocities, at several predetermined ranges from the target, there being a separate secondary sight for each of said ranges from the target, all of said sights being exposed for sighting in a sighting zone at one side of the sighting device, said secondary sights being at different distances from said primary sight and movable in said sighting zone toward and away from said primary sight, so as to locate any one of the secondary sights in its aiming position, and indicating means as-



sociated with said secondary sights to indicate corresponding aiming positions of the several secondary sights.

2,461,123
COMBINATION SAFETY CHAIR AND TABLE
Clarence W. Miller, Chicago, Ill.
Application September 6, 1946, Serial No. 695,228
6 Claims. (Cl. 155—123)

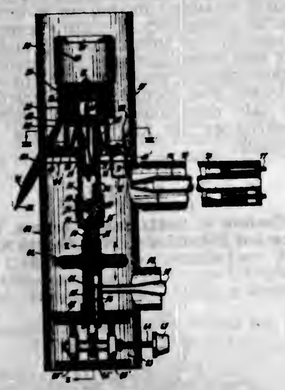


1. A combination chair and table comprising a table provided with a pair of spaced apart parallel rails provided on their opposing sides with ribs extending part way along the length of the rails and with notches on their bottom surfaces, the table-top having an enlarged opening between the rails at the rear side of the table and a short slidable top-panel forward of said opening; and a chair adapted to be mounted beneath said opening, provided with rigid sides and bottom and a foot-rest frame pivotally connected intermediate its length to the sides of the chair to provide upstanding shoulders above the pivot points, the chair-sides adjacent their tops having transversely disposed grooves adapted to receive the ribs of said table-rails whereby the chair is removably held in place, while said foot-rest frame shoulders are adapted to engage said rail notches and thereby effect locking engagement between the chair and said table-rails.

2,461,124
TAPER HOLDER AND SNUFFER
Elizabeth D. Mussy, San Francisco, Calif.
Application November 9, 1946, Serial No. 708,913
1 Claim. (Cl. 67—6)

A taper holder and snuffer comprising a tubular body having a tapered nose portion and longitudinal flanges forming a slot in said body from said nose portion to the opposite end of said body, the rear corners of said flanges overhanging and forming a yielding stop across said slot; and a taper holding socket slidable in said body and having side portions extending outward between said flanges and forming a manual control for said taper holding socket.

2,461,125
ELECTRON DISCHARGE DEVICE UTILIZING CAVITY RESONATORS
Leon S. Nergaard, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application December 31, 1943, Serial No. 516,388
23 Claims. (Cl. 315—39)

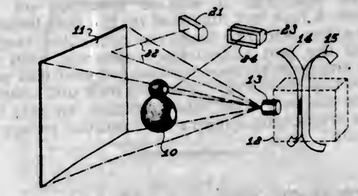


1. An electron discharge device having a cathode, grid and anode, a cavity resonator coupled between said anode and said grid and including an inner conductor coupled to said anode, and a coaxial outer tubular member having one end coupled to said grid, said outer tubular member being open at its free end and a cavity resonator coupled between said cathode and grid, and a voltage lead extending into the cavity resonator coupled between said anode and said grid, said voltage lead including a tubular member having a coaxial conductor and an insulating sleeve positioned between said conductor and said last tubular member, the end of said lead contacting said anode comprising a probe mechanically biased against the anode.

2,461,126
RESETTABLE CIRCUIT BREAKER
William Kendall Overturf, San Diego, Calif.
Application May 17, 1947, Serial No. 748,724
9 Claims. (Cl. 200—116)

6. A resettable circuit breaker comprising a hollow body member including a threaded metallic shell forming a first external electric terminal, said shell being adapted to be screwed into a fuse plug socket, a stationary contact arranged within said body member and electrically connected with a second external electric terminal, a longitudinally slotted rod member movable relative to said body member from a first position to a second position, a cross-arm extending outwardly through the slot on said rod member, a first spring arranged between said cross-arm and said body, and a second spring mounted between said rod member and said cross-arm, said two springs acting to float said cross-arm on said rod member, said first spring normally urging said rod member from said first position toward said second position, a movable contact carried by said cross-arm and arranged to contact said stationary contact only when said rod member is in said first position and to be pressed thereagainst by said second spring, a bimetallic element carried by one of said members, one end of said bimetallic element being electrically connected to said movable contact and the other end thereof being electrically connected to said metallic shell, and a detent on said other member adapted to engage said bimetallic element to hold said setting member in said first position whereby said movable contact engages said stationary contact to complete an electric circuit only as long as said electric circuit is not overloaded.

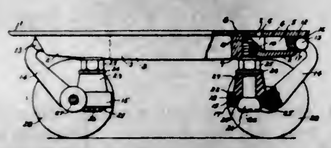
2,461,127
COMPOSITE PHOTOGRAPHY
Leonard B. Pickley, North Hollywood, Calif.
Application February 19, 1946, Serial No. 648,587
4 Claims. (Cl. 88—16)



3. In a method of composite photography, the steps of: positioning a foreground object in front of a white reflective surface; illuminating such surface with light of a spectral range including the visual and infra-red; directing light including the visual and infra-red upon the foreground object, filtering out the infra-red from said light to illuminate the object with light substantially free from infra-red; and simultaneously expos-

ing a color recording film and an infra-red sensitive film in bi-pack arrangement to the foreground object and white reflective background so illuminated.

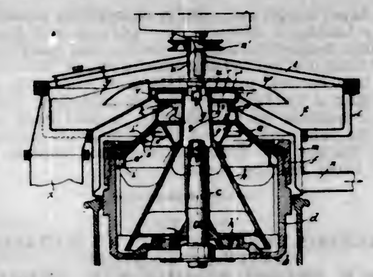
2,461,128
ROLLER SKATE
George A. Reich, Cleveland, Ohio
Application January 12, 1948, Serial No. 1,691
2 Claims. (Cl. 280—11.28)



1. A roller skate comprising, in combination, a shoe supporting member having formed therein longitudinally extending vertical slots of a predetermined depth, medially positioned longitudinally extending bosses integrally formed with and on the underside thereof, spaced ribs connecting the inner extremities of the bosses, each of the aforementioned bosses having therein a longitudinally extending smooth bore, the inner end of which leads into the beforementioned slots, the slots leading into threaded vertical bores in the bosses adapted to receive a threaded bolt having a truncated conical end portion, and a head portion with a spherical surface, the head portion being provided with a tool receiving recess therein, a cylindrical plug having a reduced end portion provided with an inclined plane extending into the slot and also into the threaded bore and also having remote from the reduced end portion a socket therein, the plug being non-rotatably but slidably mounted in the smooth bore, vertically positioned projecting members extending from the socket, a truck having an angularly disposed portion extending upward from the truck and having a portion extending therefrom toward the socket in the cylindrical plug and terminating in a ball-shaped end adapted to engage in the socket to provide a pivotal connection therewith and held in the socket by bending the projecting members to conform to the surface of the ball-shaped end, a platform having a ball seat therein, the threaded bolt extending upward through the ball seat, the spherical surface of the bolt cooperating with the seat, a resilient cushion of truncated conical configuration mounted on the bolt and on the platform, a washer mounted on the cushion, a lock nut mounted on the bolt between the washer and the boss, the truncated conical end of the bolt adapted to cooperate with the plane inclined surface on the reduced end portion of the cylindrical plug, the lock nut adapted to lock the bolt in adjusted position, an axle fast in the truck, and removably mounted rollers on the axle.

2,461,129
CENTRIFUGE FOR THE SEPARATION OF SERUM FROM CHEESE CONSTITUENTS
George J. Streynski, Chicago, Ill., assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application April 20, 1944, Serial No. 531,908
6 Claims. (Cl. 233—28)

1. A centrifuge adapted especially for the separation of cheese constituents from whey or serum of higher specific gravity, comprising a rotatable bowl shell, bottom and inclined top, a frusto-conical member within the bowl and dividing it into an inner chamber for receiving the mixture to be separated and an outer separating chamber, said separating chamber having in its upper portion an outlet for the lighter constituent located near the axis of the bowl, the said frusto-conical member extending, from near the bowl bottom and relatively close to the bowl's periphery, in an upward direction inclined to the axis toward said outlet, a third chamber rotatable with the bowl and located above and communicating with said outlet and having an outer wall sloping upward toward the periphery of the separating chamber, said bowl having a peripheral outlet for discharge

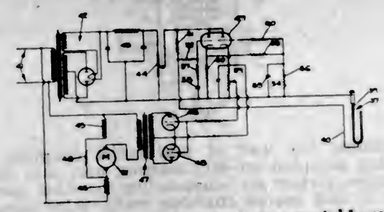


of the heavier separated constituent, a channel extending along the bowl top and communicating with said peripheral outlet, a fourth chamber above the third chamber rotatable with the bowl and located above the third chamber and communicating with said channel, a receptacle above the fourth chamber having an outlet relatively close to its pheriphery, a channel connecting the outer part of the third chamber and the outer part of said receptacle, the last named channel extending upward and outward throughout its entire length, and openings in the fourth chamber and in said receptacle for the discharge from the centrifuge of the respective separated constituents.

2,461,130
ROSARY UNIT
Casimir C. Szaj, Hales Corners, Wis.
Application February 4, 1946, Serial No. 645,381
1 Claim. (Cl. 235—123)

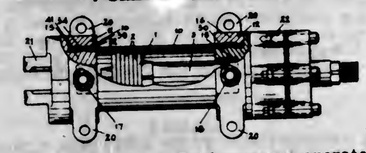
In an indicating instrument having a casing, a pair of eyes and an open slot in the front wall thereof, a pin carried numbered wheel having its periphery exposed in the front wall slot; the combination of a registering mechanism comprising an integral hub extending from the rear wall of the casing upon which the numbered wheel is journaled, a fixed arm radially extending from the end of the casing hub adjacent the front face of said wheel to confine the same against end play upon said hub, a numbered disc faced against the arm, a pintle carried by the numbered wheel extending through the arm, a spring controlled star wheel secured to the disc pintle upon the inner face of the arm, a pin carried by the numbered wheel engageable with the star wheel, guide lugs extending from the casing wall about the hub, an arm bracket reciprocatively mounted between the said numbered wheel and casing wall, whereby it is confined, a bow spring carried by the bracket having its ends engaging a pair of the guide lugs, and a dog extending from the central portion of the bracket engageable with the teeth of the star wheel.

2,461,131
ELECTRICAL CIRCUIT
Francis C. Todd, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a corporation of Ohio
Application June 15, 1946, Serial No. 676,883
1 Claim. (Cl. 318—343)



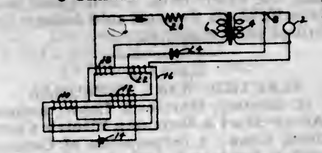
An electrical circuit including a variable speed electric motor, means for slowly and variably adjusting the speed of said motor including a normally closed motor circuit including the secondary winding of a transformer, means for smoothly varying the current delivered to said secondary winding including a primary winding connected to the output circuit of an electron-discharge tube having a grid-cathode control circuit with a resistor therein, means for smoothly varying the voltage across said resistor including a second electron-discharge tube in whose output circuit said resistor is connected, a control circuit for said second electron-discharge tube including a floating time control circuit provided by a condenser and high resistance shunt resistor, and switch controlled circuit means for charging said condenser and removing it to discharge through said resistance shunt.

2,461,132
FLUID PRESSURE UNIT
Bertis H. Urschel and Lorin H. Janser, Bowling Green, Ohio, assignors to Urschel Engineering Company, Bowling Green, Ohio, a corporation of Ohio
Application December 7, 1946, Serial No. 714,726
7 Claims. (Cl. 309—2)



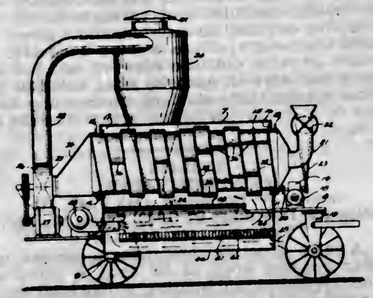
1. A cylinder, for a fluid pressure operated device, having an open end shell forming the cylinder body and means for closing said open end comprising a head element, disposed within the open end of the shell, the head element having protruding portions extending radially outwardly with respect to an axis concentric with the symmetrical center of the open end and terminating at points on an orbital line extending about and in a plane at right angles to said concentric axis and of a greater length, at temperatures normal to cylinder use, than the circumferential lineal dimensions of the inner surface of said shell open end, and in said plane an end element having an opening within which the open end of the shell is located, and the element having protruding portions extending radially inwardly with respect to said concentric axis and terminating at points on an orbital line extending about and in a plane at right angles to said concentric axis and of a shorter length, at temperatures normal to cylinder use, than the circumferential lineal dimension of the external surface of said shell open end in said plane, the protruding portions of each element being offset from the protruding portions of the other element.

2,461,133
ELECTRIC POWER SYSTEM
Philip John Walsh, San Francisco, Calif., assignor, by direct and mesne assignments, to Agency Electric Co., San Francisco, Calif., a limited partnership
Application December 6, 1943, Serial No. 513,153
8 Claims. (Cl. 175—363)



1. The method of converting alternating current from a source of alternating-current voltage to direct current in a circuit on which an alternating-current voltage is impressed, comprising passing alternate half cycles of current through said circuit in response to alternate half cycles of said impressed alternating-current voltage, and during each intermediate half cycle of said impressed alternating-current voltage, introducing a half cycle of voltage of substantially similar wave shape and duration, into said circuit at another point and in phase opposition thereto.

2,461,134
APPARATUS FOR TREATING MATERIAL WITH A GAS
Alex W. Arnold, La Crosse, Wis.
Application July 10, 1944, Serial No. 544,287
6 Claims. (Cl. 34—57)



4. Apparatus of the character described, comprising in portable compact form a frame, a casing thereon having apertured ends, a drum having an inlet and an outlet for material to be treated and rotatably mounted in the casing and

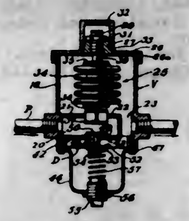
having its ends projecting from the casing apertures, said drum comprising a helical flange having segmental projections outside the drum and providing within the drum a helical channel therethrough, and mutually lapping volute peripheral wall portions disposed between successive flights of the flange and marginally connected to said projections to provide louver passages opening into the drum between successive flights of said flange, an inlet fitting connected with one end of the drum for delivering thereto material to be treated therein, a discharge fitting connected with the opposite end of the drum, a blower casing having an inlet with which said discharge fitting communicates, a separator mounted on said frame, a delivery pipe leading from said blower casing to said separator, means for rotating the drum in a direction opposite to the direction of tangential admission of gases from the casing to the drum through said louvers, the lapping of said volute wall portions being adapted to deliver material from said wall portions to successive wall portions of the drum across the louvers in the course of drum rotation, and said casing comprising a plenum chamber about the drum from which gases are supplied for admission through said louvers for the treatment of such material.

2,461,135
ELECTRIC WIRE TERMINAL
Robert H. Bentley, Hartford, Conn., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn., a corporation of Connecticut
Application January 6, 1947, Serial No. 720,413
7 Claims. (Cl. 173—259)

6. An electric wire terminal connection comprising a plate portion having a screw-threaded aperture and a second aperture adapted to receive the bared end of a wire conductor, side portions bent out of the plane of said plate portion having recesses, a jaw member having trunnion portions entering said recesses providing a pivotal mounting for said jaw member, said jaw member having a hole in partial register with said second aperture and through which said bared wire end may be inserted, and a screw bolt in said threaded aperture bearing upon said jaw member to cause opposite edges of said jaw hole to grip said wire on opposite sides, said jaw hole having substantially straight intersecting sharp edges to increase the biting action thereof into the wire.

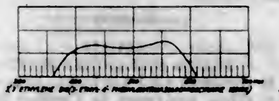
2,461,136
CONTROL VALVE
George W. Bernquist, Oak Park, Ill.
Application December 27, 1943, Serial No. 515,755
7 Claims. (Cl. 236—92)

2. A valve structure comprising a substantially tubular housing open at its ends, a removable cap on one end of said housing, a fluid inlet chamber within said housing including spaced walls each having an opening therein communicating with an outlet chamber within said housing, a valve member to cooperate with and be guided in one of said openings, the dimensions of the last mentioned opening with respect to the said valve member being such that this opening is not at any time entirely closed by the valve member so that some of the fluid is allowed to flow through the opening and past the valve member under any circumstances, a temperature responsive element connected to said valve member to control its position relative to said related opening, a stem on said temperature responsive element adjustably mounted in the cap to permit adjustment of said element and valve member relative to the related opening, a flexible diaphragm overlying the other end of said housing

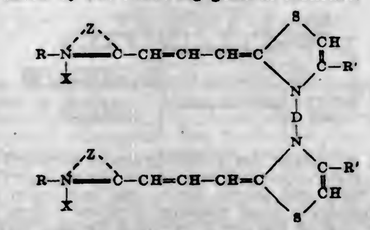


providing one wall of said outlet chamber, a casing mounted on said housing over said diaphragm, a valve seat surrounding the other opening in said spaced chamber walls, valve means secured to said diaphragm arranged to cooperate with said valve seat to control the flow through its related wall opening, said valve means including a valve disc and a stem, a spring disposed in the casing to urge the diaphragm and the connected valve means into a valve opening position, and means in the casing adjustable to vary the tension of said spring.

2,461,137
PHOTOGRAPHIC EMULSIONS SENSITIZED WITH N,N-ALKYLENECYANINE DYES
Leslie G. S. Brooker, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application September 4, 1946, Serial No. 694,837
6 Claims. (Cl. 95—7)



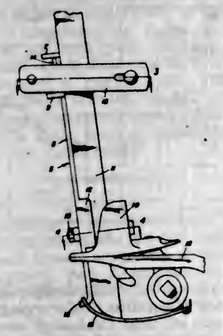
1. A photographic silver halide emulsion sensitized with at least one sensitizing bis carbocyanine dye selected from those which are represented by the following general formula:



wherein R represents a primary alkyl group of the formula C_nH_{2n+1} wherein n represents a positive integer of from 1 to 4, R' represents a member selected from the group consisting of the methyl group and the phenyl group, X represents an anion, D represents a member selected

from the group consisting of the ethylene, the trimethylene and the tetramethylene groups, and Z represents the non-metallic atoms necessary to complete a heterocyclic nucleus of the benzoxazole series.

2,461,138
LUG STRAP HANGER
Frank Buchanan, Guntersville, Ala.
Application October 13, 1947, Serial No. 779,625
1 Claim. (Cl. 139—154)



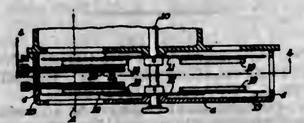
The combination of a picker stick for looms of a lug strap hanger comprising a rigid bar positioned vertically at the rear edge of a picker stick, means at the upper end of the bar engaging a lug strap to hold the strap on the picker stick, a single attaching means for the lower end of the bar, and means carried by the bar and engaging the picker stick to hold the bar in a perpendicular position, said first named means comprising upper and lower vertically spaced apart guard plates carried by the bar and projecting rearwardly and laterally at each side of the bar, and a pad carried by the bar between the guard plates and positioned between the lug strap and the bar.

2,461,139
STARCH ESTER DERIVATIVES AND METHOD OF MAKING SAME
Carlyle G. Caldwell, Forest Hills, N. Y., assignor to National Starch Products Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application January 8, 1945, Serial No. 571,969
13 Claims. (Cl. 260—234)

1. An ungelatinized starch derivative comprising a reaction product of ungelatinized starch, water and an organic acid anhydride in an alkaline medium having a pH in the range of not substantially below 7 nor substantially above 11.

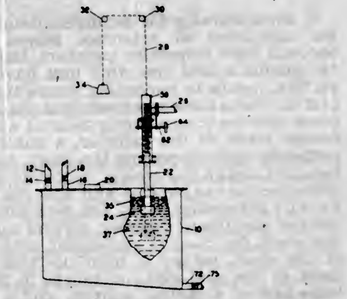
2,461,140
DOUBLE SHUTTER HEAT PROTECTION FOR MOTION-PICTURE PROJECTORS
John G. Capstaff, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application November 13, 1947, Serial No. 785,688
2 Claims. (Cl. 88—17)

1. A safety device for projectors comprising a source of light, a heat screen in the light beam, a rotary shutter in the light beam, said shutter comprising a pair of spaced shutter members, one on each side of the heat screen, fins carried by the shutter member facing the heat screen and having a path of movement close thereto to sweep off a layer of hot air adjacent the heat screen thereby cooling the heat screen, the fins carried



by the shutter members having a length approximately as long as the greatest dimension of the heat screen to sweep the air from the entire faces thereof as said fins pass across the surfaces of the heat screen during rotation of the shutter.

2,461,141
APPARATUS FOR THE TOP SEPARATION OF NITROTOLUENE
Marvin H. Carl, St. Louis, Mo., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Original application January 27, 1943, Serial No. 473,712. Divided and this application February 9, 1945, Serial No. 577,119
1 Claim. (Cl. 23—285)



Apparatus for the separation of nitrotoluene from spent nitrating mixtures which comprises a nitrating kettle, a movable pipe extending down into said kettle, said movable pipe adapted to slide in telescoping relation over a fixed pipe, a ratchet connected to said movable pipe and outside said tank, a rotatable pinion in operative relation with said ratchet to raise and lower said movable pipe in said tank, counterbalancing means supporting said movable pipe independently of said fixed pipe, a cup enclosing and attached to the lower end of said movable pipe the lip of said cup lying in one horizontal plane, and the sides of said cup being spaced from said movable pipe, whereby liquid flowing into said movable pipe must reverse its direction, and gauge means to indicate the height of said cup in said tank.

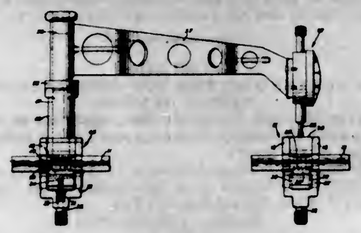
2,461,142
PRODUCTION OF BETA-TRICHLORETHANE
Oliver W. Cass, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 26, 1944, Serial No. 551,452
2 Claims. (Cl. 204—163)

1. A process for producing beta-trichlorethane which comprises passing chlorine, hydrogen chloride and acetylene in substantially equimolecular

per gage supporting slide member adjustably sup-

proportions into a liquid chlorohydrocarbon containing a predominant amount of beta-trichlorethane, at a temperature between −30° C. and 25° C., in the presence of actinic light.

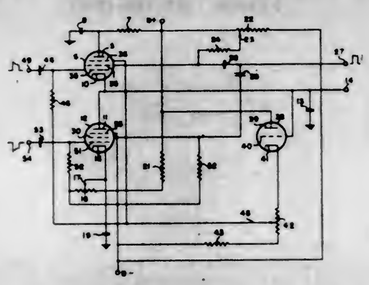
2,461,142
GAUGING APPARATUS FOR CHECKING THE RELATIVE ALIGNMENT OF REFERENCE PLANES OF SPACED ARTICLES
Harry W. Clifford, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 15, 1946, Serial No. 669,785
6 Claims. (Cl. 33—180)



6. An apparatus for gaging contoured member for alignment of reference planes extending through their respective members, the apparatus comprising a first centering unit having a plane surface, means to removably secure the centering unit to one of the members and cause the said plane surface thereof to lie parallel with the reference plane of the member, a shaft, a second centering unit supporting the shaft, means to removably secure the second centering unit to the other member to position and hold the shaft with its axis perpendicular to the reference plane of the last mentioned member, an arm supported by the shaft for rocking movement about the axis of the shaft, means to limit the rocking movement of the arm given distances in both directions beyond a central position, and a gage unit, supported by the free end of the arm, including a dial with indicia extending in both directions from a zero position, a pointer cooperating with the dial to register with the zero position if the reference planes are aligned, and a plunger to ride on the said plane surface of the first centering member to actuate the pointer relative to the dial to indicate alignment of the said reference planes or the degrees the said reference planes are out of alignment during rocking movement of the arm.

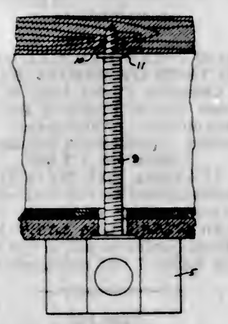
2,461,144
ELECTRICAL STORAGE DEVICE
John C. Cook, Afton, Wyo., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application April 30, 1946, Serial No. 666,024
4 Claims. (Cl. 250—27)

1. An electronic circuit for developing and storing electrical potentials in accordance with predetermined signal potentials of short duration comprising a first multi-grid vacuum tube having anode and cathode electrodes, a second vacuum tube similar to said first vacuum tube having its anode electrode electrically connected to the cathode electrode of said first vacuum tube, a storage capacitor connected from the cathode of said first vacuum tube to a point of fixed potential, means for biasing the anode of said first vacuum tube positively with respect to said fixed potential, means for biasing the cathode of said second vacuum tube negatively with respect to said fixed potential, means associated with said positive bias means for biasing at least one grid of said first vacuum tube, cathode follower means for variably biasing at least one additional grid of said first vacuum tube, means for biasing the several grids of said second vacuum tube, means for impressing first signals on at least one grid of each of said first and second vacuum tubes,



means for impressing second signals on at least one grid other than the grid receiving said first signals in each of said first and second vacuum tubes, whereby when said first and said second signals are substantially coincident in time of arrival at said first and second vacuum tubes the amount of charge on said storage capacitor is altered in accordance with the type and magnitude of said first signals, and means for impressing the voltage across said capacitor after said alteration on an external circuit.

2,461,145
WALL BRACKET HANGER
William Carl Craver, Winston-Salem, N. C.
Application July 9, 1946, Serial No. 682,235
1 Claim. (Cl. 248—216)



A hanger for wall boxes having a central opening formed therein, an externally and internally threaded bushing secured within the opening, a screw embodying a threaded shank secured within the bushing, a reduced threaded end on the shank, said reduced threaded end of the shank adapted to be secured within a supporting member, and a washer secured to the shank at the base of the reduced end of the shank for engaging the supporting member and restricting movement of the screw into the supporting member.

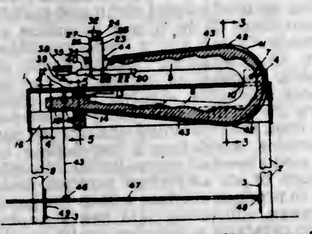
2,461,146
REFRACTORY LINING COMPOSITION
William C. Cress, Chicago, Ill., assignor to Whiting Corporation, Harvey, Ill., a corporation of Illinois
No Drawing. Application February 5, 1945, Serial No. 576,269
2 Claims. (Cl. 106—68)

1. A composition adapted for use as a refractory lining for converters, ladles and the like consisting of a homogeneous mixture of ganister, silica flour and bentonite, approximately 50% by weight of said mixture consisting of ganister having a particle size varying from ⅜ inch to a particle size which will pass through a 28 mesh screen, approximately 30% by weight consisting of ganister having a particle size varying from ⅛ inch to a particle size which will pass through a 65 mesh screen, approximately 14% by weight being the silica flour and approximately 6% by weight being the bentonite.

2,461,147
DEHYDROGENATION PROCESS
Elwyn P. Davies, Alameda, and Frank T. Eggertsen, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application April 24, 1946, Serial No. 664,705
4 Claims. (Cl. 260—680)

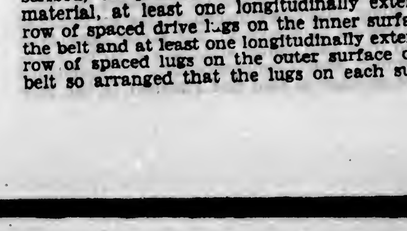
1. In a process for a dehyrogenation of a hydrocarbon at a temperature above 580° C. in the presence of added steam with a steam-stable dehydrogenation catalyst, the improvement which comprises contacting the vapors of the hydrocarbon to be dehydrogenated together with added steam under said temperature conditions with pellets of an alkali-promoted iron oxide containing catalyst prepared by forming a paste of the powdered catalyst ingredients and water, extruding the paste to form pellets, drying the pellets, and calcining them at a temperature between about 900° C. and 975° C. to activate and strengthen them and reduce the available surface to below about 10 square meters per gram, the amount of water used in forming said paste being sufficient that the catalyst pellets have an apparent density below 0.520 of the absolute density.

2,461,148
FLOATING CALIPER GAUGE
Henry Arthur Dawley, Kansas City, Mo.
Application April 22, 1947, Serial No. 743,038
7 Claims. (Cl. 33—147)



5. A floating caliper gage including a work supporting table having apertures formed through the opposite ends thereof, a pivoted U-shape caliper gage supporting bracket disposed through one of said apertures with its arms extending above and below said table, a head block pivotally supported on the outer end of said upper arm, a caliper gage supporting slide member adjustably supported in said head block, means for variably adjusting said slide member, a dial indicator caliper gage and upper gage pin removably supported on said slide member, a lower gage pin supported on the outer end of said lower arm for vertical movement through the other of said apertures, a treadle, means operated thereby for simultaneously moving both gage pins away from each other while placing an object therebetween to be gaged including a guide channel formed in the outer edge of said U-shape caliper gage supporting bracket, spaced bearing pins disposed transversely of said channel, and an operating cable secured to said pivoted head block being extended over said bearing pins in said channel, and secured at its opposite end to said treadle.

2,461,149
GARMENT HANGER
Joseph E. Ericson, Kensington, Conn.
Application April 30, 1946, Serial No. 666,086
1 Claim. (Cl. 223—86)



In a garment hanger, a wire member including a supporting hook and downwardly-diverging portions extending laterally of said hook adapted to provide shoulder-supporting portions for a body garment, said portions terminating in substantially vertical depending extremities, a tubular hanger bar open at both ends and adapted to contain a vapor-disseminating material, said bar being formed to provide a pair of vertically aligned apertures adjacent each end thereof, said vertical extremities of said wire member extending through said apertures to partially close said open ends but providing vapor passages therearound, the free ends of said extremities being upset below said bar and longitudinally thereof to retain said bar thereon, and said bar being formed to provide an opening in the upper surface thereof for the insertion of vapor-disseminating material therein.

2,461,150
ENDLESS TRACK
Theodore P. Flynn, Portland, Oreg., and Thomas Coldwell, Vancouver, Wash.; dedicated to the free use of the People in the territory of the United States
Original application June 15, 1944, Serial No. 540,510. Divided and this application May 28, 1946, Serial No. 672,902
2 Claims. (Cl. 305—10)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A track for a snow tractor of the class described, comprising an endless belt of flexible material, at least one longitudinally extending row of spaced drive lugs on the inner surface of the belt and at least one longitudinally extending row of spaced lugs on the outer surface of the belt so arranged that the lugs on each surface

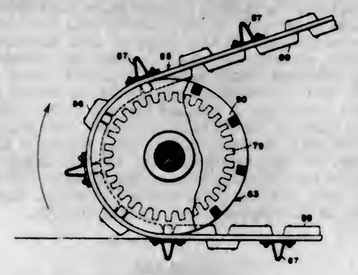
lie opposite the spaces between the lugs on the

sage in said pintle, sealing gaskets at each end

2,461,154

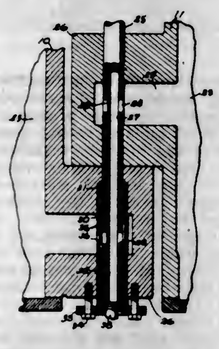
and the axes of the other two of said arms being

lie opposite the spaces between the lugs on the other surface, the longitudinal extremities of the lugs on one surface overlapping those on the



other, and securing means extending through the belt and the overlapping extremities for securing the lugs to each other and to the belt.

2,461,151
STEREOTYPE PLATE CASTING BOX
Frank A. Foster, Melrose Park, Ill., assignor to The Goss Printing Press Company, Chicago, Ill., a corporation of Illinois
Application May 17, 1946, Serial No. 670,482
5 Claims. (Cl. 22—2)



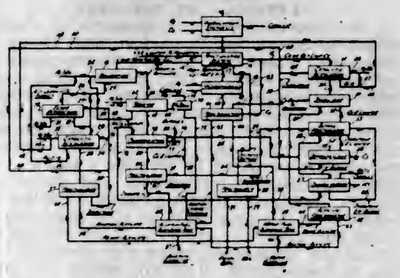
3. A casting box for stereotype plates comprising, in combination, a complemental pair of hollow shells presenting generally semi-cylindrical inner faces adapted to receive a mat, each of said shells having a vacuum chamber therein from which lead suction ports opening into the inner face of the shell, a pintle having an axially extending passage therein leading from one end of the same, gudgeons rigid with respective ones of said shells and engaging said pintle to hinge said shells for opening and closing movement relative to each other, one of said gudgeons being freely journaled on said pintle and the other fixed thereon, means including passages in said gudgeons for establishing pressure equalizing intercommunication between said vacuum chambers through such passages and through said passage in said pintle, means for establishing a connection from said interconnected chambers to a vacuum pump, said one gudgeon having an enlarged bore therein, a sleeve in the latter bore telescoped over said pintle and having ports therein through which communication is established to the passage in said one gudgeon to the passage in said pintle, sealing gaskets at each end of said sleeve, and a stuffing box for compressing said gaskets.

2,461,152
CELLULOSE ESTERS OF AMINO ACIDS
Thomas S. Gardner, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application November 8, 1945, Serial No. 627,549
7 Claims. (Cl. 260—225)

4. A mixed ester of cellulose of a lower fatty acid and an acid having the formula:

R being selected from the group consisting of aliphatic radicals and C_6H_4.

2,461,153
METHOD OF MANUFACTURING HIGH ANTI-KNOCK SYNTHESIS GASOLINE
Arthur R. Goldsby, Beacon, N. Y., assignor to Texaco Development Corporation, New York, N. Y., a corporation of Delaware
Application April 14, 1945, Serial No. 588,309
8 Claims. (Cl. 260—450)



1. A process for the manufacture of high anti-knock gasoline from carbon oxides and hydrogen, which comprises reacting a carbon oxide and hydrogen in the presence of a synthesis catalyst under conditions effective to produce normally gaseous and normally liquid paraffin and olefin hydrocarbons containing a substantial proportion of normally liquid hydrocarbons within the gasoline boiling range, separating from the resulting synthesis products a light naphtha fraction containing normally liquid olefin and paraffin hydrocarbons from C_3 up to and including at least C_7 but below C_9 and also a heavy naphtha fraction above C_7, extracting olefins from said light naphtha fraction by contacting the same with an acid alkylation catalyst under conditions to absorb the olefins, separating the acid-olefin extract from the remaining unabsorbed paraffin hydrocarbons, alkylating a low-boiling isoparaffin with said absorbed normally liquid olefins in the presence of an alkylation catalyst under conditions to produce alkylate within the gasoline boiling range, subjecting said heavy naphtha fraction to catalytic conversion under conditions including an elevated temperature of about 900–1100° F. effective to lower the boiling points of a substantial proportion thereof and produce a broad boiling range gasoline of substantially improved antiknock value, and combining a gasoline fraction from said conversion step with said gasoline alkylate.

2,461,154
BENZILIC ACID SOLDERING FLUX
Thomas Alton Hale, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 31, 1945 Serial No. 608,080
5 Claims. (Cl. 148—25)

3. A non-corrosive and electrically non-conductive soldering flux consisting of 1 to 3 parts by weight of rosin and 1 part by weight of benzilic acid dissolved in a common solvent.

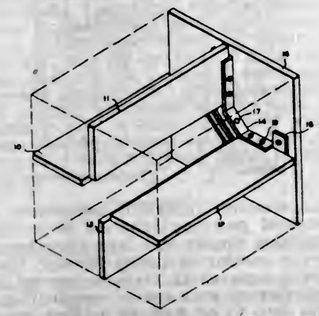
2,461,155
NAPHTHOIC ACID SOLDERING FLUX
Thomas Alton Hale, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
No Drawing. Application July 31, 1945, Serial No. 608,081
5 Claims. (Cl. 148—25)

3. A non-corrosive and electrically non-conductive soldering flux consisting of from 1 to 3 parts by weight of rosin and 1 part by weight of a compound selected from the group consisting of alpha naphthoic acid, beta naphthoic acid, alpha naphthoic acid anhydride and beta naphthoic acid anhydride, dissolved in a common solvent.

2,461,156
IMIDAZOLINES AND PROCESS OF MAKING SAME
Max Hartmann, Riehen, and Hans Isler, Bottmingen, Switzerland, assignors to Ciba Pharmaceutical Products, Inc., Summit, N. J.
No Drawing. Application October 28, 1946, Serial No. 706,089. In Switzerland November 2, 1945
6 Claims. (Cl. 260—309.6)

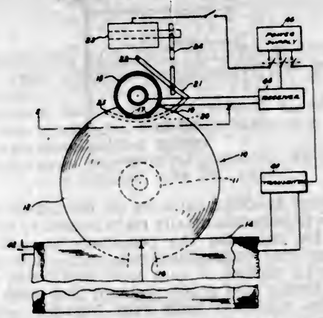
1. A member selected from the group consisting of the 2,2'-diphenylene-bis-imidazolines which are unsubstituted in the imidazoline ring, the 2,2'-diphenylene-bis-imidazolines which are substituted by a lower alkyl group in the imidazoline ring, and the inorganic acid salts thereof.

2,461,157
SHELF FOR ELECTRICAL APPARATUS
Lawrence T. Holden, Boston, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application March 26, 1946, Serial No. 657,302
6 Claims. (Cl. 211—90)



6. An end structure for sustaining four chassis cards relative to a wall, comprising a central portion and four arms secured to said central portion, the axes of said arms being substantially in a single plane and the axes of two of said arms being substantially parallel to each other and the axes of the other two of said arms being substantially parallel to each other and substantially perpendicular to the axes of the first two arms, means on said four arms respectively to sustain four chassis cards substantially normal to the plane which includes said four axes and the adjacent edges of said cards are spaced from each other.

2,461,158
RADIO PROTECTIVE DEVICE
Lowell M. Hollingsworth, Cambridge, and Louis D. Smullin, Arlington, Mass., assignors, by mesne assignments, to the United States of America as represented by the Secretary of War
Application February 8, 1945, Serial No. 576,843
5 Claims. (Cl. 343—5)



1. A radio object-locating system operable from a source of electric power and comprising, in combination, an antenna for transmitting and receiving pulsed electromagnetic energy, transmitting apparatus electrically connected to said antenna thru a pair of transmission lines and receiving apparatus, wave transmission means including a walled cavity type transmit-receive switch electrically coupled to said transmission lines, the said switch being adapted to afford operative connections from said antenna alternatively to said transmitting apparatus and to said receiving apparatus, said switch enabling said wave transmission means to pass electromagnetic energy from said transmitting apparatus to said antenna and having a portion thereof in which a coupling is normally effected between said antenna and said receiving apparatus except for the duration of energy pulse transmissions by said system, a sheet-like electrically conductive member arranged to be pivotally inserted through a suitable slot in the wall of said switch, means under control of said power source for moving said member and operative when said system is cut off from said power source to move said member into electrical contact with portions of said transmission means affording connection to said receiver apparatus adjacent said coupling portion for effecting cavity detuning and short-circuiting action thereby to protect said receiving apparatus from energy fields within said switch.

2,461,159
PULLDOWN MECHANISM FOR MOTION-PICTURE PROJECTORS
Miller R. Hutchison, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application July 23, 1947, Serial No. 763,081
11 Claims. (Cl. 88—18.4)

1. An intermittent film pull-down mechanism for use in a motion-picture projector having a

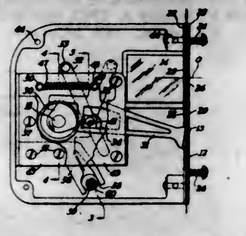
film gate through which a perforated film is

2,461,161

the cans, means to dry the cans as they travel through the drying compartment, and a plurality

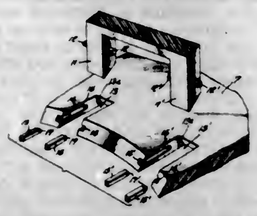
cover being manually slidable longitudinally of the magazine to provide for loading it with fas-

film gate through which a perforated film is adapted to be advanced past a projection aperture and comprising a peripheral cam having its axis lying in a plane substantially parallel to the plane of the film in the gate, means for continuously rotating said cam in a direction counter to that of the direction of film movement through the gate, a trunnion block located between said cam and said gate, a monoplanar pull-down lever having a straight surface intermediate its ends engaging the lower side of said trunnion block for constituting a fulcrum for said lever, a claw on one end of said lever for engaging the perforations in the film passing through said gate, top



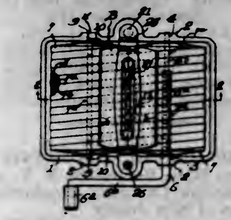
and front follower surfaces on the other end of said lever at substantially right angles to one another for engaging the periphery of said cam, whereby said cam effects the introductory and pull-down strokes of said lever and claw, and a spring acting on a portion of said lever above said trunnion block to hold said follower surfaces against said cam and pivot the lever counterclockwise about said trunnion, whereby said spring and the frictional forces between the cam and horizontal follower surface furnishes the force necessary to withdraw the claw from the film perforation at the end of a pull-down stroke and the spring alone furnishes the necessary force to return the claw to its starting position.

2,461,160
TOILET SEAT COVER
Maurice Joyce, Port Washington, N. Y.
Application August 18, 1947, Serial No. 769,244
4 Claims. (Cl. 4—235)



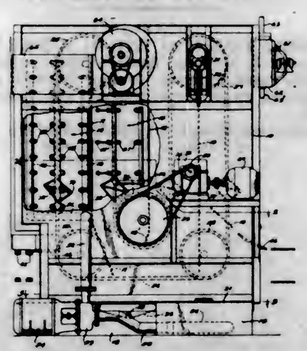
1. A cover for a toilet seat formed of a molded material and provided with an opening therein for accommodating the seating of a child thereover, a supplemental lid for said cover opening also formed of molded material, and hinge means for pivotally connecting said lid to said cover comprising a pair of projections extending from the rear of said lid engaging a pair of corresponding recesses in said cover, pintles extending transversely from said projections and adapted to be fitted within grooves in the lateral walls of said recesses and backed with splines conforming to said grooves, whereby said pintles are completely embedded within said cover.

2,461,161
RAZOR BLADE SHARPENER
James T. King, Burbank, Calif.
Application May 2, 1947, Serial No. 745,401
4 Claims. (Cl. 51—90)



1. In a wafer blade sharpening machine, a case; a crank shaft journalled in suitable bearings in said case; a sharpening roller on said crank shaft; a floating sharpening roller in said case; spring means holding said floating roller in contact with said first mentioned roller, said means comprising a hook on the bottom of the case, a roller floater having a transverse portion located under the hook and having arms lying against the bottom of the case, said arms having upward extensions terminating in ends bent over toward one another and forming trunnions for said floating roller, and projections on walls of the case for holding said floater against pivoting on said hook; and means movably engaging said case for presenting a blade to said rollers to be sharpened thereby.

2,461,162
CAN WASHING MACHINE
Elmer R. Laird, Chicago, Ill., assignor to Armour and Company, Chicago, Ill., a corporation of Illinois
Application December 11, 1944, Serial No. 567,563
10 Claims. (Cl. 134—72)



4. Can washing apparatus comprising a cabinet, vertical partitions therein providing vertical washing, rinsing and drying compartments, a conveyor passing vertically through the compartments successively, baskets carried by the conveyor formed with spaced parallel fingers to hold the cans to be washed, loading means including spaced parallel bars adapted to interleave with the fingers whereby the baskets can pick up cans from the bars, nozzles in the washing compartment to spray washing liquid on the cans as they travel therethrough, nozzles in the rinsing compartment to spray rinsing liquid on

the cans, means to dry the cans as they travel through the drying compartment, and a plurality of spaced sloping fingers adjacent the discharge end of the drying compartment to interleave with the basket fingers and unload cans from the baskets.

2,461,163
PRODUCTION OF INVERT SUGAR
William A. La Lande, Jr., Upper Darby, Pa., assignor to Attapulgus Clay Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application March 13, 1946, Serial No. 654,227
9 Claims. (Cl. 127—41)

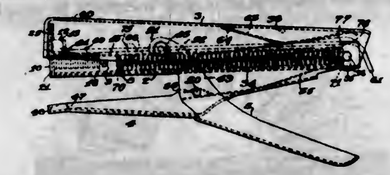
1. The method of producing invert sugar from a clarified sucrose solution, which comprises bringing said solution into intimate contact with bentonite at a temperature between 150° F. and 200° F., the weight ratio of sugar solids to bentonite being not greater than 15 to 1.

2,461,164
WEAR INDICATING ATTACHMENT FOR DRILLING BITS
Farral Francis Lewis, Houma, La.
Application March 19, 1947, Serial No. 735,628
2 Claims. (Cl. 255—61)

1. In a drilling bit, the combination of a body formed with a chamber to receive flushing fluid under pressure, an elongated receptacle provided in said body, a piston slidable in said receptacle and separating the same into upper and lower compartments, a conduit communicating with the lower compartment of said receptacle and having a normally closed but rupturable terminus disposed in a portion of said body subjected to wear, and a fluid indicating agent provided in the lower compartment of said receptacle and in said conduit, the upper compartment of said receptacle being in communication with said chamber whereby flushing fluid pressure is transmitted to said fluid indicating agent through the medium of said piston.

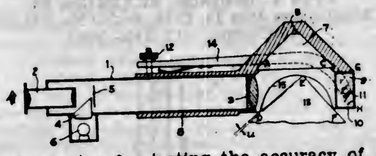
2,461,165
MAGAZINE FOR FASTENER APPLYING IMPLEMENTS
Charles M. Lindstrom, East Greenwich, R. I., assignor, by mesne assignments, to Bostitch, Inc., a corporation of Rhode Island
Application March 29, 1945, Serial No. 585,486
14 Claims. (Cl. 1—49)

1. In a fastener-applying implement, a magazine for supporting a supply of fasteners, a cover overlying the magazine for preventing displacement of the fasteners supported thereby, said cover being manually slidable longitudinally of the magazine to provide for loading it with fasteners, and resilient means acting against the



top of the cover for holding the cover in place on the magazine and applying frictional resistance to its sliding movement.

2,461,166
INSTRUMENT FOR TESTING THE ACCURACY OF THE ANGLE BETWEEN TWO PRISM FACES
Benjamin E. Luboshez, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application May 2, 1945, Serial No. 591,502
3 Claims. (Cl. 88—14)



2. Apparatus for testing the accuracy of the right angle of a prism having two surfaces at right angles, comprising an eyepiece, a reticle in the focus plane of the eyepiece, means for illuminating the reticle, an objective optically at its focal length from the reticle in optical alignment with the eyepiece and reticle, for receiving light from the reticle and for collimating it, a mount for the eyepiece, reticle and objective having an open portion in front of the objective for receiving the prism to be tested with the two surfaces in the collimated beam of light from the objective, and a plurality of reflecting surfaces carried by the mount precisely oriented relative to one another for receiving the collimated light reflected by the surfaces of prism when in said open portion and for reflecting it back to the surfaces of the prism and thence back through the objective into focus in the reticle plane.

2,461,167
CONVEYER AND TRANSFER MECHANISM
Clarence J. Malhiot, Oak Park, Ill., assignor to F. B. Redington Co, Chicago, Ill., a corporation of Illinois
Original application May 8, 1942, Serial No. 442,205. Divided and this application September 9, 1944, Serial No. 553,448
11 Claims. (Cl. 198—33)

7. In a wrapping machine, a continuously moving article conveyor, a continuously rotating transfer wheel having circumferentially spaced article receiving pockets adapted to receive articles from the conveyor on one side of said wheel, to invert the articles and return the same to said conveyor on the other side of the wheel, said conveyor having spaced pusher members thereon adapted to engage articles and deliver them successively in the pockets of the wheel, a cam track in position to cooperate with said pusher elements as they reach the wheel to retract the

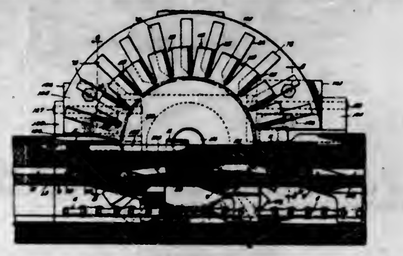
same from article engaging position as the article

terial, the particles of which move without sepa-

the latter disposed radially and with their free

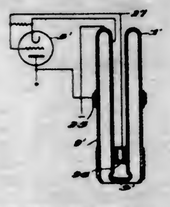
2,461,173
SEISMIC SURVEYING

same from article engaging position as the article pushed thereby enters a corresponding wheel pocket, on one side of the wheel, said cam track serving to return said pusher members to article



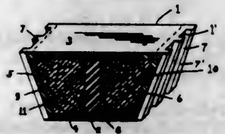
engaging position as the same reach the other side of the wheel whereby to eject articles in inverted position from said pockets at the other side of the wheel.

2,461,168
RESONANT SPARK PLUG
Oran T. McIlvaine, St. Charles, Ill.
Application July 11, 1944, Serial No. 544,395
19 Claims. (Cl. 315—209)



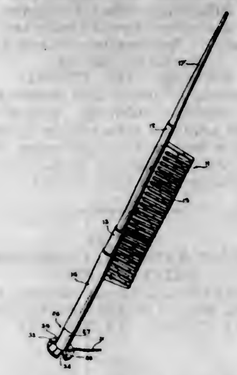
1. An all metal spark plug comprising an outer and an inner tubular electrode, each electrode being open at one end and closed at the opposite end, the closed end of the inner electrode being associated with the open end of the outer electrode for a disruptive high frequency discharge.

2,461,169
POWER TRANSMISSION BELT
Edwin August Miller, Fairfield, Conn.
Application June 27, 1944, Serial No. 542,314
2 Claims. (Cl. 74—233)



1. A power transmission belt of V-type comprising a top portion extending throughout the length of the belt and defining the outer circumference of a flexed belt portion; a base belt portion of lesser width than that of the top portion and defining the inner circumference of said flexed belt portion; converging side portions connecting said top and base portions; a flexible member of block rubber, or the like, centrally connecting said top and base portions; and a suitable fluid material between said block rubber member and said top and converging side portions, the slight lateral yielding of said fluid material, the particles of which move without separating the mass, is substantially resisted by said centrally positioned flexible member.

2,461,170
TRICUELER
Jack J. Morretta, Scarsdale, N. Y.
Application November 19, 1945, Serial No. 629,598
6 Claims. (Cl. 132—35)

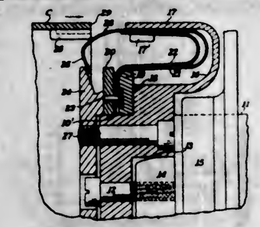


6. An article of the class described, comprising in combination a relatively wide member formed at one end with a longitudinal extension and grooves in opposite faces thereof adjacent one longitudinal edge of said wide member, a plurality of interengaged tubular curlers formed with aligned slots and engaged upon the said one longitudinal edge of said wide member with the material on opposite sides of said aligned slots engaging said grooves, said tubular curlers having their adjacent ends projected beyond the end of said wide member opposite said longitudinal extension and upon which a lock of hair can be wound for forming a curl, a scalp guard for receiving the curl formed on said tubular curlers and holding it a desired length of time to set the curl, comprising a cylindrical portion of a diameter equal to the diameter of said tubular curlers, a reduced portion formed on one end of said cylindrical portion and engageable into the open end of the inner of said tubular curlers with the cylindrical portion in concentric end alignment with said tubular curlers so that a curl formed on said tubular curlers may be slipped axially off said tubular curlers onto said cylindrical portion after which said tubular curlers are removed from said reduced portion, and means on said cylindrical portion engageable with the curl for holding it releasably in position on said cylindrical portion.

2,461,171
CENTERING SUPPORT
Leon P. Morey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application February 14, 1946, Serial No. 647,587
3 Claims. (Cl. 242—46.6)

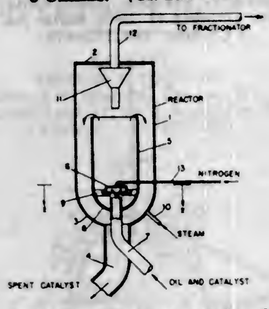
1. A core support for tubular cores of the type having one or more protuberances, said support comprising a plurality of springs between any two alternate units of which said protuberances may be inserted to serve as means for driving said core, a rotatable head, a ring member mounted on said head and carrying said springs with

the latter disposed radially and with their free ends recurved toward the axis of said head, whereby portions of the faces of said springs con-



stitute a concentric resilient seat for said core and parts of the edges of said springs constitute driving means therefor.

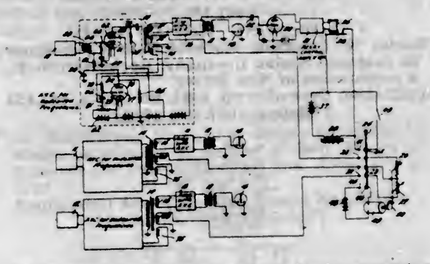
2,461,172
PYROLYTIC CONVERSION OF HYDROCARBONS
Harry Louis Pelzer, Steger, Ill., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application June 11, 1947, Serial No. 754,018
6 Claims. (Cl. 196—52)



1. In the fluid catalyst process for the conversion of hydrocarbons wherein a finely divided catalyst at an elevated temperature is brought into contact with hydrocarbon vapors to be converted in a conversion chamber, the step of injecting a suspension of the catalyst in the hydrocarbon vapors, as a substantial vertical, high velocity stream, into the lower end of a vertically elongated, cylindrical conversion chamber, suddenly breaking the velocity of the stream and deflecting the stream downwardly and radially outwardly, reducing the turbulence of the radially directed stream, distributing it substantially uniform and passing the suspension upwardly through the conversion chamber.

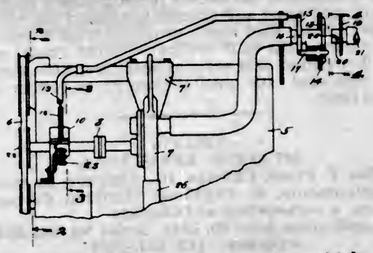
5. Apparatus of the type described comprising a closed, vertically elongated chamber, a second vertically elongated chamber coaxially positioned in the first chamber and in open communication therewith at its upper end, a conduit entering the lower end of the inner chamber and terminating therein, the inner end of the conduit being directed substantially vertically and coaxially positioned with respect to the chambers, a substantially circular cap having downwardly projecting edges placed directly above the inner end of said conduit, straightening vanes extending radially from the sides of the cap to the inner walls of the inner chamber, and conduit means leading from the lower end and upper end, respectively, of the outer chamber.

2,461,173
SEISMIC SURVEYING
Josephus O. Parr, Jr., San Antonio, Tex., assignor to Olive S. Petty, San Antonio, Tex.
Application August 27, 1945, Serial No. 612,739
7 Claims. (Cl. 177—352)



1. In apparatus for use in seismic surveying, the combination with a plurality of seismometers, of a plurality of recording devices, compositing means for combining signal energy derived from at least two of said seismometers and delivering such combined energy to one of said recording devices, and an automatic volume control circuit interposed between each of said last named seismometers and said compositing means and responsive to the arrival at the associated seismometer of energy of undesired frequencies in excess of a predetermined energy level for reducing the total energy transmitted to such compositing means from such seismometer, whereby the level of energy of undesired frequencies so combined by said compositing means is rendered more nearly equal and out of phase energy of undesired frequencies is more completely cancelled.

2,461,174
AUTO VACUUM CLEANER
Harry A. R. Peterman, Chicago, Ill.
Application April 15, 1946, Serial No. 662,336
3 Claims. (Cl. 230—14)



2. The combination with a motor vehicle internal combustion engine and the belt of the fan driving mechanism thereof, of a vacuum cleaning device, comprising a suction fan and housing adapted to be attached to the engine, an air intake hose connected with the housing, a flexible power shaft extending into the housing and on which the suction fan is secured, a pulley on one end of the shaft, a bearing in which the shaft is eccentrically mounted, a flexible operating shaft, an arm connected with said bearing and to which one end of the operating shaft is connected, a lever connected with the opposite end of the flexible operating shaft, a push rod connected with the lever, a removable air intake hose including a pipe section having a flange, said flange engaging the push rod when the removable intake hose is connected with the first-mentioned air

intake hose, rotating the bearing whereby the

tilted longitudinally, and adapted during drive

member affixed to the said bracket, the said dis-

pound and a manganese-chromium alloy having a composition within the range:

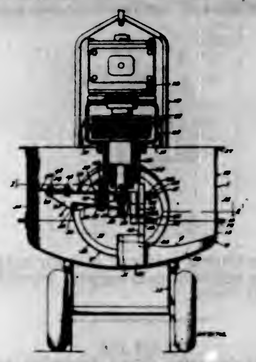
intake hose, rotating the bearing whereby the power shaft is adjusted, moving the pulley into engagement with the belt of the fan driving mechanism operating the suction fan.

2,461,175
PANORAMING TRIPOD HEAD
Charles W. Peterson, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application December 29, 1945, Serial No. 637,853
3 Claims. (Cl. 248—183)

2. A panoraming tripod head comprising a base which is adapted to be detachably connected to the top of a tripod; a vertical bearing shaft fixed to and extending a substantial distance from said base; a U-shaped lower frame having its cross arm rotatably engaging said shaft adjacent the base for horizontal rotation; a U-shaped upper frame disposed with its vertical arms in overlapping relation with those of the lower frame; a horizontal bearing shaft extending through one pair of overlapping arms and rotatable with respect to at least one of the arms; a second horizontal bearing shaft extending through the other pair of overlapping arms of the two frames in alignment with said first-mentioned horizontal bearing shaft, and fixed to one arm while rotatable with respect to the other; means on the cross arm of said upper frame for attaching a camera thereto; a handle fixed to the upper frame for controlling the movements of the head; means for frictionally restraining the combined horizontal rotation of the two frames about the vertical bearing shaft and a vertical rotation of the upper frame about the horizontal bearing shafts; said first-mentioned horizontal bearing shaft fixed to one of said arms and extending toward the center of said head, said shaft provided with a hole in alignment with said vertical bearing shaft; and the free end of said vertical bearing shaft extending into said hole with a close fit to render the head rigid.

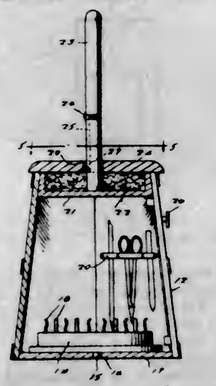
2,461,176
MULLING APPARATUS
Walter F. Piper, Chicago, Ill., assignor, by mesne assignments, to Pettibone Mulliken Corporation, a corporation of Delaware
Application June 30, 1945, Serial No. 602,564
5 Claims. (Cl. 241—124)

2. In a mulling apparatus comprising a bowl-like receptacle embodying a bottom wall and a continuous upstanding side wall and adapted to retain the material to be mulled, a rotary power driven crosshead positioned over and in spaced relation with the receptacle bottom wall, and a rotary mulling wheel carried by the crosshead and adapted during drive of the latter to travel in a circular course within the receptacle interior and effect mulling of the material by squeezing it against said receptacle, a horizontally elongated plow positioned beneath the crosshead and directly over the receptacle bottom, extending outwards from the central part of the receptacle to the side wall, having means between it and the crosshead whereby it is connected to rotate conjointly with the crosshead while at the same time it is capable of being adjusted vertically and also tilted longitudinally, and adapted during drive of said crosshead to travel in a circular course



over the receptacle bottom and deflect the material outwards into the path of the mulling wheel.

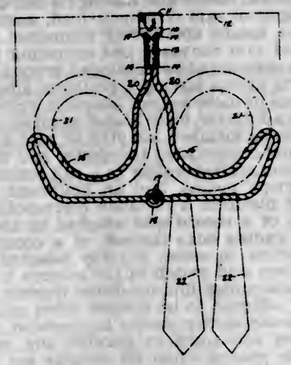
2,461,177
MANICURE CASE
Clyde G. Prestien, Berea, Ohio
Application October 18, 1946, Serial No. 704,257
2 Claims. (Cl. 132—79)



1. In a manicure case, an open top housing of conical frustum shape, a pair of doors arranged on the side of said housing and mounted for movement toward and away from each other for gaining access to the interior of the housing, a strap member provided with a plurality of loops secured to the inside surface of said doors for supporting manicuring implements thereon, a base stand member arranged in said housing and rotatably supported on the bottom of the latter for supporting containers of manicuring fluids thereon, a dish member closing the open top of said housing for supporting absorbing cotton thereon and a cover disc on said dish member and supported by said housing.

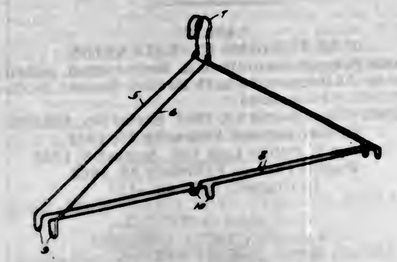
2,461,178
HAT AND TIE HOLDER
Fred A. Reinke, Cleveland, Ohio
Application January 8, 1947, Serial No. 720,740
4 Claims. (Cl. 211—32)

2. A hat and tie holder comprising a bracket for mounting on a door and a distortable body member affixed to the said bracket, the said distortable body member being shaped into two oppositely disposed, semi-U-shapes and spaced away from the said door for the reception of hats,



the outer ends of the said body member being brought together in a central location and a spacing member affixed thereto for spacing the said body member with respect to the said door.

2,461,179
TROUSER HANGER
Robert G. Rogalla, Racine, Wis.
Application June 12, 1946, Serial No. 676,125
2 Claims. (Cl. 223—95)



1. A trousers hanger formed of a length of wire material constructed to provide triangular parallel identical hanger sections, a spring hook formed integral with the sections normally drawing the sections towards each other, a lower rod forming a part of each hanger section, the ends of said sections being extended downwardly, inwardly and upwardly forming continuations of the lower rods and providing spaces at the ends of the lower rods for the reception of trousers' cuffs supported by the hanger.

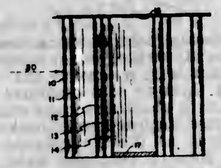
2,461,180
COATED WELD ROD
Ernest Clarence Rollason, Waltham Abbey, England, assignor to Metal and Thermit Corporation, New York, N. Y., a corporation of New Jersey
No Drawing. Application October 16, 1946, Serial No. 703,490. In Great Britain November 8, 1945
3 Claims. (Cl. 219—8)

1. A flux-coated welding electrode in which the flux ingredients comprise an alkali metal compound and a manganese-chromium alloy having a composition within the range:

	Percent
Manganese	50 to 98
Chromium	0.5 to 7
Carbon not exceeding	1.5
Silicon not exceeding	5
Copper not exceeding	5

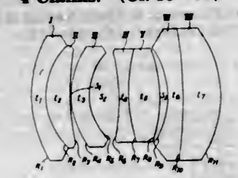
Iron with traces of normal impurities remainder.

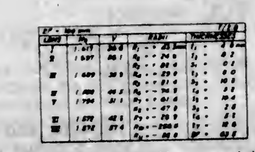
2,461,181
REFLECTING DEVICE
Paul Rosenberg, Brookline, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War
Application August 8, 1945, Serial No. 609,659
16 Claims. (Cl. 177—386)



1. A supersonic reflector comprising a plurality of hollow cylindrical elements of graduated sizes, means for maintaining said cylindrical elements in a substantially coaxial arrangement whereby a coded echo is produced when a pulse of supersonic energy impinges on said reflector, and means for suppressing undesirable echoes from said reflector.

2,461,182
FOUR COMPONENT PHOTOGRAPHIC OBJECTIVE HAVING THE FIRST TWO CEMENTED SURFACES CONVEX TO THE FRONT
Willy Schade, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application February 9, 1946, Serial No. 646,685
4 Claims. (Cl. 88—57)





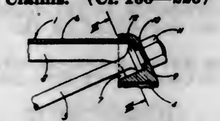
1. A photographic objective consisting of four components axially spaced in the following order: a positive meniscus component convex to the front, a negative meniscus component also convex to the front, a positive meniscus component, and a comparatively thick meniscus component of long focal length, the last two components being concave toward the front and enclosing between them an airspace having the shape of a positive meniscus lens, characterized in that each of the two positive components consists of

ate stage of said turbine means through said

ably mounted upon the drive shaft vertically over

a negative element cemented to the front of a positive element whose index is higher by at least 0.04 than that of the negative element, in that both cemented surfaces are convex to the front, and in that the radius of curvature of the concave surface of each of the two positive components is between two-fifths and two times the focal length of the objective as a whole.

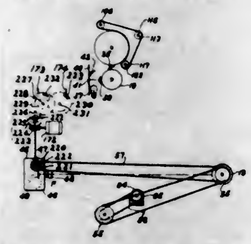
2,461,183
BRAKE BEAM
Frederic Schaefer, Pittsburgh, Pa.
Application April 4, 1947, Serial No. 739,282
8 Claims. (Cl. 188—228)



1. A brake beam comprising a compression member having inturned ends provided with openings therethrough, a tension rod having its ends extending through said openings, said rod being provided with abutting means engaging the inner faces of said inturned ends, brake heads at the opposite ends of the compression member provided with sockets receiving said inturned ends, each head having an opening in it through which the adjacent end of the tension rod projects, and fastening members mounted on the projecting ends of the rods and bearing against the outer faces of the brake heads to clamp the heads and the ends of the compression member tightly against said abutting means.

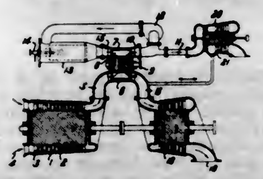
2,461,184
WITHDRAWN

2,461,185
RECORD HANDLING AND COPYING APPARATUS
Alvin E. Schubert and Harvey P. Hintz, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application January 8, 1943, Serial No. 471,706
29 Claims. (Cl. 88—24)



1. In an apparatus for handling and copying records, the combination with a casing provided with an opening, a photographic copying machine within said casing and including a camera adapted to contain a film and having a switch operated according to a film condition in said camera and including a document feed with its entrance adjacent said opening and having a rotatable member for moving records widthwise through and out of said document feed, a driving means for said copying machine, an auxiliary film-advancing means for winding a predetermined length of film through said camera, a carriage assembly on said casing adjacent to and filling said opening and carrying an intermittent record feeder, a continuous conveyer having an arcuate document path, adapted to receive records from said feeder and having its exit opposite the entrance of said document feed, and a common drive means operatively connected to said feeder and said conveyer and operating in synchronism with the aforementioned driving means, a receiving means having a platform adapted to support one or more records edgewise thereon and including a follower plate biased to move towards said rotatable member, adapted to hold a record in frictional engagement therewith, and movable to a position corresponding to a full condition of said receiving means, and an abutment spaced from said platform a distance corresponding to the width of a record and adapted to abut and stop the leading edge thereof, of a control circuit including in series a relay adapted to be opened when said switch in the camera is closed by a predetermined film condition therein, a second relay adapted to be opened when said auxiliary film-advancing means is operated, a pair of switches connected in parallel and adapted both to be opened when no records are in the document path of said feeding means, a starting switch for shunting said pair of switches, and a switch adapted to be opened when said member of the receiving means is moved to full position, an operating circuit interrupted by opening of said control circuit and rendering said common driving means inoperative, a second control circuit completed by the opening of the first-mentioned control circuit and adapted after all the records in said copy machine have been photographed to render inoperative the drive means therefor.

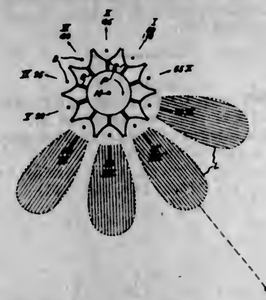
2,461,186
GAS TURBINE INSTALLATION
Claude Seippel, Ennetbaden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie, Baden, Switzerland
Application March 16, 1943, Serial No. 479,369
In Switzerland February 20, 1942
Section 1, Public Law 690, August 8, 1946
Patent expires February 20, 1962
13 Claims. (Cl. 60—41)



6. In a combustion gas turbine plant, a combustion chamber, means for supplying fuel to said chamber, a multistage air compressor means for supplying compressed air to said combustion chamber, a turbine having an inlet connected to said combustion chamber, a second turbine of multistage type having an inlet connected to the outlet of said multistage air compressor means, and a bleeder connection from an intermediate stage of said second turbine to the inlet of the first turbine.

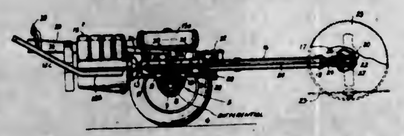
9. In a combustion gas turbine plant, a combustion chamber, means for supplying fuel to said combustion chamber, compressor means including a low pressure turbo-compressor stage and a high pressure cell-runner pressure exchanger stage, multistage turbine means, conduit means for delivering combustion gases to an intermediate stage of said turbine means through said pressure exchanger, and conduit means connecting said combustion chamber to a low pressure stage of said turbine means to supply pressure gas thereto in by-pass relation to said pressure exchanger.

2,461,187
DIRECTION FINDING APPARATUS
Willy Steinmann, Zurich-Wipkingen, Switzerland, assignor to Patelhold Patentverwertungs- & Elektro-Holding A.-G., Glarus, Switzerland
Application May 4, 1945, Serial No. 591,859
In Switzerland May 6, 1944
30 Claims. (Cl. 343—106)



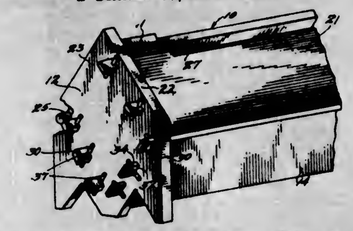
1. In the art of radio direction finding, the process of establishing a field in space which comprises, propagating a plurality of elongated directional radio frequency beams in different directions from a point of transmission, simultaneously and periodically displacing said beams angularly through a predetermined angle, modulating each of said beams with an individual identifying signal, and simultaneously varying the modulating frequencies of the several beams as they are displaced to develop a field pattern of identifying signals which remains substantially fixed in space during displacement of said beams.

2,461,188
SELF-PROPELLED TREE FELLING AND LOG CUTTING SAW RIG
Forrest H. Stoner, Dixon, Mo.
Application October 11, 1945, Serial No. 621,761
1 Claim. (Cl. 143—43)



In an apparatus of the kind described, a two-wheel truck or chassis, the wheels thereof being rigidly mounted upon the ends of a two-part axle shaft the parts thereof being operatively connected by a differential unit, a supporting frame balanced upon the said truck, a power unit and controls at the rear of the frame, timber sawing elements at the forward portion of the frame, a drive shaft operatively connecting the power unit with the timber sawing elements, a stub-shaft journaled vertically in the chassis over the said differential and having a gear at its lower end intermeshing with and operating the differential, a horizontally disposed, bevelled driven gear at the upper end of the said stub-shaft and keyed thereto, a gear-shift tube slidably mounted upon the drive shaft vertically over the differential and the said driven gear, this tube being of a length to overlap the driven gear and being longitudinally slotted to slidably receive a lock pin thereinto as extended from the drive shaft, a lock pin extended as stated from the drive shaft into the slot of the gear shift tube, bevelled pinion gears keyed upon the ends of the gear shift tube in such relation thereto and to the said horizontally disposed, bevelled driven gear at the upper end of the stub shaft, that either of the pinion gears may alternately be intermeshed with the driven gear as desired by sliding the tube forwardly or rearwardly, for driving the chassis either forwardly or rearwardly as desired, and means for thus sliding the gear shift tube forwardly or rearwardly for the stated purpose.

2,461,189
MOP CLEANER AND HOLDER
Leo Stanley Thiel, Des Plaines, Ill.
Application October 18, 1945, Serial No. 623,099
1 Claim. (Cl. 15—142)



A mop cleaner and holder comprising a receptacle having a dust receiving base, a reticulated partition supported upon the walls of said base, a cover for said holder including an upwardly inclined top member overlying a portion of said base, a second upwardly inclined top member hinged to said base, said top members having a conterminous edge above the longitudinal center line of said base and a mop handle receiving slot in said conterminous edge whereby a mop handle may be moved and retained therein while a mop is scraped and rests upon said reticulated partition, said slot being disposed intermediate and longitudinally of said cover and comprising complementary notches in the adjacent edges of said top members, said first-mentioned top member being rigidly secured to said receptacle and said second-mentioned member abutting the edge of said first-mentioned top member in their closed position.

2,461,190
ADJUSTABLE MOUNT FOR OPTICAL ELEMENTS
Frederick J. Wolff, Jr., Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New Jersey
Application August 4, 1945, Serial No. 608,977
9 Claims. (Cl. 248—180)

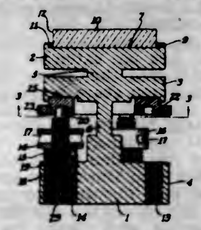
1. An adjustable mount for optical elements comprising a support, a pressure surface, an optical element holding surface on the support, a first bendable neck forming the sole connection between said holding surface and said pressure surface included in the support, a base carried by the support spaced from the pressure surface and connected thereto by a second bendable neck, said second bendable neck bending more readily than said first bendable neck, and means extending between the base and pressure surface for

bending the second bendable neck and for hold-

lie close to and parallel with said vertical shaft, the first named arm aforesaid, when in its neu-

connection of the first and second terminals while the switch is "On" will provide a path of con-

bending the second bendable neck and for holding the second bendable neck in a predetermined



position, said first bendable neck preventing distortion of the optical element holding surface when the bendable neck is bent.

2,461,191
VACUUM DISTILLATION OF TRIMETHYLAMINE FROM DIMETHYLAMINE
Dale F. Babcock, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application October 21, 1947, Serial No. 781,257
3 Claims. (Cl. 202—52)

1. In a process for the separate recovery of dimethylamine and trimethylamine from a mixture of said amines, the step comprising using a pressure less than 500 mm. Hg absolute in the distillation of substantially all the trimethylamine from said mixture whereby substantially pure dimethylamine is left.

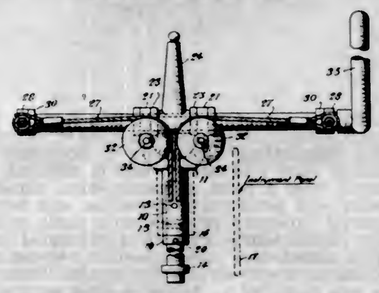
2,461,192
METHOD OF RECLAIMING SCRAP VULCANIZED RUBBER
Fernley H. Banbury, Woodmont, Donald A. Comes, Woodbridge, and Carl F. Schnuck, New Haven, Conn., assignors to Lancaster Processes, Inc., New York, N. Y., a corporation of New York
No Drawing. Application July 31, 1947, Serial No. 765,256
20 Claims. (Cl. 260—5)

1. A process of treating a scrap vulcanized rubbery butadiene polymer which comprises subjecting a mass of such scrap in a confined working space to intense shearing action while exerting mechanical pressure thereon to compact and densify the mass, the pressure being sufficiently high to enable said shearing action to develop a power input averaging at least about 1.5 horsepower per pound of the scrap for a period of time within the range of approximately three to twelve minutes, the lower the said average horsepower per pound the longer the said period of time and vice versa.

2,461,193
PROCESS OF TREATING WASTE MATERIAL CONTAINING RUBBER
Fernley H. Banbury, Woodmont, Donald A. Comes, Woodbridge, and Carl F. Schnuck, New Haven, Conn., assignors to Lancaster Processes, Inc., New York, N. Y., a corporation of New York
No Drawing. Application August 13, 1947, Serial No. 768,510
16 Claims. (Cl. 260—5)

1. A process of treating a waste rubber stock having an unvulcanized rubbery butadiene polymer as a component thereof, which comprises subjecting a mass of such stock in a confined working space to intense shearing action while exerting mechanical pressure thereon to compact and densify the mass, the pressure being sufficiently high to enable said shearing action to develop a power input averaging at least about 1.5 horsepower per pound of stock for a period of time within the range of approximately three to twelve minutes, the lower the said average horsepower per pound the longer the said period of time and vice versa, thereby causing the polymer to become substantially vulcanized in the early stage of said period of time and the thus vulcanized polymer to become devulcanized and the mass converted into a substantially homogeneous plastic condition in the subsequent stage of said period of time.

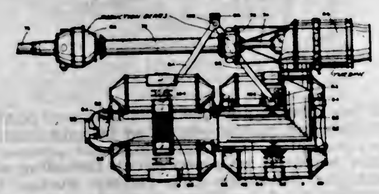
2,461,194
CONTROL UNIT FOR AIRPLANES
Walter Kerts Beetle, Jr., Hewlett, N. Y., assignor to Dayton Aircraft Products Sales, Inc., Dayton, Ohio, a corporation of Ohio
Application February 12, 1945, Serial No. 577,430
1 Claim. (Cl. 244—83)



A manually operated unit for combination with the elevators, ailerons and rudder of an aeroplane whereby these three manoeuvering controls may be operated through a single handle, said unit comprising: a vertical shaft for rotation about its longitudinal axis, a horizontal shaft whose longitudinal axis is perpendicular to the axis of said vertical shaft and having an operating handle secured thereto, bearings for said horizontal shaft carried by the upper end of said vertical shaft and in which said horizontal shaft is both slidable and rotatable, a cable for operating the elevators having its ends secured respectively to the ends of said horizontal shaft, an arm swingable in a plane which is perpendicular to the axis of said horizontal shaft and passes through the axis of said vertical shaft, one end of said arm being keyed to said horizontal shaft, connections secured to the other end of said arm for operating the ailerons, and an arm secured to said vertical shaft for operating the rudder; the said unit being characterized by the following: a pair of pulleys carried by the upper end of said vertical shaft each of which is mounted to rotate in a plane closely adjacent to said horizontal shaft and parallel to the axes of both said vertical and horizontal shafts, the effective radius of each said pulley being slightly less than the distance between its own axis and the axis of said vertical shaft, the said cable for operating the elevators extending parallel to and along said horizontal shaft from each end thereof to the respective pulleys aforesaid and thence over said pulleys and vertically down so as to

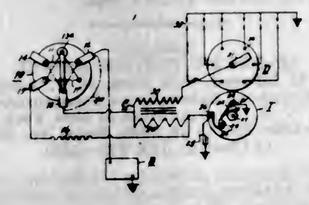
lie close to and parallel with said vertical shaft, the first named arm aforesaid, when in its neutral position, having its longitudinal axis coincident with that of said vertical shaft, and the said connections for operating the ailerons extending laterally from that said arm.

2,461,195
GENERATOR MOUNTING
Walter Kenneth Bodger, South Glastonbury, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 30, 1945, Serial No. 575,347
5 Claims. (Cl. 60—44)



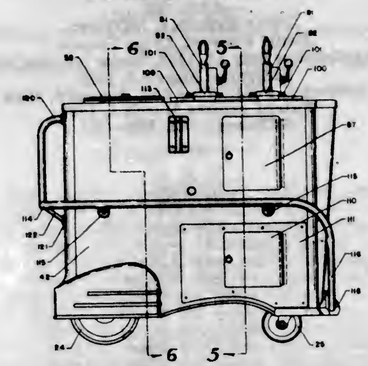
4. A power plant including a gas collector, a number of free-piston units arranged in groups around the collector, said groups being spaced longitudinally of the collector, a reinforcing ring around the collector centrally of each group of free-piston units on which the units of each group are cantilevered, and supporting means movable with respect to each other, and engaging the longitudinally spaced reinforcing rings for supporting the groups of generators.

2,461,196
IGNITION SYSTEM
William E. Brown, Andersen, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application February 25, 1948, Serial No. 10,657
1 Claim. (Cl. 315—77)



An ignition system comprising a current source, an ignition coil having a primary coil and a secondary coil, a timer having a contact connected with one end of the primary coil and a contact connected with the source and engaged by the first mentioned contact, a condenser having a terminal connected with the first contact and a terminal connected with the source, a switch having a first terminal connected with the source, a second terminal connected with the other end of the primary coil and having a third terminal, a resistance connecting the third terminal with the primary coil end first mentioned, a movable contact of the switch which, when in "On" position, connects the first and second terminals and which, when in "Off" position, connects the second and third terminals, whereby the primary coil ends are shunted through the resistance and connection of the first and second terminals while the switch is "On" will provide a path of condenser discharge through the resistance and bypassing the primary coil.

2,461,197
DISPENSING MACHINE
Joseph A. Chambers, Memphis, Tenn.
Application November 9, 1945, Serial No. 627,712
2 Claims. (Cl. 62—89)



1. In a dispensing machine of the character described, a wheeled chassis, a deep heat-insulated body mounted upon said chassis and having compartments therein for ice cream and beverages with access openings through the top of said body, covers on the body top for closing said compartments, dispensing devices having nozzles on the top of the beverage compartments, a drain compartment in the body situated beneath and accessible to said dispensing devices and adapted to receive therein a removable container for catching the drippings from the dispensing device, a door in a side of the body for giving access to the drain compartment for the removal and replacement of such container, drip pans mounted upon the top portion of the body beneath the nozzles of the dispensing devices and having downturned tubular necks and hollow tubes for receiving such tubular necks, said hollow tubes lying through the top wall of the body and projecting downwardly into the drain compartments.

2,461,198
CLAMPING DEVICE FOR ELECTRON TUBES AND THE LIKE
Arthur Chiger, New York, N. Y., assignor to Times Facsimile Corporation, New York, N. Y., a corporation of New York
Application June 23, 1947, Serial No. 756,360
3 Claims. (Cl. 248—361)

1. A clamp for electron tubes and the like, comprising a single metal blank having an annular means defining a punched-out opening to

register against the top of the electron tube to be clamped, and having a flexible strip portion

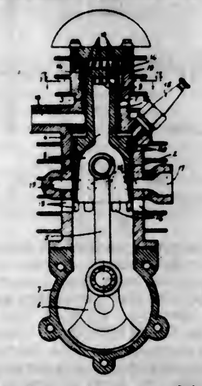
pole of said battery connected through another winding of said relay to the other conductor of

2,461,203
HAND TRUCK
Ralph C. Evans, Syracuse, N. Y.

inally on the opposite plate, and sliding such other needles of the said intermediate group across to such opposite plate with the stitch-loops sliding

register against the top of the electron tube to be clamped, and having a flexible strip portion which is bent back upon itself to substantially U-shape, the arms of the U having aligned openings, a rod passing through said openings, at least one of the arms of said U being normally inclined with respect to the rod to cause the edge of the opening therein to tightly engage the surface of said rod.

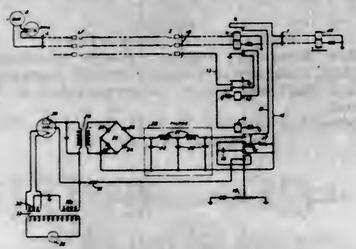
2,461,199
TWO-STROKE MOTOR
Henri Convert, Lyon, France
Application July 18, 1945, Serial No. 605,760
In France March 1, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires March 1, 1964
6 Claims. (Cl. 122—73)



1. A two stroke motor comprising a cylinder including two parts of different radii, a hollow stepped piston adapted to reciprocate in said cylinder, the narrower part of which forms a combustion chamber, a casing communicating with the inside of the piston and closing the base of the larger part of the cylinder, means for feeding a part of the combustible mixture into the outer end of the narrower part of the cylinder when the piston has moved outwardly, means passing through the inner end of the outer wall of the piston at a location angularly shifted with said feeding means for transferring said part of the combustible mixture through the hollow piston from the compression chamber into the casing when the piston has returned inwardly and subsequently transferring the mixture through the piston from the casing into the larger part of the cylinder when the piston has moved again outwardly and exhaust means communicating with the larger part of the cylinder.

2,461,200
AUTOMATIC LINE VOLTAGE COMPENSATOR AND IMPULSE REPEATER FOR SIGNALING SYSTEMS
Arthur S. Dubuar, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 8, 1945, Serial No. 581,640
11 Claims. (Cl. 179—16)

1. In combination, a two-conductor line, an impulse receiving relay and a battery at one end of said line, one pole of said battery connected to ground and through one winding of said relay to one of the conductors of said line, the other pole of said battery connected through another winding of said relay to the other conductor of said line, an impulse repeating relay at the other end of said line, means including a contact of said impulse repeating relay for closing a loop circuit including said conductors, windings and battery to effect the operation of said impulse

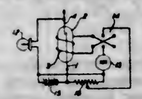


receiving relay, a non-grounded source of booster potential, and means controlled by said impulse repeating relay for connecting said source of booster potential in a loop circuit including said conductors, windings and battery during the transmission of impulses over said line corresponding to impulses received by said impulses repeating relay.

2,461,201
FLEXIBLE AND/OR ELASTIC SELF-LOCKING BAND
Robert P. Ellis, York, Pa.
Application July 4, 1945, Serial No. 603,122
7 Claims. (Cl. 2—311)

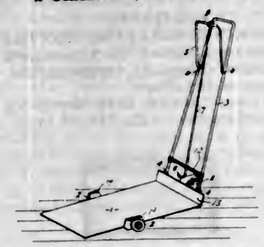
1. An elastic band provided with serrations on the faces of both ends thereof, the serrations all being of the same size and shape and permitting the interlocking of the serrations on one end with the serrations on the other end when said end are formed into a closed loop.

2,461,202
MAGNETIC TESTING DEVICE
Walter B. Ellwood, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application March 28, 1945, Serial No. 585,291
10 Claims. (Cl. 175—183)



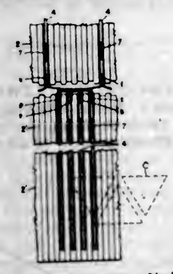
1. In a device for testing the residual magnetism of the core of a relay, a pair of magnetic reeds operative to attract each other when subjected to the full magnetization of said core when said relay is energized and operating to remain attracted to each other when subjected to the residual magnetism remaining in said core after said relay is deenergized, a coil around said reeds, means for energizing said coil to magnetize said reeds to overcome the magnetization caused by said residual magnetism and to cause said reeds to separate, and means for indicating the value of the energizing force required for said separation of the reeds as a symbol of the value of said residual magnetism.

2,461,203
HAND TRUCK
Ralph C. Evans, Syracuse, N. Y.
Application November 14, 1946, Serial No. 709,704
2 Claims. (Cl. 214—65.4)



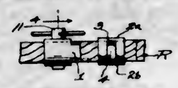
1. A hand truck including a platform, wheels supporting the same between the front and rear edges thereof, a rigid handle extending upward from the rear edge of the platform, a crank pivotally mounted on the handle on a horizontal axis and extending forwardly and horizontally therefrom, and a link depending from the handle for connection to an article to be lifted from the floor onto the platform, the crank being arranged to swing upwardly from a horizontal position and rearwardly toward a vertical position into a position in line and alongside the upper end portion of the rigid handle during the loading of the article on the platform.

2,461,204
CABLE STITCH KNITTING
Jack Fontaine, Cleveland, Ohio, assignor of 32½/100 to Leonard Rapaport, Shaker Heights, Ohio
Application January 30, 1946, Serial No. 644,209
5 Claims. (Cl. 66—63)



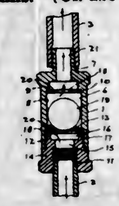
1. The method of knitting on link-and-link flat type knitting machines having grooved needle-plates and racking means, which comprises making cable stitches by providing in the grooves of the needle plates needles having an open hook at one end and a hook with closing member at the other end, forming a row of stitch-loops on the needle hooks on one plate in an intermediate group between spaced stitch-loops on oppositely directed hooks on the opposite plate, relatively moving some of the stitch loops and needles to position the initially more remote stitch-loops and needles of the said intermediate group near to one of said spaced stitch-loops and needles on the opposite plate and then sliding said relatively moved needles of the said intermediate group across to such opposite plate with the stitch-loops sliding along their needles to the hooks of the other end, relatively moving the rest of the stitch-loops and needles of said intermediate group near to the other of said stitch-loops and needles originally on the opposite plate, and sliding such other needles of the said intermediate group across to such opposite plate with the stitch-loops sliding along their needles to the hooks of the other end, then sliding all such transferred needles of the said intermediate group back to their original plate and bringing their stitch-loops onto the other end of the needles, knitting for several courses, and then repeating the foregoing steps.

2,461,205
ROPE CLAMP
William M. Forsythe and James A. Forsythe, Dubach, La.
Application June 2, 1945, Serial No. 597,238
1 Claim. (Cl. 24—81)



A rope clamp comprising a clamping collar consisting of two substantially semi-circular wings, a tongue forming a longitudinal continuation of the end of one wing, the other wing having a longitudinal slot in which the tongue is received, a relatively long flat body forming an integral continuation of one side edge of the collar midway between the ends of the wings, a pair of substantially semi-circular arms integral with the body at the end remote from the collar, the arms being directed oppositely from the wings of the collar and being disposed in cooperative relation to receive and encircle a rope body, the ends of the arms terminating in spaced parallel plates, a threaded bolt extending transversely through and connecting said plates and connected at one end to a plate to be held against turning, and a nut threaded upon the other end of the bolt.

2,461,206
CRANKCASE VENTILATOR VALVE
Charles N. Fouse and Walter H. A. Krieg, Preston, Ontario, Canada, assignors to Kralinator Products Limited, Preston, Ontario, Canada
Application June 23, 1948, Serial No. 34,694
5 Claims. (Cl. 123—119)



1. A crank case ventilator valve comprising a valve chamber, a pair of discs supported in said chamber in spaced relation and each provided with a central opening therethrough, a ball valve arranged between said discs and adapted to seat against said openings, at least one of said discs having an eccentric orifice to provide an unequal fluid flow around the periphery of said ball valve to effect the spinning of said ball.

2,461,207
MANDIBULAR CAST POSITIONER
Von K. Frowine, Kalamazoo, Mich.
Application September 28, 1945, Serial No. 619,199
3 Claims. (Cl. 32—19)

2. In means for measuring characteristics of dental structure, the combination comprising: a

pillar; a denture element establishing a deter-

the back of the wearer of the belt and adapted

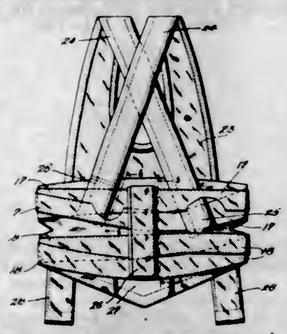
a specific acceleration; an outline on said diagram defining the combinations of speed and

shifted in a direction and a distance corresponding to the swing of the trailer vehicle on its pivot;

pillar; a denture element establishing a determinable relationship with the dental portion of a patient's lower jaw and means holding same in selectable position with respect to said pillar as determined by said relationship; a plate slidably positioned on the pillar and placed in a plane perpendicular to the axis of said pillar; a collar slidably positioned on said pillar and means associated therewith effecting securing of said collar at any selected point on said pillar; a body part member affixed centrally to said plate for

sliding movement in a plane parallel to the plane of said plate and having a chin contact pad at its free end on the upper side thereof; a pair of arms affixed slidably to opposite extremities of said plate for movement in a plane parallel to the general plane of said plate and each having a jaw contact pad on the upper side thereof; the whole being so constructed and arranged that the upper surfaces of said three contact pads lie in the same plane which plane is perpendicular to the axis of said pillar.

2,461,208
ABDOMINAL BANDAGE
Lula Goforth, Denver, Colo.
Application March 8, 1946, Serial No. 653,048
3 Claims. (Cl. 128—96)

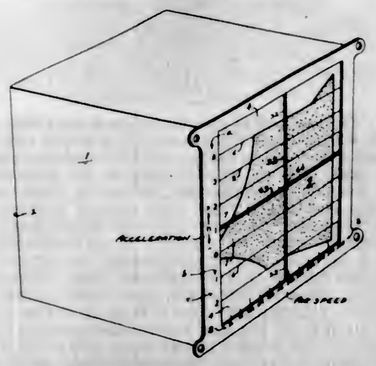


1. A body belt of the character described, comprising a panel of fabric material adapted to extend across and cover the major portion of the abdomen between the hips of the wearer, a pair of strap members extending laterally from each side of the panel, each of said strap members being of sufficient length to extend across the back of the wearer of the belt and at least halfway across the front of the panel, means for attaching the ends of the straps to the front of the panel, and a loop carried by one of the straps in a position for location at the central part of the back of the wearer of the belt and adapted to have the other straps pass there through for coupling the straps together at the back of the wearer.

2,461,209
WATERPROOF SHIPPING CONTAINER
Harold J. Grampp, Kenvil, N. J., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
Application December 10, 1946, Serial No. 715,291
18 Claims. (Cl. 229—5.5)

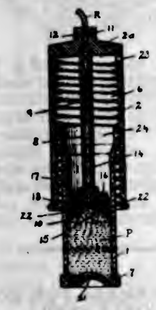
1. A waterproof shipping container comprising in combination a waterproof tubular receptacle having one end portion open and the other end portion inwardly crimped to form a fluted end wall; an interior element of heavy cardboard or the like in juxtaposition to the interior surface of said fluted end wall; a waterproof, adhesive, and thermoplastic material substantially filling a central cavity defined by the fluted end wall; securing means to secure said interior element to said fluted end wall; an adhesive sealing ring placed exteriorly to said fluted end wall; an exterior element of heavy carboard or the like in juxtaposition to the exterior surface of said fluted end wall and retained in place by said sealing ring and said thermoplastic material; an end cover of like structure as the waterproof tubular receptacle and the open end portions of the receptacle and cover being adapted to being brought into abutment; and a waterproof adhesive-coated tape adapted to seal the joint formed by the abutment of said receptacle and cover and said tape adapted to be removed to permit disassembly of the container.

2,461,210
AIRCRAFT STRUCTURAL LIMIT INDICATOR
William L. Gray, Wichita, Kans.
Application June 27, 1945, Serial No. 601,883
4 Claims. (Cl. 73—178)



2. An instrument in and for an aircraft, for continuously indicating the co-existing magnitudes of the accelerations and velocities to which said aircraft is being subjected during operation, comprising: a velocity acceleration diagram on which any point represents a specific velocity and a specific acceleration; an outline on said diagram defining the combinations of speed and acceleration for which said aircraft was structurally designed; a pair of intersecting indicators mutually co-operating to locate a point on said diagram; means responsive to the velocity of the aircraft and operably connected to one of said indicators for operating the same; means responsive to accelerations of said aircraft relative to a specific axis thereof, said means operably connected to the other of said indicators for operating the same, the positions of said two indicators with relation to each other and to said diagram being adapted to apprise an occupant of the aircraft as to whether or not the craft is being subjected to combinations of acceleration and velocity beyond its safe structural limits.

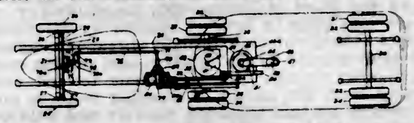
2,461,211
DISPENSING CONTAINER
James M. Guthrie, Allison Park, Pa., assignor of one-fourth to John S. Lear, Pittsburgh, Pa.
Application July 13, 1943, Serial No. 494,508
3 Claims. (Cl. 222—390)



1. In a dispensing device including a body having a bore, a plunger extending axially of said bore, a head on said plunger, a passage extending from an inlet in said head and through said plunger to an outlet opening externally of said body, said bore being adapted to receive a container having a bore containing semi-solid material, with the plunger entered in the bore of the container and the plunger head engaging the wall of the container, whereby the advance of the container into the bore of the dispensing device displaces said semi-solid material in the bore of said container and forces it outward through said plunger, and means for breaking the vacuum between the plunger and the closed end of the jar when said plunger, by the removal of the container from the dispensing device, is withdrawn from said bore of said container and thereby inhibiting the sucking back of said material through said passage.

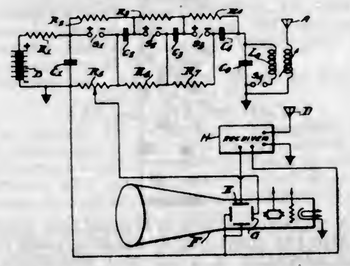
2,461,212
DEVICE FOR CONTROLLING THE SWING OF TRAILER VEHICLES
William T. Hanna, Cincinnati, Ohio
Application November 17, 1947, Serial No. 786,469
17 Claims. (Cl. 280—33.05)

1. In a tractor-trailer vehicular system in which the tractor vehicle is equipped with steering mechanism, and wherein the trailer vehicle is pivotally connected at its front end to the tractor vehicle at a point to the rear of steering mechanism thereon, including, in combination, shiftable means coupled to the trailer vehicle and shifted in a direction and a distance corresponding to the swing of the trailer vehicle on its pivot; control means coupled to the shiftable means and normally holding it from shifting but operable to permit such shifting; means actuated by movement of the steering mechanism to operate the



control means to permit such shifting of the shiftable means as to permit the trailer vehicle to track with the tractor vehicle; and means coupled to the shiftable means and to the control means to return the control means to normal holding condition when the trailer vehicle has come to tracking alignment.

2,461,213
DISTANCE MEASURING DEVICE
William D. Hershberger, Haddonfield, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 16, 1939, Serial No. 279,585
4 Claims. (Cl. 343—13)



3. A distance measuring system including a voltage generator, a plurality of serially connected capacitors and spark gaps, means for applying said voltage to said capacitors in parallel, an oscillatory circuit connected across the last of said spark gaps so that an overvoltage is applied to said oscillatory circuit, means for radiating damped wave trains established by applying said overvoltage to said circuit, a cathode ray tube including sweep electrodes, means for applying voltages derived from said generator to said electrodes to sweep said ray in synchronism with the radiating of said wave trains, a radio receiver, and means connected to said receiver for deflecting said ray at an angle to said sweep to indicate reception of reflected wave trains.

2,461,214
FOLDING MACHINE
Walter Holms, Pearl River, N. Y., assignor to Dexter Folder Company, Pearl River, N. Y., a corporation of New York
Application February 10, 1945, Serial No. 577,267
5 Claims. (Cl. 270—68)

1. In a fold plate for buckle type folding machines having a sheet stop associated therewith,

means for moving said sheet stop along the fold

stand substantially upright when the case is open,

thereon frictionally engaging the internal annular surface of said bushing, and a second brake

the back having its side edges received in the channels of the back, the lower part of the mem-

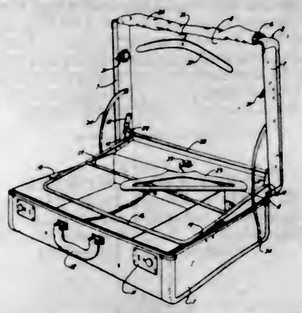
means for moving said sheet stop along the fold plate to various positions, comprising a longitudinally movable elongated member connected with said sheet stop and extending therefrom beyond the end of the fold plate opposite to the mouth thereof for rapidly moving said member and the sheet stop therewith longitudinally of said fold plate, a bracket carried by said fold plate at said end, an externally threaded member slidably carried by said bracket and guiding said elongated member for movement toward and away from the mouth of the fold plate, a nut threaded on said threaded member and held by said bracket against axial movement relative to said threaded member for slowly moving the latter longitudinally of said fold plate and said elongated member, and means for releasably connecting said elongated member with said threaded member for movement with the latter upon rotation of said nut.

2,461,215
WIRE CLIP COMBINING SCARF AND COAT
Samuel J. Judge, Rochester, N. Y.
Application November 19, 1946, Serial No. 710,752
3 Claims. (Cl. 2—91)

3. A muffler construction arranged for cooperation with the conventional hanging strap found in the neckband of a top coat comprising, an elongated muffler having a buttonhole formed longitudinally therein and located centrally thereof, said buttonhole being of less overall length than the overall loop length of the hanging strap, said muffler being cut away to form a neck and shoulder space below said buttonhole, a resilient wire clip having an eye centrally thereof and arms diverging from said eye, hooked ends terminating each of said diverging clip arms, a looped strap passing through said clip eye and having connection with said muffler below said buttonhole, said muffler disposed transverse the shoulder portion of a top coat with the hanging strap extending forwardly through the buttonhole therein, and the clip being moved upwardly to lie on the front of the muffler with the hooked ends of the diverging arms being inserted under the hanging strap to spread the strap beyond the ends of the buttonhole for the purpose of attaching the muffler to the top coat.

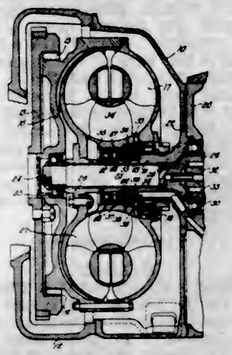
2,461,216
WARDROBE CASE FOR MEN'S SUITS AND WOMEN'S DRESSES ON HANGERS
Samuel L. Kleber, Pittsburgh, Pa., assignor to Kleber Trunk & Bag Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application May 4, 1946, Serial No. 667,267
3 Claims. (Cl. 190—41)

3. In a wardrobe case formed from a top section which is joined by a hinge connection at one side to a bottom section and which is adapted to stand substantially upright when the case is open, said upright top section having upper and lower walls connected by vertical end walls, a support for long-garment hangers suspended from said upper wall, a lower support for short-garment hangers mounted on said lower wall, a frame pivoted at its inner end in the case on a horizontal axis adjacent said hinge connection and adapted to have folded over its outer end and extending along its opposite sides the garments which are



mounted on said hangers, and a removable retaining bar adjacent the inner end of the frame for extending across garments supported from the long-garment hangers and around which the long garments fold when the frame is swung into said top section, said lower support extending from below the bar toward the open side of the top section for supporting short-garment hangers between said bar and the open side of said top section so that short garments will lie next to the frame.

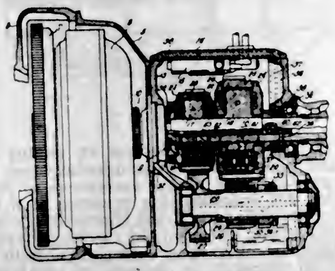
2,461,217
ONE-WAY BRAKE FOR TORQUE CONVERTERS
Robert Lapsley, Berrien Springs, and Burton L. Mills, Buchanan, Mich., assignors to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application May 31, 1945, Serial No. 596,834
6 Claims. (Cl. 188—81)



1. A one-way brake mechanism for the stator of a torque converter including a fixed sleeve having an external helical spline, a hub bushing fixed in said stator having an internal splined end, a first brake member having ratchet teeth on one face thereof mounted on said helical spline and having an external coiled spring

thereon frictionally engaging the internal annular surface of said bushing, and a second brake member journalled on said sleeve and splined in the end of said bushing and having cooperating ratchet teeth, whereby rotation of said stator in one direction causes said first brake member to move away from the other brake member, and reverse rotation of said stator moves said first member into clutching engagement to lock said stator against said reverse rotation.

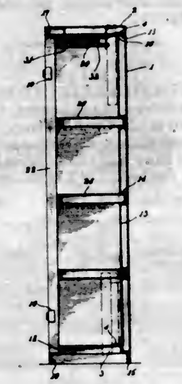
2,461,218
TRANSMISSION CONTROL SYSTEM
Robert Lapsley, Berrien Springs, Mich., assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application August 10, 1945, Serial No. 610,037
13 Claims. (Cl. 74—364)



1. A fluid pressure control system for a fluid drive transmission having a plurality of fluid pressure operated clutches for selecting various speed ratios, and a selector valve for selectively controlling the operation of said clutches, comprising pump means operating to deliver fluid under pressure to said selector valve, an accumulator in said system for storing fluid under pressure, and a shock absorber for accumulating fluid under pressure, said accumulator being connected to said selector valve for providing a large volume of high pressure fluid upon actuation of said valve to speed up engagement of the selected clutch, and said shock absorber having means for dumping a volume of high pressure fluid into said transmission to reduce the pressure in the shock absorber for cushioning the engagement of said selected clutch by the high pressure fluid admitted to the latter, and to provide additional lubrication as said selected clutch is actuated.

2,461,219
KNOCKDOWN SHEET METAL CABINET
Harold Lew, Brooklyn, N. Y.
Application May 16, 1946, Serial No. 670,196
5 Claims. (Cl. 312—144)

2. A cabinet having a top, bottom, sides and back, the bottom having a horizontal shoulder round its edges on its upper face, the sides and back resting on the shoulder, the back having its vertical lateral edges turned over and inward to form channels, the sides having their rear edges turned over and abutting the turned-over edges of the back, and having their front edges turned over and inward to form similar channels, shelf-engaging members against the inner faces of the sides and having their front edges received by the channels thereof, and the member against the back having its side edges received in the channels of the back, the lower part of the members having horizontal shoulders abutting the shoulder on the bottom.



2,461,220
SEPARATION OF POLYHYDRIC ALCOHOLS
Eugene J. Lorand, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 14, 1947, Serial No. 734,881
8 Claims. (Cl. 260—637)

1. A process for separating polyhydric alcohols containing from 2 to 4 carbon atoms from a mixture containing such polyhydric alcohols in admixture with polyhydric alcohols of more than 4 carbon atoms which comprises bringing the mixture into contact with a cyclic ether of the group consisting of dioxan, 1,3-dioxan, dioxolane, monomethyl dioxan, dimethyl dioxan, ethyl dioxan, and mixtures thereof, permitting a separation into two phases, separating the two phases, and recovering 2 to 4 carbon atom polyhydric alcohols from the phase containing the major portion of the cyclic ether solvent.

2,461,221
PENCIL HOLDER
Lazar Margulies, New York, N. Y.
Application May 18, 1945, Serial No. 594,575
4 Claims. (Cl. 120—103)

1. In a pencil holder having a pair of opposed semi-circular shell sections for engagement on opposite sides of a finger, a hinge pivotally connecting the shell sections together at their front ends, an arcuate rack bar pivotally mounted on one of the shell sections and formed along one edge with ratchet teeth, a lug extending from the side of the other shell section and formed with an opening through which said rack bar extends, and a spring mounted on the shell section which pivotally supports said rack bar and engaging and urging said rack bar into a position in which said ratchet teeth engage the material of said lug at one side of said opening,

said ratchet teeth being directed to idle past said lug when the shell sections are moved together

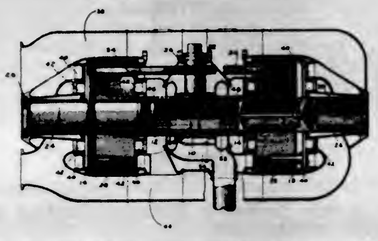
forming a part of said system for automatically moving said piston into a starting position and

tion, an engine cylinder in which the engine portion reciprocates, a chamber communicating with

its lower portion devoid of flanges and adapted

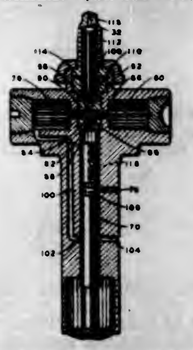
said ratchet teeth being directed to idle past said lug when the shell sections are moved together and to restrain movement of the shell sections when moved apart.

2,461,222
ACCUMULATOR INJECTION SYSTEM
Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application May 11, 1943, Serial No. 486,625
6 Claims. (Cl. 230—56)



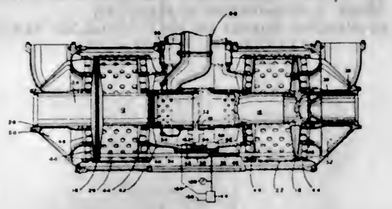
1. A free-piston compressor having opposed pistons and a restraining linkage connecting said pistons and including an oscillatory pinion, in combination with a fuel injection pump including a casing having a bore, a plunger in said bore and coaxial with the pinion, said pinion surrounding said casing with the plunger concentric to the pinion axis, and cooperating means connecting the pump plunger and pinion for reciprocating the pump plunger in response to the pinion oscillation.

2,461,223
ARRANGEMENT FOR FUEL INJECTION IN A FREE-PISTON UNIT
Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,895
5 Claims. (Cl. 230—56)



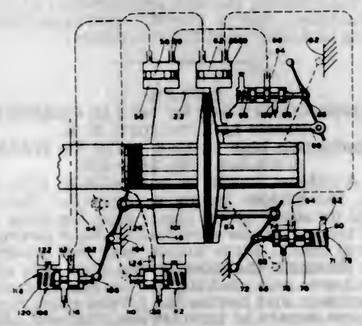
2. In a free-piston unit, a piston, an engine cylinder in which the piston reciprocates, pump means responsive to the piston reciprocation for supplying fuel to said engine cylinder, said pump means including a casing having a filling port communicating with a fuel supply, and a plunger covering said port during a part of its stroke, and connected to and movable in response to piston movement to cover and uncover the port, in combination with a starting system, and means forming a part of said system for automatically moving said piston into a starting position and causing the plunger to move to a position to uncover the filling port when said piston is in said starting position.

2,461,224
OVERSTROKE CONTROL FOR FREE-PISTON UNITS
Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,896
1 Claim. (Cl. 230—56)



A free-piston unit including an engine cylinder and piston, means for injecting fuel into said engine cylinder, means responsive to piston movement for changing the pressure of a control fluid proportionally to the change in the position of the piston at the end of successive strokes, and a plunger actuated by said control fluid and movable in response to changes in pressure of said fluid, a valve mechanically connected to and movable at all times with said plunger, said valve being controlled by said plunger for cutting off the supply of fuel to said injecting means if the piston moves beyond a predetermined limit and a spring acting on said valve and plunger in a direction to open said valve in opposition to the pressure of said control fluid on said plunger.

2,461,225
CONSTANT STROKE MECHANISM FOR FREE-PISTON COMPRESSORS
Donald E. Meitzler, Manchester, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 29, 1946, Serial No. 644,091
9 Claims. (Cl. 230—56)



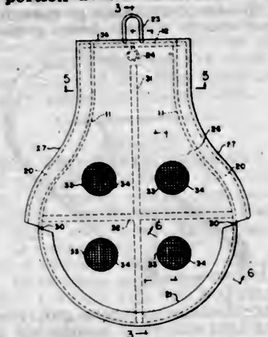
6. In a free-piston unit, a piston assembly including an engine portion and a compressor portion, an engine cylinder in which the engine portion reciprocates, a chamber communicating with one end of the compressor cylinder, a movable partition in said chamber dividing the chamber into two parts, one of which communicates with the compressor cylinder, a source of control fluid, a control valve for adjusting the supply of control fluid from the source to the other part of said chamber for moving the partition, and means responsive to a change in the end position of the piston stroke from the normal end of the stroke for rendering the control valve operative.

2,461,226
METHOD OF MAKING SLIP LASTED WELT SHOES
Jack Meltzer, New York, N. Y.
Application March 25, 1948, Serial No. 17,092
1 Claim. (Cl. 12—142)

In the making of a shoe, the steps which consist in stitching a socklining and a platform cover to an upper with the top surface of the socklining and the outer surface of the platform cover lying next to the inner and outer surfaces, respectively, of the upper and with the line or lines of stitching spaced appreciably inwardly from the lower edge of the upper so as to provide a lasting allowance on the upper, stitching a welt strip to the free margin of said platform cover with the top surface of the welt strip lying next to the outer surface of said platform cover, applying said assembly to a last and fitting the upper to the last by pulling upon said lasting allowance and adhesively securing it to the under surface of the socklining, applying to said assembly a platform sole and securing it in position by pulling said platform cover around it and adhesively securing the pulled margin of said platform cover to the under surface of said platform sole, adhesively securing an outer sole to said assembly with the edge of said outer sole in substantial alignment with the outer edge of said welt strip, and stitching said welt strip to the marginal part of said outer sole.

2,461,227
SKIPPERPROOF MEAT CASE
Frank W. Mewherter and Edward E. Smith, Raeford, N. C.
Application January 8, 1947, Serial No. 720,877
3 Claims. (Cl. 99—269)

1. A case for preserving cured meat and the like comprising a back member and side walls and a top member, the top member having means on the exterior thereof for suspending the case from a suitable support and having suspending means on the interior thereof from which a piece of meat may be suspended, said side walls on their upper portions having out-turned flanges and the lower portion having an inturned flange, a lid member having the upper portion of its outer edges turned outwardly, downwardly and inwardly to fit over the out-turned flange on the lower portion of the wall member and having its lower portion devoid of flanges and adapted



to fit inside the inturned flange on the lower portion of the side wall.

2,461,228
METHOD OF AND MATERIAL FOR PREPARING ZINCIFEROUS SURFACES FOR ELECTROPLATING
Donald Lee Miles, Detroit, Mich., assignor to American Chemical Paint Company, Ambler, Pa., a corporation of Delaware
No Drawing. Application August 11, 1947, Serial No. 768,068
7 Claims. (Cl. 41—42)

1. In the art of electroplating surfaces of zinc and zinc base alloys the step of treating the surface prior to the electroplating operation by subjecting it to the action of an aqueous bath containing the following ingredients in approximately the proportions indicated:

Mineral spirits	gals	0.3360
Phosphoric acid (75%)	gals	0.2418 to 0.4835
Cyclic coal tar bases	gals	0.0144
Sulphuric acid (66° Bé.)	gals	0.0049
Thiourea	lbs	0.0250
Polymerized ethylene oxide condensate (100% basis)	lbs	0.0135

2,461,229
METHOD OF PRODUCING MAGNESIUM BASE ALLOYS
Alfred John Murphy, Petts Wood, and Ronald James Malcolm Payne, New Malden, England, assignors to Magnesium Elektron Limited, London, England, a company of Great Britain
No Drawing. Application July 4, 1945, Serial No. 603,276. In Great Britain July 11, 1944
1 Claim. (Cl. 75—168)

Process for the manufacture of a magnesium base alloy containing additions of cerium and zirconium, comprising melting a body of magnesium under protection of a flux cover, introducing into the molten body a silver beryllium pre-alloy in such quantity as to incorporate in the base between 0.01 to 0.1 per cent by weight of beryllium, removing the flux cover from said body, introducing into said body a silver-zirconium pre-alloy, and finally introducing the desired amount of cerium.

2,461,230
DEFLECTING COIL
Maximilian J. Obert, North Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application September 4, 1946, Serial No. 694,805
7 Claims. (Cl. 250—156)

1. An electromagnetic deflecting means for

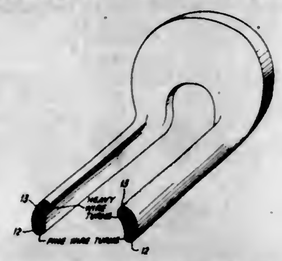
cathode ray apparatus for deflecting the cathode ray beam in one co-ordinate of movement com-

printing plate, a stationary holder situated directly above the printing roll closely adjacent thereto, and having an opening extending ver-

the ends symmetrically doubled back into an approximately parallel position, the loop being adapted to engage the said box frame, the paral-

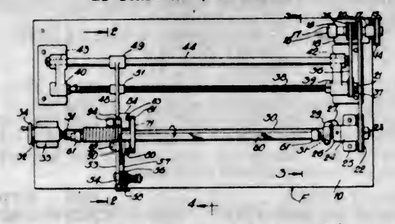
plurality of switches; a lead from one of the contact members to a power line, a lead from each plate on the other contact member to one of the switches; leads from the switches to different

cathode ray apparatus for deflecting the cathode ray beam in one co-ordinate of movement comprising coil means wound from a plurality of



electrical conducting members and wherein at least one of said electrical conducting members has a cross-sectional area differing from that of the others of said conducting members.

2,461,231
WINDING MACHINE
Ralph Oppenheim, Brooklyn, N. Y.
Application October 5, 1945, Serial No. 620,444
13 Claims. (Cl. 242—7)



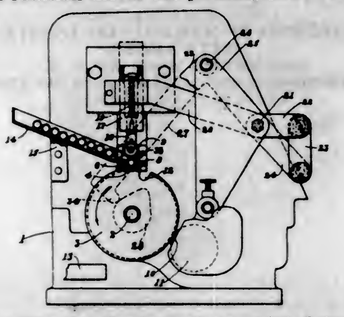
1. A strand winding machine comprising a rotatable winding shaft and an auxiliary shaft keyed on the periphery of said winding shaft for rotation therewith and for longitudinal sliding movement thereon.

2,461,232
PLAYING STEEL
Henry H. Pulsifer, Kitchener, Ontario, Canada
Application April 22, 1946, Serial No. 664,119
9 Claims. (Cl. 84—319)

1. A tone bar for a stringed musical instrument comprising, a main steel, and an auxiliary steel carried thereby, the said auxiliary steel being adapted to move to and fro with respect to the main steel and to swing in a plane perpendicular thereto so as to permit accurate and rapid adjustment of the two steels.

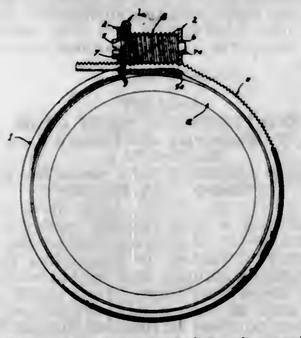
2,461,233
MACHINE FOR MARKING CYLINDRICAL ARTICLES
David F. Putnam and Charles F. Robbins, Keene, N. H., assignors to Markem Machine Company, Keene, N. H., a corporation of New Hampshire
Application November 28, 1945, Serial No. 631,370
1 Claim. (Cl. 101—38)

A machine for marking cylindrical articles comprising a cylindrical printing roll carrying a printing plate, a stationary holder situated directly above the printing roll closely adjacent thereto, and having an opening extending vertically therethrough of a size to loosely receive a cylindrical article to be printed, such article resting on and being supported by the peripheral surface of the printing roll while it is occupying said opening, a feed chute leading to the holder for delivering thereto the cylindrical articles to be printed, means to rotate the printing roll, a hold-down member to engage a cylindrical article occupying said opening and hold it pressed against the printing roll as the latter rotates and by its rotation moves the printing plate beneath



the article thereby to make a printed impression on the article while it is occupying said opening, said hold-down when thus engaging the article in the holder constituting a stop for the unprinted cylindrical articles in the chute, said printing roll having in its periphery an article-receiving cavity adjacent the trailing end of the printing plate into which the printed article drops when the cavity comes into register with the opening in the holder, and means operative after the article-receiving cavity has moved out of register with the holder to raise the hold-down member thereby to let the end cylindrical article in the chute gravitate into the opening of the holder.

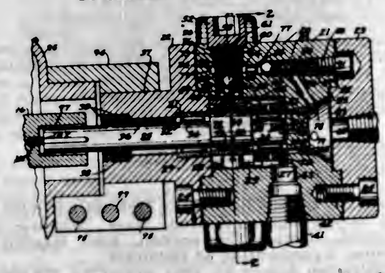
2,461,234
ADJUSTABLE CLAMP
Albert A. Radtke, New York, N. Y.
Application May 18, 1945, Serial No. 594,522
5 Claims. (Cl. 24—19)



1. A clamp member comprising in combination a box frame, a screw member having bearing ends journaled in said box, and a traction member engaged between the threads of said screw and said box comprising a looped rod having

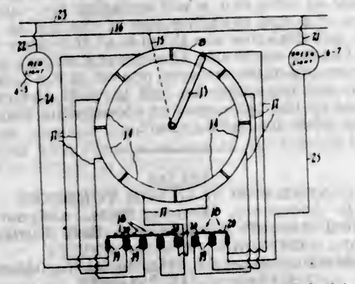
the ends symmetrically doubled back into an approximately parallel position, the loop being adapted to engage the said box frame, the parallel ends thereof being adapted to be bent around a cylindrical body and being adapted after passing around said body to engage between said box frame and the threads of said screw member.

2,461,235
FLUID PRESSURE ENERGY TRANSLATING DEVICE
Thomas E. Raymond, Zanesville, Ohio, assignor to Simplex Engineering Company, Zanesville, Ohio
Application August 9, 1946, Serial No. 689,548
14 Claims. (Cl. 103—182)



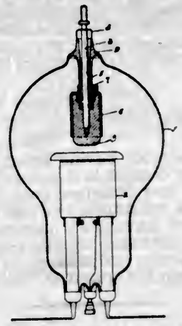
1. A hydraulic pump comprising a casing having a chamber and a plurality of recesses radiating therefrom, said recesses opening at their outer ends to the exterior of said casing, said casing having inlet and outlet passages communicating with the chamber and recesses respectively; actuating means in said chamber; piston and cylinder assemblies removably disposed in each recess, each of said assemblies having a cylinder sleeve inserted in a recess in said casing and a piston being formed of metal and slidably disposed in said sleeve, said piston having a longitudinally extending passage; and valve means in said passage to prevent fluid flow from the interior of said sleeve to the chamber in said casing.

2,461,236
SWITCH MECHANISM FOR SIGNAL LIGHTS AND THE LIKE
Louis Rostoker, Toronto, Ontario, Canada, assignor to David Esser, Toronto, Ontario, Canada
Application January 17, 1946, Serial No. 641,703
3 Claims. (Cl. 177—337)



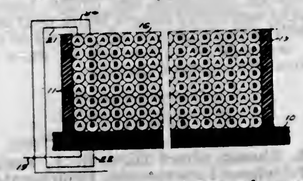
1. A switch mechanism for signal lights and the like, including two contact members, one of which comprises a plurality of annular segmental plates insulated from one another over which the other contact member is adapted to pass; a plurality of switches; a lead from one of the contact members to a power line, a lead from each plate on the other contact member to one of the switches; leads from the switches to different signal lights, and leads from the signal lights to said power line, said switches being operable to connect each plate to a selected light.

2,461,237
RECTIFIER DISCHARGE TUBE AND METHOD OF SEALING THE ANODE LEADIN
Dominicus Gerardus Serge Ruhwandl, Eindhoven, Netherlands, assignor to Hartford National Bank and Trust Company, Hartford, Conn., as trustee
Application February 14, 1947, Serial No. 728,565
In Belgium December 15, 1944
Section 1, Public Law 690, August 8, 1946
Patent expires December 15, 1964
3 Claims. (Cl. 250—27.5)



1. A discharge tube having a cathode and an anode in a glass envelope, with a lead-in connection to the anode consisting of a metallic conductor having its inner end secured to the anode body, a refractory tube encircling and spaced from the conductor with one end of the refractory tube tightly secured to the anode body to seal-off the conductor at that region, a cylindrical glass moulding piece having a body section encircling the lead-in conductor in spaced relation thereto, with the inner end of the moulding piece sealed to the outer end of the refractory tube and the outer end of the moulding piece sealed to a metal element on the body of the lead-in conductor, and a glass seal connection between the outer side wall of the moulding piece and the envelope.

2,461,238
RESONANT DIFFERENTIAL TRANSFORMER
Herman Schaevitz, Collingswood, N. J.
Application February 9, 1946, Serial No. 646,622
3 Claims. (Cl. 171—119)

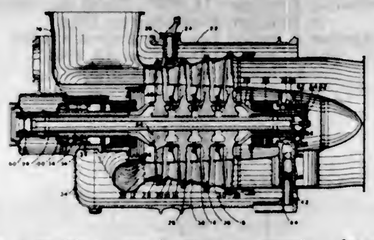


3. A differential resonant transformer comprising a pair of axially aligned spaced hollow secondary coils joined in bucking series relation, each secondary coil comprising a plurality of turns of a wire strand respectively mutually separated

lector, a number of free piston units around the

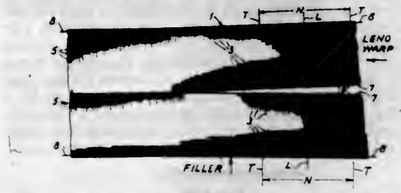
axially of the coil by the respective turns of another wire strand, with said strands of each coil being joined in series, a primary hollow coil disposed between and in axial alignment with the respective secondaries, and an armature relatively movably disposed in the primary coil and extending partially at least into one of said secondaries.

2,461,239
COOLING TURBINE ROTORS
John Schuster, Jr., Narberth, Pa., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,898
10 Claims. (Cl. 60—41)



1. A turbine rotor having an annular chamber through which coolant is circulated, the inlet and discharge for said chamber both being adjacent one end and a substantially cylindrical partition in the chamber having an opening spaced from the inlet and discharge for the chamber and adjacent the opposite end thereof to guide the flow of coolant within the chamber.

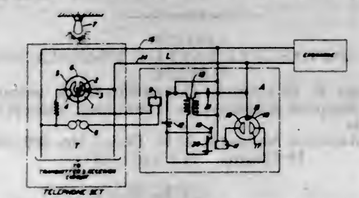
2,461,240
OPEN-MESH FABRIC SELVAGE
Thomas M. Scruggs, Richmond Heights, Mo., assignor to Bemis Bro. Bag Company, St. Louis, Mo., a corporation of Missouri
Application May 24, 1946, Serial No. 672,118
3 Claims. (Cl. 28—80)



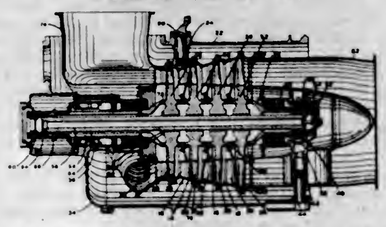
1. An open-mesh fabric comprising spaced warp strands and spaced filler strands, each filler strand having a free end at a marginal edge of said fabric, said edge having a group of engaged warp strands extending the length thereof, the free end of each filler strand being bent over longitudinally with respect to said edge and disposed against one side of said group of warp strands and adhesively secured thereto.

2,461,241
TELEPHONE ALARM SYSTEM
Oscar A. Shann, Short Hills, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 9, 1946, Serial No. 660,618
3 Claims. (Cl. 179—2)

1. In a telephone system, a line, a station thereon, a telephone at said station, a source of continuous illumination for said telephone which it is required shall not be below a predetermined degree of brilliancy, a source of ringing current of predetermined potential for connection to said line, and means for giving an alarm signal when ringing current is connected to the line in case said station illumination is below said predetermined intensity, said means comprising a gas-filled discharge tube exposed to said illumination and connected to said line which tube is arranged to conduct said ringing current when the illumination is of said predetermined brilliancy but to be nonconductive at a lesser degree of illumination.



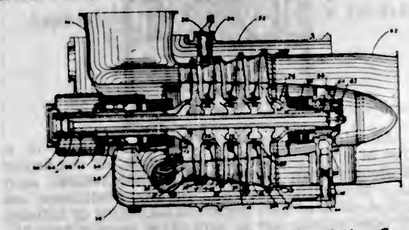
2,461,242
ROTOR CONSTRUCTION FOR TURBINES
Carl R. Soderberg, Weston, Mass., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,899
4 Claims. (Cl. 253—39)



1. A rotor construction including a number of discs having rows of blades, each disc having a central opening, a shaft at each end of the set of discs and engaging the end discs, each shaft having a central recess, a tie bolt extending through the openings in said discs and into the recesses in the shafts for holding the discs and shafts together, the ends of the bolt being within the recesses in the shafts, said tie bolt having threads at each end, a nut engaging the threads at one end and engaging one of the shafts, another nut engaging the threads at the other end, one of said nuts having threads of different pitch on inner and outer surfaces, one set of the threads on the nut engaging the bolt threads, the other threads on the nut engaging cooperating threads on the other projecting shaft.

2,461,243
DIAPHRAGM SEAL FOR TURBINES
Carl R. Soderberg, Weston, Mass., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application August 23, 1944, Serial No. 550,900
2 Claims. (Cl. 253—69)

1. A turbine rotor including a number of discs each having a row of blades extending substantially radially from the periphery thereof, and each having annular flanges on opposite sides thereof concentric to the discs, each of said discs having a central opening with the annular flanges of such a dimension as to be radially spaced between the central opening and the periphery of the discs, said flanges being in interengagement and having means thereon for piloting the discs with respect to one another, and means extending through the central openings in the discs and holding said discs in endwise engagement, an annular sealing element located between adjoining discs and supported on the outer surfaces of said flanges, said sealing element being in the form substantially of a cylinder having engagement with both of the flanges adjacent thereto, and a cylindrical sealing flange connected to and spaced from the outer periphery of the cylinder, in combination with a turbine casing having rows of nozzles alternating with the rows of blades, and diaphragms extending inwardly from the nozzles and located between adjoining discs, and a sealing element carried by each diaphragm having a substantially cylindrical flange fitting between the flange on the rotor sealing element and the outer periphery of the cylinder part of the rotor sealing element.

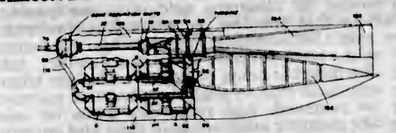


2,461,244
ADVERTISING DEVICE FOR CONTAINERS
Earl G. Stanton, Glencoe, Ill., assignor to Libby, McNeill & Libby, a corporation of Maine
Application August 10, 1944, Serial No. 548,881
8 Claims. (Cl. 40—4)

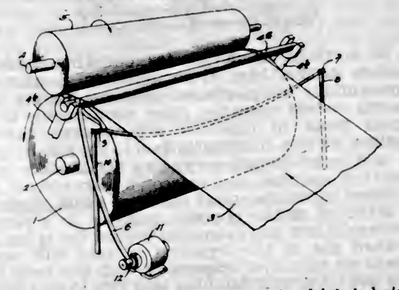
3. An advertising device for containers consisting of two connected sections which when applied to a container extend above the same in substantially triangular formation in cross-section, an extension integral with one of the sections folded to extend laterally therefrom and engaging and locking with the other section and adapted to rest on top of the container, each section having locking fingers depending below the extension at opposite sides thereof and adapted to engage opposite sides of the container, and means integral with the said extension for further locking the device on the container.

2,461,245
MOUNTING OF COLLECTOR AND FREE-PISTON GAS GENERATORS
Ransom S. Thompson, East Hampton, Conn., assignor to United Aircraft Corporation, East Hartford, Conn., a corporation of Delaware
Application January 30, 1945, Serial No. 575,346
4 Claims. (Cl. 60—44)

2. A power plant including a scavenge collector, an exhaust collector within the scavenge collector, a number of free piston units around the scavenge collector, each unit having a scavenge opening, and a surrounding flange adapted to be connected to the scavenge collector, and said unit having an exhaust pipe extending through the scavenge opening and connected to the exhaust collector, said scavenge collector supporting each generator by said surrounding flange.

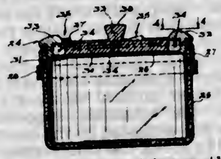


2,461,246
WEB SEVERING METHOD AND APPARATUS
John Theodore Weyenberg, Kimberly, Wis., assignor to Paper Patents Company, Neenah, Wis., a corporation of Wisconsin.
Application August 21, 1944, Serial No. 550,354
6 Claims. (Cl. 242—56)



1. The method of severing a web which is being delivered to and wound upon a reel and of starting the winding of the severed leading end of the web on an empty reel core, which consists in looping a tape or cord-like member around the empty core adjacent one end thereof, anchoring one end of the member beyond one side of the web to be severed, securing the other end of the member to tensioning means, said member being initially loosely disposed around said empty reel so as to permit the latter to rotate freely within the member looped therearound, and actuating said tensioning means so as to cause said member to engage said empty core with sufficient frictional force to cause the member to traverse the length of the empty core as an incident to the rotation thereof.

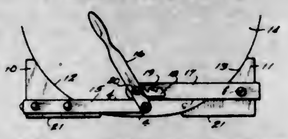
2,461,247
UTILITY COVER
George Wormull, Bergenfield, N. J.
Application July 4, 1945, Serial No. 603,200
4 Claims. (Cl. 215—38)



1. A utility cover, comprising a thermoplastic member having a reinforced top wall for extending over the open top of a bottle or jar to be closed,

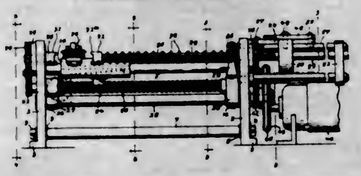
and furthermore having a skirt wall for engaging about the top portion of said bottle or jar, a plug-like member having tapered sides set into a complementary opening in the top of said member, and means for clamping said plug-like member tightly in said opening including ribs projecting from said thermoplastic member and extending over said recess for said plug-like member, said plug-like member being provided with slots alignable with said ribs so that the plug-like member may be removed, and ridge-like cams on said plug-like member adjacent said slots and engageable against the bottom edges of said ribs.

2,461,248
VEHICLE CHOCKING DEVICE
Alva T. Wright, Fort Worth, Tex.
Application January 16, 1947, Serial No. 722,429
1 Claim. (Cl. 188—32)



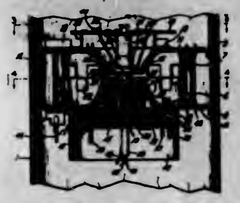
In a chocking device for chocking vehicle wheels, or the like, in combination, a pair of substantially wedge-shaped members having inwardly curved operative faces conformable to a wheel tread in opposing arrangement thereagainst, an arm rigidly attached to one side of one of said members and extending horizontally beyond the operative face thereof, a lever pivoted at its lower end to the end of said arm, a link pivotally attached to the opposite member in a plane above said arm and extending toward the latter, a toothed slot in the free end of said link, and means on said lever engageable with the teeth in said slot adjustably latching said arm to said link.

2,461,249
VEGETABLE PEELING MACHINE INCLUDING TRAVELING SCREW DRIVEN CUTTERS
Edwin J. Anderson, Aurora, Ill.
Application November 20, 1944, Serial No. 564,233
3 Claims. (Cl. 146—43)



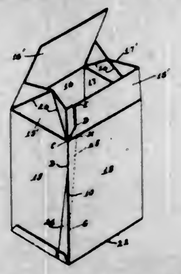
1. A vegetable peeling machine, comprising a frame, a threaded shaft, means for rotatably and oscillatively mounting the shaft on the frame, means for rotating the shaft, means for oscillating the shaft, a rotatable slidably mounted means for supporting a vegetable, means connected with the means for rotating the shaft for actuating the vegetable supporting means, means for sliding the vegetable supporting means to release a vegetable, a carriage slidably mounted on the frame and having a traveler engaging the shaft in one of its positions, a cutter on said carriage contacting a vegetable on the rotatable supporting means, automatic means actuated by the carriage for tilting the shaft to break the connection to the vegetable supporting means and release the traveler, and means for returning the carriage to its starting position.

2,461,250
ELECTRIC DISCHARGE DEVICE AND SYSTEM
Francis M. Bailey, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application December 5, 1945, Serial No. 632,977
17 Claims. (Cl. 250—27.5)



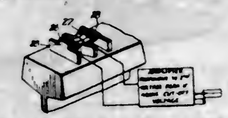
1. An electric discharge device comprising a source of electrons including means for confining said electrons in a generally planar region, said means including electrode means positioned on opposite sides of said region, a plurality of control electrodes supported in mutually spaced and insulated relation in a plane on one side of said region and parallel thereto, a substantially planar control electrode lying in a plane on the opposite side of said region and in opposed relation to said plurality of control electrodes, and a pair of collecting electrodes for selectively collecting electrons emitted by said source in accordance with the energization of said control electrodes.

2,461,251
CONTAINER
Charles O. Ball, Maumee, and Franklin D. Scott, Toledo, Ohio, assignors to Owens-Illinois Glass Company, a corporation of Ohio
Application March 12, 1945, Serial No. 582,250
4 Claims. (Cl. 229—37)



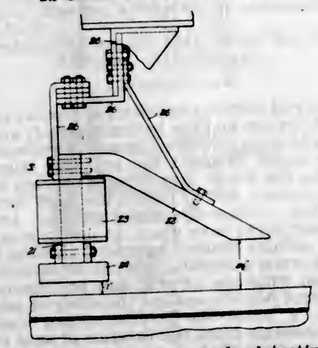
1. A blank of sheet material adapted to be folded for forming a container having a rectangular tubular body and a closed bottom end, said blank being of generally rectangular shape and having parallel score lines spaced to define the four sides of said body and along which the blank is adapted to be folded for forming said body, and a transverse score line in position to define the lower edge of the four sides of said body, the portion of the blank below said transverse score line being in the form of a bottom strip adapted to be folded inwardly and form the bottom end of the container, the blank including a side seam flap at one end thereof, one of said vertical score lines forming the inner edge of said flap, said flap being continued downward below said horizontal score line and through said bottom strip, whereby when the blank is folded to shape the container, the side seam is carried into a bottom end portion of the container, said side seam flap being tapered inwardly and upwardly from a point adjacent to said horizontal score line with the upper end of its outer edge terminating in a said vertical score line at a point spaced below the upper end of said body.

2,461,252
METHOD AND APPARATUS FOR DETECTING FLAWS
Walter C. Barnes, Lake Bluff, and Henry W. Keevil, Evanston, Ill.
Application June 5, 1944, Serial No. 538,818
17 Claims. (Cl. 175—183)



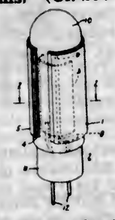
4. Progressive flaw detecting apparatus including core means having forward, intermediate and rearward poles adapted to lie close to a ferromagnetic body to be tested and connecting magnetic portions, one extending between the forward pole and the intermediate pole, and one extending between the rearward pole and the intermediate pole, windings on said connecting portions connected together and to lead wires with such polarity as to cooperate in impressing an impulse on the lead wires in response to a decrease of flux in one direction through one coil and an increase in flux in the same direction through the other coil, said core means forming approximately a continuous magnetic circuit from the forward pole to the rearward pole.

2,461,253
FLAW DETECTION APPARATUS
Walter C. Barnes, Lake Bluff, and Henry W. Keevil, Evanston, Ill.
Application June 5, 1944, Serial No. 538,819
12 Claims. (Cl. 175—183)



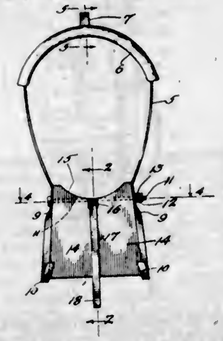
1. Apparatus for progressively detecting flaws in rail comprising a steel frame car adapted to run on the rail, and means on the car for creating residual magnetism in the rail in advance of an inductive detector unit, said means comprising an electro-magnet carried by the car adjacent the rail including a core having forward and rear poles and a coil on said core polarizing said core, the portion of said core having the polarity of the rear pole being substantially closer to the steel frame of said car than the portion of the core having the opposite polarity, said rear pole being further from the rail than the forward pole.

2,461,254
RADIATION FILTER
Merton O. Bassett, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application October 18, 1947, Serial No. 780,686
4 Claims. (Cl. 250—165)



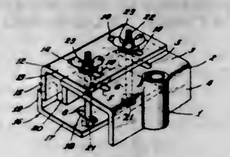
1. A radiation filter adapted to engage resiliently a device such as a radiation sensitive tube comprising a radiation transmissible resilient inner tubular element having a lengthwise section removed from the wall thereof, a radiation transmissible resilient outer tubular element having a lengthwise section removed from the wall thereof and adapted to fit tightly over said inner tubular element, and a thin sheet of filter material inserted between the outer surface of said inner tubular element and the inner surface of said outer tubular element.

2,461,255
ANIMAL POKE
John H. Beard, Ruston, La.
Application June 13, 1945, Serial No. 599,199
2 Claims. (Cl. 119—140)



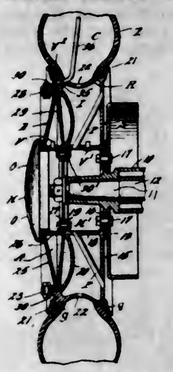
1. An animal poke comprising a strap metal yoke of inverted substantially U-shape, the upper portion of the yoke being shaped to substantially conform to the contour of the animal's neck, the lower end portions of the yoke legs being inclined forwardly, the lower ends of the legs of said yoke terminating in forwardly and upwardly extending hooks declined laterally toward each other, a plate disposed between the lower end portions of the yoke legs, a horizontal bolt extending through the legs of the yoke, said plate being pivotally suspended from said bolt, said plate having a concave recess in the upper edge thereof to fit about the underside of the animal's neck and being provided with a transverse groove in the upper edge thereof midway between the sides of the same to expose the intermediate portion of the bolt, and a hook member pivotally suspended on said exposed portion of the bolt and extending downwardly in front of and below the plate.

2,461,256
PORTABLE OARLOCK
Samuel A. Black, Chicago, Ill.
Application December 4, 1946, Serial No. 713,962
9 Claims. (Cl. 9—26)



1. A portable oarlock structure comprising a pair of relatively adjustable clamping members having portions for clamping the sides of a gunwale of a boat and having slots adapted to be in registry with each other when adjusting the relation of said members, one of said members carrying an oarlock socket, a third clamping member having a portion relatively adjustable with respect to one of said first mentioned members, said third member having a slot adapted to be in registry with the slots of said first mentioned members, and a tie element extending through said slots for clamping said members to the gunwale of the boat.

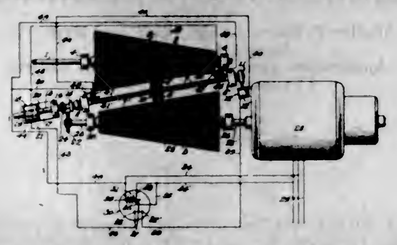
2,461,257
CUSHION VEHICLE WHEEL
George M. Brandon, Tallahassee, Fla.
Application November 28, 1944, Serial No. 565,498
4 Claims. (Cl. 152—10)



1. In a vehicle wheel, a wheel section comprising an inside wall having spaced integral rim and bottom wall portions, a rigid outside wall arranged in spaced relation to said inside wall and in tight connection with said rim and bottom wall portions, an elastic diaphragm interposed between said walls providing a reservoir between said diaphragm and said inside wall and an air chamber between said diaphragm and said outside wall, a tire on said rim, said reservoir communicating with said tire and adapted to contain liquid, means for venting said tire, and an inflating valve for said air chamber.

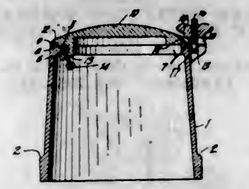
2,461,258
AUTOMATIC TRANSMISSION MECHANISM
Cuyler W. Brooks, Brooklyn, N. Y.
Application June 6, 1946, Serial No. 674,718
5 Claims. (Cl. 322—28)

1. An automatic transmission mechanism including a driving shaft connected to a load, a driven shaft, a screw shaft, cones carried by said driving and driven shafts, said cones tapering in opposite directions from each other, a friction disc threadedly mounted on said screw shaft and forming a driving connection between said cones, said screw shaft causing said disc to advance along the surfaces of the cones in either direction and to thereby change the velocity ratio between the cones, a generator driven by said driven shaft,



electrical circuit means including switches controlled by the voltage of the generator, said switches being adapted to be actuated by said disc, for controlling the generator output between predetermined limits, and means for braking the rotation of the screw shaft responsively to the generator output varying beyond a predetermined voltage to cause a return of the disc along the shaft.

2,461,259
CLOSURE
Anthony F. Ciarfello, Albany, N. Y.
Application January 18, 1945, Serial No. 573,403
2 Claims. (Cl. 138—89)

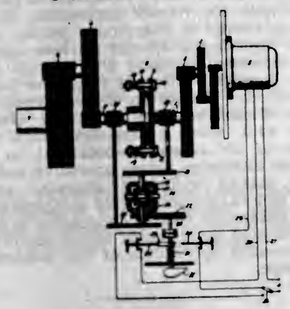


1. An end ferrule comprising a tubular element open at the top and the bottom thereof; and provided with only a single, inwardly-projecting lug on the inside adjacent the top edge thereof, a cover for the top of said tubular element having on the bottom and adjacent the edge thereof a depending, outwardly-projecting lug adapted, when said cover is in place, to underlie said lug on said tubular element in spaced relation thereto, a set screw extending through in threaded cooperation with one of said lugs and having the end thereof bearing against the other of said lugs to form a hinge-like structure, and clamping means operable from the exterior of said ferrule and cooperating with said cover and said tubular element in a zone substantially opposite said lugs for securing said cover to said tubular element; whereby, by adjusting said set screw, said cover may be positioned on said tubular element with the portions of said cover adjacent said set screw in contact with the top of said tubular element and the oppositely-disposed portions of said cover adjacent said clamping means in slightly spaced relation to the top of said tubular element; and all portions of said cover may then be brought into tight contact with the top of said tubular element by tightening said clamping means.

2,461,260
INFANT'S FOLDING BATH STAND AND DRESSING TABLE
Charles T. De Puy, Brighton, and William C. Baxter, Rochester, N. Y., assignors to Trimble Nurseryland Furniture, Inc., Rochester, N. Y., a corporation of New York
Application April 22, 1946, Serial No. 664,132
1 Claim. (Cl. 4—177)

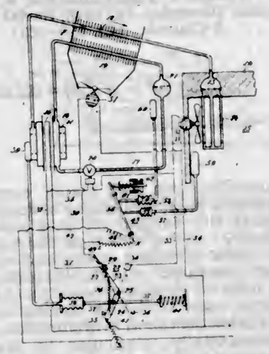
In a folding cross-legged bath stand, the combination with leg-frames including metal top rails of U-shaped cross-section with the open channels facing downwardly, of a flexible tub having its front and rear edge portions arranged in said channels and engaged with three walls of said channels, wooden clamping strips fitting closely in said channels against the edge portions of the tub, the clamping strips having longitudinally extending recesses at their upper outer edges, the front and rear edges of the tub being provided with longitudinally extending hems, rope elements arranged in said hems, the hems and rope elements being located in said recesses and retained by the corner portions of the U-shaped top rails, fastening devices extending through the top rails and edge portions of the tub into said clamping strips, and flaring portions on the inner walls of said top rails extending away from the clamping strip at points above the side edges of the tub.

2,461,261
OVERLOAD PROTECTION DEVICE FOR POWER TRANSMISSION APPARATUS
John W. Drisko, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application January 27, 1947, Serial No. 724,670
8 Claims. (Cl. 318—9)



1. In a power-transmission device with overload protection, the combination of reversible motor adapted to be energized from an external source and having a pair of input conductors arranged for alternative connection to said source whereby said motor may be operated in either direction of rotation, a driving member driven by said motor, a driven member, a friction coupling member interconnecting said driving member and said driven member, differential means operatively connected to said driving member and said driven member and having a portion adapted for movement responsive to a difference in the speed of said driving member and said driven member caused by slippage of said coupling member, a reversing switch for selectively connecting said input conductors to said source, a pair of limit switches respectively in circuit with said input conductors, and means connected with said portion of said differential means and operable thereby in response to a predetermined slippage of said coupling member adapted to actuate one of said limit switches whereby said motor is deenergized after a predetermined amount of slippage of said clutch and said motor cannot be reenergized until said reversing switch is changed to the opposite direction of rotation.

2,461,262
REFRIGERATION
Nils Erland af Kleen, Stockholm, Sweden, assignor to Kleen Refrigerator, Inc., Hoboken, N. J., a corporation of Delaware
Application June 2, 1945, Serial No. 597,337
9 Claims. (Cl. 62—5)



3. A refrigerating system comprising a refrigerant vapor-supplying means, an ambient air-cooled condenser, a refrigerating evaporator, connections providing communication between said vapor-supplying means, condenser and evaporator, a heater for said vapor-supplying means, control means for varying the heating rate of said heater, means for varying the capacity of said condenser, thermostatic means responsive to a temperature condition affected by said evaporator, thermostatic means responsive to ambient air temperature, and operating means responsive to both thermostatic means capable of controlling both said heat-varying means and said condenser capacity-varying means.

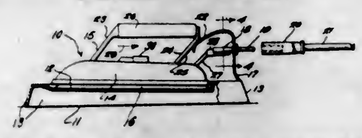
2,461,263
BRAKING MECHANISM FOR RAIL VEHICLES
Henry Fort Flowers, Findlay, Ohio
Application May 16, 1946, Serial No. 670,148
11 Claims. (Cl. 188—33)

1. A rail vehicle comprising a body, opposed independent wheel trucks on which said body is mounted, each wheel truck including a wheel frame on which wheels are mounted in tandem, supporting means between each wheel frame and the body permitting the wheel frame to swing about a vertical axis, to oscillate in the plane of the wheels, and to move bodily vertically relative to the body, a brake cage pivotally mounted on

each wheel frame for swinging movement in the plane of the wheel with which it is associated, a brake shoe carried thereby, each brake cage having a rigid arm projecting inwardly from the truck frame, a tie bar pivotally connecting the opposed brake cage arms whereby horizontal turning

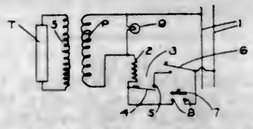
movements of one wheel truck are imparted to the opposed wheel truck, and means connected to said tie bar for turning the same for swinging the brake cages on its pivotal mounting and moving the brake shoes into and out of contact with the wheels.

2,461,264
PRESSING IRON AND STAND
William P. Fox, Columbia, S. C.
Application December 16, 1946, Serial No. 716,481
3 Claims. (Cl. 219—25)



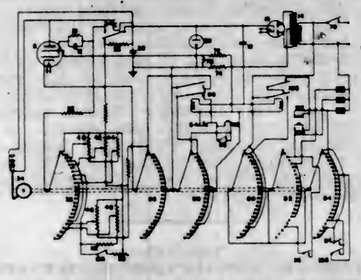
1. A pressing iron and stand, comprising in combination, a base, a plurality of spaced parallel longitudinal ribs formed on said base, adapted to removably receive the iron thereon, an upstanding shield provided at one end of said base, a pair of elongated contact terminals on said shield, a pair of terminal posts at the rear end of said iron, said terminals having an inverted V-shaped cross-sectional configuration, said posts being substantially triangular in cross-section and engageable with said terminals, said iron including an upwardly and rearwardly extending handle support and the upper portion of said shield being forwardly and downwardly arcuated to form a cam-surfaced tongue, said tongue being engageable with said support.

2,461,265
PROTECTED TRANSFORMER CIRCUIT FOR HIGH-VOLTAGE TUBES
Herbert H. Gates, Shrewsbury, Mass.
Application September 17, 1945, Serial No. 616,800
2 Claims. (Cl. 315—276)



1. In a circuit for high voltage illumination having, a transformer including a primary and a secondary winding, an illuminating device connected across said secondary winding, an alternating current source of electrical energy, one side of said primary winding being connected to one side of said energy source, and a normally open underload relay having its winding and one contact connected in series with the other side of said primary winding and having a second contact adapted to be connected with the second side of said energy source; the improvement which consists in the provision of a manually operable unitary switch movable from an open to a closed position with a snap action, said switch having contacts in circuit with said relay winding and the second side of said energy source so as to establish momentarily, upon an initial movement of said switch to an intermediate position between open and closed, a circuit around the open contacts of said relay and between said relay winding and the second side of said energy source to cause said relay to pull in and close its normally open contacts, and contacts in circuit with the second contact of said relay and said second side of said energy source so as to maintain, upon a final movement of said switch to a second position, said relay contacts closed as long as a current of predetermined value traverses the primary circuit.

2,461,266
TIMING DEVICE
Godwin R. F. Gay, Marblehead, Mass.
Application May 31, 1946, Serial No. 673,336
2 Claims. (Cl. 250—27)



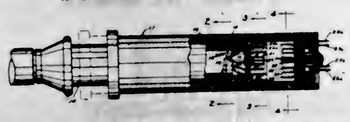
1. A timing control comprising an electron discharge device having an anode, a cathode and a control grid, a condenser connected to the grid, multiple, voltage divider means for supplying a plurality of reference potentials, relay switching means in the anode circuit responsive to flow of anode current for briefly connecting the condenser to a source of charging potential and for thereafter applying a selected reference potential to the condenser to cause the control grid to assume a potential differing from the reference potential by the charge on the condenser, a resistor for dissipating the condenser charge to cause the grid, after a time dependent on the magnitude of the reference potential, to render the electron discharge device operative, said relay switching means including stepwise actuated switching means for successively applying selected reference potentials to the condenser to provide a predetermined sequence of timed intervals between successive operations of the electron discharge device.

2,461,267
TIRE CHAIN HOLDER
Melvin Givens, Montclair, N. J., assignor to Peter G. Gaylor and Fred Laifer, both of Newark, N. J.
Application April 11, 1947, Serial No. 740,890
5 Claims. (Cl. 152—233)

1. In a holder for a tire chain section employing separate oppositely disposed anchoring strips inserted on the wheel between the tire wall and the rim, for holding the ends of the chain section, the invention comprising narrow, rigid strips of sufficient thickness in their upper section to withstand hitting on the top with a hammer, and of length sufficient to extend from above the wheel rim edge to below the tire bead, and a lower section on said strip of less thickness and of such

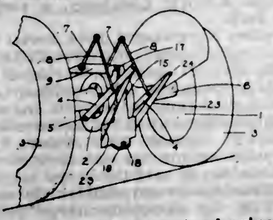
weaker strength as to cause bending thereof at the inner angular portion of the rim near the tire bead when the top of the strip is hit with a hammer, thereby allowing the angular portion to guide the bent strip section under the tire bead, thus anchoring the strip.

2,461,268
FOUR-WAY CABLE CONTACT
Edwin R. Goldfield, University Heights, Ohio, assignor to Picker X-Ray Corporation Waite Manufacturing Division, Inc., Cleveland, Ohio, a corporation of Ohio
Application July 13, 1946, Serial No. 683,313
2 Claims. (Cl. 173—328)



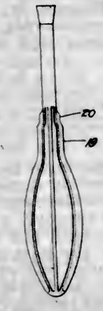
1. High tension electrical contacts adapted for relative twisting movement between male and female contacts comprising three spaced concentric contacts and a fourth contact having a base portion spaced from its end portion and substantially on the same radius as the outermost of said concentric contacts and having an end portion bent radially outwardly from said base portion by an amount slightly greater than the thickness of a mating concentric contact, said fourth contact being electrically insulated from said outermost of said concentric contacts, there being a shoulder portion connecting said base and end portions, and one of said three concentric contacts engaging its mating contact to limit movement of said male and female contacts toward each other before a mating contact can engage said shoulder.

2,461,269
DRAWBAR CONSTRUCTION FOR TRACTORS
William A. Greene, Oxford, Mass.
Application December 14, 1945, Serial No. 634,984
3 Claims. (Cl. 280—33.44)



1. In combination with a tractor having a pair of laterally spaced draft members, and means for maintaining said draft members in a predetermined position with respect to the rear axle housing of said tractor, of a drawbar suspended at its upper end from a fixed point of said axle housing and providing a draft receiving portion at its lower end beside said housing, said drawbar being provided with spaced rigid arms extending rearwardly and pivotally connected at their ends to the ends of said draft members.

2,461,270
BALLOON MOLD
Emile E. Habib, Arlington, and David G. Greenlie, Wayland, Mass., assignors to Dewey and Almy Chemical Company, North Cambridge, Mass., a corporation of Massachusetts
Application February 19, 1946, Serial No. 648,674
3 Claims. (Cl. 18—41)



1. A balloon mold having neck-forming shank and a fluted body-forming portion and a fluted portion intermediate between said body portion and said shank having a perimeter smaller than but at least one-sixth of the maximum perimeter of said body portion, said neck-forming shank having a perimeter smaller than but at least one-sixth of the perimeter of said intermediate portion.

2,461,271
METHOD OF MANUFACTURING BALLOONS
Emile E. Habib, Belmont, and David G. Greenlie, Wayland, Mass., assignors to Dewey and Almy Chemical Company, North Cambridge, Mass., a corporation of Massachusetts
Original Application February 19, 1946, Serial No. 648,674. Divided and this application August 6, 1947, Serial No. 766,742
In Canada January 25, 1947
2 Claims. (Cl. 18—58.7)

1. The method for forming balloons and similar hollow objects having a neck reinforcing zone on the body of the balloon which consists in providing a hollow expansible gel having a stepped

portion intermediate the body portion and the

around the circumference of said anode and ex-

crank arm and crank pin ensemble in presence

shaft and thereby causing open-mouthed con-

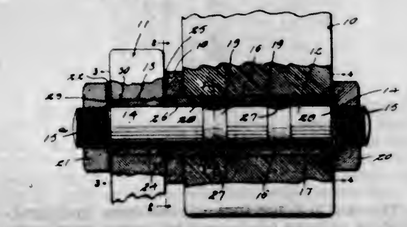
tainers delivered in upright position to one end

portion intermediate the body portion and the neck portion, that part of the intermediate portion adjacent the neck having a diameter greater than but not exceeding approximately 6 times the diameter of said neck and that part of the intermediate portion adjacent the body having a diameter less than but not less than one-sixth of the body portion of said gel, securing the neck portion of the gel against expansion throughout substantially the entire length thereof, expanding the gel by fluid pressure, and drawing the stepped portion of the gel beyond the neck portion into the body of said balloon by said expansion while retaining the molded neck diameter.

2,461,272
CAM-ACTUATED PLIER WRENCH WITH WEDGE ADJUSTMENT
Edward S. Hanson, Jr., Racine, Wis.
Application August 26, 1946, Serial No. 693,024
3 Claims. (Cl. 81—44)

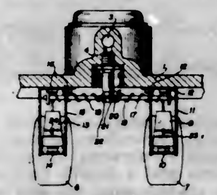
3. In a tool, a rigid main handle having a rigid jaw, said handle having oppositely disposed side walls, a pivot pin extending between said side walls and pivotally supporting a movable jaw cooperating with the fixed jaw in gripping an article, said movable jaw having a rearwardly extending end the under face of which is provided with a cam surface, said rigid handle being hollow, a pair of spaced rearwardly extending arms pivotally supported at their front ends on said pivot pin and having beveled rear ends normally disposed within the hollow portion of the rigid handle, a secondary handle pivotally supported between the free ends of said arms and provided with a cam, resilient means holding the cam surface of the movable jaw in engagement with said cam, a reciprocable plunger within the hollow rigid handle provided with a beveled end adapted to engage the beveled ends of said arms, a sleeve exterior of the main handle and rotatable thereon and provided interiorly of the handle with a rotatable interiorly threaded nut, said plunger provided with an exteriorly threaded end threadedly engaging said nut, and rotation of said sleeve and nut acting to reciprocate the said plunger.

2,461,273
CRANKPIN REPLACEMENT BEARING CONSTRUCTION
John W. Heaston, Huntington Beach, Calif.
Application January 30, 1945, Serial No. 575,302
4 Claims. (Cl. 74—598)



1. In means for restoring the operative relationship between a pitman and its co-operating crank arm and crank pin ensemble in presence of worn conditions within the ensemble, the combination with the pitman and crank arm, of an assemblage operative to function as a crank-pin having a rigid connection with the crank arm and rotatable relative to the pitman, said assemblage including an elongated member extending through axially alined openings of the pitman and crank arm with the diameter of the member less than that of the respective openings and with the end zones of the member extending beyond the crank arm and pitman openings and threaded for receiving nuts for retaining the ensemble in operative relation, and an annular element carried by and anchored to the member and freely rotatable within and relative to the pitman, an end zone of the element having a collar constituting a spacing member for the pitman and crank-arm, said crank arm nut and said collar each being formed to permit location of an anchoring medium of fusible type between the nut, collar, elongated member and the crank arm to thereby anchor the crank arm to said elongated member.

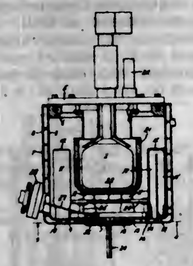
2,461,274
CARBURETOR FLOAT MECHANISM
Ralph M. Heintz, Cleveland, Ohio, assignor to Jack & Heintz Precision Industries, Inc., Cleveland, Ohio, a corporation of Delaware
Application August 24, 1946, Serial No. 692,818
2 Claims. (Cl. 74—470)



1. In combination with a device employing a slidably mounted member and a pair of transversely spaced members pivotally mounted for movement in a fore and aft direction, a resilient linkage between each of said pivotal members and said slidable member of sliding actuation of said slidable member independently in response to pivotal movements of either or both of said pivotal members, said resilient linkage comprising a leaf spring connected to each of said pivotal members and a pair of separate coil springs one end of each of which bears against said slidable member and the other end of each of said coil springs bears against said leaf spring.

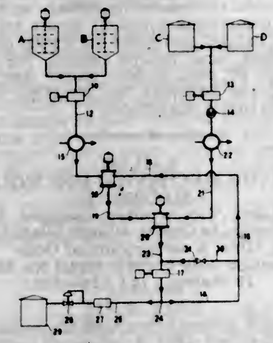
2,461,275
POOL-TYPE ELECTRIC DISCHARGE DEVICE
Carl C. Herskind, Niskayuna, N. Y., assignor to General Electric Company, a corporation of New York
Application November 8, 1946, Serial No. 708,537
9 Claims. (Cl. 250—27.5)

1. An electric discharge device of the single anode type including a generally cylindrical enclosure, a pool-type cathode in one end of said enclosure, a generally cylindrical anode supported in insulated relation with respect to said enclosure and having an end thereof in opposed spaced relation to said pool-type cathode, a baffle interposed between said anode and cathode obstructing the direct discharge path between said anode and cathode, a plurality of elongated baffle members arranged in spaced relation around the circumference of said anode and extending vertically from the region of said cathode to a point substantially above the end of said



anode, said baffle members cooperating with said transverse baffle to divide the discharge and to distribute the discharge over the anode surface.

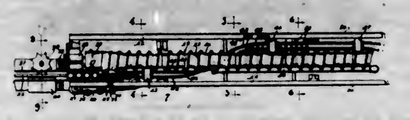
2,461,276
MANUFACTURE OF SOAP-THICKENED COMPOSITIONS AND APPARATUS THEREFOR
Charles Ray Hetherington, Bronxville, N. Y., assignor to California Research Corporation, San Francisco, Calif., a corporation of Delaware
Application November 12, 1946, Serial No. 709,319
6 Claims. (Cl. 252—32)



1. Continuous process of making grease, which comprises continuously intimately admixing proportional amounts of preformed soap stock and preformed grease to form an intermediate uniform dispersion, and continuously intimately admixing said uniform dispersion with a proportional amount of oil to form another uniform dispersion characterized by high stability and a reduced soap content as compared with the first mentioned dispersion.

2,461,277
ARTICLE CONVEYING MECHANISM
John Hehl, Robert K. Beinap, Jr., and Herbert A. Barnby, Toledo, Ohio, assignors to Owens-Illinois Glass Company, a corporation of Ohio
Application November 16, 1944, Serial No. 563,720
9 Claims. (Cl. 198—33)

7. The combination of a worm conveyor comprising a shaft and having a spiral conveying surface extending lengthwise of the shaft and concentric therewith, a support in which the shaft is horizontally mounted for rotation, means for rotating the conveyor about the axis of said shaft and thereby causing open-mouthed containers delivered in upright position to one end thereof to be advanced by the conveyor, stationary guiding means comprising a series of guiding rods to engage, respectively, the bottoms, sides and tops of the containers, said rods extending along the conveyor and spaced therefrom in position to hold the said containers in contact with the spiral driving surface, the series of rods including an article inverting section and a reinverting section, the portions of the rods



comprising each said section being extended spirally around the conveyor through an angular distance of substantially 180°, and means for delivering the articles to the spiral conveyor and directing them into position between the said guide rods and the spiral conveying surface, said directing means comprising a belt extending substantially parallel with the conveyor shaft along and spaced from an end portion of the conveyor to provide a guideway for the containers, and pulleys on which said belt is mounted.

2,461,278
STANDARDIZATION OF THERAPEUTIC CURARE PREPARATIONS
Horace A. Holaday, Highland Park, N. J., assignor to E. R. Squibb & Sons, New York, N. Y., a corporation of New York; dedicator to the People of the United States
No Drawing. Application December 13, 1945, Serial No. 634,895
11 Claims. (Cl. 167—67)

1. In the production of a physiologically-standardized curare-drug preparation, assaying the curare-drug by determining the relative volumes of aqueous solutions of the test sample and of a reference standard required to produce the same temporary paralysis of muscles of a mammalian laboratory-tested animal when slowly injected intravenously into the same animal under the same conditions at different times, the animal being permitted to recover from one injection before being subjected to the other injection, and making up a preparation of the desired activity from the assayed curare-drug in accordance with the assay results.

2,461,279
HYDRAULIC CIRCUIT
Matthew W. Huber, Watertown, N. Y., assignor to The New York Air Brake Company, a corporation of New Jersey
Application April 1, 1946, Serial No. 658,590
3 Claims. (Cl. 60—53)

1. A hydraulic unit comprising means for supplying liquid, a pump, a motor and connections such that the pump draws liquid from the liquid supplying means and discharges it through the motor; means for restricting the flow of liquid discharging from the motor; adjustable means for progressively varying the effective displacement of the pump; yielding means biasing said adjustable means in a direction to cause the pump to operate at full displacement; and two pressure responsive means arranged to react on said adjustable means in opposition to said bias the first

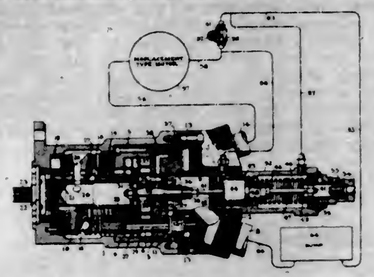
of which responds to fluid pressure in the connec-

other workpiece in upright position, a decorating

a comparatively small torque, means for apply-

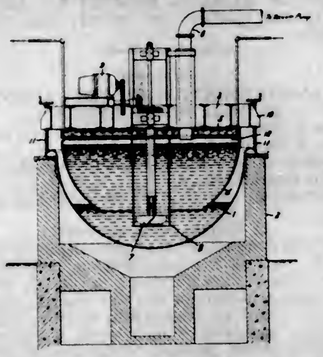
cally mounted in the sleeve and provided with a transverse opening adjacent its inner end, said

of which responds to fluid pressure in the connection between the pump and motor and the sec-



ond of which responds to the back pressure developed by said flow restricting means.

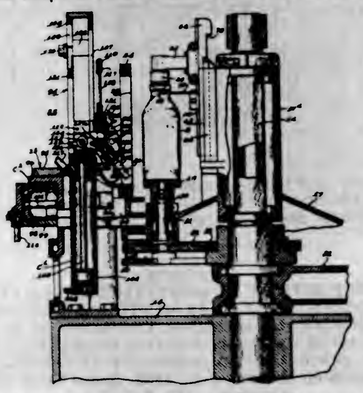
2,461,280
REFINING OF LEAD
William T. Isbell, Herculaneum, Mo., assignor to St. Joseph Lead Company, New York, N. Y., a corporation of New York
Application May 25, 1944, Serial No. 537,265
1 Claim. (Cl. 75—78)



A method of removing zinc from lead containing a small amount of zinc of the order of that left in lead by the zinc desilvering process which comprises maintaining a body of molten zinciferous lead at a temperature of about 1100° F., agitating said body of lead to provide a continually renewed extended surface thereof, subjecting the extended surface to a reduced absolute pressure of not more than about 1 millimeter of mercury, and maintaining an extended water-cooled solid surface adjacent said extended surface of molten lead.

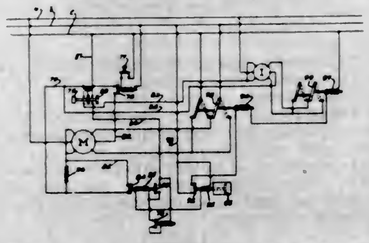
2,461,281
MACHINE FOR APPLYING SURFACE DECORATIONS TO BOTTLES AND JARS
Albert S. Jackson, Wood River, and Clarence A. Heyne, Alton, Ill., assignors to Owens-Illinois Glass Company, a corporation of Ohio
Application July 5, 1946, Serial No. 681,618
15 Claims. (Cl. 101—123)

1. A decorating machine comprising a machine base, a carriage mounted thereon for rotation about a vertical axis, work-holders mounted on the carriage and arranged at uniformly spaced positions around the axis of the carriage and each comprising means for holding a bottle or other workpiece in upright position, a decorating unit having a stationary mounting at a decorating station adjacent to the path of the workpieces, said decorating unit comprising a carrier mounted for horizontal movement radially of the said carriage, a piston motor comprising a vertical cylinder attached to said carrier and a vertically reciprocating piston rod and piston, a screen frame and screen on said carrier, a squeegee arm



and squeegee connected to the motor piston for up-and-down movement therewith, said decorating unit comprising a screen motor arranged to drive said carrier and move the screen to decorating position, and control means for effecting movement of said piston motor and thereby operating the squeegee for applying a surface decoration to the workpiece.

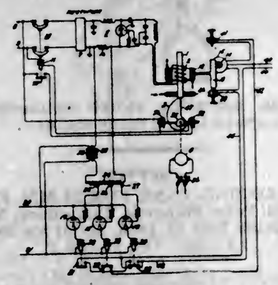
2,461,282
INJECTOR MECHANISM FOR MOLDING MACHINES
Conrad Jobst, Toledo, Ohio, assignor, by mesne assignments, to Owens-Illinois Glass Company, Toledo, Ohio, a corporation of Ohio
Application July 6, 1945, Serial No. 603,449
12 Claims. (Cl. 318—302)



11. The combination with power transmitting mechanism including telescopically mounted elements having cooperating helical driving surfaces, said elements being relatively movable in the direction of their axis by a relative rotation, of power motors individual to said elements, driving mechanism through which the motors are geared to said elements respectively, one said motor being geared to normally drive its said element at a comparatively slow speed and powered to apply a comparatively great driving torque to its said element, the other motor being geared to normally drive its said element at a comparatively high speed and powered to apply thereto

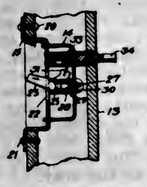
a comparatively small torque, means for applying to said elements a resistance to their said relative rotation and increasing it during said rotation and thereby stopping the said smaller torque motor, and automatic controlling mechanism for maintaining the larger torque motor in operation and causing both motors to maintain a driving torque after the low torque motor is stopped.

2,461,283
HIGH-FREQUENCY HEATING REGULATOR
John Paul Jordan, Scotia, N. Y., assignor to General Electric Company, a corporation of New York
Application May 7, 1946, Serial No. 667,824
6 Claims. (Cl. 219—47)



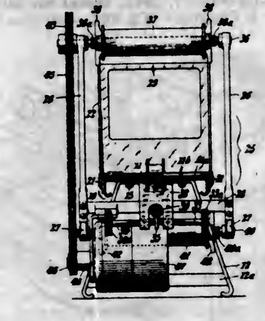
1. High frequency heating apparatus comprising a high frequency induction heating coil provided with a plurality of axially spaced turns, a short circuited coil surrounding said heating coil having an axial length substantially the same as the axial length of said heating coil, and means for moving relatively said heating coil and said short circuited coil axially between positions of substantial nonencirclement of said heating coil by said short circuited coil and positions of substantially complete encirclement of said heating coil by said short circuited coil thereby to vary substantially the power input to said heating coil.

2,461,284
LOCK BOLT
Reinhold Kemmet, Everett, Wash.
Application November 5, 1945, Serial No. 626,673
1 Claim. (Cl. 292—143)



A lock for the rear door of an automobile having a door post and front and rear doors, said lock comprising a frame adapted to be detachably mounted in the door post and having an outwardly opening, recessed face opening toward the side of said door post which is engaged by the front vehicle door, a sleeve mounted in said frame and opening outwardly of the opposite side of the door post and toward the rear vehicle door, an L-shaped lever pivotally mounted at its apex in said frame and having one arm thereof extending into the recessed face of the frame and swingably disposed relatively thereto, a bolt reciprocally mounted in the sleeve and provided with a transverse opening adjacent its inner end, said sleeve being provided with a longitudinal slot, the other arm of said lever extending upwardly and being provided with a restricted extension swingably disposed in the slot of said sleeve and loosely engaging the opening of said bolt whereby the bolt will be projected and retracted when the first mentioned end of the lever is manually actuated in the recessed face of the frame, said bolt, when in a projected position, being adapted to engage a recess in the free edge of the rear door for retaining said door in a closed and locked position, and said recessed face of the frame being disposed to be closed by said front door when the latter is in a closed position to prevent actuation of the lever for locking or unlocking the rear door.

2,461,285
MOTION-PICTURE TITLER
Harold E. Kleintop, Parkesburg, Pa.
Application June 6, 1945, Serial No. 597,913
5 Claims. (Cl. 88—16)



2. A motion picture titler including in combination, a horizontal base for stationarily supporting a motion picture camera; a transversely arranged easel on the base having a frame aperture in axial alignment with the lens of the camera; a vertical bracket for rotatably sustaining at its top and bottom respectively, supply and take up spools for passage of a legend bearing scroll across the frame aperture of the easel, said bracket having a bar extending transversely thereof; a horizontal axis pivot centrally of said bar at right angles to the spool axes; a bearing in which the pivot is rotatively supported from the base; and means for adjusting the bracket about the pivot to align the scroll vertically with the frame aperture of the easel.

2,461,286
RADIO-FREQUENCY BRIDGE
Halsey W. Kline, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application June 10, 1946, Serial No. 675,563
5 Claims. (Cl. 175—183)

1. Radio frequency measuring apparatus comprising a four arm resistance bridge having opposite input terminals, a line for supplying said bridge at radio frequency connected across said input terminals, a resistor connected across the bridge terminals of said line, said bridge having arms of substantially equal resistance and the combined impedance of the bridge and resistor

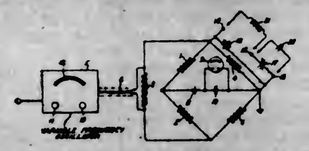
being not greater than the surge impedance of said line when supplied at radio frequency, a

tric firing means for igniting said charge; a source of electric current; and circuit means in-

alined position with respect to their longitudinal axes and having below said operating station a conveyor belt which receives and advances said

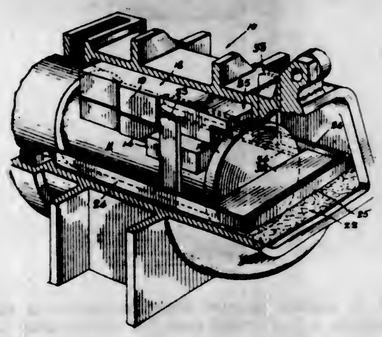
when said piston is moved in said direction by said fluid, at least one of said members being equipped with a longitudinal key slot, and a

being not greater than the surge impedance of said line when supplied at radio frequency, a rectifier instrument connected across the other opposite terminals of said four-arm bridge, a circuit changer for short circuiting one arm of



said bridge, a pair of test terminals connected to the ends of said last-mentioned bridge arm and a calibrated variable capacitor connected between one of said test terminals and a third test terminal.

2,461,287
PACKING RETAINER FOR JOURNAL BOXES
Magnus Lagreid and John Henry McGuire, Minneapolis, Minn.
Application June 7, 1945, Serial No. 598,060
5 Claims. (Cl. 308—89)



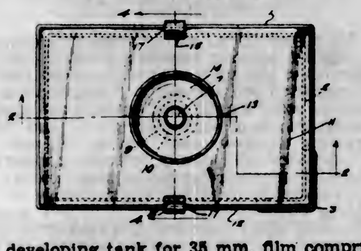
1. In a packing retainer for journal boxes, two spaced side pieces of angle section with their horizontal flanges directed toward each other and their vertical flanges directed upwardly from the outer edges of the horizontal flanges, a front piece connecting the side pieces, a cover plate between the side pieces adjacent to the front piece, and a post extending upwardly from each side piece behind the cover plate.

2,461,288
AIRCRAFT LANDING GEAR
Carl R. Livermon, Roxobel, N. C.
Application April 10, 1945, Serial No. 587,511
6 Claims. (Cl. 244—103)

1. In an aircraft landing gear of the character described, in combination, a landing wheel strut; a landing wheel rotatably mounted on said strut; a turbine rotor carried by said wheel; blades having inlet edges on said rotor a cartridge supporting frame fixed to said strut adjacent said wheel; a cartridge having an open-ended case defining a nozzle orifice supported on said frame, the orifice of said case being positioned closely adjacent the blades of said rotor and so constructed as to conform to a sector of the path of the inlet edges of said blades and to direct a stream of impelling gas against the blades of said turbine rotor, said cartridge containing an explosive charge; electric firing means for igniting said charge; a source of electric current; and circuit means in-

cluding an operating switch connecting said source of current to said firing means.

2,461,289
DEVELOPING TANK FOR 35 MM. FILM
Joseph Peter Mancuso, Jamesburg, N. J.
Application July 27, 1946, Serial No. 686,606
1 Claim. (Cl. 95—90.5)



A developing tank for 35 mm. film comprising a tank formed with a peripheral groove, a cover therefor having a sealing flange detachably seated in said groove, means for maintaining said cover on the tank, a tray mounted in vertically spaced placement in the tank, a central upstanding tubular opening on said tray defining a sectional film holder, U-shaped film guides, having oppositely extending cooperatingly directed retaining fingers, spaced along the sides of the tray for accommodating film laced therebetween and film supporting clips, having holding slots, detachably positioned on the tray for selective use responsive to the length of the film, a light trap collar depending telescopically from said cover in the tubular opening, an operating rod extending from said tray through the collar exteriorly of the cover for imparting vertical reciprocation to the tray.

2,461,290
BOTTLE CHUTE
Ernest W. Maynard, Brooklyn, N. Y., and Louis P. Di Giacomo, Jersey City, N. J., assignors to American Home Products Corporation, New York, N. Y., a corporation of Delaware
Application October 13, 1945, Serial No. 622,204
5 Claims. (Cl. 198—38)

2. In a bottle-handling machine having an operating station which periodically and automatically ejects bottles to fall freely in uniformly

alined position with respect to their longitudinal axes and having below said operating station a conveyor belt which receives and advances said bottles: a bottle chute interposed in the trajectory of said bottles between said operating station and said conveyor belt, the chute having a sinuous bottle channel formed in part by a cylindrically curved wall of the chute and a resilient cylindrically curved check plate, the generating elements of both curved surfaces being substantially parallel, the upper portion of said check plate being positioned to receive and check one end of each

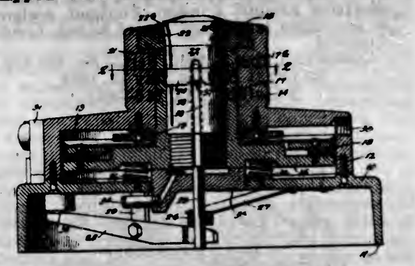
bottle in its fall while permitting the other end to descend in an arc into the sinuous bottle passage, the lower end of said check plate projecting sufficiently into the bottle passage to damp but not prevent the descent of each bottle, the sinuous bottle passage terminating at its lower end in a straight vertical portion immediately above the conveyor belt, the straight portion of the passage having an opening on one side to permit egress of the bottles but having at least two other sides closed to steady the bottles as they land on the belt.

2,461,291
MANUFACTURE OF DRIED MEAT
Harry H. McKee, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application December 7, 1944, Serial No. 567,123
8 Claims. (Cl. 99—158)

3. The method of smoking and drying a thin beef slice comprising: confining said slice of wafer thin thickness between apertured sheets in an extended position to prevent curling and subjecting said slice between said sheets to an atmosphere of smoke and an elevated temperature of about 170° to 175° F. for a period of time of about 10 to 30 minutes to smoke and dry said meat.

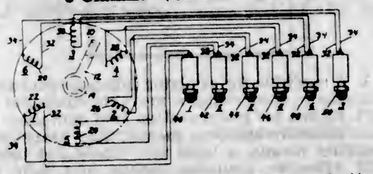
2,461,292
WORK HOLDER
Theodore E. Mead, Wilmette, Ill., assignor to Mead Specialties Company, Inc., a corporation of Illinois
Application June 18, 1945, Serial No. 600,156
4 Claims. (Cl. 279—4)

1. In a work holder, a casing providing a piston chamber and a tubular bore aligned therewith, a piston in said chamber and equipped with a tubular member received within said tubular bore, a hollow clamping member in said tubular piston member and adjustably connected thereto, means for admitting fluid to said chamber to move said piston in one direction, means associated with said casing for causing the clamping member to grip a work-piece received therein when said piston is moved in said direction by said fluid, at least one of said members being equipped with a longitudinal key slot, and a



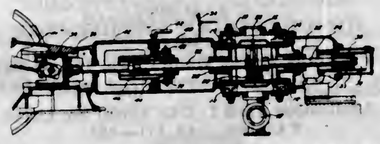
spring member equipped with a key engaging said slot and having arms engaging the member to which said spring is not attached by said key.

2,461,293
IGNITION CIRCUIT
Raymond J. Miller, Detroit, Mich.
Application June 21, 1943, Serial No. 491,584
3 Claims. (Cl. 315—213)



1. An ignition circuit comprising a battery, spaced induction coils, a rotatable electromagnet adapted to move with reference to the induction coils, connecting means between the battery and one end of the electromagnet, connecting means between the battery and the other side of the electromagnet, and means to close the circuit between the battery and the electromagnet when the electromagnet is aligned with one of the induction coils.

2,461,294
SEAL FOR GAS COMPRESSORS
Ellis Nathan, Easton, Pa., assignor to Pennsylvania Pump & Compressor Company, Easton, Pa., a corporation of Pennsylvania
Application May 21, 1946, Serial No. 671,242
3 Claims. (Cl. 230—203)



1. A compressor for gases comprising a gas compressing cylinder having intake and discharge valves mounted therein, an auxiliary compressing cylinder adjacent thereto, a piston rod having pistons thereon operating within said cylinders, a closed chamber into which the discharge from said auxiliary cylinder discharges, said chamber being connected at one end to said gas compressing cylinder and to said auxiliary compressing cylinder at its opposite end, and a piston rod packing between said chamber and gas compressing cylinder.

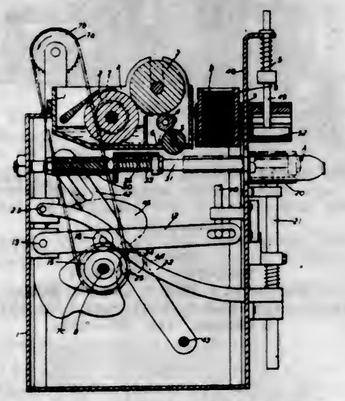
2,461,295
LABELING MACHINE
Robert John Newman, Enfield, and Dagobert

teeth when aligned presenting openings for said slots whereby windings may be positioned therein, and aligning means on said laminations, said

spaced apart and arranged under predetermined tension in engagement with said drive member and said driven member for providing a driving

ous-alkaline saponification of a fatty oil containing unsaponifiable oil-soluble pigment material, the improved step which comprises: mixing fatty oil and an excess of aqueous alkali under vacuum

2,461,295
LABELING MACHINE
Robert John Newman, Enfield, and Dagobert Siegfried Freund, London, England, assignors of one-third to Edward Albert Baker, London, England
Application May 9, 1945, Serial No. 592,856
In Great Britain May 19, 1944
2 Claims. (Cl. 216—54)

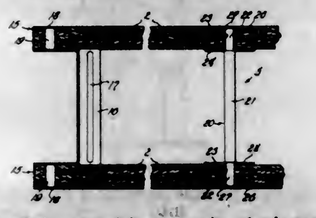


1. A machine for applying labels to packages or containers, comprising a movable container support, means for reciprocating said container support, adhesive applying means, label transfer and applying means, a label pile interposed between said adhesive applying means and said label transfer and applying means, a label gumming and picker device, and means for reciprocating said gumming and picker device in a direction which is transverse to the direction of movement of said container support so that said gumming and picker device in moving toward said container support first receives adhesive from said adhesive applying means, and is then caused to collect a label from said pile and to bring said label to a container carried upon said container support, and means for timing the movement of said container support and said label transfer and applying means so that the label is transferred from the said label gumming and picker device to the container carried upon said container support during the movement of the said container support and container.

2,461,296
DYNAMOELECTRIC MACHINE CORE MEMBER
Arthur Frank Ordas, Huntertown, Ind., assignor to General Electric Company, a corporation of New York
Application April 1, 1948, Serial No. 18,446
9 Claims. (Cl. 171—252)

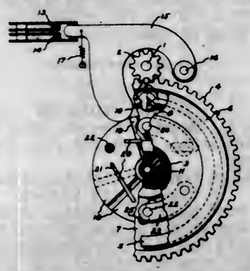
1. In a dynamoelectric machine, a magnetizable core member composed of a plurality of laminations, said laminations having a plurality of teeth defining winding slots therebetween, said teeth when aligned presenting openings for said slots whereby windings may be positioned therein, and aligning means on said laminations, said means being out of line when said teeth are aligned, said means being adapted to be aligned for causing said teeth to be out of line whereby said slot openings are closed a predetermined amount after said windings are emplaced.

2,461,297
PALLET
William J. Philp, Battle Creek, Mich., and Charles W. Parmentier, Philadelphia, Pa.; said Philp assignor to Clark Equipment Company, Buchanan, Mich., a corporation of Michigan
Application October 17, 1946, Serial No. 703,766
10 Claims. (Cl. 248—120)



1. A pallet comprising a pair of planar rectangular platforms disposed in fixed vertical relation with respect to each other by corner brackets arranged between each of the corner edges of said platforms and side brackets disposed between side edges of said platforms intermediate the corner edges thereof, said corner brackets each having upper and lower channel sections substantially U-shaped in cross-section embracing adjacent side edges of the corners of the platforms and a vertically extending integral wall member between said channel sections, and side brackets each having upper and lower channel sections substantially U-shaped in cross-section in which the adjacent side edges of the pair of platforms are disposed.

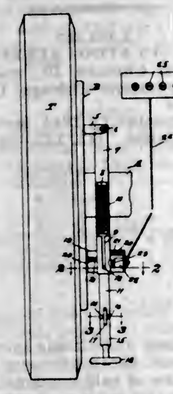
2,461,298
COMBINATION COUPLING AND OVERLOAD CAM OPERATED DEVICE
Hugh M. Stephenson, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York
Application October 5, 1944, Serial No. 557,363
12 Claims. (Cl. 192—150)



1. A coupling overload device for transmitting torque in either direction of rotation and for controlling a limit device above a predetermined maximum transmitted torque including a drive member, a driven member, an arcuate spring member having the ends thereof circumferentially

spaced apart and arranged under predetermined tension in engagement with said drive member and said driven member for providing a driving connection therebetween through said spring, means including a pivotally mounted operating arm arranged for operating a limit device on actuation thereof, means including a radially expansible diaphragm cam mounted for radial movement outwardly or inwardly on relative rotational movement of said drive and driven members, and means for biasing said operating arm into engagement with said diaphragm cam for operation of a limit device on relative rotational movement between said drive and driven members beyond a predetermined value.

2,461,299
TIRE DEFLATION SWITCH
Clarence E. Sullivan, Atlanta, Ga.
Application March 24, 1947, Serial No. 736,787
3 Claims. (Cl. 200—58)



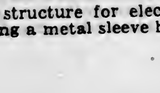
2. As an attachment to a motor vehicle, a tire-actuated switch comprising a bracket secured to the brake housing of the wheel on which the tire is mounted, a housing pivotally connected to the bracket at one end for swinging movement in a plane perpendicular to the plane of a tire of the vehicle, the other end being free, a shaft slidable in the housing and having one end extending from the free end thereof, means hinged to said end of the shaft for swinging movement in a plane parallel to the plane of the tire, and positioned relative to the side wall of the tire for lateral movement thereby upon deflation of the tire, whereby the free end of the housing may be pivotally moved, and an electrical contact element mounted on the vehicle for engagement by the free end of the swung housing.

2,461,300
METHOD OF CONDITIONING A HARD SOAP FOR SOLVENT EXTRACTION
John M. Tabor, East Islip, N. Y., Howard F. Seibert, Mason, Mich., and Paul R. Frohring, Bainbridge, Ohio, assignors to General Biochemicals, Inc., Chagrin Falls, Ohio, a corporation of Ohio
Original application October 13, 1943, Serial No. 506,060. Divided and this application August 1, 1945, Serial No. 608,280
1 Claim. (Cl. 260—418)

In a method of conditioning a hard soap for solvent extraction, which soap is formed by aqueous-alkaline saponification of a fatty oil containing unsaponifiable oil-soluble pigment material, the improved step which comprises: mixing fatty oil and an excess of aqueous alkali under vacuum in a closed saponification zone, continuously agitating the saponification mixture, continuously maintaining a pressure in the saponification zone not exceeding 355 mm. of mercury throughout the saponification by continuously exhausting gases and vapors therefrom, and continuing said agitation and the maintenance of said sub-atmospheric pressure until the soap formed is substantially dry, whereby the heat of saponification is utilized to boil off water entrapped in soap lumps formed during saponification at a temperature substantially below the normal boiling point of water and the lumps are thus disrupted and comminuted and the soap is made accessible to the solvent.

2,461,301
POLYMERIZABLE CHEMICALS
Pliny O. Tawney, Passaic, N. J., assignor to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application May 5, 1944, Serial No. 534,322
7 Claims. (Cl. 260—80)

5. A polymerizable chemical having the formula

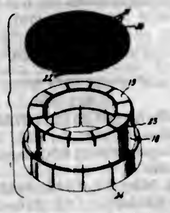


where R is selected from the class consisting of allyl and methallyl radicals.

2,461,302
METHOD OF FLAMEPROOFING
John Truhlar, Clarendon Hills, and Athan A. Pantsios, Chicago, Ill., assignors to Rudolf F. Hlavaty, Cicero, Ill.
No Drawing. Application July 28, 1945, Serial No. 607,659
1 Claim. (Cl. 117—138)

The process of flameproofing a quantity of material which includes the steps of dipping the material in a solution of antimony chloride and an organic phosphite, and thereafter steaming the impregnated material to convert the antimony chlorides to antimony oxides, the said solution containing 80 parts acetone, 20 parts antimony trichloride, and 8 parts triamyl phosphite.

2,461,303
GRID STRUCTURE FOR ELECTRIC DISCHARGE DEVICES
Robert P. Watson, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application March 9, 1948, Serial No. 13,934
6 Claims. (Cl. 250—27.5)



1. A grid structure for electric discharge devices including a metal sleeve having an inwardly

directed flange, a plurality of spaced slots extending through said flange and the adjacent side wall of said sleeve, an apertured disk of metal

feeding audio frequency energy to an input electrode, circuit means for withdrawing amplified audio frequency energy from an output elec-

fingers in the path of travel of the cup fingers, and a downwardly inclined series of collecting chutes carried by the band, positioned rearwardly

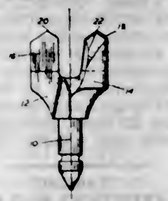
in humidity of an atmosphere to which it is exposed, an electrical resistance element bonded to said sheet whereby changes in the dimensions of said sheet produce changes in the dimensions

directed flange, a plurality of spaced slots extending through said flange and the adjacent side wall of said sleeve, an apertured disk of metal having a different temperature coefficient of expansion than said sleeve, and a plurality of wires bonded to said disk, said disk being bonded to said inwardly directed flange.

2,461,304
CONTROL VALVE
John Harrison Wilson, Bay Shore, N. Y.
Application July 12, 1945, Serial No. 604,702
3 Claims. (Cl. 277—71)

1. A control valve for use with fluids flowing selectively in different directions, comprising a valve body having upper and lower seats, a pair of opposed flap valves arranged to selectively seat on the lower seat and close the body by fluid flowing in one of two opposite directions, said flap valves hinged to hang down by their weight when under no lateral fluid pressure and unseat and open the body, a valve head above the body integral therewith, and a fluid outlet conduit from the head.

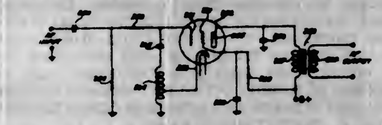
2,461,305
ROTARY BIT FOR DRILLING COAL AND ROCK
William Winn, Monkseaton, England, assignor to Victor Products (Wallsend) Limited, a British company
Application September 14, 1944, Serial No. 554,030
In Great Britain September 22, 1943
3 Claims. (Cl. 255—61)



1. A rotary drilling bit having two wings each with a cutting face whose end is of angular form with a projecting apex spaced from the axis of the bit, one of said wings having its inner edge parallel to the axis of the bit and the other wing having its inner edge throughout the entire extent of the wing inclined from its base outwardly from said axis toward its outer end, and also having the apex of its angular end further from the axis of the bit than is the apex of the other said wing.

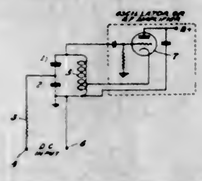
2,461,306
OSCILLATOR-AMPLIFIER RADIO CIRCUITS
John J. Antalek, Chicago, Ill., assignor to The Rauland Corporation, Chicago, Ill., a corporation of Illinois
Application May 31, 1943, Serial No. 489,235
7 Claims. (Cl. 250—36)

6. In combination, an electronic tube including input and output electrodes, circuit means for feeding audio frequency energy to an input electrode, circuit means for withdrawing amplified audio frequency energy from an output electrode, means for biasing said input electrode, said biasing means including circuit means connected thereto and oscillating at a super-audible frequency, and a biasing resistor also connected



thereto, and filter means interposed between input electrode and audio frequency feeding circuit means and between output electrode and audio frequency withdrawing circuit means, respectively, said filter means passing said audio frequency, whereby said tube functions simultaneously as an oscillator and as an audio frequency amplifier.

2,461,307
MODULATING SYSTEM
John J. Antalek, Chicago, Ill., assignor to The Rauland Corporation, Chicago, Ill., a corporation of Illinois
Application November 13, 1944, Serial No. 563,275
5 Claims. (Cl. 332—30)

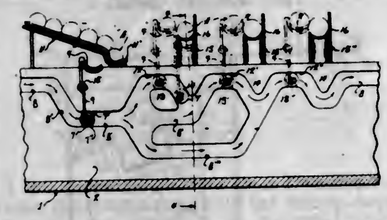


2. In a frequency modulating system, a circuit comprising at least two condensers connected in series, at least one of said condensers having an amorphous dielectric with a constant exceeding 75 and a capacity which varies when different direct potentials are applied across it, a source of modulating direct potentials connected across said one of said condensers and comprising a direct current source for providing a fixed direct potential, a signal source for providing varying signal potentials and a circuit for combining the direct potential and the signal potentials, an output inductance connected in series with said condensers, and a resistor in series with said source of modulating potentials and said one of the condensers.

2,461,308
MACHINE FOR ASSORTING EGGS ACCORDING TO WEIGHT
Adrian A. Brown, Lake Geneva, Wis.
Application April 4, 1947, Serial No. 741,185
1 Claim. (Cl. 209—121)

An egg grading machine comprising a rotary table, a fixed band about the table, a main cam track carried by the band interrupted by a lower medium egg track section and a heavy egg track section upon a lower plane than the medium track section, the medium and heavy track sections communicating with a series of cam loops, a counter balanced egg weighing scale arm pivotally mounted upon the table, having a roller engaging the cam track, a fingered cup extending upwardly from the scale arm, a downwardly inclined runway carried by the band, the runway being provided with upwardly curved bottom

fingers in the path of travel of the cup fingers, and a downwardly inclined series of collecting chutes carried by the band, positioned rearwardly of each cam loop, the said chutes being slotted at their upper ends to permit travel therethrough of the cup fingers, whereby a light weight egg



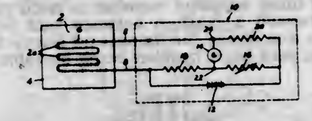
may be delivered to the first chute, a medium weight egg to the second chute and a heavy weight egg to the third chute, the roller carrying scale arm and associated cup being caused to travel upward and downward through the first, second and third cam loops to selectively sort three grades of eggs.

2,461,309
BRACELET CLASP
Julius Cedar, New York, N. Y.
Application October 3, 1945, Serial No. 620,008
2 Claims. (Cl. 24—71)

1. In a clasp of the character described, a casing connected near one of its ends to one of a pair of pivotally joined links, said casing having flanges extending along its longitudinal edges, said links being adapted to be either located within the casing or swung to an extended position out of the casing, a slidable link member in the form of an open frame movable into or out of the casing, said slidable link member being provided along its longitudinal edges with inwardly turned flanges, one of the pivotally joined links being provided with flanges for a portion of its length for engagement behind those on the slidable link member to thereby hold the pivotal link from swinging movement out of the casing while the slidable link member is in a retracted position within the casing, the slidable link member having two spaced edges each provided with ratchet teeth, a U-shaped spring member within the casing and located between the slidable link member and the back of the casing, said spring member being provided with detents engaging the ratchet teeth, and means on the spring member projecting through the casing and disposed externally of the casing for manually causing a simultaneous disengagement of the detents from the ratchet teeth.

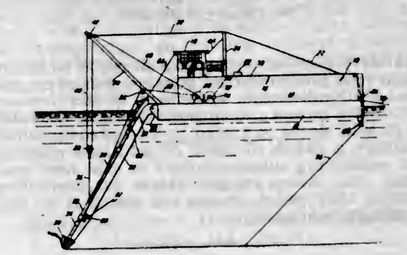
2,461,310
APPARATUS FOR MEASURING HUMIDITY
Putnam Cilley, Sharon, Mass., assignor to The Foxboro Company, Foxboro, Mass., a corporation of Massachusetts
Application May 21, 1947, Serial No. 749,437
5 Claims. (Cl. 73—335)

1. A humidity measuring device comprising, in combination, a sheet of hygroscopic material that expands and contracts in response to variations in humidity of an atmosphere to which it is exposed, an electrical resistance element bonded to said sheet whereby changes in the dimensions of said sheet produce changes in the dimensions



and electrical resistance of said element, and an electrical resistance measuring circuit connected to said element to measure the resistance of said element as a measure of the humidity of said atmosphere.

2,461,311
CONTROL SYSTEM FOR HYDRAULIC DREDGES
Paul J. Cushing, Piedmont, and Paul M. Enright, Oakland, Calif., assignors to Hydraulic Dredging Company, Ltd., Oakland, Calif., a corporation of Delaware
Application December 29, 1945, Serial No. 637,946
9 Claims. (Cl. 114—230)



1. On a hydraulic dredge having a control station, a plurality of mooring wires adapted to position the vessel for dredging operation, and means including control devices located at said control station for retracting or lengthening each wire, an electrical signalling device for each wire comprising a self-synchronizing transmitter motor having a rotor shaft adapted to be rotated by a movement of the wire, a self-synchronizing receiver motor, a plurality of wire leads connected to the motor so that the rotor of the receiver motor is adapted to reproduce the movement of the rotor of the transmitter motor, a dial for each wire at the control station, each dial having indicating means associated therewith and connected to the rotor shaft of a receiver motor to indicate the direction of movement and magnitude of said movement of one of the mooring wires.

2,461,312
HOSE FITTING MECHANISM
J. Gordon Dahlem, Fort Wayne, Ind., assignor to The Wayne Pump Company, Fort Wayne, Ind., a corporation of Maryland
Application March 21, 1946, Serial No. 655,953
30 Claims. (Cl. 284—18)

4. In a hose coupling, the combination of a stationary inner coupling member having a hose connection at its inner end and a valve seat at its outer end, a valve movable to seated and unseated positions, resilient means urging said valve toward closed position, a latch for locking said valve

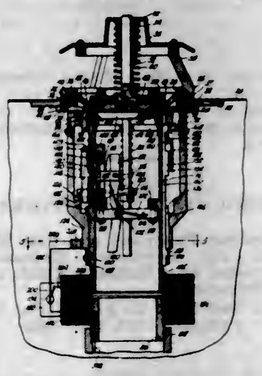
in closed position, pressure responsive means for moving said latch to unlocked position when the

2,461,314
COIN SLIDE

2,461,316
WINDOW FIXTURE
John Di Lorenzo, Jeannette, Pa., assignor of

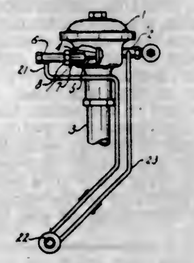
2,461,318
ELECTRIC CLOTHES DRIER
Arthur J. Folli, Chicago, Ill.

in closed position, pressure responsive means for moving said latch to unlocked position when the pressure reaches a predetermined value, means for urging said latch toward locked position, an outer rotatable coupling sleeve rotatably mounted on said inner coupling member, a latch member urged toward a position between said coupling member and sleeve for fixing said sleeve against rotation, said latch member being movable to in-



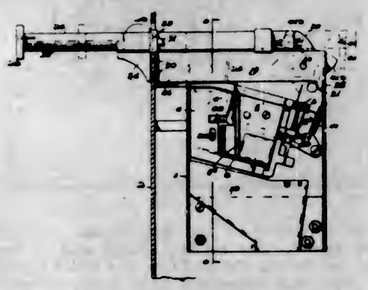
operative position when said sleeve is to be rotated to a predetermined position, means on said sleeve for preventing movement of the pressure responsive means and thus unlocking of the latch until said sleeve is moved to said predetermined position, a switch disposed on said hose coupling for controlling supply of fluid to said hose coupling, and means on said sleeve for preventing closing said switch unless the sleeve is in said predetermined position.

2,461,313
VALVE OPERATING MECHANISM
Charles S. Davis, Pittsburgh, Pa.
Application November 1, 1944, Serial No. 561,469
2 Claims. (Cl. 137—139)



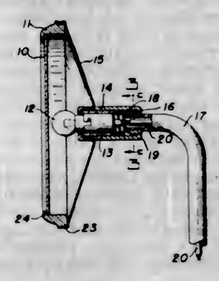
1. An operating mechanism for a flush valve having an operating arm, a cylinder mounted to the casing of the valve, a plunger extending from one end of said cylinder engaging the operating arm of said valve, a piston in said cylinder having a coil spring connection with said plunger and normally biased by a coil spring to the retracted position of the plunger, and fluid pressure means connected to the water supply of said flush valve and to said operating cylinder on one side of said piston and valve means controlling the application of said fluid pressure to said piston.

2,461,314
COIN SLIDE
Vesta K. Davis and Emma T. Davidson, Winona, Minn.
Application October 28, 1946, Serial No. 706,256
10 Claims. (Cl. 194—97)



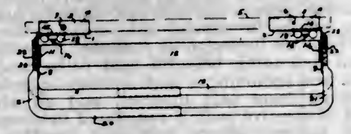
1. In a vending machine, the combination with a chute section, coin selector mechanism associated with said chute section adapted to allow proper coins to pass through the chute section and to arrest slugs therein, a movable blade member for clearing said chute section of a slug held therein, and spring means acting to normally maintain said blade member in inoperative position, of a reciprocating coin receiver having a coin slot and adapted to be manually operated inwardly to deliver a coin to said chute section, spring means acting to return the coin receiver to normal coin receiving position, and means controlled by said coin receiver acting automatically to actuate said blade member to clear said chute section in the return outward movement of the coin receiver to normal coin receiving position after an inward stroke of the same.

2,461,315
ILLUMINATED MIRROR
Richard De Virgilis, Detroit, Mich.
Application January 25, 1946, Serial No. 643,351
1 Claim. (Cl. 240—4.2)



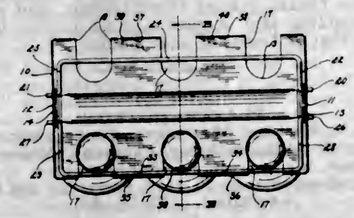
In an illuminated mirror, including a concave reflector, a source of light centrally located therein, an opaque mirror in front of the source of light, a translucent member framing the mirror and interposed between the plane of said mirror and the plane of marginal portion of the reflector for transmission of light sideways, said marginal portion being curved inwardly and silvered for reflection of light through the body of said translucent member in the direction facing said mirror.

2,461,316
WINDOW FIXTURE
John Di Lorenzo, Jeannette, Pa., assignor of three-tenths to Louis Di Lorenzo, Jeannette, Pa.
Application July 10, 1945, Serial No. 604,273
1 Claim. (Cl. 248—253)



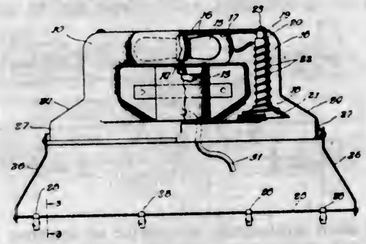
A window fixture of the class described comprising the combination of a flat oblong suspension plate provided with an elongated vertical slot and positioned vertically against the front of the top member of a window frame, a rearwardly extending seating flange carried at the upper end of said plate and seating on the top edge of said top member, a pair of teeth depending from the free rear edge of said seating flange and engaging the rear of said top member to connect said plate in position to the top member, a flat vertically adjustable supporting bracket positioned against the outer side edge of said plate and projecting forwardly edgewise from the latter, an attaching flange formed integral with said bracket and being disposed rearwardly of said plate, a bolt fixed in said attaching flange and projecting through said slot, a nut engaged on said bolt operable for securing said bracket in an adjusted position, and a pair of forwardly projecting vertically aligned connecting fingers stamped from said bracket and being disposed at the outer side of said bracket and adjacent to the latter in spaced horizontal parallel relation to each other, each of said fingers being adapted for connection with the end of a curtain rod.

2,461,317
BOTTLE CARRIER
Godfrey L. Dreher, Minneapolis, Minn.
Application May 31, 1946, Serial No. 673,310
5 Claims. (Cl. 224—45)



5. A bottle holder and carried comprising a relatively flat base member formed with a plurality of slots extending inwardly from the peripheral portion of said member, each of said slots being adapted to receive the narrow portion of a bottle neck, a handle member formed with rigid downwardly extending legs each of which is joined to said base member, U-shaped bar pivotally mounted at its opposite ends on one of said members and being operative to engage said base member adjacent the outer extremities of said slots to enclose the bottle necks therein, and detent means carried by said base member for locking said bar in engagement with said base member.

2,461,318
ELECTRIC CLOTHES DRIER
Arthur J. Folli, Chicago, Ill.
Application April 8, 1946, Serial No. 660,437
6 Claims. (Cl. 34—151)



1. An electric dryer of the class described comprising a housing having a chamber in its uppermost portion; a fan arranged horizontally within said chamber; a grille formed in said housing above said fan for the admission of air; an electric motor mounted within said housing below said fan chamber and operably connected to said fan; side air passageways on opposite sides of said fan chamber and communicating therewith; vertical air passages extending downwardly from said side air passageways; an inverted cup air space communicating with both of said vertical air passageways; air heating element arranged in each of said vertical passagways; and clothes supporting means arranged below said housing in spaced relation thereto in the path of air discharged from said housing.

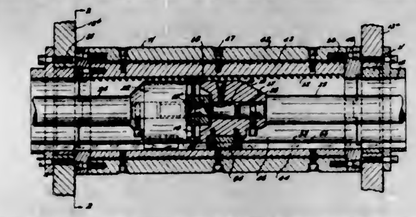
2,461,319
SOAP DABBER
Frank A. Fortino, Newark, N. J.
Application June 5, 1946, Serial No. 674,596
4 Claims. (Cl. 45—28)

1. A soap dabber to fit over a double kitchen faucet combination, comprising a circular loop fitting around one faucet pipe and having one terminal extending out to the other faucet, the other terminal substantially completing said loop and also extending for a short distance alongside the first mentioned terminal, means for locking the last mentioned terminal to the first mentioned one, a substantially semicircular loop on the first mentioned terminal, fitting over the other faucet pipe, a length projecting from the second loop terminating into a third loop having a plane perpendicular to the planes of the other loops and, after substantially completing said third loop, extending for a short distance alongside the other terminal of the same loop, means for locking both extended terminals of the latter loop, and a cake of soap mounted in the last named loop.

2,461,320
BROACHING APPARATUS AND METHOD
Lee B. Green, Lakewood, Ohio
Application December 11, 1943, Serial No. 513,850
17 Claims. (Cl. 90—10)

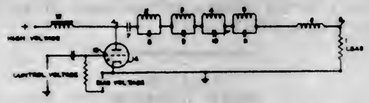
1. The method of broaching which comprises advancing a gear blank or the like through a hol-

low broach, machining certain portions of the blank during the advance movement and simultaneously using other portions of the blank for slidably supporting and centering the blank in the hollow broach during the advance movement,



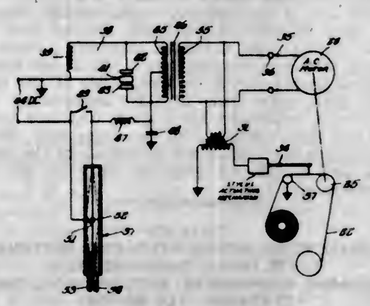
and then subjecting the blank to another such advance movement and machining said other portions and simultaneously using the previously machined portions of the blank for slidably supporting and centering the blank in the hollow broach during the second advance movement.

2,461,321
PRODUCTION OF ELECTRIC PULSES
Ernst A. Guillemin, Wellesley, Mass., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Application June 24, 1943, Serial No. 492,160
21 Claims. (Cl. 171—97)



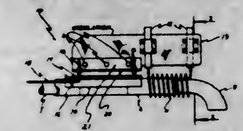
21. A circuit for producing abrupt pulses of electrical energy including a source of direct current electrical energy, a switching device, a load, and a reactive network, said network having an input series condenser and being derived from another network having also an input series condenser by reducing the magnitude of the capacitance of said condenser from its value in said other circuit, said other network having substantially the reactance characteristics of an open-circuited uniform transmission line.

2,461,322
RECORDING APPARATUS
Claude M. Hathaway, Denver, Colo.
Application September 13, 1945, Serial No. 616,107
4 Claims. (Cl. 346—33)



3. An apparatus for recording variable factors in an aircraft comprising a source of direct current, a synchronous inverter energized from said source for supplying substantially constant frequency alternating current, a synchronous motor energized by said inverter, a record chart apparatus connected to said motor, said apparatus having a metal roller adapted to receive a supply of record chart material having one surface coated with an electrically conductive material, a stylus for cooperation with said material and said roller, means for moving said stylus in response to a variable factor to be recorded, an electrical circuit extending between said roller and said stylus and including a high voltage transformer energized from said inverter, and an aircraft speed responsive switch connected between said direct current source and said inverter, said switch being arranged to close when a predetermined value of speed has been reached by said aircraft and to open whenever the speed of said aircraft drops to a predetermined value.

2,461,323
INDUCTION HEATER FOR USE WITH PIPE BENDING APPARATUS
Guenther H. Hille, Lake, Wis., assignor to Ladish Co., Cudahy, Wis., a corporation of Wisconsin
Application July 27, 1946, Serial No. 686,510
6 Claims. (Cl. 219—13)

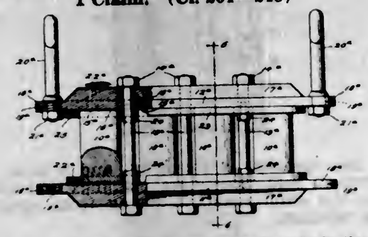


1. An induction heater for heating metal blanks supported for travel along a defined substantially horizontal path, comprising: an induction coil through which the blanks are adapted to pass to be heated thereby; a floating support for the induction coil for holding the same in predetermined position relative to the blanks passing therethrough, said support including a saddle adapted to engage over and ride directly on the blanks, said saddle being free to move up and down through variation in the blanks passing thereunder so as to automatically and continuously control the position of the coil relative to the blanks passing therethrough; and means for holding said support against motion in the direction of travel of said blanks.

2,461,324
PLASTIC BUTTON
Otto J. Hueister, Waterbury, Conn., assignor to Scovill Manufacturing Company, Waterbury, Conn., a corporation of Connecticut
Application June 20, 1945, Serial No. 600,459
6 Claims. (Cl. 24—95)

1. A button comprising a cap, said cap comprising a molded body, a hub portion, one end of the hub portion being embedded and anchored in said molded body, the major part of the hub portion protruding from one surface of said body centrally thereof, said body outwardly of the hub and within the peripheral edge thereof having a pair of circumferentially spaced and radially extending lugs projecting from said surface of the body adjacent the hub, and said lugs forming therebetween an orienting recess in alining the button with respect to a support to which the button is attached.

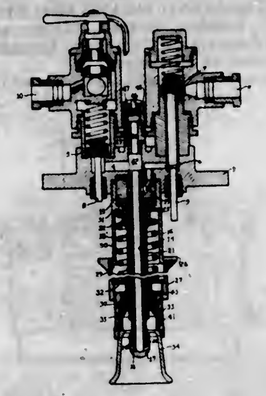
2,461,325
ELECTROLYTIC WATER PURIFIER
Theodore C. Jones, Louisville, Ky.
Application March 9, 1944, Serial No. 525,733
1 Claim. (Cl. 204—248)



An open-type self-cleaning galvanic boiler water correction device comprising an upper horizontal metallic bar having downwardly open sockets in its lower side and equidistantly spaced apart longitudinally thereof, said downwardly open sockets being of uniform depth and uniform diameter and each having a smooth end surface and a continuous smooth side wall; a lower horizontal metallic bar having upwardly open sockets in its upper side and alined with said downwardly open sockets, said upwardly open sockets having the same depth and diameter as said downwardly open sockets and also having smooth end surfaces and smooth continuous side walls; spaced metallic inserts having their upper ends seated in said downwardly open sockets and their lower ends seated in said upwardly open sockets, said inserts having smooth upper end surfaces water-tightly contacting with said smooth end surfaces of said downwardly open sockets and having smooth lower end surfaces water-tightly contacting with said smooth end surfaces of said upwardly open sockets, said inserts having smooth peripheral surfaces within said sockets and so related with said smooth side walls thereof as to water-tightly contact with said side walls during use, the coefficient of expansion of said inserts being greater than that of said bars to insure the last mentioned water-tight contact; and tie bolts spaced apart along said bars and rigidly holding said bars and elements in assembled relation; said bars being galvanically cooperative with said inserts to cause erosive decomposition of the latter in use; the aforesaid water-tight contact between the aforesaid smooth peripheral and end surfaces of said inserts and the smooth socket side walls and end surfaces serving to prevent the electrolytic boiler water from erosively decomposing the socket-contained ends of said inserts, whereby said inserts cannot become erosively freed from said sockets during the life of the device.

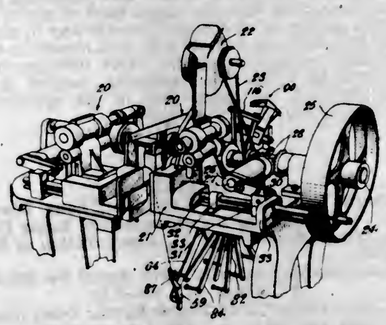
2,461,326
FILLER VALVE FOR CONTAINER FILLING MACHINES
James Kantor and Edward Marevitz, Chicago, Ill., assignors to The Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Application June 25, 1945, Serial No. 601,500
10 Claims. (Cl. 226—115)

1. In a bottle filling machine, the combination with a relatively stationary filling tube adapted to be projected into the container to be filled, when the container is moved into filling position, and a valve for controlling the flow of liquid through said tube, means for admitting a counter pressure fluid into the container, prior to the opening of said liquid valve, said tube at its top



communicating with the atmosphere, means operated by the counter pressure admitted to the container for closing said communication, said closing means being operable to open said communication when the counter pressure in said filling tube and container is released.

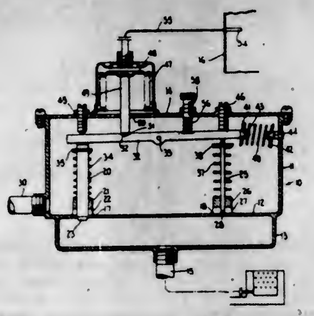
2,461,327
STRING CLOSURE AFFIXING MACHINE
Stanley Kilinski, Brooklyn, N. Y., assignor to Baltimore Paper Company, Kansas City, Mo., a corporation of Missouri
Application October 12, 1944, Serial No. 558,443
10 Claims. (Cl. 93—1)



1. In a machine for attaching a string to a sheet article, looper apparatus for holding an end of the string, fastening means for securing the end of the string to the article at a predetermined location, a threader that moves toward the looper to deliver the end of the string and then away from the looper to draw out a length of string, said threader comprising a radially-extending portion and a head that moves along a curved path and that is offset from the radially-extending portion in a direction at an angle to the plane of said curved path, string-abutment means

on the inside of the curved path of the threader head and in position to contact the string as said string moves inward as a chord of the curved path, and a shear for cutting the string.

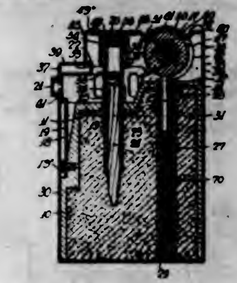
2,461,328
CONTROLLING MEANS AND SYSTEM
Walter S. Landon, Detroit, Mich., assignor to Detroit Lubricator Company, Detroit, Mich., a corporation of Michigan
Application December 30, 1943, Serial No. 516,173
5 Claims. (Cl. 277—21)



1. In a seatless metering valve, a wall having a cylindrical outlet passageway therethrough, a valve member cooperable with said passageway and having passageway-closing and stem portions of a cross-section to pass completely through said passageway, said stem portion terminating at one end in said passageway-closing portion and at its other end in an operating portion, said passageway-closing portion having an unbroken continuous cylindrical surface of a diameter to fit slidably and tightly in said passageway to close off flow therethrough, said passageway-closing portion terminating at its end opposite said stem portion in a conical flow metering portion cooperable with the upper edge of the cylindrical surface of said outlet passageway to meter flow through said passageway, and means to stop opening movement of said valve member in a position in which said metering portion is in the plane of the upper edge of the cylindrical surface of said outlet passageway.

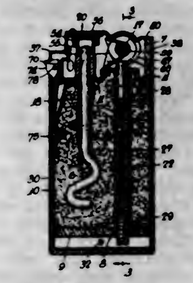
2,461,329
LIGHTER
Richard F. Landwehr, Laurelton, Long Island, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia
Application December 19, 1945, Serial No. 635,847
4 Claims. (Cl. 67—7.1)

2. In a lighter, a fuel tank having front, back, side and top walls, a wick tube extending upwardly through said top wall, arms extending upwardly from the top of the side walls and having openings therein in transverse registration at a level above said top wall to define the axis of rotation for the snuffer cap, a supplemental casing having side and end walls engaged about and telescoped over the upper end of the fuel tank and extending above the top wall thereof and overlying said arms, the upper edges of the side walls of the supplemental casing having a portion thereof curved concavely to a radius about said axis to receive the snuffer cap and a snuffer cap having side walls whose rear portions are curved concavely to the same radius as aforementioned for seating in said concavely curved portion formed in the supplemental casing, said side walls of the cap having openings in registration



with the openings in the arms, and a pivot pin received in said registering openings and about which the snuffer cap is swung from open to closed position.

2,461,330
LIGHTER
Richard F. Landwehr, Laurelton, Long Island, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a corporation of Virginia
Application February 9, 1946, Serial No. 646,549
7 Claims. (Cl. 67—7.1)

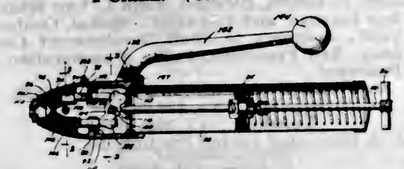


2. In a lighter, the combination of a prismatic fuel tank; a casing disposed on top thereof and having a rear bridge-piece and a somewhat lower front bridge-piece, the top edges of the casing side walls adjacent said front bridge-piece being substantially level therewith and the top edges thereof adjacent said rear bridge-piece being arcuate; a cover, the side walls of which have radially-curved rear portions and front portions defined by parallel edges and terminating in a front wall, said radially-curved rear portions being received in said arcuately formed top edges of the casing side walls and with the lower edges of said front portions of the cover side walls in abutting relation to the said substantially level top edges of the casing side walls, and with said front wall of the cover substantially at the rear edge of said front bridge-piece; a pair of parallel ears extending upwardly from the sides of the fuel tank at said arcuate casing edges for pivoting the cover about an axis disposed centrally of said arcuate portions and of said radially-curved rear portions of the cover; said front portion of the cover being closed by a flat top substantially at the level of said rear bridge-piece, and said radially-curved rear portions thereof being closed at the top and rear by a part cylindrical surface.

2,461,331
PROCESS FOR DEHYDROGENATION OF HYDROCARBONS IN THE PRESENCE OF A GASEOUS DILUENT
Charles J. G. Leesemann, Baytown, Tex., assignor, by mesne assignments, to Standard Oil Development Company, Elizabeth, N. J., a corporation of Delaware
Application June 10, 1946, Serial No. 675,809
10 Claims. (Cl. 260—680)

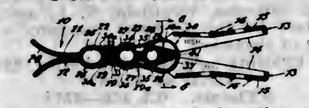
7. A process for catalytically dehydrogenating a normal mono-olefin having more than 3 carbon atoms in the presence of steam in which a catalyst unsusceptible to deactivation by steam is employed which comprises separately preheating a stream of said mono-olefins to a temperature below active dehydrogenation temperatures, preheating a stream of steam to a temperature above active dehydrogenation temperature, said steam being in excess of said olefins, charging the stream of preheated steam to the inlet of a catalyst zone containing a bed including an active dehydrogenation catalyst, dividing said preheated mono-olefins into a plurality of streams, charging the plurality of mono-olefin streams into the catalyst zone at selected points between the inlet and outlet of said zone, admixing the mono-olefin streams with steam at said selected points in said catalyst zone, maintaining a progressively decreasing ratio of steam to mono-olefins from the inlet to the outlet of said catalyst zone, and withdrawing from the catalyst zone an effluent comprising diolefins.

2,461,332
LUBRICANT COMPRESSOR
John T. Leonard, Evanston, Ill.
Application December 1, 1944, Serial No. 566,169
1 Claim. (Cl. 103—183)



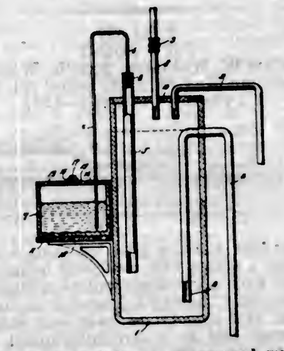
A portable lubricant compressor comprising, a body having a passageway for the reception of lubricant and having two cylinders therein communicating with the passageway, an outlet check valve for each of the cylinders, plungers reciprocable in said cylinders, each plunger having a sidewardly open notch therein, and means for reciprocating the plungers to discharge lubricant from the cylinders past the check valves, said means comprising a shaft mounted for oscillation in the body, said shaft having a non-circular end portion projecting from the body, a handle having a generally semicircular yoke, one arm of the yoke having a complementally shaped opening receiving the non-circular portion of the shaft, a shouldered stud threaded in the body in axial alignment with the shaft and forming a bearing for the other arm of the yoke, and an operating lever non-rotatably secured to the shaft and having rounded ends respectively bearing in the notches in the plungers.

2,461,333
CLOTHESPIN
Mario Maccaferri, Rye, N. Y.
Application May 28, 1947, Serial No. 751,028
5 Claims. (Cl. 24—137)



1. In a clothes pin, the combination of a pair of hinged pivoted jaws, each jaw having a cylindrically shaped outward bulge, and a U shaped spring embracing the pivoted ends of the jaws and having each leg provided with an outward curved portion extending over and hugging said bulge, and having an inward semi-circular or ogee curve between said outwardly curved portion and the common portion forming part of each leg.

2,461,334
LIQUID TREATING UNIT
Ralph M. Major, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware
Application December 1, 1944, Serial No. 566,087
7 Claims. (Cl. 210—17)



1. A device for adding a measured quantity of a second liquid to a first liquid comprising a receptacle adapted to receive said first liquid, an inlet conduit for flow of said first liquid into said receptacle, a siphon tube for intermittently emptying said receptacle, a reservoir for a second liquid open to the atmosphere, a conduit extending into said receptacle well below the top of said siphon tube and terminating above the inlet of said siphon tube in open communication with said receptacle, a capillary tube connected to one end of said conduit and having its opposite end submerged in liquid in said reservoir.

2,461,235
ORGANOMETALLIC COMPOUND
Louis A. Mikeska, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Original application December 16, 1938, Serial No. 246,073. Divided and this application October 18, 1944, Serial No. 559,254
9 Claims. (Cl. 260—606)

1. An oil miscible condensation product having an alkyl substituted aryl calcium oxide in which the oxygen of the calcium oxide group is directly attached to the aryl nucleus and in which at least two alkylated aryl nuclei are interconnected by at least one atom of an element of the sulfur family, the alkyl radicals each containing at least four carbon atoms.

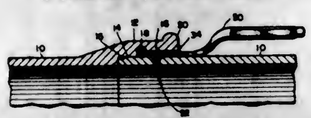
2,461,236
MANUFACTURE OF GLUTARIC ACID
Louis A. Mikeska, Westfield, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application April 1, 1946, Serial No. 658,877
9 Claims. (Cl. 260—537)

1. The process of preparing a glutaric acid which comprises subjecting a mononitrile condensation product, having the formula

in which R is a carbonyl radical selected from the group consisting of

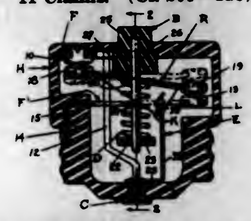
R^1 is one of the group consisting of hydrogen and an aliphatic group and R^2 is an alkyl group, to heat in the presence of a hydrolyzing agent, thereby hydrolyzing the nitrile radical and splitting off the carbonyl radical and forming a glutaric acid.

2,461,337
PIPE JOINT
Carl W. Miskimen, Seattle, Wash.
Application May 24, 1946, Serial No. 671,959
2 Claims. (Cl. 285—115)



1. In a pipe joint, a pipe bell and a pipe provided with a spigot end, said bell being provided internally with a circumferential cylindrical seat of substantially the same diameter as that of the outside of said spigot end, said seat terminating at its inner end in a circumferential shoulder adapted to abut with the end of said spigot, said bell being provided with an enlarged counterbore extending from the outer end inward to terminate at the outermost end of said cylindrical seat in a circumferential shoulder, the inner end of said counterbore being provided with a circumferential groove, a malleable metallic cast-in-place and outwardly swaged hollow cylindrical gasket positioned in said enlarged counterbore and said circumferential groove, said hollow cylindrical gasket being equal in internal diameter to and extending in axial alignment from said cylindrical seat outward substantially to the outer end of said bell, said spigot end being provided with a circumferential groove disposed at a point intermediate the length of the bell counterbore and disposed therewithin, said gasket being extruded into and filling the groove of said bell and closely engaging the outer walls of said bell on either side of said groove.

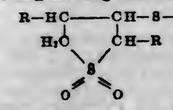
2,461,338
FUSE-PLUG TYPE CIRCUIT BREAKER
Swift Miller, Milwaukee, Wis.; Edith Mayhew Miller, executrix of said Swift Miller, deceased, assignor by decree of distribution to Edith Mayhew Miller
Application September 7, 1944, Serial No. 553,037
11 Claims. (Cl. 200—116)



5. A fuse type circuit breaker comprising a casing, screw shell and center contacts carried by the casing, oppositely facing fixed contacts supported within the casing and spaced from each other, both transversely and axially, said fixed contacts being connected to the screw shell and center contacts respectively, a rockable bridging contact arm disposed between the fixed contacts and having contact portions cooperable therewith, a spring cooperable with the arm and providing a source of power to move the same, a push button also cooperable with the arm, a bi-metallic element having a hook-like formation cooperable with the arm and co-functioning with the spring to hold the circuit breaker closed under normal conditions and also serving as a fulcrum for the arm to provide for rocking of the arm to engage said contacts when the circuit breaker is reset, the spring also acting, when the bi-metallic element warps, and disengages its hook-like formation from the arm first to rock one of the contact portions of the bridging contact arm about its fixed contact and then press an intermediate portion of the bridging contact arm against the inner end of the push button thereby holding both contact portions of the bridging contact arm spaced from their fixed contacts.

2,461,339
UNSATURATED THIOETHERS OF CYCLIC SULFONES
Rupert C. Morris, Berkeley, John L. Van Winkle, San Lorenzo, and Edward C. Shokal, Oakland, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application January 7, 1946, Serial No. 639,694
3 Claims. (Cl. 260—329)

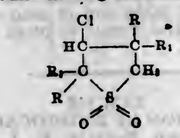
3. A compound having the formula



wherein R_1 is a beta, gamma-alkenyl radical and the R's are alkyl radicals.

2,461,340
POLYALKYLATED CYCLIC SULFONE HALOHYDRINS
Rupert C. Morris, Berkeley, and John L. Van Winkle, San Lorenzo, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application January 22, 1946, Serial No. 642,742
3 Claims. (Cl. 260—329)

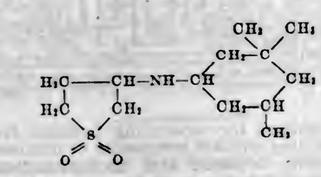
3. A compound having the structural formula



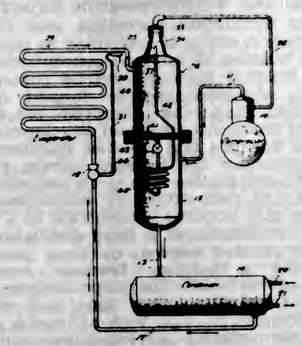
wherein the R's are alkyl radicals, one of the R_1's is a hydroxy radical and the other of the R_1's is a hydrogen atom.

2,461,341
SECONDARY SULFOLANYL AMINES
Rupert C. Morris, Berkeley, and Alva V. Snider, Richmond, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
No Drawing. Application January 26, 1946, Serial No. 643,835
3 Claims. (Cl. 260—329)

1. The compound having the structural formula

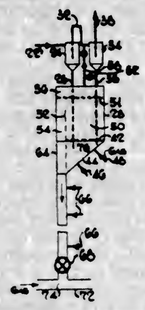


2,461,342
REMOVAL OF LIQUID REFRIGERANT FROM THE SUPPLY LINE TO A COMPRESSOR
Joseph W. Obreiter, Jr., Glen Ridge, N. J.
Application September 17, 1947, Serial No. 774,643
10 Claims. (Cl. 62—115)



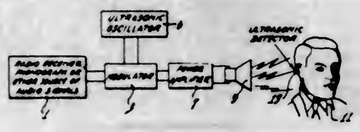
1. In the operation of a refrigeration system in which compressed refrigerant is condensed, evaporated to produce refrigeration, and returned to a compressor, the improvement that comprises withdrawing any remaining liquid refrigerant from the evaporator refrigerant at a region along the course of circulation of the evaporated refrigerant through the system, transferring the liquid to another region of higher temperature, vaporizing said withdrawn liquid by the application of heat at the region of higher temperature, and returning the resulting vaporized refrigerant to the course of circulation of the evaporated refrigerant along a course that by-passes the region at which the liquid was withdrawn and at a region downstream from that at which said liquid was withdrawn at a region beyond that at which the liquid was withdrawn from the evaporated refrigerant and ahead of the intake of the compressor.

2,461,343
CONTACTING GASEOUS FLUIDS AND SOLID PARTICLES
Henry J. Ogorzaly, Summit, N. J., and Alexis Voorhies, Jr., Baton Rouge, La., assignors to Standard Oil Development Company, a corporation of Delaware
Application December 30, 1944, Serial No. 570,741
8 Claims. (Cl. 196—52)



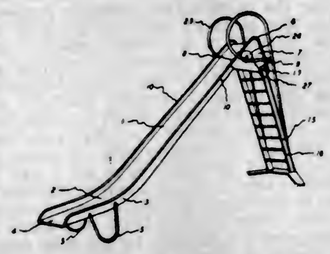
1. In a process wherein solid contact particles are maintained as a dense dry fluidized bed in a contacting zone by upward passage therethrough of gaseous fluid and the spent or fouled contact particles are withdrawn as a dense fluidized stream from the lower portion of the dense fluidized bed while a gaseous stream is withdrawn from the top of the contacting zone, the improvement of first passing the withdrawn dense fluidized particles downwardly through a first stripping zone beneath said contacting zone, passing a primary stripping gas upwardly through the first stripping zone into the contacting zone whereby the particles are partially stripped, then passing the partially stripped particles into the bottom portion of a second separate stripping zone, introducing a secondary stripping gas into the bottom portion of said second stripping zone, mixing the partially stripped particles with the secondary gas to form a dilute suspension in said bottom portion, passing the suspension upwardly as a plurality of streams into an upper portion of the second stripping zone at a gas velocity adapted to form a dense fluidized mixture having a level in the upper portion of said second stripping zone while purging them and while moving them generally upwardly in the said upper portion, removing stripped contact particles from below the level of the dense fluidized mixture in said second stripping zone and removing secondary stripping gas and stripped material from above the fluidized level of said second stripping zone.

2,461,344
SIGNAL TRANSMISSION AND RECEIVING APPARATUS
Harry F. Olson, Princeton, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application January 29, 1945, Serial No. 575,008
6 Claims. (Cl. 179—1)



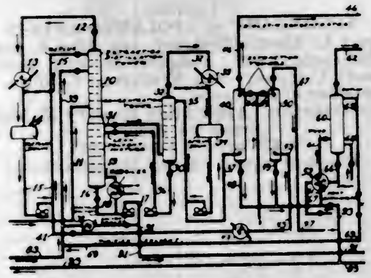
1. A system for producing and transmitting in an unconfined medium ultrasonic compressional waves modulated at audio frequencies and for detecting the audio frequency modulation components of said waves without the use of a power source, said system comprising, in combination, a source of audio frequency signals, an ultrasonic oscillator, means associated with said source for modulating the output of said oscillator in accordance with said audio frequency signals to provide a modulated ultrasonic signal, a signal translating device adapted to generate compressional waves and arranged to generate said waves in the unconfined ambient, means for applying said modulated ultrasonic signal to said translating device whereby said device will generate in the unconfined ambient ultrasonic compressional waves modulated at said audio frequencies, and a receiver exposed to said ambient in spaced relation to said translating device for receiving said modulated compressional waves, said receiver being adapted to be powered solely by the modulated compressional waves received thereby and to detect said audio frequency modulation components when so powered, said receiver being further adapted to be worn in the ear of a listener and comprising a generator and a motor, said generator including a vibratory member exposed to the ambient, and said motor including a vibratory member arranged to face the ear canal when said receiver is worn in the ear, the output of said generator being connected to the input of said motor.

2,461,345
PLAYGROUND SLIDE
Gordon W. Packer, Litchfield, Mich., assignor to Litchfield Manufacturing Company, Litchfield, Mich., a corporation of Michigan
Application December 3, 1945, Serial No. 632,313
7 Claims. (Cl. 272—56.5)



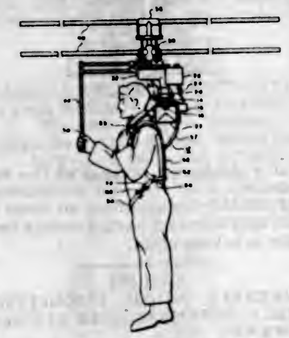
3. A play slide assembly comprising a chute having a load supporting portion and side guiding rails having upper edges, a gusset plate at each side of one end of said chute, said gusset plates having edges in alignment with said guiding rails and extending in one direction, said plates having edges extending in parallel relation in another direction at an angle substantially less than 180° from said first-named direction, a step supported by said gusset plates, a riser for said step supported by said gusset plates and intersecting directly said load supporting portion of said chute, said step and riser forming a safety pocket for users of the slide to stand, in a position below the top of said chute, hand rails secured to said upper edges of said guiding rail, steps to support said gusset plate end of said chute in elevated position, and means to pivot said steps to said gusset plate.

2,461,346
SEPARATION OF HYDROCARBONS
John A. Patterson, Beverly, N. J., assignor to Standard Oil Development Company, a corporation of Delaware
Application December 28, 1944, Serial No. 570,193
1 Claim. (Cl. 260—681.5)



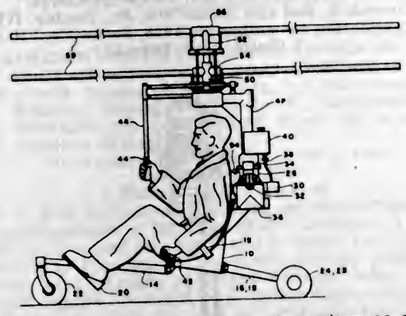
In a process for separating isoprene from a closely boiling mixture containing C_5 monoolefins, C_5 paraffins, isoprene and cyclopentadiene by fractional distillation in the presence of an acetone solvent in an extractive distillation zone in which the relatively saturated paraffins and monoolefins are removed as distillate, the relatively less saturated isoprene and cyclopentadiene are removed as an intermediate fraction containing solvent, the remaining solvent is removed as a bottoms fraction containing a major proportion of acetone and dicyclopentadiene formed in the extractive distillation operation, and the said intermediate fraction is redistilled to separate a distillate fraction of isoprene concentrate and a residual fraction high in acetone content and containing dicyclopentadiene formed in said redistillation step, the improved process for separating cyclopentadiene and dicyclopentadiene from said bottoms and residual fractions comprising returning the residual solvent fraction from said redistillation step to an isoprene stripping stage of said extractive distillation zone, subjecting said isoprene concentrate to a second fractional distillation in a third distillation zone to recover purified isoprene distillate therefrom, withdrawing a bottoms fraction containing cyclopentadiene and dicyclopentadiene from the said third distillation zone and combining this bottoms fraction with at least a portion of the said bottoms solvent-dicyclopentadiene fraction removed from said first extractive distillation zone and contacting these combined bottoms fractions with sufficient water to cause separation of a dilute aqueous acetone phase and a hydrocarbon phase containing said cyclopentadiene and dicyclopentadiene polymer.

2,461,347
HELICOPTER ADAPTED TO BE ATTACHED TO A PILOT
Horace T. Pentecost, Renton, near Seattle, Wash.
Application October 17, 1945, Serial No. 622,726
3 Claims. (Cl. 244—4)



1. In a helicopter, a pair of juxtaposed posts to lie along the back of a pilot and having hooks thereon to extend over his shoulders, a lower arcuate crossbar on said posts, a back-pad carried by said posts below the hooks thereon, straps extending between the top and bottom edges of said back-pad, each said strap being slidably associated with the crossbar and immovably coupled with a hook, coaxial lifting rotors having changeable-pitch blades carried by and above said posts in fixed relationship thereto, an engine for driving said rotors, and means for varying the pitch of said blades, including means positioned in front of and conveniently operable by the pilot.

2,461,348
HELICOPTER OF THE COAXIAL WING TYPE
Horace T. Pentecost, Renton, near Seattle, Wash.
Application October 17, 1945, Serial No. 622,727
4 Claims. (Cl. 244—17.23)



1. In a helicopter of the counter-rotary co-axial wing type, an internal combustion engine having substantially opposed cylinders and an upright drive shaft, a frame attached to said engine and adapted to carry variable loads to one side thereof, a structural column solely supported by and rising above said engine and providing support for the drive shaft of said engine, a laterally disposed structural member rigid with said column and overlying said load-carrying frame, an intermediate shaft supported by said laterally disposed structural member and including an over-running coupling between its ends, bevel gearing between said engine drive shaft and said intermediate shaft, and counter-rotating bevel gearing between said intermediate shaft and said rotary wings.

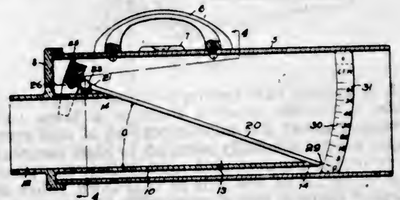
2,461,349
COMPOUNDS MODIFIED BY ABIETIC NITRILES
Anderson W. Ralston and Hoyt M. Corley, Chicago, Ill., assignors to Armour and Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application October 29, 1943, Serial No. 508,254
11 Claims. (Cl. 260—27)

4. A composition selected from the class consisting of butadiene polymers, butadiene-acrylonitrile copolymers, isoprene polymers, chloroprene polymers, and polyisobutylene, which composition contains a nitrile produced by the reaction of abietic acid and ammonia at elevated temperature and serving as a plasticizer in said composition.

2,461,350
ELECTRODEPOSITION OF LEAD-ANTIMONY-TIN ALLOYS
Ralph A. Schaefer, East Cleveland, and James B. Mohler, Euclid, Ohio, assignors to The Cleveland Graphite Bronze Company, Cleveland, Ohio, a corporation of Ohio
No Drawing. Application November 6, 1943, Serial No. 509,278
2 Claims. (Cl. 204—43)

1. A method of electroplating an alloy of approximately 12.2% antimony, 1%–2% tin and the balance lead which consists in electrodepositing the alloy from an aqueous bath consisting essentially of fluoboric acid (42%) 189 grams per liter of bath, basic lead carbonate 135 grams per liter, antimony trifluoride 26.4 grams per liter, stannous sulfate 32.6 grams per liter, gelatin 0.5 gram per liter, the current density being not less than 20 amperes per square foot.

2,461,351
FLOWMETER
Leslie Silverman, Westwood, Mass.
Application November 21, 1945, Serial No. 630,027
6 Claims. (Cl. 73—228)



1. A portable metering device for flow of air and other fluents, comprising a transparent tubular housing having a carrying handle, said housing open at one end and having a closure cap at the other end, a flow tube mounted on and extending through the cap and lengthwise in the housing in parallel axial relation and laterally spaced from the housing wall, the tube terminating in the housing along an elongated bevel in a plane acutely oblique to the axis and defining a correspondingly elongate flow outlet and marginal seat about the latter, a plate-like vane shaped and proportioned for reception on the seat in closing relation to the outlet, transverse pivotal supporting means for the vane on

the tube in or paralleling the plane of the bevel, and counterbalancing means for the vane between and out of contact with the tube and the housing.

2,461,352

WATER-IN-OIL EMULSION PAINTS CONTAINING A LEAFING PIGMENT

Vaughn R. Smith, El Cerrito, and Don E. Stevens, Fairfax, Calif., assignors to California Research Corporation, San Francisco, Calif., a corporation of Delaware

No Drawing. Application November 6, 1946, Serial No. 708,179
9 Claims. (Cl. 106—269)

1. A fluid leafing pigment paint consisting of by weight 2–40% leafing pigment and the remainder consisting essentially of a paint vehicle, said paint vehicle being an emulsion with water as the internal phase and an organic, water-insoluble, thermoplastic paint base as the external phase.

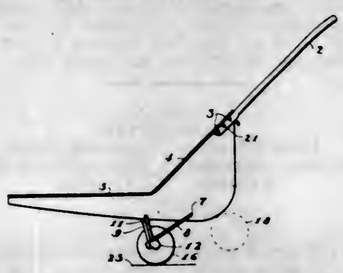
9. A fluid leafing pigment paint consisting of by weight 2–40% aluminum leafing pigment and the remainder consisting essentially of an emulsion having water as its internal phase and a solution of asphalt in a hydrocarbon solvent as its external phase, and, as a leafing promoter, .01–10% by weight stearic acid and, as an emulsifier, .01–10% by weight sodium stearate, said paint being capable of being stored without substantial loss in leafing properties.

2,461,353

GARDEN CART

William Steiser and Madelon J. Steiser, Summit, N. J.

Application February 10, 1947, Serial No. 727,628
6 Claims. (Cl. 280—52)



4. A garden cart having a scoop shaped receptacle, a handle secured thereto, a lawn roller arranged under the middle portion of said receptacle, means pivotally secured to said receptacle to revolubly support said lawn roller, the pivotal axis being aft of the axis of said lawn roller and parallel thereto, and a removable frame pivotally secured to said receptacle at the rearward portion thereof to increase the carrying capacity of said receptacle.

2,461,354

FASTENING MEANS FOR DIRECT LIFT WASTE FITTINGS OR THE LIKE

Carl R. Stone, Chicago, Ill., assignor to Crane Co., Chicago, Ill., a corporation of Illinois

Application September 13, 1945, Serial No. 616,058
6 Claims. (Cl. 4—191)

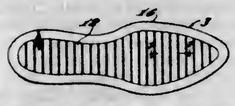
4. The combination of an escutcheon suitable for mounting over a substantially key-hole aperture on a lavatory or the like, a base plate spanning the aperture, the escutcheon being formed to receive the said base plate, the said base plate having means for attachment to a fixture or the like and having thread means on the outer periphery of a thickened portion of the base plate for engagement with the said escutcheon, and a clamp bar suitable for spanning an inner end portion of the aperture and having means for attachment to the said base plate.

2,461,355

TRANSVERSELY RIGID, LONGITUDINALLY FLEXIBLE, INTERNAL SOLE ELEMENT FOR FOOTWEAR

Gilbert Supple, Waban, Mass.

Application May 27, 1946, Serial No. 672,346
8 Claims. (Cl. 36—22)



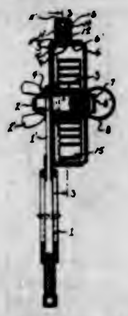
1. A full length insole for use in footwear, said insole comprising a series of transversely rigid ribs and a marginal attaching strip of flexible material, said attaching strip comprising a portion which fits into and is secured in grooves in the ends of the several ribs, the attaching strip thereby connecting the ribs and extending uninterruptedly all of the way around the insole, including its heel and toe ends.

2,461,356

AUTOMATIC FISH POLE HOLDER

Joseph E. Sus and Anton Sus, Jr., Racine, Wis.

Application December 30, 1946, Serial No. 719,170
1 Claim. (Cl. 248—42)



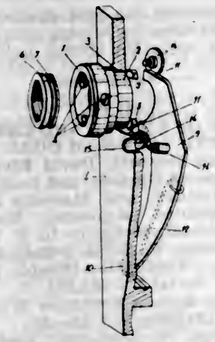
A fish rod holder comprising a stationary flanged circular shell, an inner flanged shell rotatably mounted upon the flange of the stationary shell, a slot formed in the flange of the inner shell having offset ends, a fixed hub extending from the stationary shell, a coil spring having ends secured to the fixed hub and flange of the inner shell, a radially disposed sleeve extending from the outer shell flange, a spring controlled reciprocative plunger mounted in the sleeve for frictionally engaging one of the offset ends of the spring controlled shell slot, whereby upon a slight back movement of the spring controlled outer shell, the spring controlled plunger is released from its frictional engagement with the offset slot end, and a stop-pin carried by the outer shell extending into the inner shell slot.

2,461,357

CAMERA OBJECTIVE MOUNTING

Jacques Jean Broido, Joinville-le-Pont, and Jean Weismbrodt, Paris, France

Application December 4, 1945, Serial No. 632,704
In France December 6, 1944
2 Claims. (Cl. 88—57)



1. In a camera, a casing, an objective mounting having a shoulder and a cylindrical rear barrel adapted to engage a centering hole in said casing, said cylindrical barrel being cut out at its rear end to provide two diametrically opposed cam-shaped hooks and a movable bolt pivoted to said casing and having projections adapted to engage said cam-shaped hooks for determining the angular position of said mounting and holding and tightening the same in said casing.

2,461,358

DIOLEFIN POLYMERIZATION IN THE PRESENCE OF AMMONIUM SOAP EMULSIFIER

Byron M. Vanderbilt, Westfield, N. J., and Frances Bascom, Staten Island, N. Y., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application June 1, 1946, Serial No. 673,896
6 Claims. (Cl. 260—84.5)

1. The process of producing aqueous emulsion polymerizates of mixtures of a butadiene-1,3 hydrocarbon and an acrylic nitrile which comprises using as the emulsifying agent a minor proportion of a mixture of a soap-forming fatty acid and from 5 to about 75% molar excess of ammonia over that required to react with the fatty acid.

2,461,359

INHIBITING ACIDIC CORROSION IN WELLS

Prentiss S. Viles and Elza Q. Camp, Goose Creek, Tex., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application January 26, 1946, Serial No. 643,758
6 Claims. (Cl. 252—8.55)

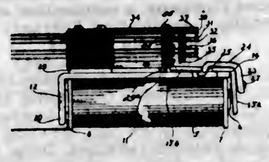
1. A method for reducing the corrosiveness to corrodible ferrous metal of a corrosive fluid including moisture, petroleum hydrocarbons and a corrosion-producing amount of carbon dioxide which comprises introducing into said fluid a corrosion inhibiting amount of hydrogen sulfide free from other corrosion preventing agents.

2,461,360

RELAY

Andrew W. Vincent, Rochester, N. Y., assignor to Stromberg-Carlson Company, Rochester, N. Y., a corporation of New York

Application October 16, 1943, Serial No. 506,606
5 Claims. (Cl. 175—345)



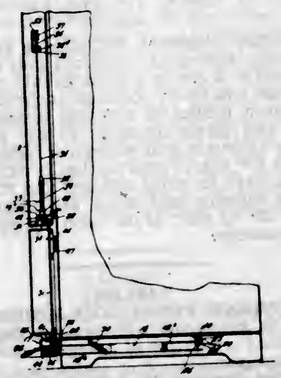
1. In a relay having a core provided with a coil, a frame associated with said core and having a portion adjacent one end of said core, said portion constituting a line bearing, said frame having a notch therein which interrupts said line bearing, an angular armature having an inner corner and having a struck-out tongue received in said notch and provided with a corner extending in substantial registry with the line bearing of said frame, the inner corner of said armature engaging said line bearing whereby the armature can rock on said frame with respect to said core, and a spring latch having a lip acting on the corner of said tongue in a direction to force the inner corner of the armature against the line bearing of the frame.

2,461,361

REFRIGERATOR LATCH

Hugh Wallace, Evansville, Ind., assignor to Servel, Inc., New York, N. Y., a corporation of Delaware

Application August 8, 1945, Serial No. 609,567
5 Claims. (Cl. 292—255)



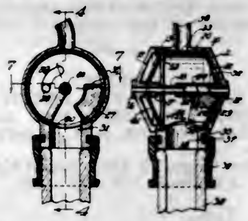
1. Latch mechanism for a hinged door of a cabinet including a latch bolt secured to said door, a treadle cushioned on said cabinet and having a tread traversing substantially the entire front of said cabinet below said door, and means yieldably connecting said treadle to said latch bolt, said means including a first vertical

element yieldably connected to said treadle, a second vertical element connected to said first vertical element and passing upwardly through said door on the hinged side thereof and a horizontal element connected at one end to said second vertical element and at its opposite end to said latch bolt.

2,461,362
PREPARATION OF 2-3 METHYL BUTADIENE 1-3
David W. Young, Roselle, and Charles E. Britton, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware
No Drawing. Application February 9, 1945, Serial No. 577,138
4 Claims. (Cl. 260—681)

3. A method for the preparation of a conjugated diolefin comprising contacting an aliphatic glycol in the liquid phase at a temperature between room temperature and 75° C. in a reaction zone with a catalyst selected from the group consisting of: $AlBr_3$, AlOBr, $AlBr_3.AlOBr$, $(AlBr_3)_4.AlOBr$, $(AlBr_2Cl)_4.AlOBr$, $(Al_2Br_5Cl)_8.AlOBr$, $AlBr_3$-hydrocarbon complexes, BBr_3, $BBr_3.BOBr$, $TiBr_4$, $TiOBr_2$, and $TiBr_3Cl$, and distilling the conjugated diolefin from the reaction zone.

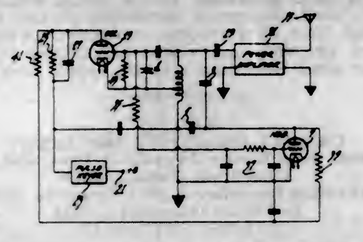
2,461,363
DISPENSER WITH MEASURING CHAMBER OF ADJUSTABLY VARIABLE CAPACITY
William P. Zommer, Lake Zurich, Ill.
Application December 11, 1945, Serial No. 634,206
2 Claims. (Cl. 222—362)



2. A liquid dispenser, including a casing having ingress and egress openings and adapted to be secured to a bottle, a drum in said casing having ingress and egress openings and movable relative thereto, means for bringing respectively the ingress and egress openings of the casing and drum in alternate and successive registry, a disk mounted for axial reciprocation in said drum to minutely vary its cubic content and the amount of liquid entering said drum, and means for admitting air to said drum upon registry of said egress openings.

2,461,364
ELECTRONIC FREQUENCY MODULATOR
Amedeo D. Zappacosta, Havertown, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Application January 31, 1946, Serial No. 644,526
7 Claims. (Cl. 332—19)

7. The combination comprising an oscillation generator including a thermionic tube and a tuned circuit, series connected reactances for tuning said circuit connected across said tuned circuit, a second thermionic tube having its anode-cathode path effectively in parallel with one of said reactances, the impedance of said anode-cathode path being determined by the grid voltage applied to said second tube, and a direct-current conducting path connecting the grid electrodes of said first and second tubes for biasing said second tube in response to operation of the oscillation generator.

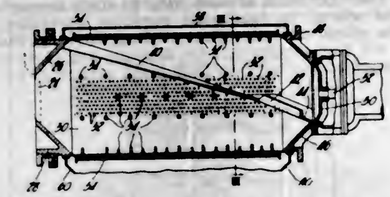


2,461,365
PRODUCTION OF SHAPED AND CARBONIZED ARTICLES FROM COAL
John Godolphin Bennett, David Blythe Foster, Charles Desmond Greaves, and George Cordery Phillpotts, London, and Marcello Pirani and William Julianus Kramers, Kingston-on-Thames, England, assignors to C. D. Patents Limited, London, England, a British company
No Drawing. Application October 17, 1945, Serial No. 622,934
In Great Britain November 2, 1944
8 Claims. (Cl. 18—55)

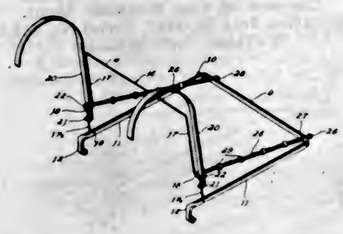
1. The process of producing useful shaped articles which comprises preparing an intimate mixture of finely comminuted material composed at least predominantly of coal which contains volatiles in the proportion of about 13 to 30% on a dry ash-free basis, moulding from the resultant mixture an article of the desired shape under a pressure of the order of at least two tons per square inch, at least sufficient to enable the shaped article to be transferred undamaged from the moulding machine to a furnace, releasing the pressure, producing test pieces from said mixture, firing the test pieces in a non-oxidising atmosphere to a temperature of at least 550° C. and controlling the rate of firing in such manner as to produce a fired test piece free from cracks and free from a cellular structure visible to the naked eye, thereafter firing the moulded article under the conditions and at the rate at which the last-named test piece was fired to produce an article having the properties of the last-named fired test piece and cooling the article in a non-oxidising atmosphere.

2,461,366
ROTARY SCREENING DRUM FOR NAIL CLEANING APPARATUS
Bruce N. Bietso, East Cleveland, and William Thompson, Cleveland Heights, Ohio, assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application March 28, 1944, Serial No. 528,471
5 Claims. (Cl. 209—297)

1. Nail cleaning apparatus of the character described, including a screening drum consisting of an annular shell having spaced foraminous areas separated by solid imperforate areas, a spiral fin crossing said solid and foraminous areas and projecting inwardly, a plurality of inwardly extending pegs arranged in separate rows, some of the rows being in the imperforate areas and others being in the foraminous areas, the pegs in the foraminous areas being staggered with relation to those in the imperforate areas, said pegs being adapted to engage masses of nails being handled and thus to limit the sliding thereof.



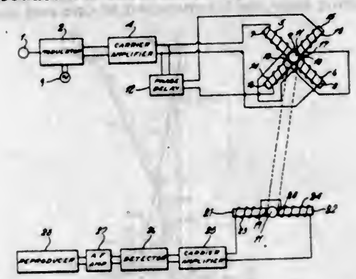
2,461,367
COLLAPSIBLE OR FOLDING INFANT'S AUTO SEAT
Theodore H. Bonk, Tampa, Fla.
Application June 10, 1946, Serial No. 675,759
3 Claims. (Cl. 155—79)



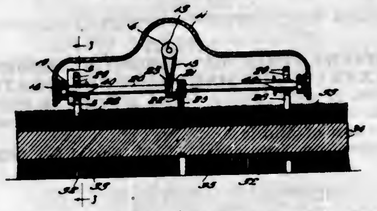
3. In a child's carrier for use in connection with the passenger seat of an automobile, hingedly connected back and horizontal and frame members, said back frame member having sides, each provided with a laterally extending offset merging into a terminal portion for the respective sides, supporting hooks swivelly connected with the terminal portions of said sides, and chains having links engaged with said offset portions of said sides and retained against displacement by the cooperative action of said sides and the swivel connections between the supporting hooks and terminals, said chains having free end portions trained through openings provided therefor in the horizontal frame member, and clasps on the terminals of said free end portions, said end portions of said chains being adapted to be drawn through the said openings and bent back for engaging said clasps with selected intermediate links in the chains to secure said horizontal frame member at selected positions of angular adjustment with respect to said back frame.

2,461,368
MAGNETIC TRANSDUCING APPARATUS UTILIZING A HELICAL SOUND TRACE
William E. Bradley, Swarthmore, Pa., assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa., a corporation of Pennsylvania
Application December 19, 1944, Serial No. 568,885
13 Claims. (Cl. 179—100.2)

3. A signal recording arrangement comprising a longitudinally movable magnetizable wire, means energized by signal modulated carrier waves to produce crossed magnetic fields, an electric phase displacing network for displacing the phase of the carrier waves applied to one of said pair of means with respect to the carrier waves applied to the other of said pair of means to produce the effect of a magnetic field having a component revolving around the longitudinal axis of said wire but without physically revolving said means, said component being modulated to correspond with the signal modulations of said carrier.



2,461,369
POLISHING ATTACHMENT FOR ELECTRIC SWEEPERS
Millard E. Cameron, Allen Park, Mich.
Application July 27, 1945, Serial No. 607,322
4 Claims. (Cl. 15—49)

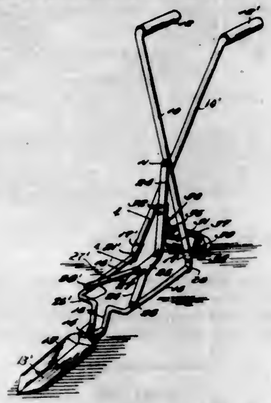


1. A surface treating attachment for electric sweepers having a casing and a motor therein comprising a shaft adapted to be mounted in said casing, extending members slidably carried by and disposed perpendicular to said shaft, said extending members being spaced longitudinally of said shaft, said extending members having a plurality of longitudinally spaced grooves, each of said extending members having a journal at one end thereof, a cylindrical surface treating member rotatably mounted in said journals, driving means connecting said surface treating member and said motor, and slidable latches carried by said shaft selectively engageable with said grooves for radial adjustment of said extending members and said surface treating member relative to said shaft.

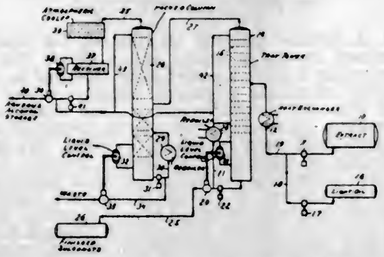
2,461,370
SHEARS
Stanley M. Carper, Sheffield County, Conn.
Application April 16, 1946, Serial No. 662,492
6 Claims. (Cl. 56—241)

1. Shears comprising in combination, a pair of crossed, upwardly extending levers pivotally connected at the intersection thereof and forming handles at their upper ends, a pair of crossed, substantially horizontal shear blades pivotally connected together and extending past the intersection thereof to constitute a pair of operating arms, a flexible connection between the free end of each of said arms and the lower end of one

of said levers, a strap secured at one end thereof at the intersection of said levers and extending downwardly therefrom, a forwardly angulated portion at the lower end of said strap, a pair of equalizing bars, each connected at one end thereof to said angulated portion and at its remaining end to one of said arms, a downwardly and rearwardly extending bracket connected to said strap, and a supporting roller rotatably mounted in said bracket.



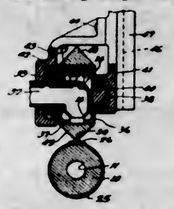
2,461,371
DISTILLATION OF AQUEOUS ALCOHOL EXTRACTS OF MAHOGANY SULFONATES
Eldon B. Cole, Tulsa, Okla., assignor to Sinclair Refining Company, New York, N. Y., a corporation of Maine
Application November 1, 1947, Serial No. 783,497
3 Claims. (Cl. 202—40)



1. Method of continuously distilling an aqueous alcohol extract of an oil-soluble mahogany sulfonate to remove the alcohol and water and to thereby produce a concentrate of the sulfonate comprising maintaining the residue in the distillation column at a temperature above the boiling point of water at the operating pressure and refluxing the column with a water-alcohol mixture containing between about 30 and 90% alcohol.

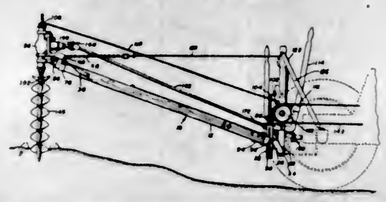
2,461,372
TUBE FORMING DEVICE
Fred V. Collins, Des Plaines, Ill., assignor to William F. Stahl, Kenilworth, Ill.
Application December 31, 1947, Serial No. 794,849
4 Claims. (Cl. 154—42)

1. Apparatus for forming tubes from fusible flat web material, comprising a mandrel, means for advancing said web forwardly of said mandrel and into tubular form, and means for subjecting the edge portions of said tube to high frequency radio waves to fuse said portions including a wave guide for directing high frequency radio



waves toward the edge portions of said tube, a substantially hollow roller receiving the end of the wave guide and a rim of high dielectric-constant material on the roller for engaging the edge portions of the tube.

2,461,373
ONE-MAN POSTHOLE DIGGER
Clarence M. Cox, Belgrade, Mont.
Application July 18, 1947, Serial No. 761,959
1 Claim. (Cl. 255—19)

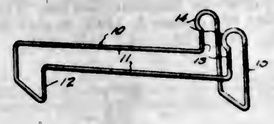


A hole digger comprising a frame, a support adapted to be secured to a tractor having arcuate tracks thereon with slots in said tracks, lugs projecting from said frame and disposed in said slots, a lever pivoted to said support, pitman rods connecting said lever and said frame to rotate said frame, a bracket secured to said frame, a perch pivoted to said bracket, a housing with a transmission therein pivotally mounted on said perch for supporting and actuating an auger, means for pivotally adjusting said perch comprising a rod secured to said auger retaining means, and a crank pivoted to said support receiving said rod, an extensible shaft, a spring urged clutch in said shaft, and means drivingly connecting said shaft and said transmission, a flexible member attached to said frame, and means mounted on said support for winding and playing out said flexible member to raise and lower said frame in a pivotal manner about said lugs as an axis.

2,461,374
RECEPTACLE SUPPORTING RACK
Harry W. Custer, Center Line, Mich.
Original application October 13, 1944, Serial No. 558,510. Divided and this application September 24, 1945, Serial No. 618,157
1 Claim. (Cl. 248—175)

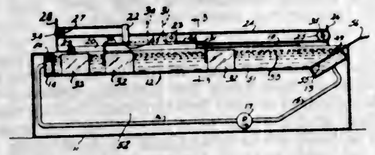
As a new article of manufacture, a rack for supporting tubular receptacles and the like, formed of a strand of material, said rack comprising a pair of spaced parallel longitudinally extending members constituting receptacle-supporting side track-rails, a depending U-shaped loop supporting the front end of said rails, said rails terminating at their opposite rear ends in

upwardly extending parallel portions, the upwardly extending parallel portions merging into forwardly projecting loop portions, the forwardly projecting loop portions in turn terminating in a downwardly extending U-shaped loop portion providing a support for the rear end of the rack, the upwardly extending parallel portions and the



forwardly projecting loop portions extending in alignment, the track-rails providing supports upon which a tubular receptacle rests and extends below the rails to hold the receptacle against lateral displacement, the rails also constituting parallel tracks for supporting the receptacle for longitudinal slidable movement upon the track-rails.

2,461,375
FOOD REFRIGERATING APPARATUS
Kosmas Eftihios, New Orleans, La.
Application April 4, 1947, Serial No. 739,328
15 Claims. (Cl. 62—104)



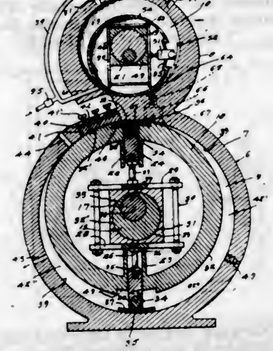
4. In a food freezing machine a refrigerant receptacle, a refrigerant cooling and circulating system associated with said receptacle, mechanism for moving containers by successive stages through refrigerant in said receptacle, said mechanism including a reciprocating carriage supported above said receptacle, a carrier extending transversely of the carriage, and a bracket pivotally supported on said carrier, said bracket in one position engaging containers in said receptacle and in another position resting on said carriage above said receptacle.

2,461,376
SHEET STRETCHING MECHANISM
Frank Feldmeier, Pittsburgh, Pa., assignor to Blaw-Knox Company, Pittsburgh, Pa., a corporation of New Jersey
Application May 28, 1947, Serial No. 751,150
3 Claims. (Cl. 271—52)

1. In combination with a drum mounted for horizontal rotation, apparatus for stretching flatly upon said drum surface a sheet of paper carried thereon, comprising a rock shaft mounted adjacent the drum and parallel to the axis thereof, a rotatable shaft and a rubber-tired wheel supported thereon for rotation in contact with the drum surface, means mounting said wheel supporting shaft for rotation about its longitudinal axis and for securing it to said rock shaft for bodily rocking movement therewith, manually controllable means associated with said mounting for selectively canting the axis of the wheel relative to the axis of the drum, and a similar wheel and mounting therefor adjustably positioned on another portion of said rock shaft and arranged for canting oppositely to the cant of

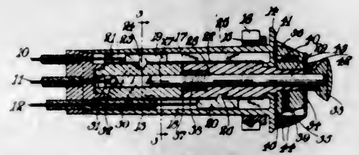
the first wheel whereby when the two wheels engage opposite margins of the sheet disposed on the drum the rotation of the drum and wheels will serve to stretch the sheet upon the drum.

2,461,377
ROTARY INTERNAL-COMBUSTION ENGINE
Clair A. Gilson, Stuart, Fla.
Application March 21, 1945, Serial No. 583,889
5 Claims. (Cl. 123—16)



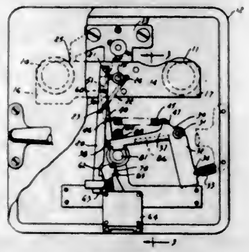
1. In a rotary engine, a substantially annular housing, inwardly extending cam bosses fixed to the ends of said housing concentric therewith, a shaft extending through said bosses eccentric thereto, a rotor fixed to said shaft concentric with said shaft and eccentric to said housing, shoes engaging the inner surface of said housing, a slide block rotatable about said cam boss, vanes slidably mounted on said rotor, means rockably securing said shoes on said vanes, and means fixed on said shaft slidable in said vanes and engaging said shoe securing means in certain positions of said rotor and said shoes for locking said shoes against rocking movement on said vanes.

2,461,378
CONTROL DEVICE FOR MULTIPLE LINEARLY MOVABLE MEMBERS
Frederick Joseph Grose, Cricklewood, London, England, assignor to S. Smith & Sons (England) Limited, London, England, a British company
Application June 30, 1947, Serial No. 758,023
In Great Britain July 16, 1946
1 Claim. (Cl. 74—501)



A control device for moving three Bowden cables comprising a casing having two straight grooves formed in the internal surface thereof, two blocks attached respectively to two of the cables and slidable respectively in said grooves and each having an inwardly extending projection, two externally threaded members arranged end to end and rotatable but fixed against axial movement in said casing and engaged respectively by said projections, each of which threaded members is provided with a bore, an operating member extending freely through the bore in one member and axially slidable but non-rotatable in the bore of the other threaded member which operating member is connected to the third cable and another operating member adapted independently to rotate the first said threaded member.

2,461,379
BINOCULAR SHUTTER MECHANISM
Lawrence Earl Hamilton, Holly Hill, Fla.
Application August 8, 1947, Serial No. 767,395
7 Claims. (Cl. 161—26)

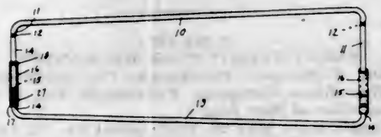


1. In a viewing device, a lens system, a shutter pivotally mounted for rotation from a first position wherein it intercepts light passing through said lens system to a second position where the lens system is open for the passage of light; a latching arm pivotally connected to said shutter at one side of the pivotal mounting thereof; a latch element; biasing means engaging said latch arm and urging said shutter to said first position and urging said latch arm toward engagement with said latch element; means for moving said shutter from the first position to the second position, said latch arm moving therewith to a position where it engages said latch element, said means comprising a latch lowering arm; means at the end of the latch lowering arm for engaging the shutter; a member operable to move the latch lowering arm into engagement with the shutter while the shutter is in the first position; additional means for moving the latch lowering arm back to its original position to move the shutter to the second position.

2,461,380
MATCH BOOK, VEST POCKET SIZE
Christine Hansen, Racine, Wis.
Application November 8, 1945, Serial No. 627,340
1 Claim. (Cl. 206—29)

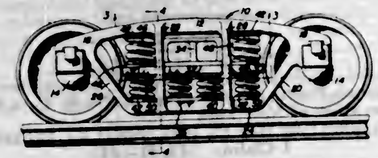
In a safety match box of vest pocket size, a main cover having its bottom edge upturned to form an open channel and its top edge having a flap bent over to form a wide housing space for match heads and the extremity of the flap bent inwardly in said space to provide an upwardly open narrow channel, a match comb with a plurality of matches enclosed in said cover having its solid bottom end rigidly secured in the upturned bottom channel of said cover and the heads projecting freely into said top housing space, said flap concealing only the tips of the match heads, and a shield having a flat straight body of about the same width as said cover and a height greater than the distance between the opposing edges of said flap and said bottom channel, said shield being bent over at its top edge to form a hook portion adapted to hook over the edge of said narrow tip channel of the cover thereby to cover the entire front of the matches and being adapted to slide sideways for uncovering them.

2,461,381
LEG AND SLEEVE STRETCHER
Scott W. Henderson, Kokomo, Ind., assignor to Vera P. Williams, doing business as C. I. Togstad Company, Kokomo, Ind.
Application June 12, 1946, Serial No. 676,148
11 Claims. (Cl. 223—63)



1. In a garment stretcher having two confronting U-shaped members with arms in lapping relation, the combination of a U-shaped bridge member for each lapping pair of arms and carried by one of those arms and slidably supported at spaced points by the other of those arms, a locking member pivotally supported by the bridge member and embracing the said other arm, and a coil spring member about said other arm and operatively interposed between the bridge member and the locking member and normally constraining the latter to locking engagement on the said other arm and against stretcher collapse and permitting relatively free stretcher extension.

2,461,382
RAILROAD CAR TRUCK BOLSTER SUSPENSION
George T. B. Hunter, St. Louis, Mo.
Application December 23, 1947, Serial No. 793,538
2 Claims. (Cl. 105—197)



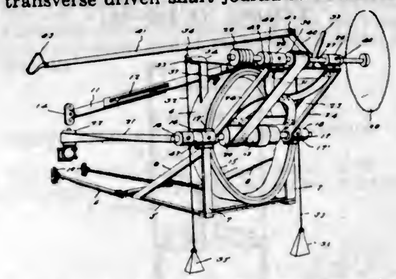
1. In a railroad car truck side frame including an upper member and a lower member, a pair of spaced parallel substantially vertical inner guide bars fixed to the inner faces of said members, and a further pair of spaced parallel substantially vertical outer guide bars fixed to the outer faces of said members; a bolster support comprising, a bolster supporting member slidably mounted between all of said guide bars, resilient means disposed between the lower member and the bolster supporting member for cushioning the downward movement of said bolster supporting member, integral extensions projecting from said bolster supporting member, further resilient means positioned between the extensions and the lower member for cushioning the downward sliding movement of said bolster supporting member, and still further resilient means disposed between the extensions and said upper member for cushioning the upward sliding movement of said bolster supporting member, said guide bars limiting certain relative movement of said bolster supporting member and a bolster supported thereon, said further resilient means and said still further resilient means cooperating to restrict tipping of said bolster supporting member.

2,461,383
COPOLYMERS OF ALPHA-ACETAMINO-ACRYLATES
Elias Isaacs and Herbert Gudgeon, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application November 15, 1945, Serial No. 628,998. In Great Britain November 20, 1944
3 Claims. (Cl. 260—84)

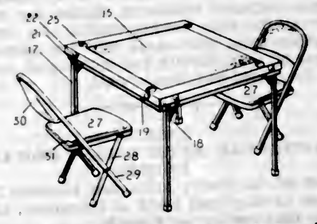
1. A process which comprises heating a solution comprising 1 part by weight of methyl α-acetamino acrylate, 19 parts of acrylonitrile, 1 part of ammonium persulfate and 0.5 part of sodium sulphite dissolved in water, at a temperature of about 30° C. for a period of about 16 hours, whereby to form a copolymer of methyl α-acetamino acrylate and acrylonitrile, and separating said copolymer from the reaction mixture.

2,461,384
TRACTOR-MOUNTED TIMBER SAWING APPARATUS
Edwin Richard Loftus Kelly, Neuse, N. C.
Application December 24, 1943, Serial No. 515,535
2 Claims. (Cl. 143—43)

1. A timber sawing attachment for tractors, comprising a horizontal rectangular frame having rigid uprights rising from the front end thereof, a vertical stationary annular band rigidly mounted transversely of and upon the front end of the frame and secured to and arranged between said uprights, a plurality of arms, one projecting rearwardly from and centrally of the top of the stationary annular band and two from the rear end of the frame and having attaching brackets at their rear ends for mounting the frame on the front of the tractor, an annular carrier band rotatably fitted in the stationary annular band, mounting plates fixed to opposite sides of the carrier band at the front edge of the latter, diametrically opposed and transversely aligned bearings secured on the front faces of said plates, a transverse driven shaft journaled in said bearings, a rectangular swinging saw frame having rearwardly projecting side members journaled on said shaft, transversely aligned bearings secured on the front end of said saw frame and having a second transverse shaft journaled therein, said second shaft having a projecting end carrying a circular saw, a belt gearing between said shafts, manually releasable means to secure the carrier band against rotation relative to the stationary band to retain the saw frame with its pivotal axis either horizontal or vertical, and means for swinging said saw frame to feed the saw to the work.



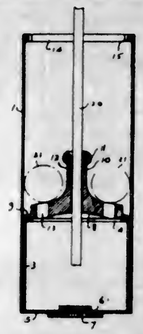
2,461,385
ARTICLE OF FURNITURE
Regina Katherine Logue, Philadelphia, Pa.
Application August 17, 1946, Serial No. 691,184
4 Claims. (Cl. 155—124)



1. A table comprising a top, legs pivotally mounted for movement relative to said top, a recessed apron depending from said top spaced inwardly of the peripheral rim of the top, said apron defining with the top a chair receiving recess inwardly of the apron, and forming with the top outwardly of the apron a niche for housing said legs in folded condition, in combination with a plurality of collapsible chairs, a plurality of spring clamps attached to said apron and arranged to overlie said chairs when folded and positioned within said recess, and means mounting said clamps to swing outwardly from under said apron to permit said chairs to be positioned within and removed from said recess, said means mounting said clamps providing an arcuate movement of said clamps on both sides of said apron and biased so that said clamps swing in-

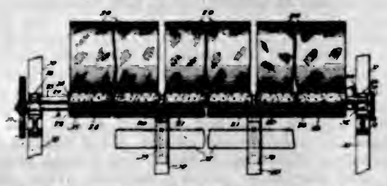
wardly and upwardly of the apron when the chairs are removed from said recess in order to effect leg clearance for users of the table, and complemental spring clamp means mounted centrally of the table to cooperate with said first clamp means in supporting chairs in said recess.

2,461,386
GOLF CUP
David Matheny, New Brighton, Pa.
Application October 15, 1947, Serial No. 779,894
1 Claim. (Cl. 273—34)



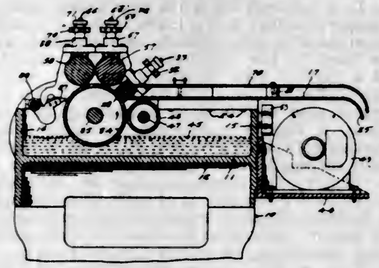
In combination, a golf cup comprising a cylindrical lining wall, a drain pot removably mounted in the lower end portion of said wall and being formed at the upper end thereof with an annular inturned supporting flange, a circular ball lifter provided with drain holes loosely mounted in said wall and seating on said supporting flange, said lifter including an upwardly extending centrally disposed stem, said stem being provided with a handling knob at the upper end thereof and with a passage extending therethrough, the top surface of said lifter sloping downwardly from said stem to the peripheral edge of the lifter, and a retaining ring having a screw thread connection in the upper end of said wall, said lifter being formed with an annular retaining flange for engaging said retaining ring for preventing the removal of said lifter from said wall and for allowing the disposal of said sloping top surface of said lifter above the upper end of said wall.

2,461,387
CLOTH ROLL ATTACHMENT FOR LACE LOOMS
Edward W. Medbery, Arlington Heights, Ill., assignor to Marshall Field & Company, Chicago, Ill., a corporation of Illinois
Application June 26, 1947, Serial No. 757,189
15 Claims. (Cl. 87—31)



1. A cloth roll attachment for a loom comprising in combination a porcupine roller extending longitudinally of a loom, operating connections with the loom whereby the said porcupine roller is operated, a friction roller extending parallel with the said porcupine roller and in spaced relation therewith whereby a cradle is formed by the said rollers for a cloth roll and operating means for the said friction roller whereby the friction roller is driven at a faster rate of travel than the porcupine roller.

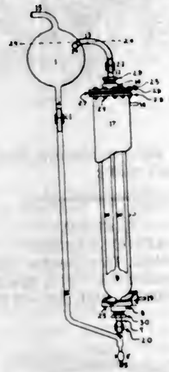
2,461,388
GLUING MACHINE
Robert Minkow, New York, N. Y., assignor to Minco Products Corp., New York, N. Y., a corporation of New York
Application May 21, 1945, Serial No. 594,895
1 Claim. (Cl. 91—51)



A gluing machine for coating either flexible or stiff materials comprising a frame, a glue well carried by said frame, a pair of elongated side members, means pivotally mounting said members on said frame, a gluing roll carried by said frame and extending into said well, a pair of pressure rolls rotatably carried by said side members engaging said gluing roll above said well, a feeding roll on said frame forwardly of said gluing roll, a sheet feeding table carried by said frame below said feeding roll for feeding flexible sheets onto said gluing roll below the uppermost edge thereof, and a second table removably secured on said first table for feeding stiff sheets onto the uppermost edge of said gluing roll substantially in a plane formed by the coacting areas of the surfaces of said gluing roll, said feed roll and said pressure rolls.

2,461,389
LABORATORY CIRCULATING EVAPORATOR
David T. Mitchell, Decatur, Ill.
Application February 23, 1945, Serial No. 579,443
1 Claim. (Cl. 122—406)

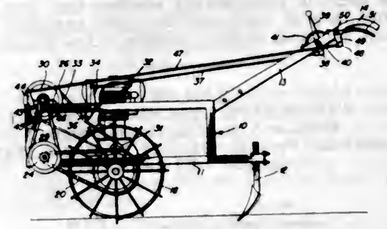
A laboratory circulating evaporator of the class described comprising in combination: an integral heat exchanger tube assembly comprising two manifold chambers, a plurality of tubes connecting said manifold chambers, an inlet tube connected to one manifold chamber, and an outlet tube connected to the other manifold chamber, said tube assembly providing for flow of the liquid being evaporated, and vapors thereof, on the inside of its tubes and manifold chambers; an integral vapor separator assembly comprising a chamber whose horizontal cross section is substantially circular, a vapor outlet tube connected to the top of said chamber, a liquid outlet tube connected to the bottom of said chamber, an inlet tube for mixed vapor and liquid connected to the chamber at a position between its top and bottom, said inlet tube protruding inwardly through the wall of said chamber for a short distance and directed toward an adjacent part of the chamber wall, whereby the incoming stream of mixed vapor and liquid is delivered tangentially against the chamber wall and imparts a smooth whirling motion to the vapor and liquid within said chamber; an integral tube assembly that provides combined improved means for charging, discharging, and washing the evaporator, and for returning liquid from the vapor separator assembly to the inlet tube of the heat exchanger tube assembly, said tube assembly comprising a straight tube with an opening in its wall, and a bent tube consisting of a bend and two substantially straight arms, the end of one of said arms being sealed to the rim of the opening in said straight tube so that said attached arm and said straight tube form an acute angle, the other of said arms lying in the same plane with said straight tube and being parallel thereto; means for heating the outer surface of said heat exchanger tube assembly; means for connecting the outlet tube of the heat exchanger tube assembly to the mixed vapor-liquid inlet tube of the vapor separator assembly; means for connecting the liquid outlet tube of the vapor separator assembly to the combined liquid-return charge-discharge tube assembly; and means for connecting said combined tube assembly to the inlet tube of the heat exchanger tube assembly.



2,461,390
UMBRELLA POCKET AND UMBRELLA
Esther Priest Montague, Arlington, Va.
Application April 24, 1947, Serial No. 743,654
4 Claims. (Cl. 2—247)

4. A garment having sewn to the outer surface thereof, a piece of material providing a vertically elongated, relatively narrow pocket open at the top only, said piece having a folded and sewn pleat adjacent its top and a similar pleat adjacent its bottom, providing outwardly extensible fullness throughout the length of the pocket therebetween, whereby the bulk of an umbrella or the like positioned in the pocket projects outwardly into said fullness; a reinforcing ply at the lower end of the pocket having an inner portion lying along and sewed to the outer face of the garment within the pocket and an outer portion lying along and sewed to the inner face of said piece and extending continuously around under the point of an inserted umbrella; a band or tape attached to the garment adjacent the upper end of the pocket having a free end of a length to embrace an umbrella below the handle thereof, and fastening means for the free end of the band or tape when positioned in embracing relation to an umbrella.

2,461,391
DRIVE TRANSMISSION FOR GARDEN TRACTORS
Joseph F. Osterhaus, Independence, Iowa
Application January 7, 1946, Serial No. 639,512
1 Claim. (Cl. 180—17)

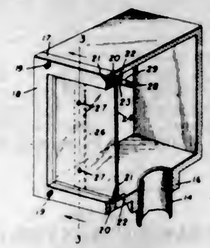


In a garden tractor a frame, a tubular axle extending transversely of the frame intermediate its ends, a stub shaft rotatably mounted in each end of the tubular axle, a traction wheel on each stub shaft adjacent the end remote from the tubular axle, a drive sprocket on each stub shaft adjacent the tubular axle, a tubular supporting member extending transversely above the frame, a stub shaft mounted to rotate in each end of the supporting member, a drive sprocket on each stub shaft adjacent the supporting member having driving connection with the drive sprocket of the traction wheel on its respective side of the frame, a drive pulley on the end of each second mentioned stub shaft remote from the tubular supporting member, a main drive shaft extending transversely of the frame above the tubular support, a main drive pulley on said main drive shaft intermediate the ends thereof, a drive pulley on each end of the drive shaft, belts establishing driving connection between the drive pulley on the prime mover and the main drive pulley and manually controlled belt tighteners selectively to tighten the belts whereby one or the other traction wheel may be stopped or driven or both traction wheels may be stopped or driven in unison.

2,461,392
AUTOMATIC VENT
Edward C. Parry, Ferndale, Wash.
Application March 3, 1947, Serial No. 732,073
1 Claim. (Cl. 4—211)

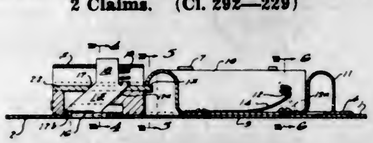
An automatic vent for stand pipes comprising a rectangular open-front casing having a bottom nipple for connection with the upper end of a stand pipe, said casing having a continuous internal shoulder adjacent the front thereof pro-

vided with open-front bearing recesses therein at the sides and near the top of the casing, a shaft journaled at its ends in said bearing recesses, a gravity closed and rearwardly opening shutter fixed to and depending from the shaft



and normally disposed within said shoulder, and a gasket carrying frame secured to the front of the casing with its gasket holding the ends of the shaft in said bearing recesses and with the inner face of its gasket normally engaging the front marginal surface portion of the shutter.

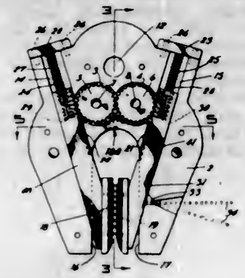
2,461,393
FLUSH TYPE LATCHING DEVICE
William A. Paxton, Detroit, Mich.
Application February 26, 1945, Serial No. 579,709
2 Claims. (Cl. 292—229)



1. A latching device for a closure member for an opening in a wall or the like comprising, in combination, a latch bolt pivotally mounted on the inside of said closure member and having a projection thereon adjacent said pivotal mounting for engaging the inner surface of said wall and thereby securing said closure member in closed position, said latch bolt being adapted on pivotal movement to swing its wall engaging projection inwardly and away from the adjacent margin of said wall and its opposite end outwardly away from the outer surface of said closure member, keeper means for retaining said latch bolt in engaged position with said wall mounted inwardly of the outer face of said closure member including a reciprocable tongue adapted to releasably engage the outwardly swingable end of said latch bolt, a cam for engaging said tongue and adapted to cause reciprocation of the tongue upon movement transversely thereof and manual means for moving said cam accessible at the exterior face of said closure member and flush therewith.

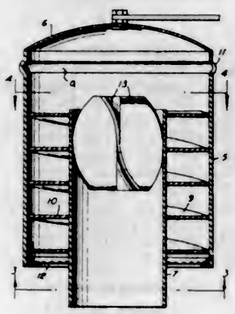
2,461,394
HOIST CLAMP
Alfred J. Plante, Augusta, Maine, assignor of one-half to Davila Cloutier, Augusta, Maine
Application January 3, 1946, Serial No. 638,821
3 Claims. (Cl. 294—86)

1. A hoist clamp including a body being slotted at its lower edge, converging jaw supporting members extending through the body into the slot, detachable jaws on said members, resilient means for projecting said members and jaws,



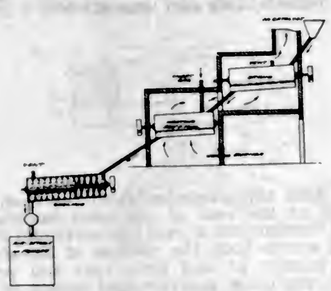
racks formed on said members, and gears interposed between said racks.

2,461,395
AIR CLEANER
Emil Psikal, Dorchester, Nebr.
Application December 15, 1947, Serial No. 791,828
2 Claims. (Cl. 183—91)



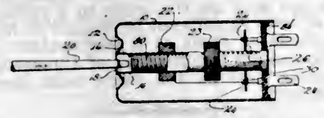
1. An air cleaner comprising an upright cylindrical casing completely closed at the top and open at the bottom, an open ended outlet tube having its upper major portion disposed centrally of and within the lower major portion of said casing, the lower end of said outlet tube projecting below the casing to fit over the air inlet of a carburetor or the like, a pair of uniformly spaced intertwined spiral baffles rigidly connecting the casing and the outlet tube and extending substantially from the lower end of the casing to the upper end of the outlet tube, said casing having an internal annular channel in the cylindrical wall thereof above the upper end of the outlet tube and being provided with a dirt escape opening through the wall of said channel, and a screen extending across the space between the lower end of the casing and the outlet tube to remove large particles of dirt from air entering the bottom of the casing, said baffles being adapted to cause whirling of air within the upper portion of the casing so that smaller particles of dirt entrained in such air will be thrown outwardly into said channel by centrifugal force and will be rotated in said channel to ultimately pass from the casing through said dirt escape opening.

2,461,396
METHOD OF PRODUCING FINELY DIVIDED METALS
Murray Raney, Chattanooga, Tenn.
Application July 25, 1945, Serial No. 606,972
1 Claim. (Cl. 75—0.5)



The process of forming non-pyrophoric nickel powder which consists in exothermally decomposing finely divided catalytically active hydrided nickel powder at about atmospheric pressure, in an atmosphere selected from the group consisting of carbon-dioxide and hydrogen, by heating it therein to a temperature of about 400° F. to start the exothermal decomposition and holding its temperature within the range of about 400°–1200° F. during such decomposition and until cessation of evolution of hydrogen therefrom, and cooling the resulting non-sintered powder in the presence of said non-reactive atmosphere.

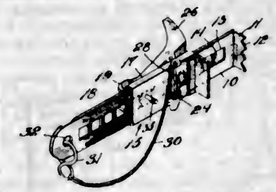
2,461,397
PERMEABILITY TUNED TRANSFORMER
Kenneth B. Ross, Chicago, Ill.
Application June 21, 1947, Serial No. 756,281
4 Claims. (Cl. 171—119)



1. In a permeability tuned inductance device, the combination of a coil, a tube extending through the coil and secured thereto, an externally threaded powdered iron core within said tube, said core being formed at one end for engagement by a tool for rotating the core, and internal projections forming parts of the tube and cooperating with the threads on the core to press the core against the opposed internal wall of the tube to hold it in adjusted position.

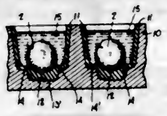
2,461,398
PORTABLE DOOR FASTENER
Henry F. Sands, Cranston, R. I.
Application May 12, 1947, Serial No. 747,455
6 Claims. (Cl. 292—297)

1. A portable door fastener comprising a plate engageable between the door and door jamb, means on the plate to lock the plate against removal from such position when the door is closed, said plate being provided with a plurality of abutment surfaces at spaced intervals, a slide movable along said plate, and a locking member pivoted on said slide and having an arm to engage and slide along a selected one of the abutment surfaces to hold the slide in adjusted position and a cam surface on the member to engage a door to force the door



away from said abutment surface as the locking member is swung on its pivot.

2,461,399
CONFECTIONERY
Herbert Strausser, New York, N. Y.
Application June 18, 1946, Serial No. 677,590
6 Claims. (Cl. 99—138)



1. As a new product, a chocolate coated candy, comprising an outer shell consisting of a chocolate composition, a semi-liquid to liquid confection in said shell, the upper surface layer of said shell being provided with a projecting integral top portion having a greater wall thickness than the rest of the shell.

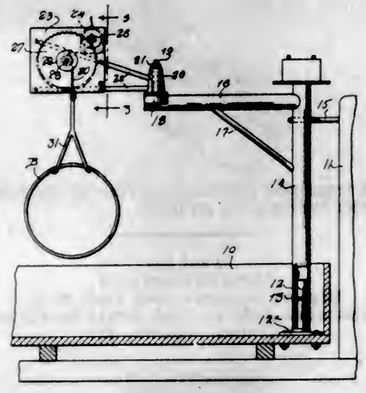
2,461,400
TACKLESS DISPLAY HOLDER
Theodore Roosevelt Thomas, Wilkes-Barre, Pa.
Application April 9, 1946, Serial No. 660,750
3 Claims. (Cl. 40—156)

3. A tackless display holder comprising a rectangular backing member, a fixed peripheral flange about said backing member, clamping members loosely supported on said backing member, a reverted looped brad on one edge of said clamping members, flat openings fixed at one end to said backing member, the free end of said springs engageable resiliently over said bead, said springs, peripheral flange and bead constituting the hinge of said clamping members for rotatably securing said clamping members to said backing member, said bead formed with an irregular surface engaging said springs whereby said springs bias said clamping members open from the open position and closed from the closed position.

2,461,401
HOISTING DEVICE
Roy Trombley, Presque Isle, Maine
Application June 29, 1945, Serial No. 602,351
5 Claims. (Cl. 212—54)

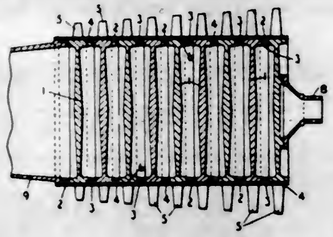
1. The combination with a vehicle body, of a pivot member fixed to said body adjacent one end thereof, a crane post pivoted on said member, a crane arm extending radially from the upper end of said post, an extension arm pivoted to the outer end of said crane arm, and a vertically disposed

plate carried by the free end of said extension arm, a motor mounted on one side of said plate,



and hoisting means driven thereby mounted on the opposite side of said plate.

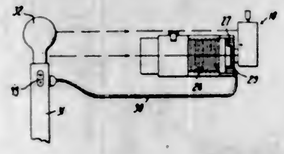
2,461,402
ROTOR FOR MULTISTAGE AXIAL FLOW COMPRESSORS AND TURBINES
Leslie Thomas Whitehead, Farnborough, England, assignor to Power Jets (Research and Development) Ltd., London, England, a British company
Application October 5, 1945, Serial No. 620,503
In Great Britain October 6, 1944
8 Claims. (Cl. 230—134)



1. A rotor for a multi-stage axial flow turbomachine, comprising in combination, a series of solid discs arranged coaxially with their rims abutting and jointly affording the equivalent of a hollow drum, blading secured in axial grooves in said drum-like assembly of inter-connected discs, and elements in said grooves extending across the joints between said discs thereby locking said discs against relative rotation.

2,461,403
PHOTOGRAPHIC SYNCHRONIZER TESTER
John Edward Wilcox, Jr., Los Angeles, Calif.
Application January 28, 1946, Serial No. 643,911
11 Claims. (Cl. 88—14)

1. An apparatus of the character described comprising an opaque casing adapted to be mounted on a camera in front thereof, a rotatable light recording screen mounted in said casing with its axis at right angles to the longitudinal axis of the camera lens, said casing having a pair of spaced apertures formed in one wall thereof arranged in alignment longitudinally of said screen, a mounting member affixed to the casing adapted to be detachably secured to the front of the camera with one of said apertures in register with the camera lens and the other out of register with said lens whereby a portion

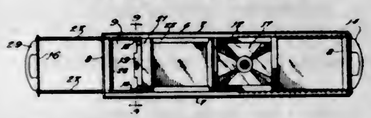


of the light rays projected from the flash bulb disposed at the rear of the open camera will project through one of said apertures and record on said screen upon the opening of the shutter and a portion of said light rays will project through the other aperture and record on said screen.

2,461,404
EXTRACTION OF PROTEIN FROM SEEDS
Robert Louis Wormell and Alfred Frank Millidge, Coventry, and Claude Leonard Knight, Kenilworth, England, assignors to Courtaulds Limited, London, England, a British company
No Drawing. Application January 17, 1947, Serial No. 722,748
In Great Britain February 19, 1946
7 Claims. (Cl. 260—112)

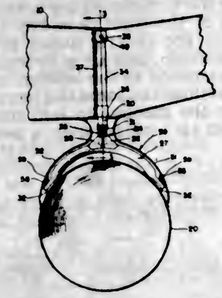
1. A method of preparing protein-containing seeds for extraction of the protein comprising the steps of impregnating the seeds with not more than about four times their weight of a dilute aqueous solution of an acid chosen from the group consisting of sulphuric acid, hydrochloric acid and phosphoric acid, the pH value of the solution being not greater than 2.0, removing water from the impregnated seeds to concentrate the acid on the seeds to a concentration of at least 25 per cent by weight by heating the impregnated seeds at a temperature below the carbonization temperature of the seeds and subsequently washing the seeds until they are free from acid.

2,461,405
PHOTOGRAPHIC FILM AND SCREEN HOLDER
William L. Appling, Uvalde, Tex.
Application December 8, 1945, Serial No. 633,813
4 Claims. (Cl. 88—24)



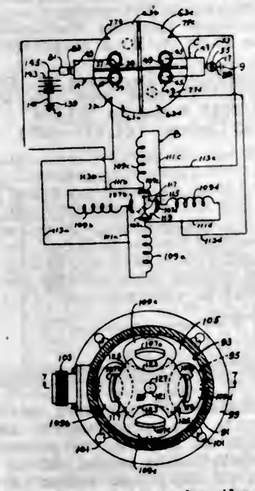
1. A photographic device which comprises a rectangular frame, a bottom upon said frame provided with a sight opening intermediate its ends, a focusing screen holder reciprocally movable into and out of registry with said sight opening, a focusing screen mounted in said holder, a film holder mounted for reciprocal movement independent of movement of said focusing screen holder into and out of registry with said sight opening, separate means mounted at the opposite ends of said frame for respectively moving the focusing sereen holder and the film holder in said frame.

2,461,406
SWAY BRACE INSTALLATION
Paul M. Birk, Kenmore, and Frederick I. Steele, Snyder, N. Y., assignors to Curtiss-Wright Corporation, a corporation of Delaware
Application July 6, 1945, Serial No. 603,464
5 Claims. (Cl. 89—1.5)



4. In an aircraft structure, an article carrying rack secured to the structure and releasably carrying the article externally of said structure, an article sway brace movably mounted upon guide means within said structure and projecting outwardly from said structure into position for contact with the article carried by said rack for supporting the article against movement relative to the rack, and resilient means within the structure acting on said sway brace to urge the same outwardly into such contact with the article and to jettison said sway brace from said structure simultaneously upon release of the article from said rack.

2,461,407
REMOTE-CONTROL APPARATUS
Hosmer L. Blum, Fort Wayne, Ind., assignor to Bowser, Inc., Fort Wayne, Ind., a corporation of Indiana
Application October 21, 1944, Serial No. 559,855
2 Claims. (Cl. 318—27)



1. In a remote control device, the combination of a magnet having a constant polarity, means mounting said magnet for rotation about a transverse axis, a plurality of electro-magnets disposed about and adjacent to said first magnet, said first magnet adapted to be moved successively to central and intermediate positions with respect to said electro-magnets and having poles, each of which is formed with three projections, the central one to cooperate and disposed to be in aligned, closely spaced relation with one electromagnet in the central position and the other two adapted to be aligned with two adjacent electromagnets of like polarity in the intermediate position, a source of power, a rotating switch connected to said source and adaptable when rotated to energize said electro-magnets in predetermined order.

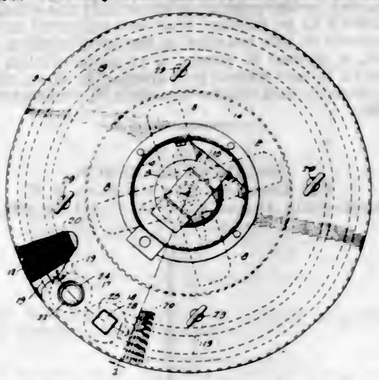
2,461,408
MECHANICAL PENCIL
Ray Brosseau, Kew Gardens, N. Y.
Application August 16, 1946, Serial No. 690,952
2 Claims. (Cl. 120—17)

1. In a mechanical pencil a feeding mechanism for the writing element, said feeding mechanism comprising a fixed chuck and a movable chuck, a collar for each of said chucks adapted to close and open said chucks, a yoke connecting said collars and a finger member connected to said yoke whereby said yoke and the collars connected thereto may be longitudinally moved to cause upward movement of the movable chuck and at the same time causing said movable chuck to open and said fixed chuck to close and then downward movement of the movable chuck and at the same time causing said movable chuck to close and said fixed chuck to open.

2,461,409
UNIT HEATER CONSTRUCTION
Donald W. Christensen, Racine, Wis., assignor to Young Radiator Company, Racine, Wis., a corporation of Wisconsin
Application June 10, 1946, Serial No. 675,694
1 Claim. (Cl. 257—137)

In a device of the class described, the combination of a pair of annular members spaced to provide a chamber between them communicating exteriorly of said members at the perimeters thereof, each of said members having a pair of openings formed therein, the openings in one member being alined with the openings in the other member transversely to the planes of said members, said openings being located contiguous to each other near the perimeters of said members, one opening of each of said pair of openings being non-circular, and an annular coil located in said chamber, said coil comprising a pair of headers connected by a plurality of

tubes bent to approximate a circle of slightly less diameter than the outside diameter of said members so as to locate said headers in parallel juxtaposition perpendicular to said members in registration with said alined openings, said headers having a projection on each end thereof adapted to be received in the opening in the adjacent member whereby said headers are held against



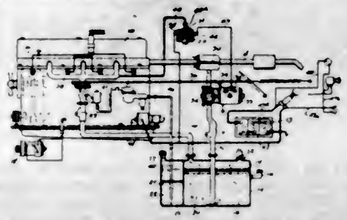
displacement radially of said members and said coil is supported between said members wholly by the seating of said projections in said openings, one of said projections on each of said headers being of non-circular form so as to interfit with the non-circular opening in one of said members whereby said headers are positively held against rotation on their axes.

2,461,410
POROUS ELECTRODE FOR ELECTROLYTIC CELLS
Richard U. Clark, Belmont, Mass., assignor to The Magnavox Company, Fort Wayne, Ind., a corporation of Delaware
Application September 24, 1945, Serial No. 618,148
8 Claims. (Cl. 175—315)

1. An electrolytic cell electrode comprising a supporting core of valve metal and an adhering surrounding porous mass of film forming metal, said porous mass being the reduction product of a porous mass of film forming metal compound reduced in situ, said surrounding mass having random formations of irregularly shaped crevasses, flutes and cracks extending thereinto.

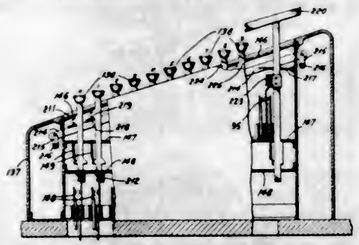
2,461,411
CARBURETOR
Parker Ed Cummings, Sr., Honolulu, Territory of Hawaii
Application February 19, 1946, Serial No. 648,735
2 Claims. (Cl. 123—122)

1. A fuel feeding system for internal combustion engines having a carburetor with an air intake port and a gasoline intake port, said system comprising an air heating means consisting of an air filter mounted on the exhaust pipe of the engine, a gasoline tank divided by means of a partition into two compartments, a pipe providing communication between said air filter and one of said tank compartments, consisting of an electric motor-driven air blower connected to said pipe to force heated air from said air filter into said gasoline tank compartment, a rheostat connected to said electric motor, a rod connecting said rheostat to the throttle on the carburetor, whereby opening of the throttle causes an increase in the speed of the electric motor and of the fan connected thereto, said air pipe leading from said air filter extending to the bottom of the gasoline tank compartment to force the heated air to bubble through the gasoline in said compartment to saturate said air with gasoline, a perforated baffle



board mounted near the top of said gasoline tank compartment horizontally thereof, said baffle board providing a space at the top of said gasoline tank compartment between said baffle board and the top wall of said tank in which the gasoline saturated heated air may collect, a second pipe communicating between the upper portion of said gasoline tank compartment and the air intake port and the carburetor, whereby the gasoline saturated heated air is adapted to be drawn up into the carburetor, a second compartment in said gasoline tank, and a pipe connecting said second compartment with the gasoline intake port in the carburetor, whereby raw gasoline may be drawn up into the carburetor.

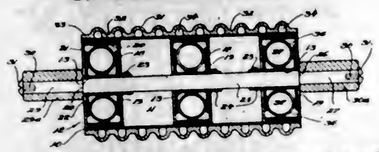
2,461,412
ACCOUNTING APPARATUS
Arthur H. Dickinson, Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Original application December 27, 1943, Serial No. 515,719. Divided and this application March 17, 1945, Serial No. 583,274
13 Claims. (Cl. 177—337)



1. In combination, a network of electronic trigger circuits for progressively registering different digits in response to pulses received by the network, means acting during a manifesting cycle to apply said pulses to the network to operate the trigger circuits for progressively registering the digits, starting from the digit registered at the beginning of the cycle,

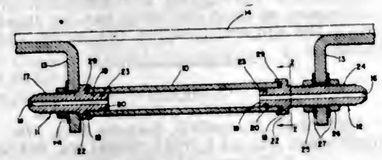
whereby a chosen digit is registered at a variable time in the cycle depending upon its relation to the starting digit, and digit manifesting means, including means rendering manifestations of the different digits available in progressive order during the cycle always starting with a predetermined digit manifestation available at the beginning of the cycle, and means controlled by the network upon the trigger circuits registering the aforesaid chosen digit for realizing the digit manifestation rendered available at the time the chosen digit is registered.

2,461,413
MASSAGING ROLLER
Louis J. Dirand, New York, N. Y., assignor of one-half to Irwin F. Mills
Application July 18, 1946, Serial No. 684,425
16 Claims. (Cl. 128—57)



1. A device as described, consisting of a rolling cylinder, a shaft upon which said cylinder rolls, and a plurality of circular coiled springs, arranged peripherally to engage the inner body of said cylinder and providing journal bearings for the shaft to extend through so that the shaft may have a floating disposition in said cylinder, and said cylinder have a floating mounting on said shaft.

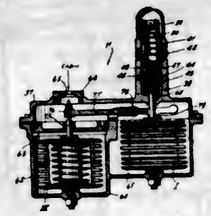
2,461,414
FITTING FOR TRANSPARENT TUBES
Verne P. Donner, East Aurora, N. Y., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application June 15, 1945, Serial No. 599,681
8 Claims. (Cl. 285—5)



1. A fluid conduit fitting for use with a transparent conduit section of a high pressure fluid system, said fitting comprising a body having an enlarged portion spaced from one end and formed to provide a seat to receive the end of the conduit section, and fluid sealing means carried near said one end of the fitting body for fluid sealing engagement with the inner surface of the conduit section at a zone inwardly of the seated end thereof.

2,461,415
PRESSURE-REGULATING VALVE
John E. Dube, St. Louis County, Mo., assignor to Alco Valve Company, Maplewood, Mo., a corporation of Missouri
Application May 22, 1942, Serial No. 444,041
10 Claims. (Cl. 98—1.5)

1. In a mechanism of the kind described, a main valve adapted to control the flow of air from a cabin or the like to the atmosphere, air pressure means to control opening and closing of said valve, including a bleed line, a pilot valve mechanism controlling the flow of air from said bleed line to atmosphere, said pilot valve mechanism including two valves in parallel both disposed in the bleed line, means responsive to the difference in pressure on two sides of the main valve to bleed the first of said pilot valves, a movable wall exposed to a pressure within the cabin, on one side, yieldable force producing means act-



ing on said wall in opposition to said internal pressure, means connecting the wall and the second pilot valve to operate the same to bleed the line when internal pressure exceeds a predetermined value, additional pressure-responsive means producing a force that varies with changes in pressure external to the cabin, and means connecting said additional means with the second pilot valve accumulatively with the internal pressure acting on said movable wall.

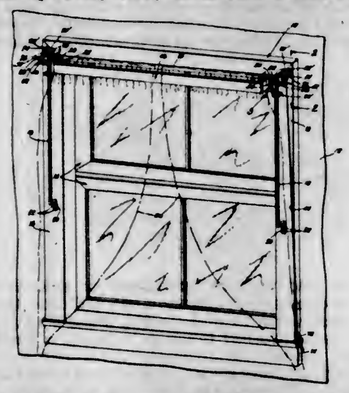
2,461,416
PATTERN MATERIAL, PATTERN, AND METHOD
Reiner W. Erdle and Charles H. Schaar, Chicago, Ill., assignors to Austenal Laboratories, Incorporated, Chicago, Ill., a corporation of New York
Application December 2, 1944, Serial No. 566,371
19 Claims. (Cl. 22—158)

1. For application to dental models to form on the model a pattern for an article to be cast, a ready-made casting pattern of cross-sectional dimensions and shape corresponding generally to the cross-sectional dimensions and shape of the article to be cast and composed essentially of thermoplastic material having a surface which is non-setting, pressure-sensitive adhesive, said thermoplastic material being eliminatable by heat from refractory molds, and said pattern having sufficient elastic recovery from distortion with respect to cross-sectional dimension and shape so as not to become permanently distorted under pressures normally required for adhesion purposes.

2,461,417
CURTAIN SUPPORT
Daniel Fallone, Astoria, N. Y.
Application February 10, 1947, Serial No. 727,515
6 Claims. (Cl. 211—103)

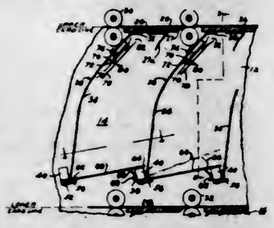
4. A curtain rod fixture, comprising guides, each guide having a shoulder and mounting portions for vertical attachment of said guide to an upright support, a bracket slidably mounted on each of said guides and having a mounting for a curtain rod and a horizontally extending lug, a pivoted detent on each of said brackets underneath the lug thereof, and a helical compression spring interposed between the lug and detent of

each bracket to urge said detent into latching engagement with the shoulder on the associated guide in the raised position of said bracket on said guide, each detent having means for securing thereto one end of a cord whereby a pull thereon upwardly away from said detent effects



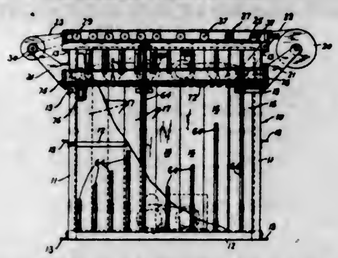
rocking of the latter out of latching position and raising of the corresponding bracket on its guide, respectively, each lug having a hole through which to extend the corresponding cord after the same is passed axially through the corresponding spring to keep the latter in place.

2,461,418
SORTER POCKET AND CHUTE BLADE CONSTRUCTION
Eugene A. Ford, Endicott, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application May 3, 1947, Serial No. 745,833
4 Claims. (Cl. 271—64)



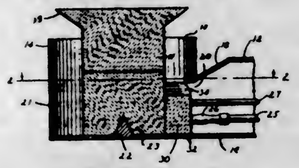
1. In a card pocket construction, a pair of partition members defining a partition wall, means for securing the upper ends of said members from a supporting surface at spaced points, said partition members extending downwardly from the supporting surface in spaced relationship, a supporting bar for the lower ends of said partition members, means for supporting said bar from a supporting surface, there being a pair of bores formed transversely in said bar at spaced points therealong, the lower ends of each of said supporting members being turned laterally, a threaded cap screw extending through each of said bores and having its lower end passing through the laterally turned end of one of said partition members, and a shelf member disposed below said laterally turned end of each of said partition members and into which one of said cap screws is threadedly received, said shelf member extending forwardly of its respective partition member and providing a supporting surface thereon, said pair of partition members forming a dividing wall between adjacent card receiving pockets in a series thereof, said supporting surface being designed to receive thereon the rear edge of a removable pocket bottom plate for the pocket on the forward side of said partition wall and said supporting bar being designed to receive thereon the forward edge of another bottom plate for the pocket on the rear side of said partition wall.

2,461,419
APPARATUS FOR DEVELOPING PHOTOGRAPHIC PAPER STRIP
Valmore J. Fergett, Ridgefield, N. J.
Application July 24, 1947, Serial No. 763,411
5 Claims. (Cl. 95—94)



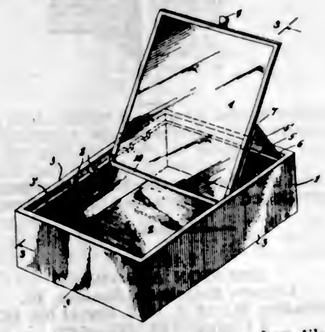
1. Apparatus for the simultaneous or selective developing, fixing and washing of two separate strips of photographic paper, said apparatus comprising a row of successive tanks having widths greater than the sum of the widths of the two strips with which the apparatus is intended to be used, rollers between successive tanks and rotatable on fixed bearings above the upper ends of the tanks, two idler rollers for reversing the respective strips in each tank, a separate frame in each tank for supporting each of the idler rollers in that tank and vertically removable hangers at the upper end of each frame for supporting that frame independently of the other frames so that one strip can be threaded through the apparatus while the other strip is running.

2,461,420
GAS BURNER CONSTRUCTION
Millard W. Hoenshell, Kansas City, Mo.
Application August 5, 1946, Serial No. 688,504
2 Claims. (Cl. 158—7)



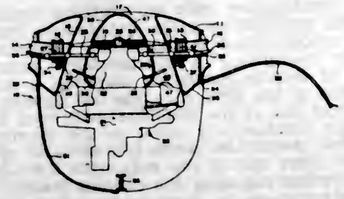
1. A fuel burner construction comprising, a cylindrical housing member open at its upper end, a cylindrical refractory block mounted centrally within said housing member and in spaced relation to the inner wall thereof to provide an annular space around said block, means providing a fuel supply passage for supplying a combustible fuel mixture to said annular space and communicating therewith at an angle substantially tangential to the cylindrical face of said block, and a helical refractory block in the space traversed by said fuel mixture as it completes its circuit through said annular space and provided with a curved and sloping upper face acting to direct the course of the fuel mixture to a level entirely above that of the flow through said fuel supply passage, said helical block terminating in an end face in the same tangential relation to said cylindrical block as said fuel supply passage.

2,461,421
VANITY CASE AND THE LIKE
Winifred Jacobus, New York, N. Y.
Application December 5, 1945, Serial No. 632,913
3 Claims. (Cl. 132—79)



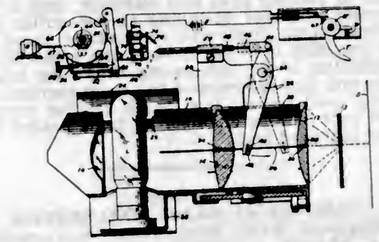
1. A vanity case comprising a box-like body, an always outwardly facing mirror serving as a cover for said body, and a connecting member permanently and hinged'y connected adjacent one end with said box-like body and adjacent an opposite end with the rear of said mirror and permitting said mirror to be raised and lowered, said connecting member being enclosed between the back of the outwardly facing mirror and said box-like body when the mirror is in closed position.

2,461,422
HELICOPTER ENGINE SUSPENSION
Robert W. Jenny, East Paterson, N. J., assignor to Curtiss-Wright Corporation, a corporation of Delaware
Application July 8, 1944, Serial No. 544,119
14 Claims. (Cl. 244—55)



1. In a helicopter, the combination of a fuselage provided with a pair of main spars constituting a structural part of the fuselage, an engine for driving the helicopter disposed with its nose section uppermost and located between the main spars, a pair of rotor drive shafts and journals therefor, one supported from each of the main spars, links connecting the inner ends of the drive shafts with the engine shaft, an open work skeleton mount for supporting the engine in position between and suspended on the main spars, said frame including a horizontally disposed mounting ring encircling and demountably secured to the nose section of the engine, a horizontally extending four-sided frame rectangular in plan in which the nose section is substantially centered, a post at each corner of the frame rigidly connected adjacent ends of the sides of the frame, bolts passing through the posts for supporting the posts from the main spars, and said frame also including diagonal braces connecting the mounting ring and frame and coacting therewith to provide a rugged internally braced mount capable of supporting the helicopter driving engine from the structural parts already in the fuselage, substantially without vibration.

2,461,423
PROJECTION APPARATUS FOR TRAINING MECHANISMS
Reynold B. Johnson, Binghamton, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Original application September 8, 1944, Serial No. 553,167. Divided and this application December 29, 1945, Serial No. 637,992
6 Claims. (Cl. 35—25)

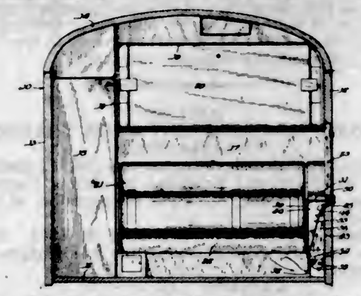


6. Punching instrumentalities of the character described comprising a hollow casing having a lens mounted at one end thereof, there being a relatively small axial bore extending through said lens and substantially concentric with the axis of the casing, a needle-like punch slidably disposed in said aperture and movable from a retracted position wherein one end thereof is positioned adjacent said lens to an advanced position wherein said end is projected to a point remote from the lens to penetrate a paper medium and create an aperture therein, means for reciprocating said punch, and means for projecting light through said lens for concentration by the latter upon the aperture created in the paper medium by said punch.

2,461,424
VEHICLE HEATING ARRANGEMENT
Basil E. Jones, Flossmoor, and Joseph R. Stanley, Chicago, Ill., assignors to The Pullman Company, Chicago, Ill., a corporation of Illinois
Application March 25, 1946, Serial No. 656,821
7 Claims. (Cl. 237—40)

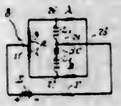
1. In a railway vehicle having a side wall, a room in the vehicle having a floor, a window for the room located in said side wall, a heating system for the room including a source of heat comprising a heating pipe coil disposed adjacent to said floor next to the side wall, a radiant heating panel spaced from the side wall beneath said window and enclosing said heating pipe coil, a radiant panel heating chamber behind said panel, a hot air flue behind said chamber having a base portion substantially full width of the space between the radiant panel and side wall and extending upwardly to a restricted outlet adjoining the window, a partition separating said heating

chamber and air flue, a plate member defining the rear wall of said flue, an opening to the hot air flue beneath said heating pipe coil to create a circulation of air over the coil, through the flue, and issuing from the outlet under said window, said panel heating chamber being heated from the hot air flue by means of a communicating opening therebetween, adjustable means controlling said opening for regulating the circula-



tion of hot air into said chamber, and a floor heating chamber including an air outlet grille substantially flush with the radiant panel and an air inlet opening beneath the grille for the admission of air circulating over said heating pipe coil and returned to the room through said grille, said hot air flue, panel heating chamber and floor heating chamber all being heated from said source of heat.

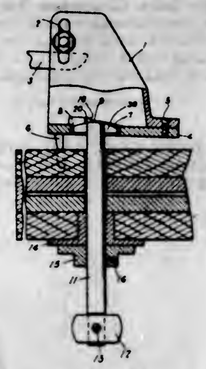
2,461,425
ELECTRICAL MEASURING SYSTEM
Frederick G. Kelly, West Orange, N. J., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application January 25, 1946, Serial No. 643,283
18 Claims. (Cl. 177—351)



1. In a meter system comprising a ratiometer having two energizable coils: the combination of an electrical bridge comprising two parallel branches adapted for connection across a current source, an arm connected across said branches and comprising said coils in series, means included in said bridge for varying the potential drop across said arm, and means connected from a point in said arm between said coils to a junction of said branches for causing the currents in said coils to vary oppositely in response to variations in the potential drop across said arm.

2,461,426
SAFETY STRIKE PLATE AND RELEASE BAR
Vernon Merton King, Bakersfield, Calif.
Application February 10, 1947, Serial No. 727,677
2 Claims. (Cl. 292—340)

1. In a safety latching device for a refrigerator, a keeper, a latching plate attached to the keeper, lugs on one side of the plate adapted to extend into the wall of a refrigerator, said plate having a slot, inclined surfaces and raised flat surfaces on opposite sides of the slot, a bar passing through the plate and having at one end thereof a key adapted to ride on the inclined surfaces and rest on the raised flat surfaces to hold the plate against the refrigerator wall, a washer of rustless metal positioned in the wall of the refrigerator and encircling the bar, a washer of non-rust-

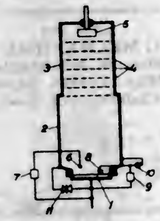


ing metal attached to the bar and engaging the first mentioned washer and a handle fixed to the bar.

2,461,427
TENSION ABSORBER
Lincoln Kneebone, Dundee, Ill.
Application March 9, 1946, Serial No. 653,379
1 Claim. (Cl. 173—322)

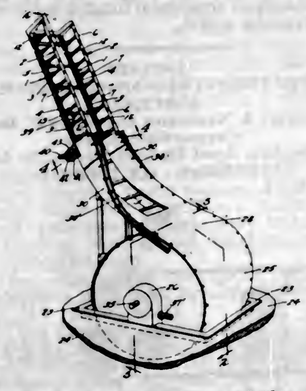
In combination with an electrical connection having cooperating male and female members and conduits leading therefrom, a tension absorber comprising a substantially linear flat strip of flexible insulating material, a hook at one end of the strip engaging the conduit leading from one of the members, said hook having a bight substantially equal to the diameter of the last mentioned conduit, a circular opening at the other end of the strip with the edges of the opening engaging the conduit leading from the other member, said opening having a diameter substantially equal to the diameter of the conduit leading from the other member, a slot extending from the opening to the marginal edge of the strip, the edges of said slot being spaced apart a distance less than the diameter of the last mentioned conduit, said strip being flexed longitudinally with said hook and the edges of the opening engaging said conduits and the resiliency of said strip causing said hook and the edges of the opening frictionally to grip said conduits by virtue of the resiliency of the material urging the strip to return to its original linear shape.

2,461,428
IGNITION DEVICE FOR IONIC VALVES
Uno Lamm, Ludvika, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden
Application April 10, 1947, Serial No. 740,655
In Sweden April 11, 1946
8 Claims. (Cl. 250—27.5)



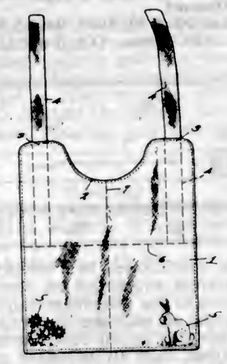
1. In ionic valves having an arcing cathode, an instantaneously acting igniter permanently adjacent to said cathode, a conductor insulated from said cathode and in contact with the ionized plasma occupying a current path of said valve, means, controlled by a potential difference between said conductor and said cathode, for forcing a current through said igniter, and means preventing a flow of current from the cathode to said conductor.

2,461,429
CONTINUOUSLY EXTENSIBLE, RETRACTABLE, AND COLLAPSIBLE STRUCTURE
Karl O. Larson, Minneapolis, Minn.
Application January 2, 1947, Serial No. 719,778
29 Claims. (Cl. 228—41)



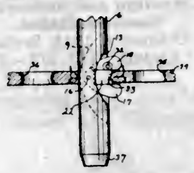
1. In an elongated structure of the class described, an elongated main member comprising a longitudinally-aligned plurality of rigid sections hinged together for movements on axes extending transversely of the structure, an elongated truss member generally parallel to the main member and comprising a longitudinally-aligned plurality of rigid sections, adjacent truss member sections being connected by joints permitting limited swivelling and universal swinging movements therebetween, said truss member sections being connected to adjacent main member sections by joints permitting limited pivotal movements on axes extending longitudinally and transversely of the structure, the centers of universal swinging movements of the joints between adjacent truss member sections being located in and movable in planes extending transversely of the structure and including the axes of joints between adjacent main member sections, the said joints between the truss member sections and main member sections allowing swinging movements of the truss member sections from operative truss-forming positions to inoperative collapsing positions wherein the centers of universal movements between truss member sections are aligned with hinge axes of main member sections.

2,461,430
COMBINATION GREETING CARD AND BIB
Theresa Gertrude Mack, Pennsauken, N. J.
Application July 10, 1945, Serial No. 604,152
1 Claim. (Cl. 2—49)



A combination greeting card and bib comprising a one piece rectangular fabric body including superposed folds made along lines respectively extending transversely and longitudinally of the body, there being a neck receiving recess formed in one end edge of the body and concealed by the folds, straps extending from said end edge at opposite sides of the recess and disposed within the folds, and means bonding said folds and straps comprising a soluble filler impregnated through all the folds and straps.

2,461,431
CHAMFERING TOOL
Theodore F. Millheam, Beloit, Wis.
Application October 8, 1945, Serial No. 620,954
4 Claims. (Cl. 77—73.5)



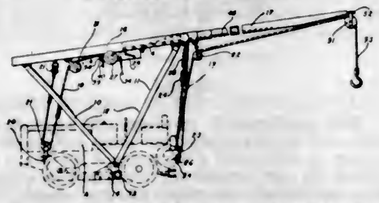
1. The combination in a chamfering tool of a rigid unitary body shaped for snug reception and rotation in a hole of a work piece having a free end and an end shaped for reception in a rotary and longitudinal movable driving means, said body having a slot extending longitudinally thereof intermediate its ends, a single cutter mounted in said slot having a first portion shaped to rest wholly within the slot for entry of said portion with the body into the hole to an initial position and a second portion projecting from said slot in said initial position to engage a face of the work

piece as the tool is moved farther into the hole from said first position, means for pivotally supporting the cutter for rotation on the body on an axis transverse to the body as the body is moved farther through the hole with said second portion engaging the side of the work piece to bring the first portion out of the slot to a position in which said portions straddle the edge of the hole, said cutter including a blade shaped to progressively cut the material of the work piece as the cutter rotates about said transverse axis.

2,461,432
AIR CONDITIONING DEVICE FOR BEDS
Orville Mitchell, Dallas, Tex., assignor to John E. Mitchell Company, Dallas, Tex., a corporation of Missouri
Application May 22, 1944, Serial No. 536,741
10 Claims. (Cl. 5—284)

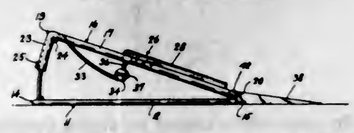
10. An air conditioned bed comprising a bedstead, a mattress supported on the bedstead in spaced relation to the floor on which the bedstead rests and having air passages therethrough, an air inlet at one end and an air outlet at the other end of said mattress, said air passages communicating with said inlet and said outlet, means providing walls carried by the bedstead in surrounding relation to the mattress and extending from the floor to a distance above the top surface of the mattress, a conduit communicating the space below the mattress and the mattress inlet, a blower in the conduit for drawing air from the space below the mattress and forcing it into the mattress inlet and through the passages in the mattress and out the outlet thereof, and means in the conduit for maintaining the temperature of the air forced therethrough at a substantially uniform temperature different from that of the surrounding atmosphere.

2,461,433
TELESCOPING TRACTOR BOOM
George B. Moulton and Arthur C. Moulton, Newfield, Maine
Application October 1, 1945, Serial No. 619,594
3 Claims. (Cl. 212—8)



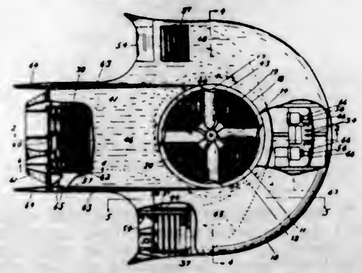
1. A boom of the character described for carriage upon a tractor, comprising fore and aft truss frames swingingly rising from said tractor, telescopically interfitted sections forming an extensible boom and having one section thereof fixed to the frames, a loading rope movably carried by such sections, means for moving one of the sections with respect to the other of said boom, the last mentioned means comprising a rack formed on the lower surface of the last mentioned section, and a gear mounted in a gear box coacting with said rack, said gear box being mounted on the section fixed to said frames, and means for swinging the frames to selected positions on the tractor.

2,461,434
FOLDING MECHANICAL PILLOW
Eunice Moyers, Washington, D. C.
Application May 24, 1944, Serial No. 537,118
3 Claims. (Cl. 5—71)



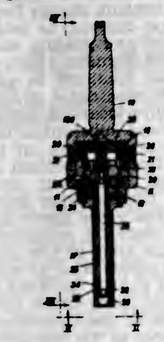
1. An adjustable supporting device for use in beds, comprising a base, a frame hinged at its forward end to the forward end of the base to be inclined angularly with respect thereto, means for adjustably supporting the frame on the base, a head rest having an open center and an open end toward the hinge connection between the frame and base, a forwardly and downwardly curved V-shaped bracket connected with the back end of the frame and extending forwardly toward the hinge connection between the frame and base, a ball-and-socket pivotal connection between the forward end of the bracket and the back of the head rest, the socket member of said connection being carried by the bracket, and an upstanding arm fixed to the ball member of said connection and to the head rest, and means adapted to hold the ball against accidental turning movement with relation to the socket.

2,461,435
FLUID PROPELLED AND CONTROLLED AIRCRAFT
Charles A. Neumann and Hugo H. Baca, Corpus Christi, Tex.
Application April 19, 1945, Serial No. 589,184
7 Claims. (Cl. 244—12)



1. An aircraft of the character described having a substantially vertical power well; a pair of propellers mounted in the upper and lower portions of the well and rotatable in opposite directions to create the air stream for propelling the craft; directional control means for the air stream in the bottom portion of the well; means connected and arranged to divert portions of the air stream laterally and to discharge them rearwardly on opposite sides of the craft; and adjustable control means connected to direct the discharge of the diverted streams in such manner as to control the lateral stability of the craft.

2,461,436
CUTTING TOOL
Arthur Offen, South Nutfield, England, assignor to Offen & Company Limited, South Nutfield, England, a British company
Application September 10, 1945, Serial No. 615,317
In Great Britain November 17, 1944
4 Claims. (Cl. 77—58)



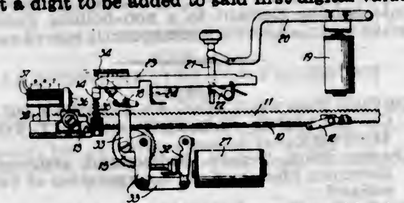
1. A boring-tool comprising the combination of a tubular cutter-bar having a transverse slot at its outer end to accommodate within it a substantially radially projecting and adjustable cutter and terminating at its inner end in a screw-threaded recess, locking-means for the cutter comprising an axially movable sleeve located within the cutter-bar with its outer end presented to the slot in which the cutter is received to be operatively engaged at its outer end with the cutter, a clamping-nut threaded into said recess to engage the inner end of the sleeve, an endwise movable setting-rod extending longitudinally within the sleeve to engage the cutter and a micrometer-head in axial alignment with and in screw-threaded engagement with the clamping-nut, a part of said micrometer-head engaging the inner end of the setting-rod to move it at least in a direction towards the cutter.

2,461,437
MANUFACTURE OF NITRILES
Peter Oxley, Thomas David Robson, Adolf Koebner, and Wallace Frank Short, Nottingham, England, assignors to Boots Pure Drug Company Limited, Nottingham, England, a company of Great Britain
No Drawing. Application October 22, 1945, Serial No. 623,880. In Great Britain November 6, 1944
4 Claims. (Cl. 260—465)

1. A process for the production of nitriles of the general formula $R.SO_2.C_6H_4.CN$ from substituted benzoic acids of the general formula $R.SO_2.C_6H_4.COOH$, where R is a lower alkyl group, which comprises the step of heating the acid with a sulphonamide at atmospheric pressure and to a temperature from about 220° C. to about 240° C. for a period not exceeding about two hours.

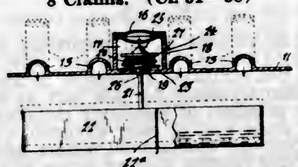
2,461,438
RECORD CONTROLLED ACCOUNTING MACHINE
Ralph E. Page, West Orange, and Horace S. Beattie, East Orange, N. J., assignors to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application March 15, 1944, Serial No. 526,632
6 Claims. (Cl. 235—61.6)

1. In an apparatus of the class described, a set of relay magnets energized to represent a digital entry therein, contacts controlled by said magnets, an adding network arranged in accordance with the table of addition, means controlled by said contacts for adjusting said network in accordance with the digital value entered in said set of relay magnets, means settable to represent a digit to be added to said first digital value,



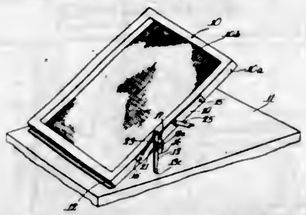
means controlled thereby for clearing said set of relay magnets, further separate means concurrently controlled thereby and including said adjusted network for selectively energizing the magnets of said set of relay magnets in accordance with the units digit of the sum of the two digits, and means for retaining said selected magnets energized.

2,461,439
ALARM DEVICE FOR MILKING MACHINES
Albert G. Perkins, Warsaw, N. Y.
Application June 23, 1944, Serial No. 541,681
8 Claims. (Cl. 31—58)



1. A device of the character described, comprising a body having a chamber formed therein and a valve-controlled port at one end thereof, a vacuum-operated alarm device fitted in said chamber, a stem extending through said port for movement axially thereof and having valve portions at its upper end in operative relation to and between said alarm device and said port, a spring applied to said stem for normally urging it in a direction to bring one of its valve portions into valve-closing relation with the alarm device and its other valve portion into valve-opening relation with said chamber-port, and a receptacle applied to the lower end of said stem and having a drain passage therein.

2,461,440
HOLDING DEVICE
Wesley Petty, Effingham, Ill.
Application July 19, 1945, Serial No. 605,889
13 Claims. (Cl. 248—195)



1. A mechanism for releasably holding one member in a set position relative to a second

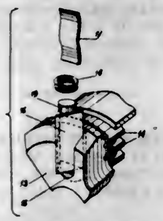
member which is biased toward said one member, comprising a holding element pivotally supported for gravity pull actuation to a holding position in response to relative movement of said members apart, and means responsive to said relative movement followed by partial relative movement of said members toward each other for rotating said holding element to a non-holding position when said members are subsequently moved apart.

2,461,441

DEVICE FOR SECURING AN ELEMENT OF AN OSCILLATING ELECTRIC CIRCUIT TO A SUPPORT

Charles Piton, Geneva, Switzerland, assignor to Hermann Thorens S. A., a corporation of Switzerland

Application November 19, 1946, Serial No. 710,786
In Switzerland August 19, 1944
6 Claims. (Cl. 174—138)



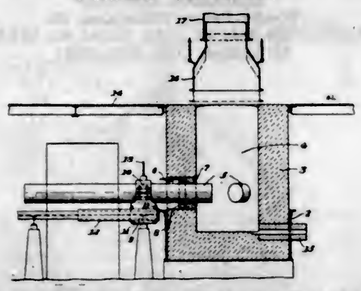
3. In an element of an oscillating electrical circuit, said element having a part provided with at least two elongated grooves of dovetail cross section and a support for said part, at least two securing members of insulating material of triangular cross section, each mounted with play in a groove for longitudinal sliding movement, a connecting member connecting one end of each securing member to said support, and a cambered blade spring located in each groove between the securing members therein and the bottom of the groove between the securing members therein and the bottom of the groove to press the securing member against the lateral faces of the groove in a manner to prevent movement of said members in said grooves in directions perpendicularly to the axis of sliding.

2,461,442

PROCESS OF MAKING FERRO-ALLOYS

Lawrence G. Pritz, North Canton, Ohio, assignor to Ohio Ferro-Alloys Corporation, Canton, Ohio, a corporation of Ohio

Application November 25, 1944, Serial No. 565,111
2 Claims. (Cl. 75—11)



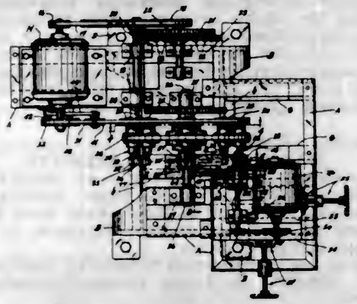
1. The process of making ferro-alloys of iron and an alloying metal in an electric furnace having a chamber and electrodes extending laterally into the chamber and terminating at a substantially common level therein, which comprises making up a charge in loose pervious condition and consisting of the constituent materials in admixture, charging the furnace therewith, initially raising a portion of the charge to reaction temperature and thereafter providing substantially the entire heating energy for the process by supplying electric current to said laterally extending electrodes and passing said electric current through the furnace charge, maintaining the reaction zone localized in and around the inner ends of the electrodes whereby the ferro-alloy is formed in a localized zone and gases are evolved, but without substantial volatilization of the alloying metal, drawing off the ferro-alloy in molten state from the bottom of the furnace chamber without supplying any substantial amount of heat thereto from any other source, passing the evolved gases upwardly through the overlying charge material, supplying fresh charge material above the level of the reaction zone as the operation proceeds and at all times maintaining a layer of charge material in the furnace above the reaction zone, which layer completely covers those parts of the electrodes lying within the vertical confines of the reaction zone and extends uninterruptedly over the area defined by the vertical projection of those confines.

2,461,443

PIPE BOWL TURNING MACHINE

Julius L. Rettke and Edmund H. Otto, Washington, Mo., assignors to Missouri Meerschaum Company, Washington, Mo., a corporation of Missouri

Application October 6, 1944, Serial No. 557,509
8 Claims. (Cl. 144—47)



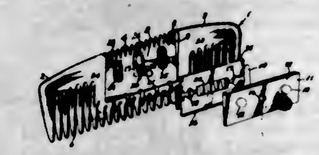
1. A pipe bowl turning machine including a motor, a rotary disc driven thereby through an interposed train of speed reduction gearing, a circular series of rotatable spindles journaled on the disc, means for driving a selected number of said spindles at a high velocity, said means including a belt engageable with pulleys rigid with said spindles, mechanism adapted to maintain said belt taut and simultaneously clear of the pulley of each spindle upon reaching a particular point, rotary cutter mechanism including a pair of spaced circular saws independently driven at a high rate of speed by a second motor, means whereby the cutter mechanism together with its source of power may be properly positioned relative to said spindles, pivotally mounted and resiliently supported burnishing apparatus, means for adjusting its position relative to said spindles, and mechanism activated by cams formed on one gear of said speed reduction gearing adapted to eject the finished bowls from the machine.

2,461,444

HAIRCUTTING COMB

Sanford E. A. Sanders, Los Angeles, Calif., assignor to Sta-Neet Corporation, a corporation of California

Application June 8, 1946, Serial No. 675,375
5 Claims. (Cl. 30—31)



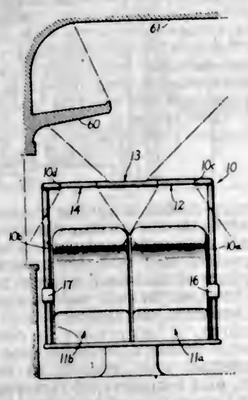
1. A hair trimmer and comb comprising a comb having teeth and having a razor blade recess extending across said teeth, said recess having end walls extending parallel to the length of said teeth, a blade holder slidably fitting in said recess between said walls, and means for adjusting said blade holder in said recess lengthwise of said teeth to vary the cutting relation of the blade with said teeth.

2,461,445

LIGHTING APPARATUS

Lindsley Schepmoes, New Haven, Conn., assignor to The Safety Car Heating and Lighting Company, Inc., a corporation of Delaware

Application September 20, 1944, Serial No. 554,870
12 Claims. (Cl. 240—7.1)



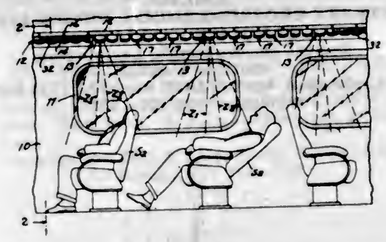
1. In lighting apparatus, in combination, a pair of frame members extending upwardly from the arms of a pair of railroad car seats in alignment with the backs of said seats, thence extending forwardly and then inwardly toward each other, three lighting fixtures mounted between the upper ends of said frame members, each of said lighting fixtures including a rigid frame construction with end brackets and with parallel longitudinal members which provide a space for an illuminator and also including a reflector positioned either above or below the space for said illuminator with the side opposite said reflector being adapted to transmit light rays, two of said lighting fixtures having the rays of light therefrom directed downwardly upon the seats positioned therebeneath, individual switch means operable by the occupant of a seat for controlling the operation of each of said last-mentioned fixtures, the third fixture having the light rays therefrom directed upwardly to illuminate the upper portions of the car, and switch means operable by a member of the train crew for controlling the operation of said last-mentioned fixture.

2,461,446

LIGHTING FIXTURE FOR PASSENGER VEHICLES

Lindsley Schepmoes, New Haven, Conn., assignor to The Safety Car Heating and Lighting Company, Inc., a corporation of Delaware

Application September 23, 1944, Serial No. 555,519
9 Claims. (Cl. 240—7.1)



7. In railway car construction, the combination of: a plurality of parallel horizontal rail members each secured at one end to the car wall and projecting outwardly therefrom with the space between each rail member and the next being substantially less than the width of the rail members so as to form a baggage rack; each of said rail members including, an elongated inverted channel member having a top flat wall and downwardly depending side walls, and a cover member snugly embracing the side walls of the channel member and extending across the bottom thereof, and one of said rail members having an opening in its cover member; a longitudinal rail member extending parallel to the said car wall and along the ends of said parallel rail members opposite to said car wall and attached to said parallel rail members; and lighting fixture means mounted within the rail member having an opening therein and comprising, a downwardly concave elongated reflector, and a trough-like lens member positioned beneath said reflector and providing space for an elongated illuminator tube.

2,461,447

YIELDING DRIVE

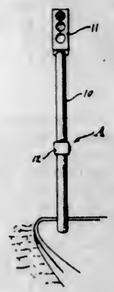
William M. Siesel, Morrisville, Pa.; Josephine M. Siesel executrix of said William M. Siesel, deceased

Application June 30, 1943, Serial No. 492,973
1 Claim. (Cl. 64—29)

In a torque limiting device having a driving member and a driven member rotatably mounted with respect to each other, the combination of a

cup-shaped member with an aperture in the bottom of the cup, a drum shaped member seated in said cup and engageable through said aperture and having cam projections on its periphery, a closure plate for said cup, a plurality of bolts extending through the interior of said cup and arranged and adapted to secure said closure plate to the cup, a spring having end portions engaged between interior portions of the cup and intermediate portions of said bolt members, said intermediate portions providing abutments in the cup, and said spring being normally disposed with its projection engaging surface approximately along a geometrical chord of the rotational path of said projections.

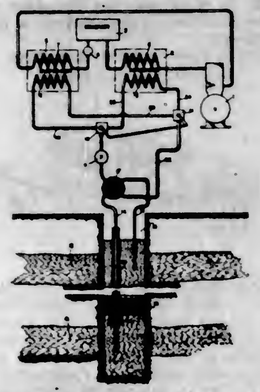
2,461,448
STREET CROSSING SIGNAL DEVICE FOR BLIND PEDESTRIANS
Everett Manley Smith, Leamington, Ontario, Canada
Application April 2, 1947, Serial No. 738,898
9 Claims. (Cl. 177—337)



1. A device for transmitting signals by sense of touch comprising a casing adapted to be mounted within human reach, signal means external of said casing adapted to be sensed by the touch, means for urging said signal means to a predetermined normal position, means internal of said casing for actuating said signal means from said normal position to at least one other predetermined position, each of said predetermined positions of said signal means being related to a predetermined signal whereby said predetermined signals can be transmitted by touching said signal means.

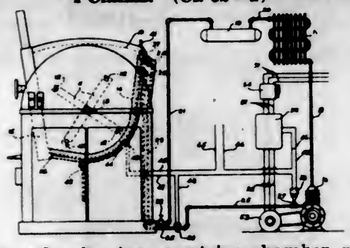
2,461,449
HEAT PUMP USING DEEP WELL FOR A HEAT SOURCE
Marvin M. Smith, Muncie, Ind., and Emory N. Kemler, Birmingham, Ala., assignors to Muncie Gear Works, Inc., Muncie, Ind., a corporation of Indiana
Application October 14, 1946, Serial No. 703,264
7 Claims. (Cl. 62—129)

1. A water circulating system comprising a well bore extending into a subterranean water stratum and having upper and lower sections containing water of different temperatures, a water circuit leading from and returning to said well bore and including a conduit which extends into the lower of said sections and a second conduit which terminates in the upper of said sections, insulating means carried by and surrounding that portion of the first conduit passing through the upper of said sections, a pump, and means connecting said conduits and said pump arranged to take water



through one conduit and return such water through the other conduit.

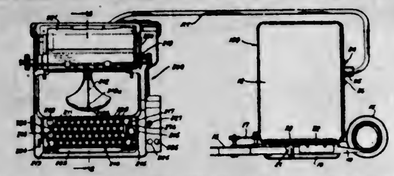
2,461,450
REFRIGERATING MEANS FOR DOUGH MIXERS
Merlin A. Sticelber, Kansas City, Mo., assigner to Quik-Seal, Inc., a corporation of Missouri
Application March 24, 1945, Serial No. 584,677
4 Claims. (Cl. 62—1)



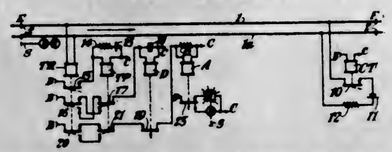
1. In a dough mixer, a mixing chamber, rotatable beater arms in said mixing chamber for contacting dough with a wall of said chamber, and means for cooling said wall comprising a jacket on the outer face of said wall, a liquid heat transfer medium confined in said jacket, a cooling coil within said jacket in engagement with said heat transfer medium, a compressor, a condenser, a receiver, conduit means connecting said coil, compressor, condenser and receiver in series in a closed circuit, and temperature responsive means controlling the operation of said compressor, having a temperature responsive controlling element extending into said jacket, said temperature responsive element being located in said liquid heat transfer medium remote from said wall and being exposed only thereto, said heat transfer medium being principally in heat transfer relation to said coil and wall.

2,461,451
SIGNAL-CONTROLLED PRINTING APPARATUS
Henry L. Tholstrup, Rochester, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a corporation of New York
Application April 19, 1945, Serial No. 589,112
3 Claims. (Cl. 197—20)

2. In data printing apparatus, the combination of signal producing means operable to successively produce signals representing character data according to a predetermined code system; translating means responsive to the signal producing means and operable to establish circuit flow paths corresponding, respectively, to the character signals produced; printing means comprising means for holding a copy sheet in printing position, a plurality of type members operable, when actuated, to print corresponding characters on a copy sheet, a plurality of electrically responsive character actuators adapted to be energized by the establishing of corresponding circuit flow paths by said translating means and effective when so energized to actuate corresponding type members, and case shifting mechanism operable to adjust said printing means to first and second case positions; control means adjustable to operative and to non-operative conditions and effective when in its operative condition to effect continuing operation of said signal producing means and effective when in its non-operative condition to stop operation of said signal producing means; an electrically responsive control device operable when energized to adjust the control means to its non-operative condition; and selective contact means adjustable in response to said case shifting mechanism and effective when the latter occupies said first case position to electrically connect one of said circuit flow paths which corresponds to a predetermined character signal to its corresponding character actuator for energizing the latter and said contact means being effective when said case shifting mechanism occupies said second case position to electrically connect said one circuit flow path to said control device for energizing the latter.

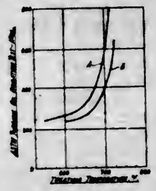


2,461,452
CODE DETECTING MEANS
Howard A. Thompson, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application July 15, 1947, Serial No. 760,985
15 Claims. (Cl. 246—34)



1. In a coded track circuit system of signaling for a section of railway track having means for supplying coded energy to the track rails at one end of said section and having a code following track relay receiving energy from the track rails at the opposite end of said section, said code following track relay having contacts which are operated to a first position when said relay is energized and to a second position when said relay is deenergized, the combination with said track relay of: an auxiliary relay energized when said track relay contacts are in said first position and having contacts operable to a first position or second position according as said auxiliary relay is or is not energized, said auxiliary relay operating its contacts slightly out of step with its energization, two slow releasing controlled relays each having contacts closed in a first position when energized, an energizing circuit for a first of said two relays including in series contacts of said track and auxiliary relays and closed when said contacts are in corresponding positions, an energizing circuit for the second of said two relays including in series contacts of said track and auxiliary relays and closed when the contacts of said auxiliary relay are out of correspondence with the contacts of said track relay, a first position contact of one of said two controlled relays interposed in the energizing circuit of the other of said two controlled relays, and traffic governing means for said section controlled by said other controlled relay.

2,461,453
MANUFACTURE OF LUBRICATING OIL
Fred C. Toetticher, Fishkill, and John R. Coley, Beacon, N. Y., assignors to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 4, 1945, Serial No. 592,054
4 Claims. (Cl. 196—147)

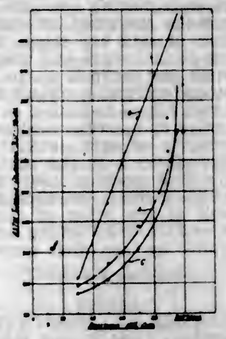


1. In the manufacture of turbine oils of superior emulsion resistant and oxidation stability properties the process that comprises first subjecting a lubricating distillate oil to treatments involving solvent refining and acid treating and neutralizing to thereby produce a product having emulsion resistant properties adapted for turbine oil, and then contacting the solvent-refined and acid-treated and neutralized oil with activated clay in a quantity amounting to not less than about 10% by weight of the oil treated at a temperature of 650–750° F. with a contact time of about ½–1 hour to thereby effect reactions involving an increase in aromaticity and formation of structures which inhibit oxidation and causing increased oxidation stability without impairing the emulsion resistant property and produce a finished product having both the emulsion resistant and oxidation stability properties adapted for turbine oil.

2,461,454
MANUFACTURE OF LUBRICATING OIL
Fred C. Toettcher, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application May 4, 1945, Serial No. 592,055
2 Claims. (Cl. 196—147)

1. The method of improving the oxidation stability of lubricating oil of the pale oil type that comprises separating from the lubricating oil a minor fraction constituting the higher boiling portion thereof, treating the minor fraction with activated clay at a temperature upwards of 600° F. and not in excess of about 750° F. with a reaction time of the order of ½–2 hours to thereby effect reactions involving an increase in aromaticity and formation of structures which inhibit

oxidation, distilling off lower boiling constituents from the treated fraction to thereby concentrate the oxidation inhibiting constituents and blend-

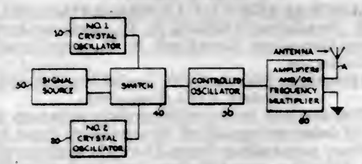


ing the resultant stripped product with the untreated major portion of the lubricating oil to produce a blended product of increased oxidation stability.

2,461,455
MANUFACTURE OF LUBRICATING OIL
Fred C. Toettcher, Fishkill, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
No Drawing. Application May 4, 1945, Serial No. 592,056
2 Claims. (Cl. 196—147)

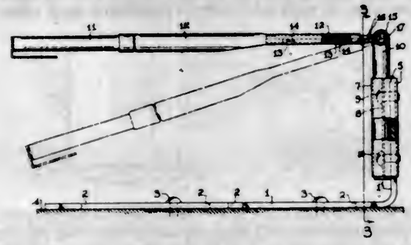
1. In the manufacture of lubricating oil of superior oxidation stability the process that comprises subjecting a distillate lubricating oil to treatment with a solvent selected from the group consisting of acetone and furfural to thereby form a raffinate fraction and an extract fraction characterized in being more susceptible of improvement in oxidation stability by catalytic treatment than the raffinate, treating the extract fraction with activated clay at a temperature of upwards of 600° F. and not in excess of 750° F. with a contact time of the order of ½–2 hours to thereby effect conversion into constituents which inhibit oxidation and blending resultant products of conversion containing the inhibiting constituents with distillate lubricating oil to thereby increase the oxidation stability thereof.

2,461,456
FREQUENCY SHIFT KEYING
George L. Usselman, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application February 11, 1944, Serial No. 521,907
15 Claims. (Cl. 250—8)



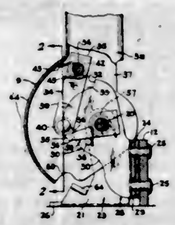
6. In a frequency shift telegraphy system, an oscillator of controllable frequency operating to generate oscillations of a first frequency, an oscillator operating at a second and substantially fixed frequency, an electron discharge tube coupling the last mentioned oscillator to the first mentioned oscillator, for entraining the first oscillator by the second oscillator, a source of currents representing two signalling conditions, and connections from said source to said tube to control the coupling through the tube from the second oscillator to the first oscillator in accordance with currents from said source.

2,461,457
DRAPERY CRANE
Henry Weber, Cleveland, Ohio, assignor of one-fourth to Harry A. Hildebrand, Brunswick, Ohio
Application April 16, 1947, Serial No. 741,871
5 Claims. (Cl. 211—105.1)



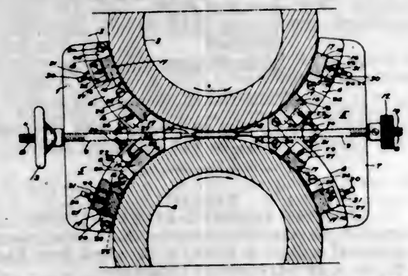
1. A drapery crane comprising a bracket having a relatively right-angular end extension, a resilient member of channel cross-section welded adjacent one edge to the end extension and having an inner concave portion forming a bearing intermediate its edges, a rod rotatably mounted at one end in the bearing and having an opposed bearing on a face of the end extension, means for releasably securing the rod in the channel and to permit the turning of the rod to a selective rotative position, a pin mounted in the other end of the rod, and a cantilever drapery carrier pivotally mounted at one end on the pin to turn in a plane at right angles to the plane of rotative movement of the rod.

2,461,458
HANDLE CONTROL FOR SUCTION CLEANERS AND THE LIKE
Harry B. White, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application September 23, 1947, Serial No. 775,615
25 Claims. (Cl. 306—13)



1. In combination, an ambulatory tool, an operating handle therefor, means for pivotally securing said handle to said tool, said last mentioned means including means for permitting movement of the handle with respect to said tool through a tool operating range and a non-operating range, means for automatically and positively locking said handle at one extreme of said operating range against return into the operating range, and means automatically operable to release said locking means upon movement of said handle into said non-operating range.

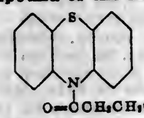
2,461,459
ROLL GRINDER AND POLISHER
William Henry Wilkes, Florence, N. J., assignor to Wm. R. Thropp & Sons Co., Trenton, N. J., a corporation of New Jersey
Application August 6, 1946, Serial No. 688,789
10 Claims. (Cl. 51—252)



1. In a portable grinding or polishing device for rolls, a pair of carriers adapted to be positioned at respectively opposite sides of the bite of a pair of rolls and having arcuate support portions arranged substantially to conform to the curvature of the rolls, and means associated with said carriers and arranged to extend between said rolls to support the carriers relative to the rolls.

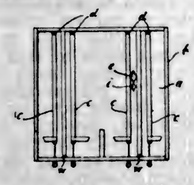
2,461,460
N-ACYLPHENOTHIAZINES
Philip S. Winnek and Herman Eldridge Faith, Indianapolis, Ind., assignors to Allied Laboratories, Inc., Kansas City, Mo., a corporation of Delaware
No Drawing. Application December 22, 1945, Serial No. 637,121
4 Claims. (Cl. 260—243)

1. The compound of the formula



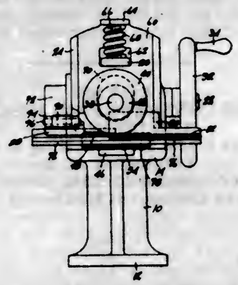
2. The process for producing n-carboxyacylphenothiazines which comprises reacting phenothiazine with a dicarboxylic acid anhydride.

2,461,461
FLOATING BODY GAME APPARATUS
Ralph Dawson Young, Morden, England
Application September 18, 1945, Serial No. 617,086
In Great Britain October 25, 1944
5 Claims. (Cl. 273—138)



1. Game apparatus comprising a vessel containing liquid, a primary floating body of thin flat form with means at one end to be engaged by a manually actuated boat-hook or the like enabling the body to be drawn across the liquid, and having an upstanding portion at the other end of the primary floating body sufficiently high to accentuate surface tension at said other end to attract a second floating body, and one or more secondary floating bodies for adherence to the first by surface tension.

2,461,462
LEATHER SKIVER
Otto E. Zahn, Penn Township, St. Joseph County, Ind.
Application April 30, 1948, Serial No. 24,219
10 Claims. (Cl. 12—17)



1. A leather skiver comprising a frame, a work feed roll rotatable on said frame, a guide shiftable vertically on said frame, spring means urging said guide upwardly; a carrier slidable on said guide in a path below said feed roll and transverse of the axis of said feed roll, actuating means for rotating said roll and advancing said carrier simultaneously and at the same linear speed, and a skiving blade carried by said frame adjacent and above the path of said carrier with its cutting edge transverse of said path and adjacent to said feed roll.

2,461,463
TOLUENESULFONATES
Alfred W. Anish, Vestal, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware
No Drawing. Application December 29, 1945, Serial No. 638,495
3 Claims. (Cl. 260—456)

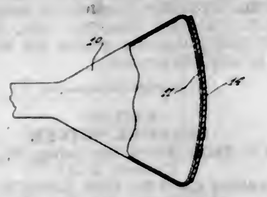
1. A toluenesulfonate having the following general formula:

wherein R represents a member selected from the class consisting of benzene and naphthalene series, and *m* represents a positive integer ranging from 2 to 3.

2,461,464
FILTER FOR FLUORESCENT SCREENS
Robert Aronstein, Brooklyn, N. Y.
Application November 14, 1947, Serial No. 785,903
2 Claims. (Cl. 250—164)

1. In a reproducing device of the type including a fluorescent screen upon which there is formed a light image the spectrum of which includes light in the yellow-orange region, means

for enhancing definition of said image comprising a sheet of transparent material interposed in the normal path of viewing of said screen and having substantially uniformly distributed col-



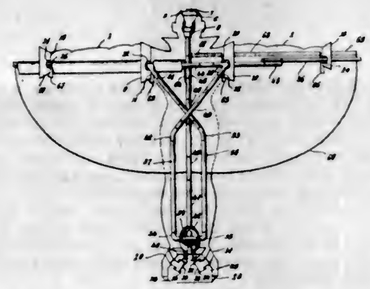
oring of a hue which selectively discriminates against light in the yellow-orange region of the spectrum of the light transmitted through said sheet.

2,461,465

FRAME CONSTRUCTION FOR KITES AND LIKE TOYS

Helga Marie Chu and Hing F. Chu, Larchmont, N. Y.

Application November 14, 1947, Serial No. 785,992
12 Claims. (Cl. 244—153)



1. An aerial toy comprising a cross-shaped minor airfoil having front and rear surfaces, a supporting frame, and a major airfoil, said frame being disposed against the minor airfoil on the rear surface thereof and having upper and lower end portions secured to the minor airfoil, said major airfoil being substantially semicircular in contour and having its straight edge portion secured to the upper end portion of the frame, and said major airfoil being located between the frame and the minor airfoil.

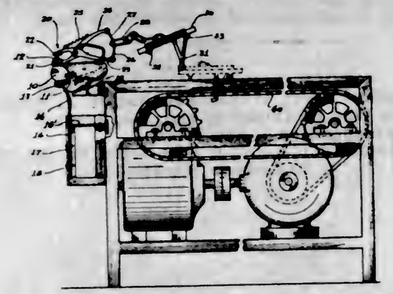
2,461,466

SKINNING MACHINE

Frederic J. Coad, Des Moines, Iowa; Gwendolyn Coad, administratrix of said Frederic J. Coad, deceased, assignor, by mesne assignments, to Swift & Company, Chicago, Ill., a corporation of Illinois

Application July 18, 1944, Serial No. 545,474
6 Claims. (Cl. 17—21)

1. A machine for pulling skin from a meat cut surrounding a bone having enlarged ends such as the humerus bone of a shoulder cut and the femur bone of a ham cut, comprising means to engage the bone of said cut at one of the enlarged ends of the bone, a clamping means adapted to be fixedly secured to the skin, pneumatically driven means to pull the clamping means away from said engaging means in a direction to pull the skin from the cut progressively from one end to



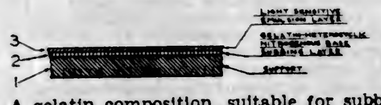
the other, and means to connect the pneumatically driven means to the clamping means.

2,461,467

GELATIN SUBBING COMPOSITION

Russell P. Easton, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application November 8, 1945, Serial No. 627,450
3 Claims. (Cl. 106—135)



1. A gelatin composition, suitable for subbing a photographic cellulose derivative film base, consisting of a small amount of water, a volatile organic solvent for said film base incapable of dissolving gelatin, and as a dispersing agent for the gelatin a hydrogenated heterocyclic nitrogenous base selected from the class consisting of N-methylmorpholine, pyrroline, pyrrolidine, piperidine, N-methylpiperidine, and 2-methylpiperidine.

2,461,468

SCOURING PAD

Nils Oskar Ellström, Aneby, Sweden, assignor, by mesne assignments, to Getram Company, Inc., New York, N. Y., a corporation of New York

Application December 26, 1945, Seri No. 637,234
In Sweden January 11, 1944
1 Claim. (Cl. 15—209)

A scouring pad, comprising a tubular knitted metallic fabric member, each end of said tubular member being rolled back annularly upon itself toward the central portion of said member so as to form two annular rolls or bodies joined by an intermediate piece of said tubular member, said annular bodies being angularly displaced relatively to one another, said intermediate piece of tubular member thereby forming an approximately helically twisted central portion and substantially flattened web-like portions flaring from said central portion and joining it to said annular bodies, one of said annular bodies being forced over the other annular body to the opposite side thereof, whereby the web-

like portion joining said firstnamed annular body to said central portion envelops the outer circumference of said second annular body, said second annular body being thereby retained between said web-like portion and said firstnamed annular body, and spot welds securing said annular bodies to one another along the inner circumference of said firstnamed annular body.

2,461,469

PHOTOGRAPHIC PROCESS FOR CONVERTING BLACK-AND-WHITE OR MONOCHROME PICTURES INTO MULTICOLOR PICTURES

Richard M. Haff, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Original application August 31, 1944, Serial No. 552,209. Divided and this application May 18, 1946, Serial No. 670,849
10 Claims. (Cl. 95—2)

1. The process of producing subtractively colored photographic prints which comprises photographing a monochrome image onto a photographic light-sensitive silver-halide emulsion, developing the exposed emulsion to a negative, coloring certain portions of the negative which are to appear in color in said subtractively colored print with a dispersion comprising:

	Grams
15–35% aqueous solution of complex sodium borophosphate	50–100
Water soluble organic dye	1–10

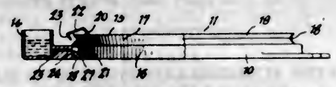
said water soluble organic dye in said dispersion being of a color, complementary to that which is to represent the corresponding colored portion in said print and coloring other portions of said negative with a dispersion as aforesaid in which the water soluble organic dye is of a color different from that of said first dispersion and complementary to that which is to represent the corresponding colored portion of said print, printing the resulting colored negative onto a photographic, multi-layer, light-sensitive emulsion, the layers of which are selectively sensitized to the red, green, and blue regions of the spectrum, each layer containing a color former capable of yielding a dye image complementary in color to that for which it is sensitized and developing the exposed layers by color forming development into a subtractively colored print.

2,461,470

SPINNING RING AND TRAVELER

Harvey E. Herr, Buffalo, N. Y., assignor to Herr Manufacturing Company, Inc., Buffalo, N. Y., a corporation of New York

Application December 3, 1945, Serial No. 632,319
4 Claims. (Cl. 57—120)



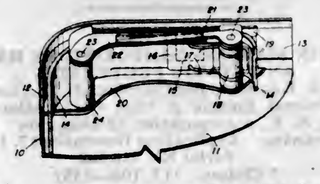
1. A device of the character described, comprising a spinning ring having a lower bearing face at substantially right angles to the ring-axis and an inner bearing face extending upwardly and outwardly from the inner edge of the lower bearing face in oblique fashion to the horizontal, and a traveler of substantially V-shape mounted on said ring and having the legs thereof terminating in oppositely-bent feet, one of the traveler legs and its foot, during the operation of the traveler, engaging flatwise and coextensively along the inner and lower bearing faces of the ring, respectively, in contiguous fashion, and the complementary traveler-leg and its foot being clear of the top portion of the ring and with the vertex of the traveler positioned outwardly of said inner bearing face.

2,461,471

LATERAL FILM EDGE PRESSURE SPRING

Carl H. Jacobson, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application October 1, 1947, Serial No. 777,280
10 Claims. (Cl. 88—17)



1. In a continuous strip advancing device, retractable strip edge guide means comprising a pair of flat, elongated guide members, pivotally mounted respectively at points adjacent to and spaced along the path of strip advancement with each member extending toward the pivot of the other member, so as to swing across the plane of said strip between an operative strip edge engaging position and an inoperative retracted position; one of said members having a slot intermediate said pivots and the other member extending through said slot; the sides of the slot being aligned with the edges of said other member when the two members are in operative position, and flexing in opposite directions relative to said other member upon movement of said members about their pivots to retracted position.

2,461,472

GELATIN SUBBING COMPOSITIONS CONTAINING A MIXTURE OF FORMAMIDE AND GLYCEROL-α-CHLOROHYDRIN

Frank J. Kaszuba, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application December 17, 1946, Serial No. 716,880
5 Claims. (Cl. 106—135)

1. A gelatin composition suitable for the subbing of a photographic film support, which comprises from 0.5% to 1.5% of gelatin dispersed in an organic solvent for said support by means of from 5 to 20% of a mixture of formamide and glycerol-α-chlorohydrin in the ratio ranging from 1:1 to 1:2 respectively.

2,461,473

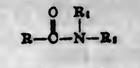
GELATIN SUBBING COMPOSITIONS HAVING ANTISTATIC PROPERTIES

Frank J. Kaszuba, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application December 17, 1946, Serial No. 716,881
7 Claims. (Cl. 106—135)

1. An anti-static gelatin composition suitable for the subbing of a photographic film support, which comprises a gelatin subbing composition containing from 0.5 to 1.5% of gelatin, from 1.33 to 15% of water, from 78 to 95.4% of a solvent

for said support, and 0.5 to 10% of an aliphatic amide of the following general formula:



wherein R is a member selected from the class consisting of hydrogen and an alkyl group of not more than 3 carbon atoms, R_1 is a member selected from the class consisting of hydrogen, an alkyl group of not more than 2 carbon atoms, and an alkylol group of not more than 2 carbon atoms, and R_2 is a member selected from the class consisting of hydrogen and an alkyl group of the same value as R_1.

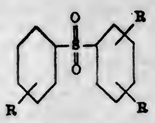
2,461,474

GELATIN SUBBING COMPOSITIONS HAVING ANTISTATIC PROPERTIES

Frank J. Kazsuba, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application December 17, 1946, Serial No. 716,882
7 Claims. (Cl. 106—135)

1. An anti-static gelatin composition suitable for the subbing of a photographic film support, which comprises a gelatin subbing composition containing from 0.5 to 1.5% of gelatin, from 1.33 to 15% of water, from 78 to 95.4% of a solvent for said support, and from 0.5 to 10% of a diphenylsulfone of the following general formula:



wherein R represents a member selected from the class consisting of hydrogen and an aliphatic radical of not more than 3 carbon atoms.

2,461,475

GELATIN SUBBING COMPOSITIONS CONTAINING ASCORBIC ACID (VITAMIN C)

Frank J. Kazsuba, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application December 18, 1946, Serial No. 717,095
5 Claims. (Cl. 106—135)

1. A gelatin composition suitable for subbing a photographic film support, which comprises from 0.5% to 1.5% of gelatin dispersed in from 94.5% to 98.5% of a solvent for said support by means of from 0.05% to 1.0% of ascorbic acid.

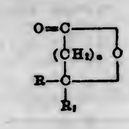
2,461,476

GELATIN SUBBING COMPOSITIONS CONTAINING LACTONES OR HYDROXY LACTONES

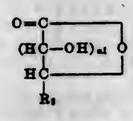
Frank J. Kazsuba, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application December 18, 1946, Serial No. 717,096
8 Claims. (Cl. 106—135)

1. A gelatin composition suitable for the subbing of a photographic film support, which comprises from 0.5% to 1.5% of gelatin dispersed in from 94.5% to 98.5% of a solvent for said support by means of from 0.05% to 1.0% of a compound selected from the class consisting of those of the following formulae:



and



wherein R is a member of the group consisting of H, CH_3, and C_2H_5, R_1 is a member of the class consisting of H and CH_3, R_2 is a member of the group consisting of H,

and

n represents a numeral from 2 to 4, and n_1 represents a numeral from 2 to 3.

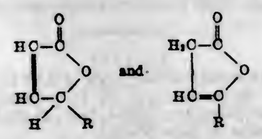
2,461,477

GELATIN SUBBING COMPOSITIONS CONTAINING AN UNSATURATED LACTONE

Frank J. Kazsuba, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application December 18, 1946, Serial No. 717,097
8 Claims. (Cl. 106—135)

1. A gelatin composition suitable for the subbing of a photographic film support, which comprises from 0.5% to 1.5% of gelatin dispersed in from 94.5% to 98.5% of a solvent for said support by means of from 0.05% to 1.0% of an unsaturated lactone selected from the class consisting of those of the following formulae:



wherein R is a member selected from the class consisting of hydrogen and methyl group.

2,461,478

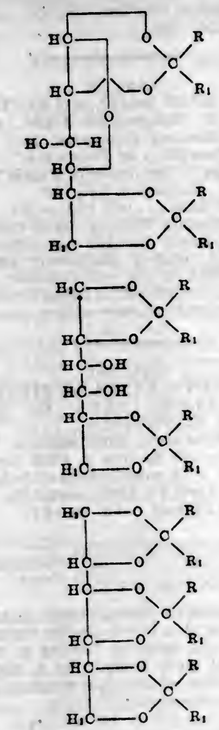
GELATIN SUBBING COMPOSITIONS HAVING ANTISTATIC PROPERTIES

Frank J. Kazsuba, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

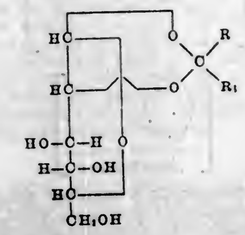
No Drawing. Application December 18, 1946, Serial No. 717,098
7 Claims. (Cl. 106—135)

1. An anti-static gelatin composition suitable for the subbing of a photographic film support, which comprises a gelatin subbing composition containing a member of the group consisting of

ketals and acetals of hexoses and hexitols of the following general formulae:



and



wherein R is a member selected from the class consisting of hydrogen and an alkyl group of 1 to 2 carbon atoms, and R_1 is an alkyl group of 1 to 3 carbon atoms.

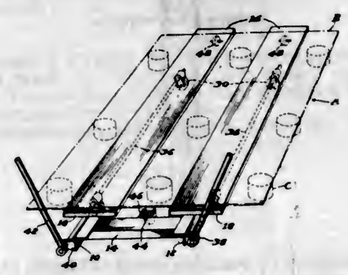
2,461,479

TEMPORARY SUPPORT FOR USE IN LOADING PALLETS OR THE LIKE

Alexander W. Moffat, Boston, Mass., assignor to Norman L. Cahners, doing business as Materials Handling Laboratories, Boston, Mass.

Application December 23, 1946, Serial No. 718,039
8 Claims. (Cl. 280—44)

1. A device for temporarily augmenting the compressive strength of a pallet or the like during operations of positioning and rigidifying a load of individual units thereon comprising a U-shaped frame, the legs of said U having parallelly extending top surfaces of substantial area, a series of rollers extending downwardly beneath each leg of said frame, said rollers being pivotally mounted on said frame for movement in vertical planes parallel to the base of said U from



positions relatively remote from said surfaces for supporting said frame with said surfaces at a predetermined level, furnishing support beneath spans of the platform of a pallet positioned over said device, to positions relatively adjacent said surfaces for permitting said surfaces to be lowered away from said platform and said device to be withdrawn from beneath said pallet on completion of a loading operation.

2,461,480

METHOD OF PREPARING LIGHT FILTER FOILS

Verne H. Reckmeyer, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

No Drawing. Application May 11, 1945, Serial No. 593,329
10 Claims. (Cl. 18—57)

1. The method of making a photographic light filter foil which comprises coating an aqueous solution of an organic film-forming material selected from the class consisting of gelatin, hydroxyethyl cellulose, polyvinyl alcohol, polyvinyl acetaldehyde acetal resins, and partially hydrolyzed polyvinyl acetate resins on a flat vitreous support resistant to hydrogen chloride, the coating side of said support having a smooth surface which has been treated with a composition comprising an organo-silicon halide in vapor form, causing the coated material to set and dry, and thereafter removing the dried foil from said support.

2,461,481

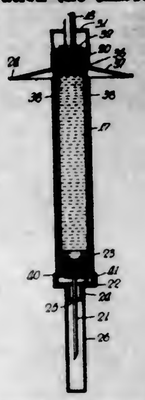
HYPODERMIC SYRINGE

Zbislaw M. Roehr, New York, N. Y., assignor to The Roberts Manufacturing Company, New York, N. Y., a partnership

Application May 26, 1944, Serial No. 537,378
3 Claims. (Cl. 128—218)

1. A surgical syringe comprising a barrel having a hypodermic needle bearing cap upon one end thereof, a plunger rod through the other end thereof, a cartridge in the barrel interposed between the plunger and the cap, said cartridge having a rubber plug normally spaced from said cap, the inner end of the needle being normally

embedded in said rubber plug, whereby in the initial plunger operation the embedded needle end



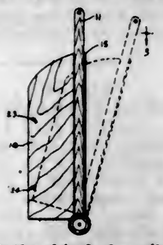
will penetrate through the entire thickness of the rubber plug.

2,461,482

COLLAPSIBLE WHEELED CONTAINER

Victor P. Schaus, Jackson Heights, N. Y., assignor to Howe Folding Furniture, Inc., New York, N. Y., a corporation

Application July 28, 1945, Serial No. 607,531
3 Claims. (Cl. 280—36)



1. A device of the kind described comprising a pair of support members interconnected at the top by a bar adapted to serve as a handle each support member carrying an axle, and wheels supported on said axles respectively, a back panel for a closure mounted between said support members, a cross piece extending across the front of said panel in a plane parallel and adjacent to said back panel, and a two-part panel member hingedly supported at its lower end on said cross piece, the two parts of said member being hingedly connected and consisting of a relatively short bottom portion adjacent said back panel and a longer front portion hingedly related to said shorter portion along its edge remote from its connection to said back panel, a pair of side panel members hingedly secured to said support members respectively said members being of a width substantially equal to the length of the shorter portion of said two-part member, said two-part portion being adapted when in folded, inoperative position to lie in a unitary plane parallel and adjacent to said back panel and when unfolded to coact with said back and side panels to form a closure, said side panels being movable from a folded position in which they overlie said folded two-part member to a position in which they form the sides of said closure, and means carried by said side members for engaging the said portions of said two-part member respectively to control the position thereof when the device is unfolded, thus forming a closure the side members of which are automatically moved to open operative position by the unfolding of said two-part portion.

2,461,483

OIL BASE DRILLING FLUID

Edward S. Self, Bakersfield, Calif., assignor to Shell Development Company, San Francisco, Calif., a corporation of Delaware

No Drawing. Application March 7, 1944, Serial No. 525,439
7 Claims. (Cl. 252—8.5)

1. A non-aqueous drilling fluid comprising a mineral oil, a finely divided solid material suspended therein, and a stabilizing agent in an amount sufficient to prevent substantial separation of said solid material formed by the reaction of an alkali metal silicate with a soap forming fatty acid.

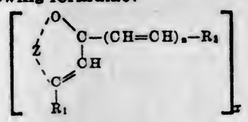
2,461,484

PYRYLIUM DYE SALTS AS FILTER AND ANTIHALATION DYES IN PHOTOGRAPHIC MATERIALS

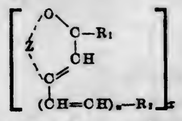
Thomas R. Thompson, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application April 17, 1945, Serial No. 588,850
9 Claims. (Cl. 95—9)

1. A light sensitive photographic element comprising a base and a silver-halide emulsion carried thereby, said element having a water-permeable colloidal layer containing a dispersion of a pyrylium dye salt of the class consisting of those of the following formulae:



and



wherein R_1 represents a member selected from the class consisting of hydrogen, alkyl, and aromatic groups, R_2 is an aromatic radical, Z represents the atoms necessary to complete a pyrylium ring structure, X represents an acid radical, and n represents a member selected from the class consisting of 0, 1 and 2.

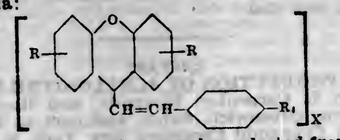
2,461,485

XANTHYLIUM DYE SALTS AS FILTER AND ANTIHALATION DYES IN PHOTOGRAPHIC MATERIALS

Thomas R. Thompson, Binghamton, N. Y., assignor to General Aniline & Film Corporation, New York, N. Y., a corporation of Delaware

Application June 21, 1945, Serial No. 600,692
7 Claims. (Cl. 95—9)

1. A light sensitive photographic element comprising a base and a silver-halide emulsion carried thereby, said element having a non-gelatin water-permeable colloidal layer containing a dispersion of a xanthylium dye salt having the formula:



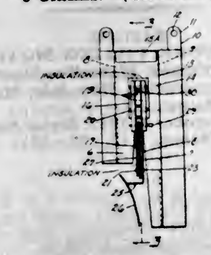
wherein R represents a member selected from the class consisting of hydrogen and hydroxy groups, R_1 is a member selected from the class consisting of alkoxy, alkylamino and dialkylamino groups, and X represents an acid radical.

2,461,486

COIN ACTUATED ELECTRICAL SWITCH

Harold B. Vroom, Hartford, Conn., assignor to Veeder-Root Incorporated, Hartford, Conn., a corporation of Connecticut

Application October 11, 1946, Serial No. 702,675
6 Claims. (Cl. 194—9)



1. A coin actuatable electric switch comprising a downwardly extending coin passageway, electric circuit closing means comprising a movable member having a contact surface adapted to be moved into circuit closing position by the weight of a coin, a movable insulating member normally covering said surface and adapted to be moved away from surface by the weight of a coin, and means on said members extending into said passageway for causing sequential operation of said members by a coin dropped through said passageway.

2,461,487

HOLDER FOR THERMIONIC VALVES AND LIKE ELECTRICAL DEVICES AND MEANS FOR SECURING IT TO SUPPORTS

George Wagstaff, Long-Eaton, England, assignor to United-Carr Fastener Corporation, Cambridge, Mass.

Application February 28, 1945, Serial No. 580,252
In Great Britain March 20, 1944
3 Claims. (Cl. 173—339)

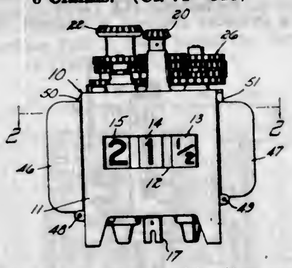
1. In combination with an electrical socket body for thermionic valves and like electrical devices which socket body is provided at one end with a flanged rim and a plurality of circumferentially spaced peripherally opening recesses extending below said rim and terminating short of an opposite end of said body; a holder for securing said body in an apertured support comprising a radially expandable split resilient annulus adapted to be expanded and slipped over an end of the socket body and provided with inwardly extending radial projections adapted to extend into the peripheral recesses in said body, and a sinusoidal ring adapted to surround said body and be supported by said annulus between it and a support on which said socket is mounted.

2,461,488

PRICE WHEEL SETTING MECHANISM

Otto Wild, Jr., West Hartford, Conn., assignor to Veeder-Root Incorporated, Hartford, Conn., a corporation of Connecticut

Application November 15, 1946, Serial No. 709,957
8 Claims. (Cl. 74—348)



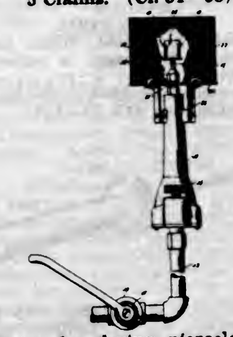
1. In a variator, the combination comprising a rotatable shaft, a gear longitudinally slidable but non-rotatably mounted on said shaft, a longitudinally movable lever arm arranged to slide said gear longitudinally on the shaft, a plurality of spaced number wheels, a pinion for driving one of said wheels in line with a pinion for driving the second of said wheels, a rack member extending between said pinions and having teeth in mesh therewith, and means for slidably holding said rack member in non-pivoting position, said rack member having an opening through which is received said lever arm, whereby the longitudinal position of said gear is indicated by said number wheels.

2,461,489

CRYSTAL DRIER

John M. Wolfskill, Erie, Pa., assignor to Bliley Electric Company, Erie, Pa., a corporation of Pennsylvania

Application November 17, 1944, Serial No. 563,966
5 Claims. (Cl. 34—58)



1. A device for drying piezoelectric crystals after washing, which comprises, a high speed mo-

tor having a shaft extending vertically upward-

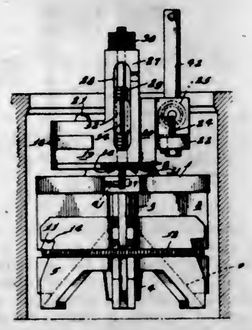
sion in a liquid medium, said particles having a

recess extending from end to end of each of the rails, and a slot extending from said recess to the

tor having a shaft extending vertically upwardly therefrom, a crystal carrier mounted on said shaft, said crystal carrier having upwardly extending wire loops forming a recess for receiving said crystal to provide substantially unobstructed paths for liquid thrown from the surfaces of said crystal by centrifugal force, said loops being positioned to hold said crystal with its major surfaces substantially in vertical planes and with the axis of said shaft passing through said crystal.

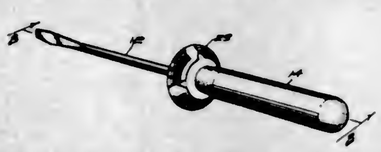
2,461,490
CYLINDER RIDGE REAMER
Herbert A. Berkman, Chicago, Ill., assignor to Zim Manufacturing Company, a corporation of Illinois
Application May 13, 1948, Serial No. 26,857
6 Claims. (Cl. 77—2)

1. In a cylinder reamer, a support, means to



secure said support in an engine cylinder at a substantial distance from a ridge to be reamed, a member mounted on said support for rotary movements about the axis of the cylinder, a carrier for a cutting tool movable up and down on said member parallel with said axis, a screw on said member connected with the device to raise and lower it, a horizontal star wheel fixed on said screw near said support, a vertical star wheel on said member meshing with the first star wheel and adapted to turn the same, and a radial ledge on said support in the path of said vertical star wheel to turn the same through one step during each revolution of said member.

2,461,491
TORQUE TOOL
Ralph E. Booth, Mansfield, Mass., assignor to Apco Mossberg Company, a corporation of Massachusetts
Application August 27, 1946, Serial No. 693,206
3 Claims. (Cl. 73—139)

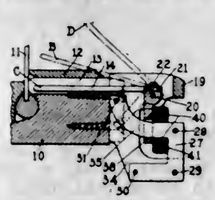


1. A torque tool comprising two relatively rotatable members, elastic resilient means resisting said relative rotation and serving to return said members to normal after relative rotation therefrom, an embracing dial carried by one of said members, a plurality of like scales at different locations on said dial and a plurality of pointers comprising one for each scale fixed to said other member and each movable over a scale as relative rotation of said members occurs whereby a reading may be had at any one of a plurality of different locations circularly about said dial.

2,461,492
PRODUCTION OF ACRYLONITRILE
Erwin L. Carpenter, Riverside, and Harold S. Davis, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y., a corporation of Maine
No Drawing. Application March 19, 1946, Serial No. 655,610
2 Claims. (Cl. 260—465.9)

1. A method of producing acrylonitrile which includes feeding ethylene cyanohydrin in liquid phase to a dehydrating zone heated to a temperature range of from 160° C. to 275° C., said zone containing an alkali forming metal salt of an organic acid as an ethylene cyanohydrin dehydration catalyst, removing acrylonitrile and water from said zone, and recovering the acrylonitrile.

2,461,493
LOOM FORK FILLING MOTION
George E. Clentimack, Plainville, Mass., assignor to Draper Corporation, Hopedale, Mass., a corporation of Maine
Application October 4, 1947, Serial No. 777,981
14 Claims. (Cl. 139—375)



1. A filling fork structure for a loom including, in combination: a fork tine, and means including periodically active interacting magnetic field producing means for actuating said tine.

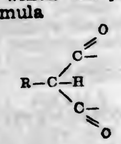
2,461,494
METHOD AND COMPOSITION FOR FLAW DETECTION
Taber de Forest, Chicago, Ill., assignor, by mesne assignments, to Robert C. Switzer, South Euclid, Ohio, and Joseph L. Switzer
No Drawing. Application May 7, 1945, Serial No. 592,531
13 Claims. (Cl. 175—183)

1. A composition of matter for detecting flaws in metallic bodies comprising a liquid suspending medium, finely divided ferromagnetic particles suspended in said liquid, a fluorescent substance insoluble in said liquid adhered to the surfaces of said ferromagnetic particles, and a non-fluorescent organic material dissolved in said liquid capable of selectively quenching any liquid fluorescence in said suspending medium.

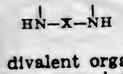
5. A method for detecting flaws in a metallic article comprising creating a magnetic flux in the portion of the article comprising the test field, applying to the test field finely divided ferromagnetic particles in the form of a suspension in a liquid medium, said particles having a fluorescent substance insoluble in said liquid adhered thereto, rinsing said test field with a liquid miscible with said liquid medium, selectively quenching fluorescence of any of said liquids with a non-fluorescent organic dyestuff dissolved in said rinsing liquid, said rinsing being carried out so as to remove from said test field ferromagnetic particles not adhered thereto, and subjecting the test field to fluorescigenous radiation to render vividly apparent the location in the test field of ferromagnetic particles adhered thereto.

2,461,495
POLYAMIDES
Don E. Floyd, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application September 8, 1945, Serial No. 615,245
11 Claims. (Cl. 260—78)

1. A resinous polyamide having a unit length of at least 8, in which the polyfunctional acyl group has the formula

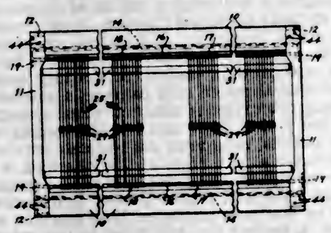


in which R is an aliphatic hydrocarbon substituent containing from 6 to 16 carbon atoms, and in which the polyfunctional amino group has the formula



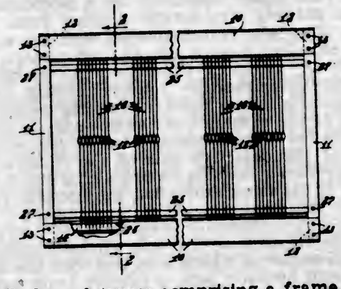
in which X is a divalent organic radical which separates the amino groups by a chain at least 3 atoms in length, said chain being selected from the group consisting of carbon chains and carbon chains interrupted solely by nitrogen, the free valences on the carbonyls of the acyl group being attached to free valences of the nitrogens of the polyamines.

2,461,496
LOOM HARNESS
John Jacob Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application January 24, 1946, Serial No. 643,107
7 Claims. (Cl. 139—92)



1. In loom harness comprising a frame having top and bottom rails, side struts connecting said rails at their ends, and heddles supported in the frame, the means for supporting the heddles in the frame comprising the provision, adjacent the inner edges of the top and bottom rails, of a recess extending from end to end of each of the rails, and a slot extending from said recess to the inner edge of the rail, a heddle supporting bar carried by each rail, said heddle supporting bar being provided with a central web portion and enlarged bead portions along its top and bottom edge, one of said enlarged portions of said bar being positioned in the recess of the rail and the web portion thereof extending through the slot, each of the heddles being provided with a bifurcated end portion complemental to and engaging the other of said enlarged portions of the heddle supporting bar.

2,461,497
LOOM HARNESS
John Jacob Kaufmann, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application July 3, 1946, Serial No. 681,244
6 Claims. (Cl. 139—92)



1. In loom harness comprising a frame having top and bottom rails, side struts connecting said rails at their ends, and heddles integrally made of thin flat strips of metal, the means for supporting the heddles in the frame comprising the provision, adjacent the inner edges of the top and bottom rails, of a recess extending from end to end in each of the rails, and a slot extending from said recess to the inner edge of the rail, each heddle being provided at each end with a head portion normally positioned within the recess and an adjacent neck portion extending through the slot in the rail of the frame, each of the heddles also being provided near its end portions with slots, and auxiliary stabilizing bars extending from end to end of the frame and passing through said slots in the heddles thereby to maintain the head portions of the heddles against turning and thus becoming detached from the rails.

2,461,498
PREPARATION OF SYMMETRICAL TRIAMINOBENZENE COMPOUNDS
John Krueger, Chicago, Ill., assignor to The Edwal Laboratories, Inc., Chicago, Ill.
No Drawing. Application December 8, 1943, Serial No. 513,464
7 Claims. (Cl. 260—580)

1. In a method of preparing symmetrical triaminobenzene compounds, the steps which comprise reacting a mixture including tin, an excess of substantially concentrated hydrochloric acid, and a symmetrical trinitrobenzene compound selected from the group consisting of trinitrobenzene, trinitrobenzoic acid, and trinitrotoluene, the reaction being carried out, in the main, at a temperature between about 60 degrees C. and about 80 degrees C.

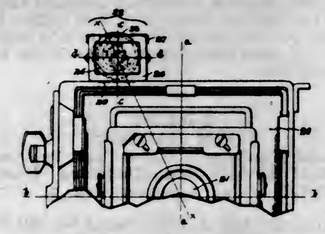
2,461,499

tion to said frame; and controllable connections

charge stroke and to open the contacts when the

2,461,504
ELECTRIC TRANSMITTER FOR DRIVING

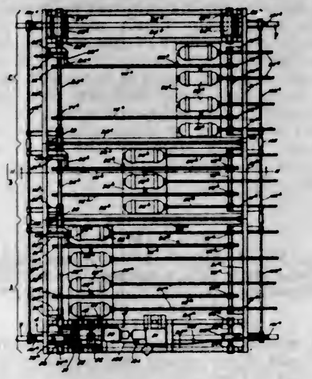
2,461,499
VIEW FINDER FOR PHOTOGRAPHIC CAMERAS
Claude B. McCathron, Rochester, N. Y., assignor to Graflex, Inc., Rochester, N. Y., a corporation of Delaware
Application November 16, 1946, Serial No. 710,287
5 Claims. (Cl. 88—1.5)



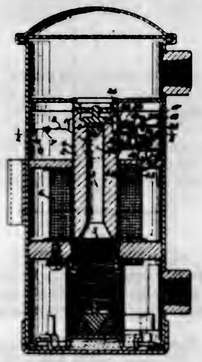
1. A view finder assembly for a photographic camera entirely structurally distinct from and, in use, physically non-connected with the mount of the objective camera lens of such camera, said view finder assembly comprising an elongated, substantially-cylindrical housing having means for attaching it in a fixed, unvarying position to the top of the camera body at one side of a vertical, central line extending through the vertical center of the objective lens of the camera, the said view-finder housing having at the end thereof that is the front end when the housing is secured in functioning position upon the top of the camera body, a stationary negative lens, and having at its opposite or rear end an axial opening, the axial center of which is in line with the axial line of said negative lens, a tubular knob having a cylindrical wall overlapping and received in a sleeve-like relation for rotative adjustment upon said rear end of the said housing and having an outer end wall extending normal to said cylindrical wall and provided with a substantially central viewing opening, the end of the said housing whereon is rotatably received said tubular knob having a slotted opening provided with parallel side walls that are parallel to a line that intersects, when the view finder is in functioning position, an inclined line intersecting the longitudinal axis of said view finder and the longitudinal axis of the objective lens, a lens block having parallel side walls received for guided sliding lengthwise movement in said slotted opening, a positive lens remote from said negative lens and received in said lens block having parallel side edges received against and guided by the side walls of said slotted opening, and cooperating interengaging formations upon said lens block and said tubular knob for moving said lens block along said slotted opening by turning movement of said tubular knob.

2,461,500
APPARATUS FOR CONSTRUCTING VIBRATION-COMPACTED CONCRETE SLABS
Arthur E. Miller and George K. Viall, Milwaukee, and Rudolph F. Lindow, Wauwatosa, Wis., assignors to Chain Belt Company, Milwaukee, Wis., a corporation of Wisconsin
Application October 4, 1944, Serial No. 557,162
10 Claims. (Cl. 94—48)

1. In apparatus for constructing vibration-compacted concrete slabs: a frame provided with power driven means for advancing it intermittently over a slab bed; vibrating means including elements disposable upon the bed in spaced relation to said frame; and controllable connections between said power driven means and the vibrating means whereby said elements may be moved over the bed toward the frame.



2,461,501
ELECTROMAGNETIC PUMP
Donald L. Miller, Pine City, N. Y., assignor to Bendix Aviation Corporation, a corporation of Delaware
Application March 7, 1947, Serial No. 733,210
2 Claims. (Cl. 103—53)



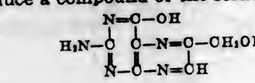
1. In an electromagnetic pump a cylinder of non-magnetic material, a piston of magnetic material slidably mounted thereon, spring means for moving the piston in a direction to eject fluid from the cylinder, said piston having a fluid passage therethrough, means preventing backward flow of fluid through said passage, a solenoid surrounding the cylinder adapted when energized to draw the piston back against the action of said spring means, magnetic pole pieces surrounding the cylinder at the ends of the solenoid, a cylindrical casing of magnetic material surrounding and connecting the pole pieces, a bracket fixed to one of the pole pieces, a fixed contact on said bracket, a second bracket fixed to the interior of the casing, a lever pivoted on the second bracket, a movable contact mounted on one end of the lever in position to cooperate with the fixed contact, a lost motion mechanical connection between the other end of the lever and the piston arranged to swing the lever to close the contacts when the piston approaches the end of its discharge stroke and to open the contacts when the piston approaches the end of its charging stroke, and means including said contacts for energizing the solenoid.

2,461,502
CYANOETHYL ETHERS OF GALACTOMANNAN AND GLUCOMANNAN GUMS
Owen A. Moe, Minneapolis, Minn., assignor to General Mills, Inc., a corporation of Delaware
No Drawing. Application April 25, 1946, Serial No. 664,986
8 Claims. (Cl. 260—209)

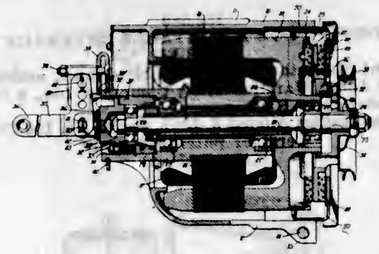
5. A process of making a cyanoethyl ether of a gum selected from the group consisting of galactomannan and glucomannan gums, which comprises condensing said gum with an acrylonitrile.

2,461,503
PROCESS FOR THE MANUFACTURE OF 2-AMINO-6-HYDROXY -8- (HYDROXYMETHYL) PTERIDINE
Hans Spiegelberg and Gérald Rey-Bellet, Basel, Switzerland, assignors to Hoffmann-La Roche Inc., Nutley, N. J., a corporation of New Jersey
No Drawing. Application January 24, 1948, Serial No. 4,219. In Switzerland February 3, 1947
1 Claim. (Cl. 260—251)

Process for the manufacture of 2-amino-6-hydroxy-8-(hydroxymethyl)-pteridine, comprising heating dihydroxy-acetone with di-amino-5-nitroso-6-hydroxy-pyrimidine in alkaline solution to produce a compound of the formula



2,461,504
ELECTRIC TRANSMITTER FOR DRIVING SEWING MACHINES AND THE LIKE
Edgar P. Turner, Fanwood, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application November 3, 1947, Serial No. 783,791
12 Claims. (Cl. 172—36)



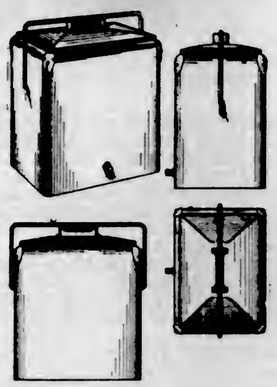
1. An electric power transmitter comprising a hollow cylindrical frame with a tubular portion extending into said frame from one end thereof, a stationary motor-element mounted on said tubular portion, a rotary motor-element disposed externally of said stationary element and mounted on a tubular motor shaft journaled in said tubular frame portion, a driven shaft extending through the tubular motor shaft, a driven clutch-element fixed to one end of said driven shaft, and mechanism operatively connected to the other end of said driven shaft for shifting said shaft endwise.

152,586

DESIGNS

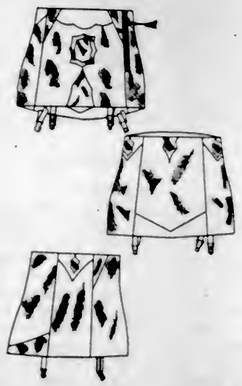
FEBRUARY 8, 1949

152,580
DESIGN FOR A PORTABLE BEVERAGE COOLER
Grant M. Acton, Arkansas City, Kans., assignor to Acton Manufacturing Company, Inc., a corporation of Kansas
Application August 6, 1947, Serial No. 140,714
Term of patent 14 years
(Cl. D67—4)



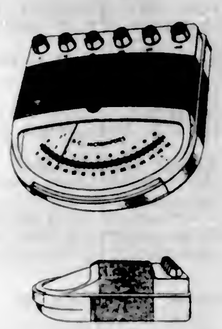
The ornamental design for a portable beverage cooler, substantially as shown.

152,581
DESIGN FOR A GIRDLE
Pierre Amyot, Quebec, Quebec, Canada
Application April 14, 1947, Serial No. 138,393
Term of patent 14 years
(Cl. D20—2)



The ornamental design for a girdle, as shown.

152,582
DESIGN FOR A MEASURING INSTRUMENT CASE
Gilbert Banever, New Haven, Conn., assignor to General Electric Company, a corporation of New York
Application December 26, 1947, Serial No. 142,360
Term of patent 14 years
(Cl. D26—5)

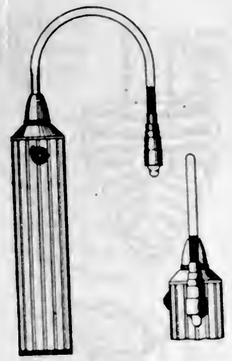


The ornamental design for a measuring instrument case, as shown.

152,583
DESIGN FOR LEATHER OR SIMILAR ARTICLE OF MANUFACTURE
Fred H. Becker and Lester F. Peabody, Girard, Ohio, assignors to The Ohio Leather Company, Girard, Ohio, a corporation of Ohio
Application March 3, 1948, Serial No. 144,886
Term of patent 14 years
(Cl. D87—3)

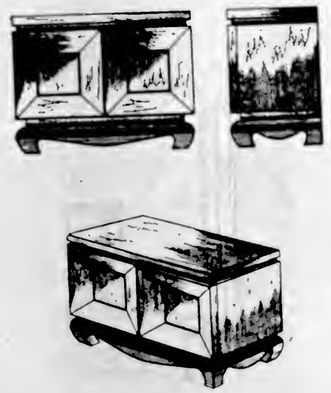
The ornamental design for leather or similar article of manufacture, as shown.

152,584
DESIGN FOR A FLASHLIGHT
Rodger F. Becker, Kalamazoo, Mich.
Application September 3, 1946, Serial No. 133,033
Term of patent 14 years
(Cl. D48—24)



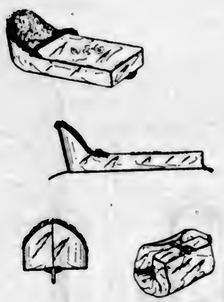
The ornamental design for a flashlight, substantially as shown.

152,585
DESIGN FOR A CABINET OR SIMILAR ARTICLE
Seth Ben-Ari, Millburn, N. J.
Application May 23, 1947, Serial No. 139,234
Term of patent 7 years
(Cl. D33—19)



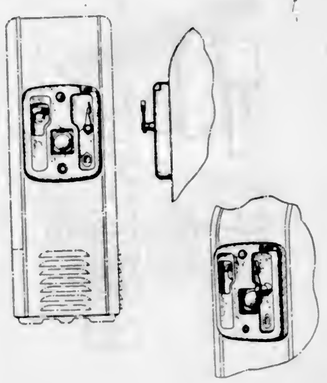
The ornamental design for a cabinet or similar article, as shown and described.

152,586
DESIGN FOR A BABY BUNTING
Application April 18, 1947, Serial No. 138,468
Esther Brande, Garden City, N. Y.
Term of patent 3½ years
(Cl. D92—2)



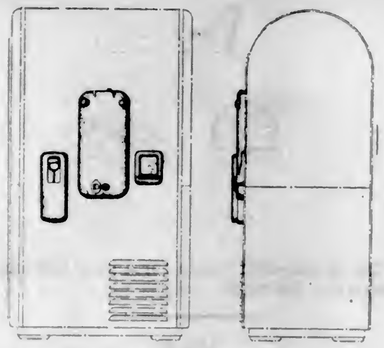
The ornamental design for a baby bunting, as shown and described.

152,587
DESIGN FOR A FACE PLATE FOR A DISPENSING MACHINE
Alan D. Brundage, Detroit, Mich., assignor to F. L. Jacobs Co., Detroit, Mich., a corporation of Michigan
Application September 11, 1946, Serial No. 133,244
Term of patent 14 years
(Cl. D52—3)



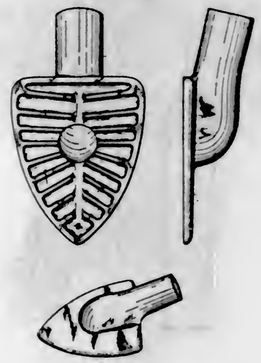
The ornamental design for a face plate for a dispensing machine, as shown and described.

152,588
DESIGN FOR A DISPENSING MACHINE
Alan D. Brundage, Detroit, Mich., assignor to F. L. Jacobs Co., Detroit, Mich., a corporation of Michigan
Application September 11, 1946, Serial No. 133,245
Term of patent 14 years
(Cl. D52—3)



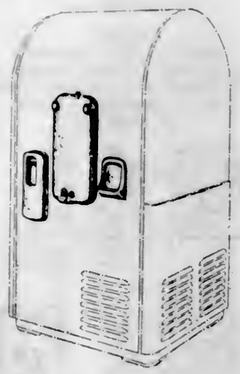
The ornamental design for a dispensing machine, as shown and described.

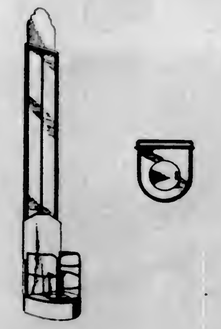
152,589
DESIGN FOR A NOZZLE ATTACHMENT FOR VACUUM CLEANERS
William F. Burri, Portland, Oreg.
Application June 3, 1948, Serial No. 146,743
Term of patent 14 years
(Cl. D37—1)



The ornamental design for a nozzle attachment for vacuum cleaners, as shown.

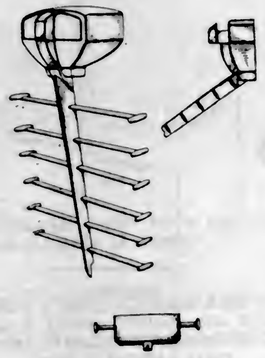
152,590
DESIGN FOR A CARNIVAL WEIGHT-LIFTING AMUSEMENT DEVICE OR THE LIKE
Phillip Campbell, Whittier, and Edward George Fox, Sr., Long Beach, Calif.
Application September 23, 1946, Serial No. 133,522
Term of patent 14 years
(Cl. D34—5)





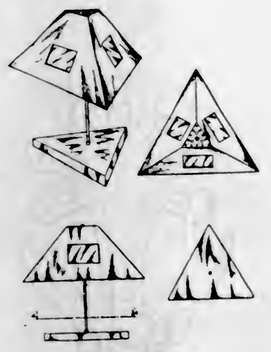
The ornamental design for a carnival weight-lifting amusement device or the like, as shown.

152,591
DESIGN FOR A TIE RACK
Herman Martin Canner, Detroit, Mich.
Application April 11, 1947, Serial No. 138,309
Term of patent 3½ years
(Cl. D33—8)



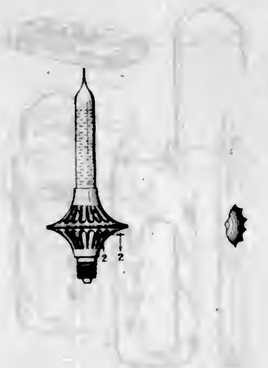
The ornamental design for a tie rack, substantially as shown.

152,592
DESIGN FOR A DECORATIVE DISPLAY LAMP OR THE LIKE
Hugh M. Carey, Glendale, Calif.
Application March 17, 1947, Serial No. 137,688
Term of patent 3½ years
(Cl. D48—20)



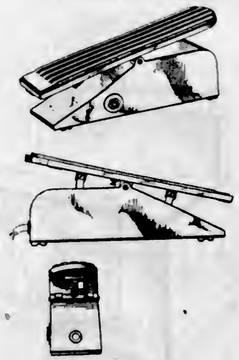
The ornamental design for a decorative display lamp or the like, substantially as shown.

152,593
DESIGN FOR A BUBBLING CANDLE LAMP
Junior K. Castell, Peru, Ind., assignor to Noma Electric Corporation, New York, N. Y., a corporation of New York
Application February 21, 1948, Serial No. 144,658
Term of patent 14 years
(Cl. D48—20)



The ornamental design for a bubbling candle lamp, substantially as shown.

152,594
DESIGN FOR A PEDAL CONTROL DEVICE
Ernest C. Caudill, Kansas City, Kans.
Application June 18, 1947, Serial No. 139,781
Term of patent 3½ years
(Cl. D26—13)

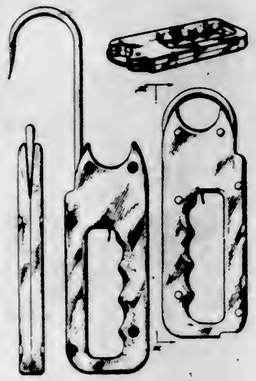


The ornamental design for a pedal control device, substantially as shown.

152,598—Continued

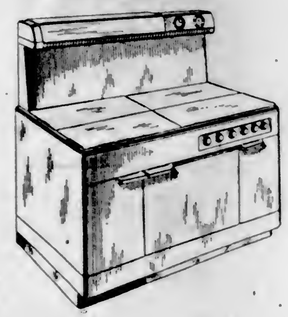
152,600

152,595
DESIGN FOR A SAFETY FISH GAFF
Harold Cederblad, San Francisco, Calif.
Application November 6, 1946, Serial No. 134,548
Term of patent 14 years
(Cl. D31—4)



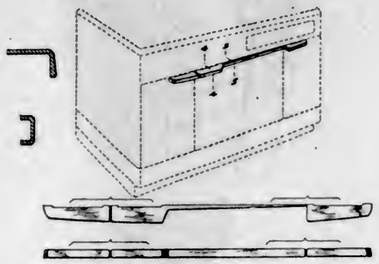
The ornamental design for a safety fish gaff, substantially as shown.

152,596
DESIGN FOR A COOKING RANGE
Laird F. Covey, Stamford, Conn., assignor to Boston Stove Foundry Company, Reading, Mass., a corporation of Massachusetts
Application February 6, 1948, Serial No. 144,334
Term of patent 14 years
(Cl. D81—4)



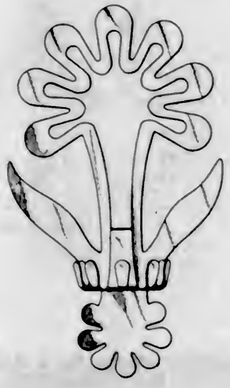
The ornamental design for a cooking range, as shown and described.

152,597
DESIGN FOR A COOKING RANGE HANDLE UNIT
Laird F. Covey, Stamford, Conn., assignor to Boston Stove Foundry Company, Reading, Mass., a corporation of Massachusetts
Application February 6, 1948, Serial No. 144,336
Term of patent 14 years
(Cl. D81—25)

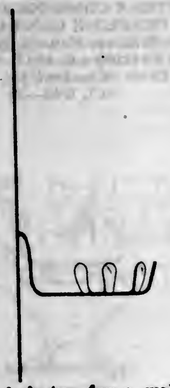


The ornamental design for a cooking range handle unit, as shown and described.

152,598
DESIGN FOR A WALL BRACKET OR THE LIKE
Peter J. Cronen, Minneapolis, Minn.
Application May 27, 1946, Serial No. 130,107
Term of patent 7 years
(Cl. D33—3)



152,598—Continued

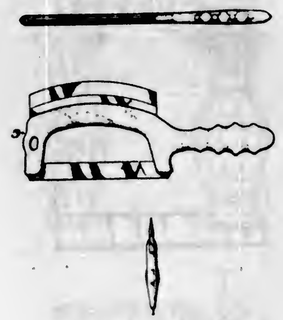


The ornamental design for a wall bracket or the like, substantially as shown.

152,599
DESIGN FOR A WALL BRACKET OR THE LIKE
Peter J. Cronen, Minneapolis, Minn.
Application May 27, 1946, Serial No. 130,108
Term of patent 7 years
(Cl. D33—3)

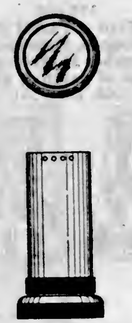
The ornamental design for a wall bracket or the like, substantially as shown.

152,600
DESIGN FOR A COMBINATION SAW AND CLEAVER
Paul F. Danielsen, San Marino, Calif.
Application February 10, 1948, Serial No. 144,384
Term of patent 14 years
(Cl. D22—3)



The ornamental design for a combination saw and cleaver, as shown.

152,601
DESIGN FOR A COMBINATION SALT AND PEPPER SHAKER
Marian S. Dillon, Youngstown, Ohio
Application August 15, 1946, Serial No. 132,553
Term of patent 3½ years
(Cl. D44—22)



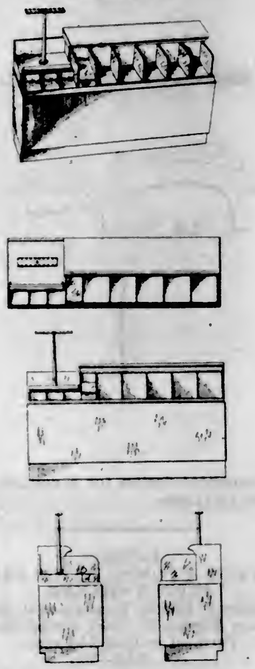
The ornamental design for a combination salt and pepper shaker, as shown.

152,602
DESIGN FOR BABY PANTIES

152,604
DESIGN FOR A CONTAINER FABRIC AND

152,606
DESIGN FOR A PERFUME BOTTLE

152,602
DESIGN FOR A DISPLAY FIXTURE
Edwin C. Dimling, Flushing, N. Y., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y., a corporation of New York
Application July 27, 1946, Serial No. 132,012
Term of patent 14 years
(Cl. D60—9)



The ornamental design for a display fixture, substantially as shown.

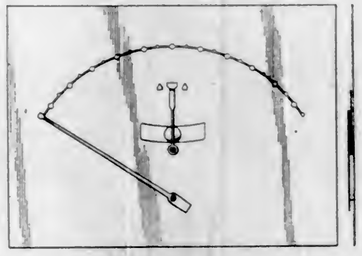
152,603
DESIGN FOR A PLAITED SKIRT
Ernest Donath, Brookline, Mass.
Application September 14, 1948, Serial No. 148,581
Term of patent 7 years
(Cl. D2—26)

The ornamental design for a plaited skirt, as shown.

152,604
DESIGN FOR A COMBINED EARRING AND PERFUME CONTAINER
Pasquale William Fanelli, Brooklyn, N. Y.
Application February 6, 1948, Serial No. 144,332
Term of patent 3½ years
(Cl. D45—9)

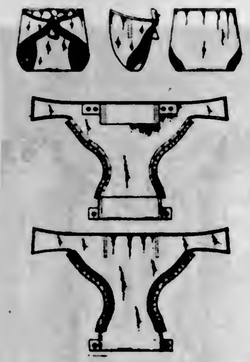
The ornamental design for a combined earring and perfume container, substantially as shown.

152,605
DESIGN FOR AN INSTRUMENT PANEL
Wendell S. Fletcher, South Pasadena, Calif.
Application January 25, 1946, Serial No. 125,967
Term of patent 14 years
(Cl. D52—1)



The ornamental design for an instrument panel, as shown.

152,606
DESIGN FOR BABY PANTIES
Esther Foreman, Evansville, Ind.
Application February 4, 1948, Serial No. 144,272
Term of patent 3½ years
(Cl. D3—17)

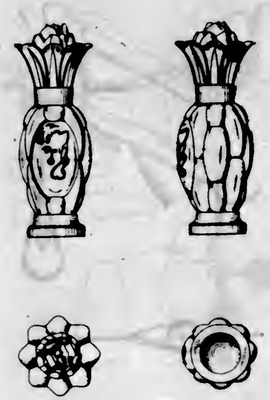


The ornamental design for baby panties, substantially as shown.

152,607
DESIGN FOR A SANDING BLOCK
Louis Gerlinger, Salem, Oreg.
Application August 11, 1948, Serial No. 148,050
Term of patent 3½ years
(Cl. D37—1)

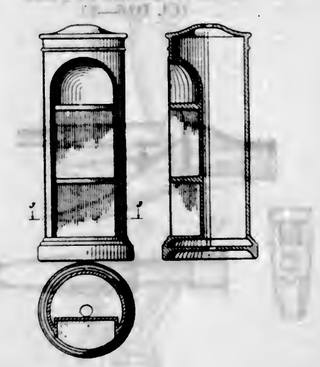
The ornamental design for a sanding block, as shown.

152,608
DESIGN FOR A PERFUME BOTTLE
Dorothy Gibson, New York, N. Y., assignor to Dorothy Gibson Perfumes Corp., New York, N. Y., a corporation of New York
Application September 3, 1947, Serial No. 141,180
Term of patent 3½ years
(Cl. D58—9)



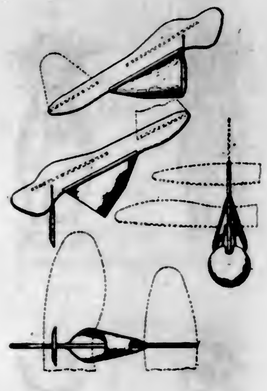
The ornamental design for a perfume bottle, as shown.

152,609
DESIGN FOR A LAMP BASE
Harry Gogolick, Brooklyn, and Elliott Meyer, New York, N. Y.
Application July 29, 1946, Serial No. 132,082
Term of patent 3½ years
(Cl. D48—20)



The ornamental design for a lamp base, as shown.

152,610
DESIGN FOR A TOY AIRPLANE
Edward H. Green, Chicago, Ill.
Application August 9, 1946, Serial No. 132,395
Term of patent 3½ years
(Cl. D34—15)



The ornamental design for a toy airplane, substantially as shown and described.

152,611
DESIGN FOR A COMBINED NOZZLE AND CONTROL HANDLE FOR DRY CHEMICAL FIRE EXTINGUISHER
Arthur B. Guise and Theodore W. Johnson, Marinette, Wis., assignors to Ansul Chemical Company, Marinette, Wis., a corporation of Wisconsin
Application September 19, 1947, Serial No. 141,483
Term of patent 14 years
(Cl. D16—2)

The ornamental design for a combined nozzle and control handle for dry chemical fire extinguisher, as shown.

152,612
DESIGN FOR A PORTABLE HAND FIRE EXTINGUISHER
Arthur B. Guise and Theodore W. Johnson, Marinette, Wis., assignors to Ansul Chemical Company, Marinette, Wis., a corporation of Wisconsin
Application September 19, 1947, Serial No. 141,484
Term of patent 14 years
(Cl. D16—2)

The ornamental design for a portable hand fire extinguisher, as shown.

152,613
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Eugene Irving Hanson, New York, N. Y.
Application January 28, 1948, Serial No. 144,116
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a textile fabric or similar article, as shown and described.

152,614
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
Eugene Irving Hanson, New York, N. Y.
Application January 28, 1948, Serial No. 144,117
Term of patent 3½ years
(Cl. D92—1)

The ornamental design for a textile fabric or similar article, as shown and described.

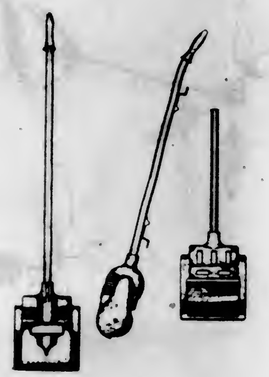
152,615
DESIGN FOR A WEATHER VANE
Otis D. Harbert, Covina, Calif.
Application November 13, 1946, Serial No. 134,764
Term of patent 14 years
(Cl. D52—9)

The ornamental design for a weather vane, substantially as shown and described.

152,616
DESIGN FOR A FLOOR WAXER
Emmett C. Hartley, Euclid, Ohio, assignor to The Sherwin-Williams Company, Cleveland, Ohio, a corporation of Ohio
Application June 18, 1947, Serial No. 139,785
Term of patent 14 years
(Cl. D9—2)

The ornamental design for a floor waxer, as shown and described.

152,617
DESIGN FOR A FLOOR POLISHING MACHINE
William E. Holt, Oakland, Calif.
Application June 11, 1947, Serial No. 139,568
Term of patent 14 years
(Cl. D9—2)

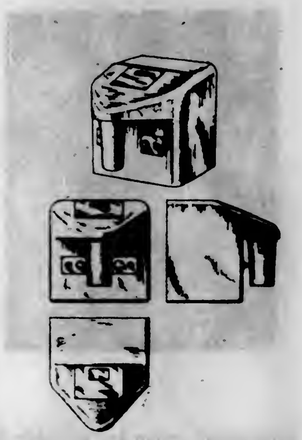


The ornamental design for a floor polishing machine, as shown.

152,618
DESIGN FOR A SOAP HOLDER
Everett L. Kibler, Pittsburgh, Pa.
Application July 31, 1946, Serial No. 132,131
Term of patent 14 years
(Cl. D4—8)

The ornamental design for a soap holder, as shown.

152,619
DESIGN FOR A MOISTURE METER
Charles N. Kimball, Johnson County, Kans., William R. Lewis, Clay County, Mo., and Herman A. Streeker, Wyandotte County, Kans., assignors to C. J. Patterson Company, Kansas City, Mo., a corporation of Missouri
Application May 17, 1947, Serial No. 139,098
Term of patent 14 years
(Cl. D52—1)



The ornamental design for a moisture meter, substantially as shown.

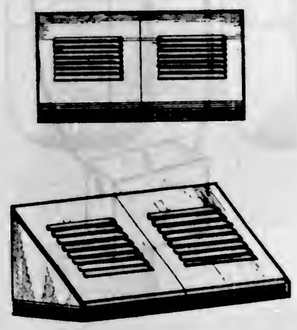
152,620
DESIGN FOR A FINGER RING
Felix P. Kinsley, St. Louis, Mo.
Application June 25, 1948, Serial No. 147,206
Term of patent 14 years
(Cl. D45—10)

The ornamental design for a finger ring, as shown.

152,621
DESIGN FOR AN APPLIANCE BRACKET
Herbert J. Kline, Jackson, Mich., assignor, by mesne assignments, to National Die Casting Company, Chicago, Ill., a corporation of Illinois
Application June 28, 1946, Serial No. 131,129
Term of patent 14 years
(Cl. D44—29)

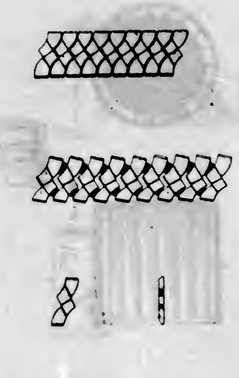
The ornamental design for an appliance bracket, as shown.

152,622
DESIGN FOR AN AWNING
Daniel D. Kobbe, Houston, Tex., assignor to Aluminum Arts, Inc., Houston, Tex., a corporation of Texas
Application January 3, 1947, Serial No. 135,924
Term of patent 14 years
(Cl. D21—6)



The ornamental design for an awning, as shown.

152,623
DESIGN FOR AN EXPANSIBLE CHAIN FOR A BRACELET OR SIMILAR ARTICLE
Arthur W. Koppell, Upper Nyack, N. Y., assignor to Jay Kel Inc., New York, N. Y., a corporation of New York
Application August 19, 1948, Serial No. 148,184
Term of patent 3½ years
(Cl. D45—4)



The ornamental design for an expansible chain for a bracelet or similar article, as shown.

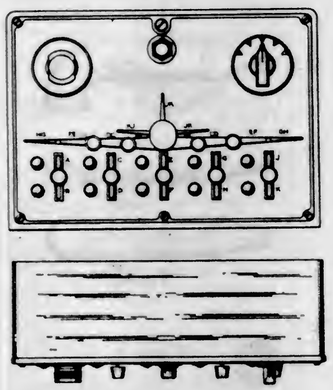
152,624
DESIGN FOR A COMBINED CIGARETTE HOLDER AND ASH RECEIVER
Henry Krohnengold, Bronx, N. Y.
Application September 10, 1946, Serial No. 133,232
Term of patent 7 years
(Cl. D85—8)

The ornamental design for a combined cigarette holder and ash receiver, as shown.

152,625
DESIGN FOR A CONTAINER CAP
Joel Kreeman, Whitestone, N. Y., assignor to Victor Industries Corporation, a corporation of New York
Application September 18, 1947, Serial No. 141,466
Term of patent 14 years
(Cl. D58—26)

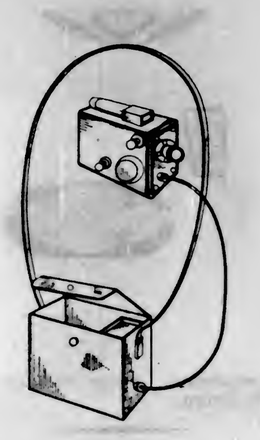
The ornamental design for a container cap, substantially as shown and described.

152,626
DESIGN FOR A PANEL FOR AN ELECTRONIC TIMER OR SIMILAR ARTICLE
John William Lauricella, Passaic, N. J.
Application November 7, 1946, Serial No. 134,572
Term of patent 14 years
(Cl. D26—1)



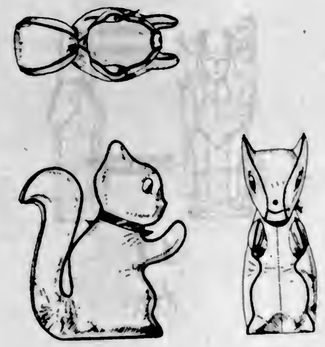
The ornamental design for a panel for an electronic timer or similar article, as shown and described.

152,627
DESIGN FOR A COMBINATION PORTABLE ELECTRIC MOTION-PICTURE CAMERA AND BATTERY CASE
Constantin P. Lant, New York, N. Y.
Application December 14, 1946, Serial No. 135,525
Term of patent 7 years
(Cl. D61—1)



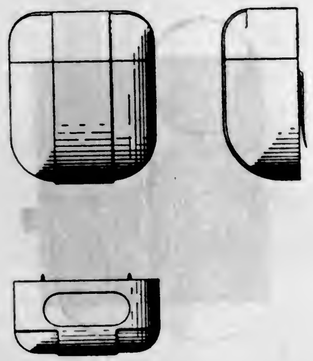
The ornamental design for a combination portable electric motion-picture camera and battery case, as shown.

152,628
DESIGN FOR A TOY ANIMAL FIGURE
Morris C. Levich, New York, N. Y.
Application May 1, 1948, Serial No. 144,127
Term of patent 14 years
(Cl. D34—2)



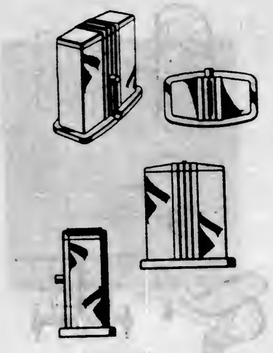
The ornamental design for a toy animal figure, substantially as shown.

152,629
DESIGN FOR A PIN-UP ASH RECEIVER
Henry W. Louis, Cleveland, Ohio
Application November 6, 1946, Serial No. 134,563
Term of patent 3½ years
(Cl. D65—2)



The ornamental design for a pin-up ash receiver, as shown.

152,630
DESIGN FOR A NEEDLE DISPENSER
Patrick T. Marinack, Glendale, and Isaac Preston Dooley, Burbank, Calif.
Application July 8, 1946, Serial No. 131,364
Term of patent 3½ years
(Cl. D58—12)

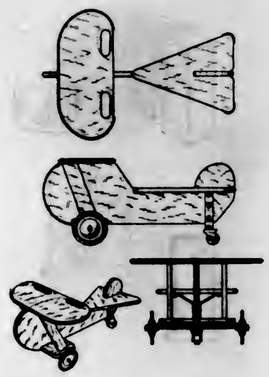


The ornamental design for a needle dispenser, substantially as shown and described.

152,631
DESIGN FOR A HEATER PLUG
Augustine H. Massey, Stratford, Conn.
Application March 27, 1947, Serial No. 137,955
Term of patent 3½ years
(Cl. D26—1)

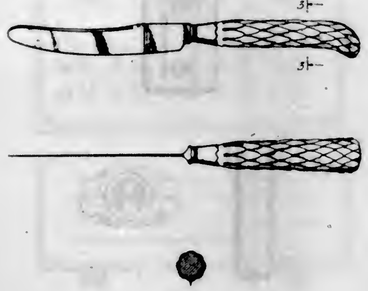
The ornamental design for a heater plug, substantially as shown.

152,632
DESIGN FOR A TOY
Nellson K. Masten, Seattle, Wash.
Application May 12, 1947, Serial No. 133,979
Term of patent 14 years
(Cl. D34—15)



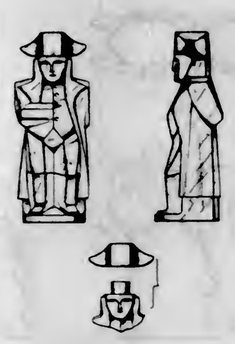
The ornamental design for a toy, as shown and described.

152,633
DESIGN FOR A KNIFE
Syrie Maugham, New York, N. Y.
Application December 13, 1947, Serial No. 143,126
Term of patent 3½ years
(Cl. D22—3)



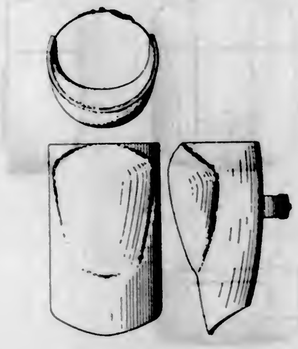
The ornamental design for a knife, as shown.

152,634
DESIGN FOR A BOTTLE
Jean Bourges Mayfield, New York, N. Y., assignor to Joseph S. Lindemann, New York, N. Y.
Application November 25, 1946, Serial No. 135,069
Term of patent 14 years
(Cl. D52—9)



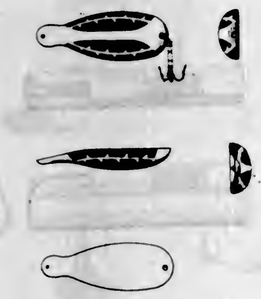
The ornamental design for a bottle, substantially as shown.

152,635
DESIGN FOR A KNEE PAD
Bert Mechur and Walter Riedler, New York, N. Y.
Application July 26, 1947, Serial No. 140,552
Term of patent 14 years
(Cl. D8—26)



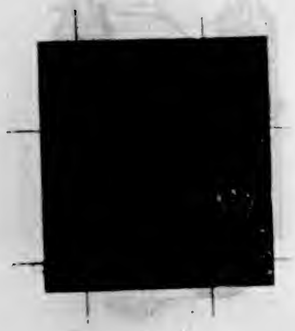
The ornamental design for a knee pad, as shown.

152,636
DESIGN FOR A FISHING LURE
Thomas W. Messick, Matteon, Ill.
Application June 5, 1947, Serial No. 139,461
Term of patent 3½ years
(Cl. D31—4)



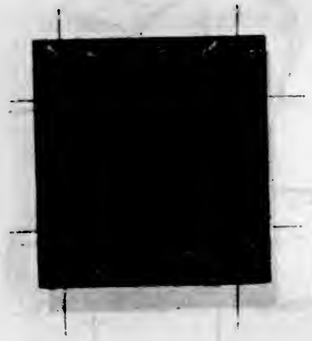
The ornamental design for a fishing lure, substantially as shown and described.

152,637
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application February 28, 1948, Serial No. 144,805
Term of patent 3½ years
(Cl. D92—1)



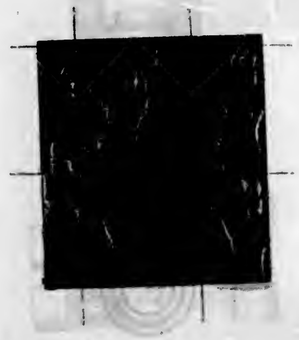
The ornamental design for a textile fabric, substantially as shown and described.

152,638
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application February 28, 1948, Serial No. 144,806
Term of patent 3½ years
(Cl. D92—1)



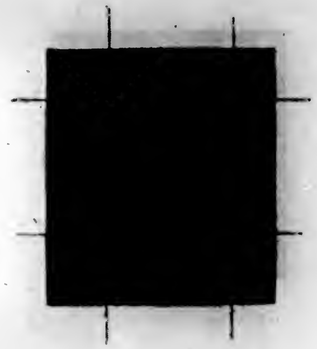
The ornamental design for a textile fabric, substantially as shown and described.

152,639
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application February 28, 1948, Serial No. 144,807
Term of patent 3½ years
(Cl. D92—1)



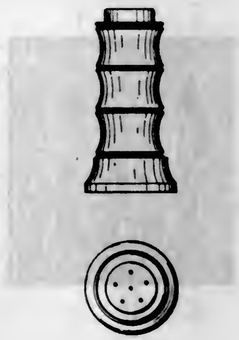
The ornamental design for a textile fabric, substantially as shown and described.

152,640
DESIGN FOR A TEXTILE FABRIC
Walter Mitschke, North Bergen, N. J., assignor to Classic Weaving Corporation, North Bergen, N. J.
Application February 28, 1948, Serial No. 144,868
Term of patent 3½ years
(Cl. D92—1)



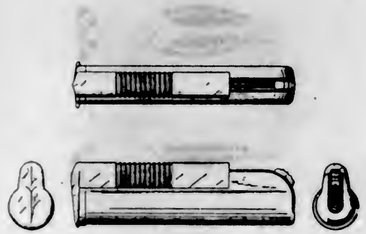
The ornamental design for a textile fabric, substantially as shown and described.

152,641
DESIGN FOR A CONDIMENT SHAKER
Henry E. Musselman and William H. Buck, Kalamazoo, Mich.
Application June 5, 1947, Serial No. 139,468
Term of patent 7 years
(Cl. D44—22)



The ornamental design for a condiment shaker, as shown.

152,642
DESIGN FOR A LIGHTING DEVICE
Jerome Nathan, New York, N. Y., and James C. Haberman, Springfield, Mass.
Application April 5, 1947, Serial No. 138,170
Term of patent 3½ years
(Cl. D48—37)



The ornamental design for a lighting device, as shown.

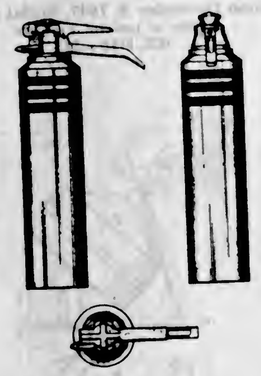
152,643
DESIGN FOR A LADY'S STOCKING
William Nebel, Charlotte, N. C.
Application December 24, 1947, Serial No. 143,232
Term of patent 14 years
(Cl. D47—7)

The ornamental design for a lady's stocking, substantially as shown and described.

152,644
DESIGN FOR A LADY'S STOCKING
William Nebel, Charlotte, N. C.
Application December 24, 1947, Serial No. 143,233
Term of patent 14 years
(Cl. D47—7)

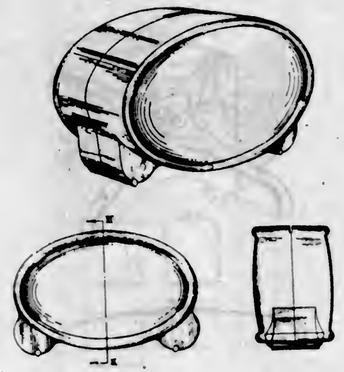
The ornamental design for a lady's stocking, substantially as shown and described.

152,645
DESIGN FOR A FIRE EXTINGUISHER
Ignatius Nurkiewicz, Brooklyn, N. Y., assignor to Step-Fire Inc., a corporation of New York
Application February 19, 1948, Serial No. 144,602
Term of patent 14 years
(Cl. D16—2)



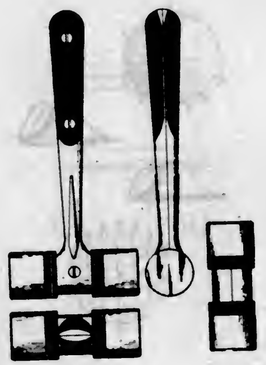
The ornamental design for a fire extinguisher, substantially as shown.

152,646
DESIGN FOR A COIN BANK
Thomas E. Orr, Lakewood, Ohio
Application May 9, 1947, Serial No. 138,933
Term of patent 14 years
(Cl. D34—11)



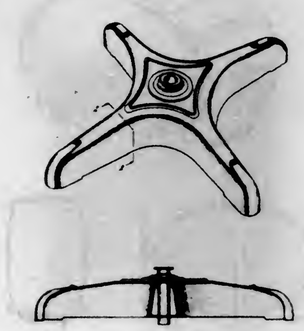
The ornamental design for a coin bank, substantially as shown.

152,647
DESIGN FOR A MALLET
George Pavlinetz, Carteret, N. J.
Application December 11, 1947, Serial No. 143,099
Term of patent 3½ years
(Cl. D93—4)



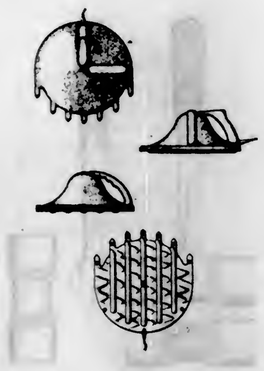
The ornamental design for a mallet, as shown.

152,648
DESIGN FOR A BASE OR PEDESTAL FOR CHAIRS
Henry A. Puncheon, Sturgis, Mich., assignor to Harter Corporation, Sturgis, Mich., a corporation of Michigan
Application January 16, 1947, Serial No. 136,185
Term of patent 14 years
(Cl. D15—2)



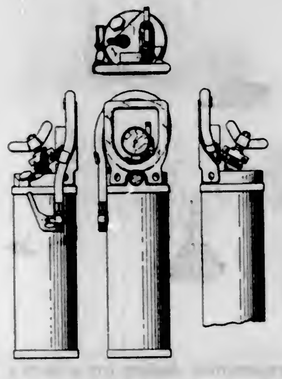
The ornamental design for a base or pedestal for chairs, as shown.

152,649
DESIGN FOR A ROTARY HEDGE CLIPPER
Rodney W. Perdew, Los Angeles, Calif.
Application July 16, 1947, Serial No. 140,209
Term of patent 14 years
(Cl. D22—4)



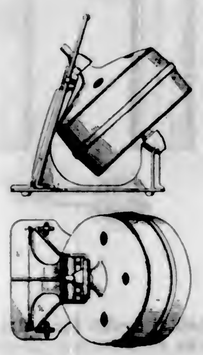
The ornamental design for a rotary hedge clipper, as shown.

152,650
DESIGN FOR A FIRE EXTINGUISHER
Albert Brown Phister, Fort Thomas, Ky., assignor to The Phister Mfg. Co., Cincinnati, Ohio, a corporation of Delaware
Application December 30, 1947, Serial No. 143,451
Term of patent 14 years
(Cl. D16—2)



The ornamental design for a fire extinguisher, substantially as shown.

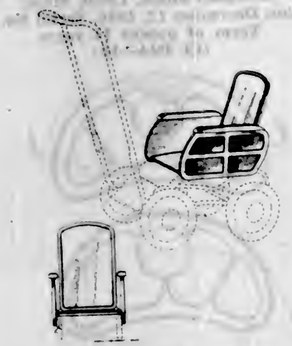
152,651
DESIGN FOR A SEWER CLEANING MACHINE
Joseph J. Rausch, Berwyn, Ill., assignor to Howard T. O'Brien, doing business as O'Brien Manufacturing Co., Chicago, Ill., a corporation of Illinois
Application December 6, 1947, Serial No. 143,012
Term of patent 7 years
(Cl. D49—1)



152,651—Continued

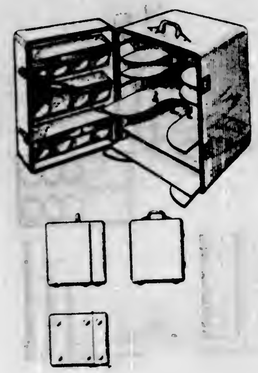
The ornamental design for a sewer cleaning machine, substantially as shown.

152,652
DESIGN FOR A STROLLER BODY
Frederick T. Regan, Brookville, Mass., assignor to Hedstrom-Union Company, Fitchburg, Mass., a corporation of Massachusetts
Application April 22, 1948, Serial No. 145,893
Term of patent 14 years
(Cl. D14—14)



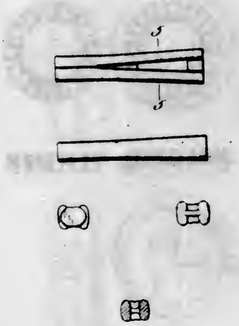
The ornamental design for a stroller body, as shown and described.

152,653
DESIGN FOR A LADY'S HAT AND SHOE CASE
Nina D. Rinehart, Seattle, Wash.
Application November 5, 1946, Serial No. 134,528
Term of patent 14 years
(Cl. D87—5)



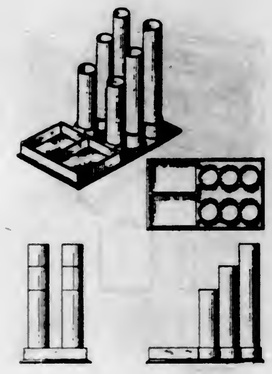
The ornamental design for a lady's hat and shoe case, as shown and described.

152,654
DESIGN FOR A HANDLE FOR A BRUSH OR SIMILAR ARTICLE
Anthony Rodriquez, Westfield, Mass.
Application January 8, 1947, Serial No. 135,999
Term of patent 14 years
(Cl. D9—2)



The ornamental design for a handle for a brush or similar article, as shown.

152,655
DESIGN FOR A FLORIST'S WIRE HOLDER
Hubert S. Rossell, Redwood City, Calif.
Application November 1, 1946, Serial No. 134,422
Term of patent 14 years
(Cl. D35—3)



The ornamental design for a florist's wire holder, substantially as shown.

152,656
DESIGN FOR AN ASH TRAY
Arnold J. Schwisow, Hopkins, Minn.
Application May 9, 1946, Serial No. 129,500
Term of patent 7 years
(Cl. D85—2)

The ornamental design for an ash tray, as shown.

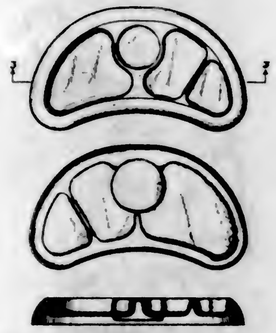
152,657
DESIGN FOR A FISH LURE
Stephan J. Simon, Detroit, Mich.
Application March 23, 1948, Serial No. 145,280
Term of patent 14 years
(Cl. D31—4)

The ornamental design for a fish lure, as shown.

152,658
DESIGN FOR A WRIST WATCH BAND
Morris Sklar, Brooklyn, N. Y.
Application January 17, 1948, Serial No. 143,856
Term of patent 3½ years
(Cl. D45—4)

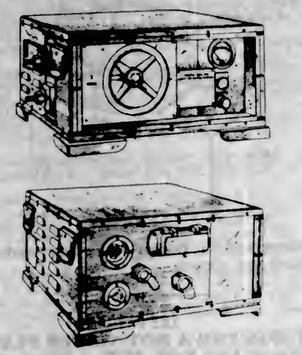
The ornamental design for a wrist watch band, as shown.

152,659
DESIGN FOR A BABY'S FOOD TRAY OR ARTICLE OF ANALOGOUS NATURE
Abraham Sloan, Lynn, Mass.
Application December 12, 1946, Serial No. 135,451
Term of patent 14 years
(Cl. D44—10)



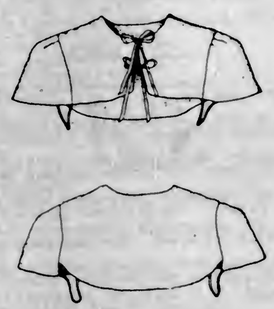
The ornamental design for a baby's food tray or article of analogous nature, substantially as shown.

152,660
DESIGN FOR AN ELECTRICAL HEATING AND WELDING TRANSFORMER
Harry B. Smith, Westfield, and George A. Dolan, East Orange, N. J.
Application July 1, 1947, Serial No. 140,052
Term of patent 14 years
(Cl. D26—15)



The ornamental design for an electrical heating and welding transformer, as shown.

152,661
DESIGN FOR A BED JACKET
Margot E. Smith, Minneapolis, Minn., assignor to Kickernick, Inc., Minneapolis, Minn., a corporation of Minnesota
Application April 19, 1947, Serial No. 138,496
Term of patent 7 years
(Cl. D3—3)

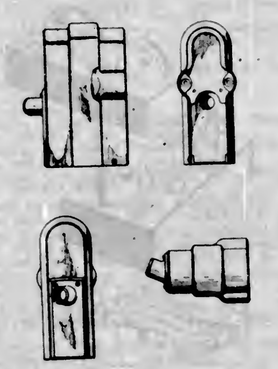


The ornamental design for a bed jacket, as shown.

152,662
DESIGN FOR AN OWL FIGURINE
Ralph C. Smith, Valparaiso, Ind.
Application April 6, 1946, Serial No. 128,351
Term of patent 14 years
(Cl. D29—23)

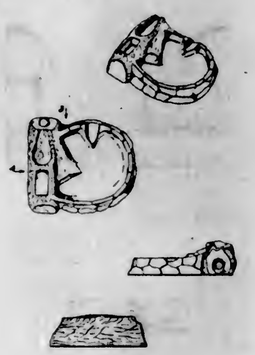
The ornamental design for an owl figurine, as shown.

152,663
DESIGN FOR A VEHICLE SIGNAL CASING
Mike Steigel, Rapides Parish, near Alexandria, La.
Application January 9, 1948, Serial No. 143,604
Term of patent 7 years
(Cl. D72—1)



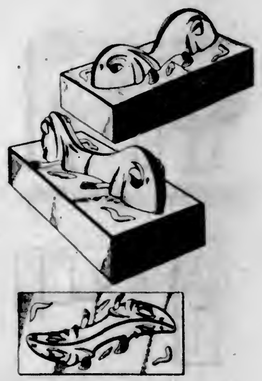
The ornamental design for a vehicle signal casing, as shown.

152,664
DESIGN FOR AN ASH TRAY
Norman K. Tschirley, Los Angeles, Calif.
Application May 12, 1948, Serial No. 146,311
Term of patent 3½ years
(Cl. D85—2)



The ornamental design for an ash tray, as shown.

152,665
DESIGN FOR A TISSUE SHEET DISPENSER
Alexander C. H. Weiss, Chicago, Ill.
Application July 31, 1946, Serial No. 132,157
Term of patent 7 years
(Cl. D58—12)

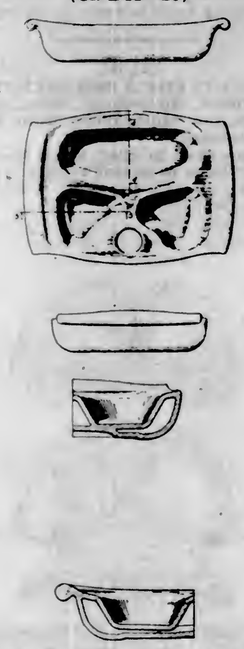


The ornamental design for a tissue sheet dispenser, as shown.

152,666
DESIGN FOR A BUS CART OR SIMILAR ARTICLE
William E. Williams, Milwaukee, Wis.
Application April 10, 1948, Serial No. 145,639
Term of patent 14 years
(Cl. D14—3)

The ornamental design for a bus cart or similar article, as shown.

152,667
DESIGN FOR A HOT-WATER PLATE
Eva S. Zeisel, New York, N. Y., assignor to China & Glass Distributors, Inc., New York, N. Y., a corporation of New York
Application April 18, 1947, Serial No. 138,470
Term of patent 7 years
(Cl. D44—10)



The ornamental design for a hot-water plate, substantially as shown.

CLASSIFIED LIST OF TRADE-MARKS REGISTERED

CLASS 1

Carbon black. Eastern Carbon Black Company. 215,460, July 20, 1926. Republished Feb. 8.
Carbon-blacks. Peerless Carbon Black Company, Limited. 31,818, re-renewed July 19, 1948. O. G. Feb. 8.
Clay. Prepared. The Denver Fire Clay Company. 239,739, Mar. 13, 1928. Republished Feb. 8.
Coal. Clover Splint Coal Company. 251,028, renewed Dec. 25, 1948. O. G. Feb. 8.
Coal. Traux-Traer Coal Company. 378,134, May 28, 1940. Republished Feb. 8.
Coal. Traux-Traer Coal Company. 380,644, Aug. 27, 1940. Republished Feb. 8.
Coal and coke. Vinton Coal & Coke Company. 506,531, Feb. 8; Serial No. 541,749, published Oct. 26, 1948.
Earth, Diatomaceous. Chick Bed Company. 506,475, Feb. 8; Serial No. 533,442, published Nov. 2, 1948.
Flax fiber. F. E. Smith. 442,036, Feb. 8; Serial No. 515,200, published Oct. 26, 1948.
Leather, Shoe-upper, glove leather, and coat leather. The Sawyer Tanning Company. 254,150, renewed Mar. 12, 1949. O. G. Feb. 8.
Molding compound. Lubricant Laboratories Inc. 258,749, July 16, 1929. Republished Feb. 8.
Resins, Thermoplastic. United States Rubber Company. 506,426, Feb. 8; Serial No. 526,644, published Nov. 2, 1948.
Seed, Alfalfa. Northrup, King & Co. 506,439, Feb. 8; Serial No. 528,307, published Nov. 2, 1948.
Seed corn. De Kalb Agricultural Association. 337,915, Aug. 25, 1936. Republished Feb. 8.
Seed corn, Hybrid. Pioneer Hi-Bred Corn Company. 434,971, Dec. 9, 1947. Republished Feb. 8.
Seed grains. Terminal Grain Company. 506,434, Feb. 8; Serial No. 527,622, published Oct. 26, 1948.
Seed, Lawn. Kaufmann Department Stores, Inc. 236,179, Dec. 6, 1927. Republished Feb. 8.
Seed, Lawn-grass. J. H. Ostberg. 252,131, renewed Jan. 22, 1949. O. G. Feb. 8.
Seed, Mixed lawn. Ferry-Morse Seed Co. 434,952, Dec. 9, 1947. Republished Feb. 8.
Seeds. The Stanford Seed Company, Inc. 506,510, Feb. 8; Serial No. 538,568, published Oct. 26, 1948.
Seeds, Grass. Northrup, King & Co. 506,415, Feb. 8; Serial No. 522,499, published Oct. 26, 1948.
Seeds, Lawn-grass and field. Whitney-Eckstein Seed Co. 250,234–5, renewed Dec. 4, 1948. O. G. Feb. 8.
Seeds, Lawn grass and field. Whitney-Eckstein Seed Co. 251,965, renewed Jan. 22, 1949. O. G. Feb. 8.
Seeds, Lawn-grass and field. Whitney-Eckstein Seed Co. 254,072, renewed Mar. 12, 1949. O. G. Feb. 8.
Sponges. S. M. Arnold, Inc. 506,547, Feb. 8; Serial No. 543,406, published Oct. 26, 1948.
Styrene, Polymerized. The Dow Chemical Company. 362,877, Dec. 6, 1938. Republished Feb. 8.
Vinyl polymers. E. I. du Pont de Nemours and Company. 506,548, Feb. 8; Serial No. 543,576, published Oct. 26, 1948.
Wool tops. Harris Research Laboratories. 506,523, Feb. 8; Serial No. 540,996, published Sept. 21, 1948.

CLASS 2

Cabinets, Dispensing. Northern Paper Mills. 363,891, Jan. 10, 1939. Republished Feb. 8.
Bags, Paper. Osborn Paper Company. 206,408, Dec. 1, 1925. Republished Feb. 8.
Bags, Paper. The Union Bag & Paper Company. 71,217, re-renewed Nov. 10, 1948. O. G. Feb. 8.
Containers for the storage of liquids and gas. A. O. Smith Corporation. 506,436, Feb. 8; Serial No. 527,760, published Nov. 2, 1948.
Drums and tanks, Steel. Rheem Manufacturing Company. 264,137, Nov. 19, 1929. Republished Feb. 8.
Tanks and combination metal and concrete tanks, Metal. Hammond Iron Works. 442,042, Feb. 8; Serial No. 515,833, published Nov. 2, 1948.
Tanks, Storage. The Heil Co. 506,507, Feb. 8; Serial No. 537,690, published Nov. 2, 1948.
Trays. Stevens & Thompson Paper Co. 200,293, June 30, 1925. Republished Feb. 8.
Trays, Paper. Stevens & Thompson Paper Co. 363,178, Dec. 13, 1938. Republished Feb. 8.

CLASS 3

Billfolds, pocket books, purses, and wallets. Nash Inc. 436,060, Jan. 20, 1948. Republished Feb. 8.

CLASS 4

Cleaner and preparation for cleaning painted, varnished, and enameled surfaces, etc., Paint. The Patent Cereals Co. 254,267, renewed Mar. 19, 1949. O. G. Feb. 8.
Cleaner, Soapless. Henry B. Heller Corp. 432,645, Sept. 9, 1947. Republished Feb. 8.
Cleaner, Sudsing cleanser, and detergent. The Hewitt Soap Company, Inc. 506,561, Feb. 8; Serial No. 545,741, published Oct. 26, 1948.
Cleaning compound. The M. Werk Company. 506,577–8, Feb. 8; Serial Nos. 552,297–8, published Oct. 19, 1948.
Cleanser. J. W. Bullen. 296,324, Aug. 2, 1932. Republished Feb. 8.
Detergent, Inorganic. Diamond Alkali Company. 506,585, Feb. 8; Serial No. 561,893, published Nov. 2, 1948.
Detergent, Liquid. Haas-Miller Corporation. 422,759, Aug. 13, 1946. Republished Feb. 8.
Detergent, Synthetic. K. C. Working Chemical Co. 442,013, Feb. 8; Serial No. 509,257, published Sept. 2, 1947.
Detergent, Wool. Botany Worsted Mills. 442,021, Feb. 8; Serial No. 511,262, published Sept. 2, 1947.
Detergents. Detergents, Inc. 506,398, Feb. 8; Serial No. 511,799, published Oct. 19, 1948.
Detergents. General Dyestuff Corporation. 506,402, Feb. 8; Serial No. 514,028, published Nov. 2, 1948.
Dressing, Waterproof auto top. R. W. Bowler. 248,515, renewed Oct. 23, 1948. O. G. Feb. 8.
Liquid compounds, soaps, and powders. J. W. Bullen. 414,636, June 19, 1945. Republished Feb. 8.
Paste, Saponaceous. Lambert Pharmacal Company. 239,895, Mar. 13, 1928. Republished Feb. 8.
Sanding kits. Rockwell Manufacturing Company. 506,595, Feb. 8; Serial No. 534,352.
Shaving cream. The Norwich Pharmacal Company. 252,066, renewed Jan. 22, 1949. O. G. Feb. 8.
Soap. Haskins Brothers & Company. 254,780, renewed Apr. 2, 1949. O. G. Feb. 8.
Soap. Murphy Laboratories, Inc. 506,574, Feb. 8; Serial No. 549,827, published Oct. 26, 1948.
Soap. The Palmolive-Peet Company. 256,069, renewed May 7, 1949. O. G. Feb. 8.
Soap. J. Wanamaker. 144,967, July 19, 1921. Republished Feb. 8.
Soap, cleaning compounds, compounds for removing stains. E. E. Van Allsburg. 442,068, Feb. 8; Serial No. 523,630, published Oct. 26, 1948.
Soap, Imported French castile. James P. Smith & Company. 206,138, Nov. 24, 1925. Republished Feb. 8.
Soap, Toilet. Lentheric, Incorporated. 253,209, renewed Feb. 19, 1949. O. G. Feb. 8.
Soaps, Toilet. Les Parfums de Dana, Inc. 506,564, Feb. 8; Serial No. 560,906, published Oct. 26, 1948.
Steelwool and steel shavings. Ronuk, Limited. 506,583, Feb. 8; Serial No. 559,182, published Oct. 19, 1948.

CLASS 6

Accelerators for rubber vulcanization. The Grasselli Chemical Company. 237,349, Jan. 10, 1928. Republished Feb. 8.
Agent, Softening and hygroscopic. Haas-Miller Corporation. 418,938, Jan. 15, 1946. Republished Feb. 8.
Analgesic balm, anethetic ointment, etc. Vitaminerals, Inc. 506,435, Feb. 8; Serial No. 527,630, published Sept. 14, 1948.
Anesthetizing, nerve blocking tablets, etc., Local. A. E. Smith. 506,430, Feb. 8; Serial No. 527,216, published Sept. 21, 1948.
Aqueous solution, Sterile. E. R. Squibb & Sons. 252,240, renewed Jan. 29, 1949. O. G. Feb. 8.
Biological immunogenic preparation. Sharpe & Dohme, Incorporated. 506,555, Feb. 8; Serial No. 544,122, published July 27, 1948.
Bleaching material, Laundry. Wallace & Tiernan Co., Inc. 237,527, Jan. 10, 1928. Republished Feb. 8.
Brake fluid. Porte Manufacturing Co. Inc. 442,071, Feb. 8; Serial No. 524,151, published Sept. 28, 1948.
Chemical agent, Hygroscopic. Haas-Miller Corporation. 351,158, Oct. 19, 1937. Republished Feb. 8.

Chemical compounds and compositions, Liquid and solid. Purecaine, Inc. 441,993, Feb. 8; Serial No. 492,788, published Nov. 2, 1948.
Chemical fire extinguishing composition. Michigan Chemical Corporation. 442,039, Feb. 8; Serial No. 515,506, published Oct. 4, 1948.
Chemical preparation. Carbide and Carbon Chemicals Corporation. 442,019, Feb. 8; Serial No. 510,935, published Oct. 19, 1948.
Chemical preparation. A. Ogint. 442,063, Feb. 8; Serial No. 521,677, published Oct. 5, 1948.
Chemicals. Celanese Corporation of America. 506,533, Feb. 8; Serial No. 541,810, published Sept. 21, 1948.
Chemicals for control of chlorination. Scholler Brothers, Inc. 506,421, Feb. 8; Serial No. 524,487, published Sept. 14, 1948.
Chemicals, Textile treatment. J. G. Nathanson. 506,442, Feb. 8; Serial No. 528,501, published Nov. 9, 1948.
Cologne. The Armand Company. 442,026, Feb. 8; Serial No. 512,227, published Nov. 2, 1948.
Cologne. Kay Daumit, Inc. 442,008, Feb. 8; Serial No. 506,739, published Oct. 26, 1948.
Cologne. R. Hudnut. 506,465–6, Feb. 8; Serial Nos. 532,225–6, published Sept. 14, 1948.
Cologne. The Andrew Jergens Company. 506,481, Feb. 8; Serial No. 534,535, published Oct. 26, 1948.
Compound used for fulling and scouring woolen and worsted goods, and general textile scouring. Haas-Miller Corporation. 378,574, June 11, 1940. Republished Feb. 8.

Cosmetic sets. Avon Products, Inc. 442,014, Feb. 8; Serial No. 509,557, published Oct. 5, 1948.
Cough balsam. The Pinex Company. 394,959, May 5, 1942. Republished Feb. 8.
Cough syrup. H. Coutinho. 506,570, Feb. 8; Serial No. 548,805, published Sept. 14, 1948.
Cough syrup, chest rub, laxative, etc. The Pinex Company. 423,766, Sept. 10, 1946. Republished Feb. 8.
Cream, Face. The Andrew Jergens Company. 506,452, Feb. 8; Serial No. 530,613, published Sept. 28, 1948.
Cream-like substance, Medicated. Colorado Chemical Company. 506,471, Feb. 8; Serial No. 532,911, published Sept. 28, 1948.
Creams and cosmetic preparations, skin powders, lotions, etc. George A. Schmidt Company. 68,119, Mar. 10, 1908. Republished Feb. 8.
Creams, Face, astringents, skin fresheners, etc. L. S. Tibbetts. 442,060, Feb. 8; Serial No. 521,159, published Nov. 2, 1948.
Creams, liquids, pastes, powders, and solid substances, etc. The May Department Stores Company. 233,550, Oct. 4, 1927. Republished Feb. 8.
Disinfectant. J. W. Bullen. 128,948, Jan. 20, 1920. Republished Feb. 8.
Disinfectant and insecticide. J. W. Bullen. 300,192, Jan. 10, 1933. Republished Feb. 8.
Disinfectant, bactericide and deodorizer in solid form, etc. The Diversey Corporation. 506,417, Feb. 8; Serial No. 522,739, published Oct. 26, 1948.
Dispersed synthetic rubber. Haas-Miller Corporation. 424,742, Oct. 22, 1940. Republished Feb. 8.
Drugs, Household. Royal Souders, Inc. 506,391, Feb. 8; Serial No. 504,516, published Nov. 2, 1948.
Dyes and dyestuffs. General Dyestuff Corporation. 506,438, Feb. 8; Serial No. 528,268, published Nov. 2, 1948.
Emollient for use as a teat conditioner and as a soothing and cooling dressing for chapped teats, cuts and skin abrasions. Newell & Errecart. 442,051, Feb. 8; Serial No. 517,195, published Sept. 9, 1947.
Emulsifying, dispersing, solubilizing, and wetting agents. Atlas Powder Company. 506,552, Feb. 8; Serial No. 543,872, published Sept. 21, 1948.
Enzyme preparation. Wallerstein Company, Inc. 506,582, Feb. 8; Serial No. 557,878, published Oct. 12, 1948.
Explosive powder. The Hazard Powder Company. 67,233, Jan. 28, 1908. Republished Feb. 8.
Extract obtained from certain animal tissue combined with extracts of skin tissue obtained from certain species of reptiles. P. N. Zang. 442,004, Feb. 8; Serial No. 502,676, published Nov. 2, 1948.
Face cream. L. H. Howard. 254,711, renewed Mar. 26, 1949. O. G. Feb. 8.
Face creams, skin lotions, face powder, etc. L. H. Howard. 254,712, renewed Mar. 26, 1949. O. G. Feb. 8.
Face powder, lipstick, rouge, etc. Almay, Inc. 442,037, Feb. 8; Serial No. 515,355, published Sept. 21, 1948.
Face powder; preparations for treating the skin; toilet, cleansing, vanishing, and cold creams, etc. Daggett & Ramsdell. 506,568, Feb. 8; Serial No. 548,719, published Oct. 26, 1948.
Foot remedy, Athletic. E. T. Kelley. 442,044, Feb. 8; Serial No. 516,419, published Mar. 9, 1948.
Fuel, Lighter. Colibri Lighters Limited. 442,064, Feb. 8; Serial No. 521,722, published Sept. 28, 1948.
Hair and scalp cream preparations. M. L. Allen. 442,066, Feb. 8; Serial No. 522,298, published Nov. 2, 1948.
Hair tonic, face cream, talcum powder, etc. E. V. W. Blake. 506,562, Feb. 8; Serial No. 545,812, published Sept. 28, 1948.
Hydrocarbon black. The United Oil & Natural Gas Products Corporation. 192,125, Nov. 25, 1934. Republished Feb. 8.
Hydrolysed polysaccharide. Schenley Laboratories, Inc. 506,396, Feb. 8; Serial No. 509,250, published Nov. 2, 1948.
Insecticide. Mayfair Industries, Inc. 506,565, Feb. 8; Serial No. 547,861, published Oct. 26, 1948.
Insecticide and disinfectant. J. W. Bullen. 304,514, July 11, 1933. Republished Feb. 8.
Insecticides. Bostwick Laboratories, Inc. 506,569, Feb. 8; Serial No. 543,786, published Oct. 26, 1948.
Insecticides. Pacific Guano Company. 506,535, Feb. 8; Serial No. 541,957, published Oct. 26, 1948.
Insecticides and fungicides. The Sherwin-Williams Company. 506,558, Feb. 8; Serial No. 545,293, published Sept. 21, 1948.
Insecticides, chemicals, and chemical compositions. Michigan Chemical Corporation. 506,521, Feb. 8; Serial No. 540,850, published Nov. 2, 1948.
Insecticides, fungicides, herbicides, etc. The Sherwin-Williams Company. 442,073, Feb. 8; Serial No. 524,730, published Nov. 2, 1948.
Insecticides, rodenticides and fungicides. Paramount Pest Control Service. 442,041, Feb. 8; Serial No. 515,631, published Nov. 2, 1948.
Laxatives. G. L. Nicholas. 442,070, Feb. 8; Serial No. 523,979, published Nov. 2, 1948.
Liquid composition of matter employed as a treating and tanning agent. Robeson Process Company. 506,529, Feb. 8; Serial No. 541,462, published Oct. 26, 1948.
Liquid compounds. J. W. Bullen. 414,197, May 29, 1945. Republished Feb. 8.
Liquid-insecticide-spraying compositions. McCormick & Co., Incorporated. 237,373, Jan. 10, 1928. Republished Feb. 8.
Liquid preparation for relief of pain, etc. Mallon Chemical Corp. 433,260, Sept. 30, 1947. Republished Feb. 8.
Lithographic supply products. McKinley Litho Supply Company Inc. 442,024, Feb. 8; Serial No. 512,011, published Oct. 26, 1948.
Lotion, Hair, hair tonic, shampoo, etc. F. Ame. 506,541, Feb. 8; Serial No. 543,049, published Sept. 28, 1948.
Lotions or creams, Hand. J. E. Respondek. 506,490, Feb. 8; Serial No. 535,350, published Oct. 26, 1948.
Make-up preparation for the face, Liquid. Robbins, Anatole, Inc. 506,420, Feb. 8; Serial No. 524,284, published Nov. 2, 1948.
Make-up preparation for the face, perfume, cologne, etc. Robbins, Anatole, Inc. 506,419, Feb. 8; Serial No. 524,283, published Oct. 26, 1948.
Medical preparation. J. T. Adair. 246,297, renewed Sept. 4, 1948. O. G. Feb. 8.
Medicated preparation for treatment of the hair and scalp and the removal of dandruff. Lambert Pharmacal Company. 244,676, July 24, 1928. Republished Feb. 8.
Medicinal, antiseptic, and deodorant compound, tooth powder, tooth paste, etc. Lambert Pharmacal Company. 240,162, Mar. 20, 1928. Republished Feb. 8.
Medicinal compound for the treatment of colds, grippe, pleurisy, etc. C. C. Marshall. 324,597, May 21, 1935. Republished Feb. 8.
Medicinal preparation. Amphac Laboratories, Inc. 506,571, Feb. 8; Serial No. 549,106, published Nov. 2, 1948.
Medicinal preparations. Od Peacock Sultan Company. 506,489, Feb. 8; Serial No. 535,343, published Sept. 28, 1948.
Medicinal preparation containing mineral oil. J. B. Roerig and Company. 506,456, Feb. 8; Serial No. 531,154, published Sept. 21, 1948.
Medicinal preparation for the prevention of sea-sickness. Seajoy Company Limited. 506,443, Feb. 8; Serial No. 528,517, published Oct. 26, 1948.
Minerals for cattle, sheep, horses, etc. Moorman Manufacturing Company. 506,394, Feb. 8; Serial No. 508,542, published Oct. 26, 1948.
Mouth wash, and a lotion for the skin. F. N. Averill, Jr. 506,567, Feb. 8; Serial No. 548,561, published Oct. 26, 1948.
Nose drops, antipyretic tablets, vapor inhalant, etc. Medicine For Children, Incorporated. 506,486, Feb. 8; Serial No. 535,061, published Sept. 14, 1948.
Oil, Pine. Newport Industries, Inc. 506,554, Feb. 8; Serial No. 543,978, published Sept. 28, 1948.
Ointment, Solidified iodine. Vodol Company. 442,032, Feb. 8; Serial No. 513,859, published Nov. 2, 1948.
Perfume. L. H. Brownback. 442,052, Feb. 8; Serial No. 517,235, published Oct. 5, 1948.
Perfume, cologne, deodorant, etc. Consolidated Cosmetics. 506,538, Feb. 8; Serial No. 542,536, published Nov. 2, 1948.

Perfumes and essential oils. Van Ameringen-Haebler, Inc. 506,506, Feb. 8; Serial No. 537,378, published Sept. 28, 1948.
Perfumes and hair dye. Hijos De N. Lopez Caro. 442,053, Feb. 8; Serial No. 517,351, published Oct. 26, 1948.

Perfumes, colognes, toilet waters, etc. Lucien Lelong, Inc. 506,450, Feb. 8; Serial No. 530,209, published Oct. 26, 1948.
Perfumes, toilet water, face powder, etc. Lentheric, Incorporated. 252,215, renewed Jan. 29, 1949. O. G. Feb. 8.
Perfumes, toilet waters, rouge, etc. Lanselle Parfumeur S. A. E. L. 506,395, Feb. 8; Serial No. 509,222, published Nov. 2, 1948.
Pharmaceutical. Wallace & Tiernan Products, Incorporated. 506,517, Feb. 8; Serial No. 540,344, published Sept. 21, 1948.
Pharmaceutical preparation. Mead Johnson & Company. 506,404, Feb. 8; Serial No. 516,615, published Sept. 28, 1948.
Pharmaceutical preparation. Wm. P. Poythress & Company, Inc. 399,438, Jan. 5, 1943. Republished Feb. 8.
Pharmaceutical preparations. Hygienic Productions Inc. 506,566, Feb. 8; Serial No. 548,259, published Nov. 2, 1948.
Photographic developer. Mallinckrodt Chemical Works. 506,416, Feb. 8; Serial No. 522,522, published July 6, 1948.
Pills, tonics, ointments, etc. Arthur Peter & Co. 32,800, re-renewed May 2, 1949. O. G. Feb. 8.
Poisoned raisin and barley mixture. B. G. O'Neill. 397,577, Sept. 8, 1942. Republished Feb. 8.
Powder cakes, Toilet, rouge, lipsticks, etc. The Napier Company. 506,522, Feb. 8; Serial No. 540,852, published Oct. 26, 1948.
Preparation containing vitamin B1, tricalcium phosphate, calcium glycerophosphate, etc. Rhodes Pharmacal Co., Inc. 506,390, Feb. 8; Serial No. 500,826, published Oct. 25, 1948.
Preparation for removing scale, corrosion, and grease from boilers. The Liverpool Borax Co., Ltd. 68,586, Apr. 21, 1908. Republished Feb. 8.
Preparations for the hair and scalp. G. D. Coleman. 506,573, Feb. 8; Serial No. 549,421, published Sept. 14, 1948.
Preparation for the prevention and treatment of screw-worm infestation in livestock. Florida Chemical Industries, Inc. 412,115, Feb. 20, 1945. Republished Feb. 8.
Preparation for the treatment of bovine keratitis. R. E. Parrish. 416,764, Sept. 25, 1945.
Preparation for use in the elimination of worms in animals and poultry. Florida Chemical Industries, Inc. 409,843, Oct. 24, 1944. Republished Feb. 8.
Preparation to be taken for relieving discomfort of gastric flatulence. Ketone Laboratories, Inc. 506,553, Feb. 8; Serial No. 543,938, published Oct. 5, 1948.
Preparation used in the treatment of neuralgia and as a febrifuge. G. L. Guillevic. 248,272, renewed Oct. 16, 1948. O. G. Feb. 8.
Product for deodorising and perfuming interior spaces. Adco, Inc. 506,397, Feb. 8; Serial No. 510,635, published Oct. 26, 1948.
Reagents and volumetric solutions. Central Scientific Company. 442,067, Feb. 8; Serial No. 523,077, published Nov. 2, 1948.
Remedy for neuralgia, sick and bilious headache. A. R. Perry. 129,047, Jan. 20, 1920. Republished Feb. 8.
Remedy for rheumatism and gout. Warner Drug Co. 69,823, July 7, 1908. Republished Feb. 8.
Remover, Nail polish. Studio Cosmetic Company. 442,002, Feb. 8; Serial No. 502,470, published Jan. 21, 1947.
Resin suspensions or dispersions. Rohm & Haas Company. 435,557, Dec. 30, 1947. Republished Feb. 8.
Scale remover, Liquid chemical boiler, liquid brine solvent and metal cleaning paste. G. B. Reese. 441,991, Feb. 8; Serial No. 482,892, published Nov. 2, 1948.
Shampoo, Dandruff massage. D. A. Arnold. 419,676, Feb. 26, 1946. New certificate. O. G. Feb. 8.
Shampoo in cream form. The Hennafoam Co. 506,498, Feb. 8; Serial No. 535,959, published Oct. 26, 1948.
Shampoo, Insecticidal. H. Shapiro. 431,849, Aug. 12, 1947. Republished Feb. 8.
Shock absorber fluid and hydraulic brake fluid, Hydraulic. Windsor-Lloyd Products, Inc. 506,483, Feb. 8; Serial No. 534,702, published Sept. 28, 1948.
Sodium mannuronate. Haas-Miller Corporation. 387,779, May 27, 1941. Republished Feb. 8.
Solution of anesthetics in vegetable oil. C. F. Kirk Company. 442,020, Feb. 8; Serial No. 511,164, published Sept. 21, 1948.
Starch, Laundry. National Starch Co. 71,599, re-renewed Dec. 1, 1948. O. G. Feb. 8.
Suppositories, Penicillin vaginal. Schenley Laboratories, Inc. 506,564, Feb. 8; Serial No. 547,663, published Oct. 26, 1948.
Suppositories, Vaginal. S. M. Laboratories Company. 376,215, Mar. 12, 1940. Republished Feb. 8.
Tablet containing digitoxin. The National Drug Company. 435,664, Jan. 6, 1948. Republished Feb. 8.
Tablet for the treatment of vitamin deficiencies. Table Rock Laboratories, Inc. 506,432, Feb. 8; Serial No. 527,430, published Sept. 14, 1948.
Tablets. Table Rock Laboratories, Inc. 506,431, Feb. 8; Serial No. 527,317, published Sept. 28, 1948.
Tablets, Headache. Elars Products, Inc. 442,000, Feb. 8; Serial No. 501,247, published Jan. 14, 1947.
Talcum powder, face powder and medicated powder. Bo-Kay Perfume Co., Inc. 506,556, Feb. 8; Serial No. 544,969, published Sept. 28, 1948.
Teething-powder. M. Gardner. 68,118, Mar. 10, 1908. Republished Feb. 8.
Toilet preparations. Curley Company, Incorporated. 506,572, Feb. 8; Serial No. 549,131, published Oct. 26, 1948.
Unguent or salve. The Frederick Laboratory. 66,365, renewed Nov. 26, 1947. O. G. Feb. 8.
Vitamin food supplement for livestock. Thompson-Hayward Chemical Company. 506,549, Feb. 8; Serial No. 543,669, published Sept. 21, 1948.
Weighting chemicals, Textile. Haas-Miller Corporation. 357,132, May 24, 1938. Republished Feb. 8.

CLASS 9

Ammunition. The Kilgore Manufacturing Company. 196,278, Mar. 17, 1925. Republished Feb. 8.
Caps, Paper. The Kilgore Manufacturing Company. 285,869, Aug. 11, 1931. Republished Feb. 8.
Matches. Union Allumettiere Societe Anonyme. 155,545, renewed May 30, 1942. O. G. Feb. 8.

CLASS 10

Fertilizers. Naamloose Vennootschap Amsterdamsche Superfosfaatfabriek. 292,830, Mar. 29, 1932. Republished Feb. 8.
Fertilizers. Naamloose Vennootschap Amsterdamsche Superfosfaatfabriek. 297,281, Sept. 6, 1932. Republished Feb. 8.
Manure. Naamloose Vennootschap Vereenigde Chemische Fabrieken. 298,720, Nov. 1, 1932. Republished Feb. 8.

CLASS 11

Carbon-blacks. [illegible]less Carbon Black Company, Limited. 31,818, re-rene[illegible] July 19, 1948. O. G. Feb. 8.
Carbon paper. F[illegible] Webster Company. 506,576, Feb. 8; Serial No. 552,196, published Oct. 26, 1948.
Inking ribbons. Burroughs Adding Machine Company. 506,433, Feb. 8; Serial No. 527,469, published Oct. 26, 1948.

CLASS 12

Asphalt, Refined. The Paraffine Paint Company. 81,479, Apr. 11, 1911. Republished Feb. 8.
Brick, Fire, and fire-clay tile. The Denver Fire Clay Company. 240,711–12, Apr. 3, 1928. Republished Feb. 8.
Brick, Fire, and fire clay tile and high-temperature cement or mortar. The Denver Fire Clay Company. 240,656, Apr. 3, 1928. Republished Feb. 8.
Bricks. The Mutton Hollow Fire Brick Company. 243,766, renewed June 26, 1948. O. G. Feb. 8.
Cement, High temperature. Plibrico Jointless Firebrick Company. 269,699, Apr. 15, 1930. Republished Feb. 8.
Cement or mortar, Refractory. The Denver Fire Clay Company. 239,740, Mar. 13, 1928. Republished Feb. 8.
Cement, Plastic. The Paraffine Companies, Inc. 248,211, Oct. 16, 1928. Republished Feb. 8.
Cement, Refractory. Plibrico Jointless Firebrick Company. 344,616, Mar. 30, 1937. Republished Feb. 8.
Composition for coating roofs. The Paraffine Companies, Inc. 178,196, Jan. 8, 1924. Republished Feb. 8.
Construction material. Schumacher Wall Board Corporation. 248,241, Oct. 16, 1928. Republished Feb. 8.
Construction materials and structural elements, Carbon and graphite. National Carbon Company, Inc. 442,077, Feb. 8; Serial No. 525,370, published Aug. 24, 1948.
Frames and sash, Door and window. White Pine Sash Company. 255,435, renewed Apr. 23, 1949. O. G. Feb. 8.
Mortar, Chrome neutral high temperature bonding. The Denver Fire Clay Company. 356,821, May 10, 1938. Republished Feb. 8.
Plaster board. Schumacher Wall Board Corporation. 236,475, Dec. 13, 1927. Republished Feb. 8.
Putty, caulking compound, crack fillers, etc. The Sherwin-Williams Company. 442,074, Feb. 8; Serial No. 524,732, published Sept. 28, 1948.
Rail cables, posts, offsets, etc., Guard. Lewis Bolt & Nut Company. 372,811, Nov. 14, 1939. Republished Feb. 8.
Roofing and siding products, Saturated felt base. The Celotex Corporation. 406,114, Mar. 14, 1944. Republished Feb. 8.
Siding. The Celotex Corporation. 419,962, Mar. 19, 1946. Republished Feb. 8.
Slates, tile, plates, etc. Societe Francaise De L'Everite. 224,568–70, Mar. 1, 1927. Republished Feb. 8.
Structural material, Cellular. Pittsburgh-Corning Corporation. 398,771, Nov. 24, 1942. Republished Feb. 8.
Waterproof material. The Paraffine Paint Co. 69,554, June 23, 1908. Republished Feb. 8.

CLASS 13

Attaching members for vehicle non-skid tread members. Staples & Seefeld. 138,128, Dec. 14, 1920. Republished Feb. 8.
Coffeepots. The Enterprise Aluminum Company. 251,161, renewed Jan. 1, 1949. O. G. Feb. 8.
Copper manufactures. Baltimore Copper Smelting and Rolling Company. 32,595, re-renewed Mar. 14, 1949. O. G. Feb. 8.
Fasteners, Miter joint. Clamp Nail Company. 338,443, Sept. 8, 1936. Republished Feb. 8.
Sprinkler apparatus, Automatic fire. Globe Automatic Sprinkle Company. 422,209, July 9, 1946. Republished Feb. 8.

CLASS 14

Alloys. P. R. Mallory Co., Incorporated. 327,547, Aug. 27, 1935. Republished Feb. 8.
Chromium-coated sheets and chromium-coated rolls of sheet metal. American Nickeloid Company. 248,980, renewed Nov. 6, 1948. O. G. Feb. 8.
Copper manufactures. Baltmore Copper Smelting and Rolling Company. 32,595, re-renewed Mar. 14, 1949. O. G. Feb. 8.
Electrode material. P. R. Mallory & Co. Incorporated. 281,177, Mar. 10, 1931. Republished Feb. 8.
Track joints, Railway. The Rail Joint Company. 347,282, June 22, 1937. Republished Feb. 8.

CLASS 15

Oil, lubricating grease, gasoline, etc., Lubricating. Ultra-Penn Refining Company. 292,319, Mar. 15, 1932. Republished Feb. 8.
Oil sludge emulsifier. Lansir Chemical Corporation. 417,457, Oct. 30, 1945. Republished Feb. 8.
Oils and greases, Lubricating. Hudson Motor Car Company. 311,852, Apr. 10, 1934. Republished Feb. 8.
Oils, Motor fuel. Evangeline Refining Company. 397,329, Sept. 1, 1942. New certificate. O. G. Feb. 8.

CLASS 16

Carbon black. Standard Carbon Company. 178,187, Jan. 8, 1924. Republished Feb. 8.
Carbon black. United Carbon Company. 249,072, Nov. 6, 1928. Republished Feb. 8.
Carbon-blacks. Peerless Carbon Black Company, Limited. 31,816, re-renewed July 19, 1948. O. G. Feb. 8.
Coating or paint, Wall. J. W. Bullen. 324,496, May 24, 1935. Republished Feb. 8.
Coatings, Plastic protective. Michigan Chrome & Chemical Company. 442,040, Feb. 8; Serial No. 515,577, published Oct. 19, 1948.
Colors, paint pigments (cake and moist tube), and color liquids in bottles. Winsor & Newton, Limited. 442,059, Feb. 8; Serial No. 520,847, published Oct. 19, 1948.
Enamel, Floor, and porch paint. The A. Burdsal Company. 506,425, Feb. 8; Serial No. 526,602, published Oct. 19, 1948.
Finishes, Flat wall, enamels, and varnishes. Keystone Varnish Company. 72,686, re-renewed Feb. 9, 1949. O. G. Feb. 8.
Hydrocarbon black. The United Oil & Natural Gas Products Corporation. 170,445, July 17, 1923. Republished Feb. 8.
Mixture of paint oils. James B. Sipe and Company. 506,459, Feb. 8; Serial No. 531,383, published Oct. 19, 1948.
Paint. Patek Brothers, Inc. 506,463, Feb. 8; Serial No. 531,827, published Oct. 19, 1948.
Paint. Patek Brothers, Inc. 506,470, Feb. 8; Serial No. 532,867, published Oct. 19, 1948.
Paint, Cement base. J. H. Naden. 442,047, Feb. 8; Serial No. 516,910, published Oct. 19, 1948.
Paint enamel. Chicago Paints, Inc. 506,509, Feb. 8; Serial No. 538,362, published Oct. 19, 1948.
Paint enamel. Patek Brothers, Inc. 506,464, Feb. 8; Serial No. 531,828, published Oct. 19, 1948.
Paint enamel, White. M. J. Merkin Paint Co., Inc. 506,512, Feb. 8; Serial No. 539,069, published Oct. 19, 1948.
Paint enamels. The Paraffine Companies, Inc. 206,946, Dec. 15, 1925. Republished Feb. 8.
Paint enamels and varnishes. Jewel Paint & Varnish Co. 257,873, June 18, 1929. Republished Feb. 8.
Paint enamels, paint enamel undercoats, ready mixed interior paints, etc. The O'Brien Corporation. 506,405, Feb. 8; Serial No. 517,281, published Oct. 19, 1948.
Paint in paste and liquid form. Continental Paint & Varnish Co. 506,513, Feb. 8; Serial No. 539,276, published Oct. 19, 1948.
Paint, Ready-mixed. Morris Paint & Varnish Co. 442,031, Feb. 8; Serial No. 513,577, published Oct. 19, 1948.
Paints and varnishes. W. J. Lynch Paint & Varnish Co., Inc. 442,022, Feb. 8; Serial No. 511,485, published Oct. 19, 1948.
Paints, Asphalt-base. The Paraffine Paint Co. 73,396, re-renewed Apr. 13, 1949. O. G. Feb. 8.
Paints, Ready mixed, paste paints, wood stains, etc. Roberts Paint Corp. 442,046, Feb. 8; Serial No. 516,574, published Oct. 19, 1948.
Polish, Furniture. A. E. Davis. 442,011, Feb. 8; Serial No. 507,574, published Oct. 19, 1948.
Seal and finish in the nature of varnish, wood floor seal, water emulsion floor wax, etc., Wood floor. The Diversey Corporation. 506,462, Feb. 8; Serial No. 531,780, published Oct. 19, 1948.
Shellac, Ready-mixed adhesive. C. Benoit. 93,418, Sept. 16, 1913. Republished Feb. 8.
Varnish and clear varnish sealer. James B. Sipe and Company. 506,458, Feb. 8; Serial No. 531,382, published Oct. 19, 1948.
Varnish and pyroxylin lacquers, paint enamels, paint and varnish thinning liquids, etc. Lacquer & Chemical Corporation. 506,393, Feb. 8; Serial No. 508,048, published Oct. 19, 1948.
Varnishes. Acme White Lead & Color Works. 253,357, renewed Feb. 26, 1949. O. G. Feb. 8.
Varnishes. The Bissell Varnish Company. 506,488, Feb. 8; Serial No. 535,295, published Oct. 19, 1948.
Varnishes. Blue Ribbon Paint Company. 506,518, Feb. 8; Serial No. 540,369, published Oct. 19, 1948.
Varnishes, japans, ready-mixed paints, etc. Clover Leaf Paint & Varnish Corporation. 506,479, Feb. 8; Serial No. 534,243, published Oct. 19, 1948.
Wax finish. Minwax Company, Inc. 506,389, Feb. 8; Serial No. 496,454, published Oct. 19, 1948.
Wax, Semi-liquid wallpaper. H. S. Ingber. 442,023, Feb. 8; Serial No. 511,615, published Oct. 19, 1948.

CLASS 17

Cigarettes. Lambert Pharmacal Company. 240,953, Apr. 10, 1928. Republished Feb. 8.
Cigars. H. Fendrich. 72,271, re-renewed Jan. 12, 1949. O. G. Feb. 8.
Tobacco, Smoking. Cohen, Weenen & Co., Limited. 248,771, renewed Oct. 30, 1948. O. G. Feb. 8.

CLASS 19

Automobile heaters. Noblitt-Sparks Industries, Inc. 506,447, Feb. 8; Serial No. 529,811, published Oct. 12, 1948.
Automobile mat pads, Composition rubber and fabric. Fritzsche Tire & Reliner Company. 506,588, Feb. 8; Serial No. 523,257.
Automobile radiator guards, collapsible step for vehicles, and automobile luggage carriers. State Welding Works, Inc. 442,065, Feb. 8; Serial No. 521,938, published Oct. 12, 1948.
Automobile structural parts. Hudson Motor Car Company. 283,898, June 9, 1931. Republished Feb. 8.
Automobiles. Hudson Motor Car Company. 110,022, May 2, 1916. Republished Feb. 8.
Automobiles. Hudson Motor Car Company. 111,825, Aug. 8, 1916. Republished Feb. 8.
Automobiles and chassis for automobiles, bicycles, and aeroplanes. Minerva Motors. 149,703, renewed Dec. 20, 1941. O. G. Feb. 8.
Automobiles and their structural parts. Amplex Manufacturing Company. 247,898, renewed Oct. 9, 1948. O. G. Feb. 8.
Automobiles, Gasoline passenger. Hudson Motor Car Company. 271,819, June 17, 1930. Republished Feb. 8.
Automobile, Passenger. Graham Paige Motors Corporation. 442,006, Feb. 8; Serial No. 505,577, published Oct. 5, 1948.
Automobiles, Passenger. Hudson Motor Car Company. 360,457, Sept. 20, 1938. Republished Feb. 8.
Bicycles. The Cuthrell Company, Incorporated. 248,698, renewed Oct. 30, 1948. O. G. Feb. 8.
Bicycles. Mead Cycle Company. 506,422–3, Feb. 8; Serial No. 525,363–4, published Oct. 5, 1948.
Car wheels, brake shoes, brake shoe keys, etc. American Brake Shoe Company. 506,411, Feb. 8; Serial No. 520,667, published Oct. 5, 1948.
Coaches, Baby. John Wanamaker, Philadelphia. 506,557, Feb. 8; Serial No. 545,202, published Oct. 19, 1948.
Covers for vehicle seats. Crawford Manufacturing Co., Inc. 163,045, Jan. 2, 1923. Republished Feb. 8.
Marine runabouts and cruisers. Correct Craft, Inc. 506,406, Feb. 8; Serial No. 517,651, published Oct. 5, 1948.
Mirrors, Rear view. Jay Electric Co. 442,054, Feb. 8; Serial No. 518,355, published Oct. 5, 1948.
Motor scooters. Solar Corporation. 506,441, Feb. 8; Serial No. 528,381, published Oct. 12, 1948.
Railroad cars, All types of. Magor Car Corporation. 506,408, Feb. 8; Serial No. 519,878, published Oct. 5, 1948.
Railway wheels and tires. Standard Steel Works Company. 347,933, July 13, 1937. Republished Feb. 8.
Trucks, Refrigerated, refrigerated semi-trailer trucks, refrigerated trailer trucks, etc. The Broquinda Corporation. 506,414, Feb. 8; Serial No. 521,175, published Oct. 5, 1948.
Wagon boxes having unloading mechanism. Mallory Manufacturing Company. 442,030, Feb. 8; Serial No. 513,434, published Oct. 5, 1948.
Windshield wipers for automobiles and trucks. Windsor-Lloyd Products, Inc. 506,484, Feb. 8; Serial No. 534,703, published Oct. 12, 1948.

CLASS 21

Air heaters, Electric. Markel Electric Products, Inc. 506,449, Feb. 8; Serial No. 530,089, published Oct. 26, 1948.
Amplifiers, Audio frequency, audio frequency transformers, choke coils, etc. Webster Electric Company. 506,505, Feb. 8; Serial No. 537,260, published Oct. 26, 1948.
Articles and products for electrical purposes. Speer Carbon Company. 506,482, Feb. 8; Serial No. 534,563, published Nov. 2, 1948.
Batteries, Electric. General Dry Batteries, Inc. 251,778, renewed Jan. 15, 1949. O. G. Feb. 8.
Batteries, radio receiving sets and parts therefor. Kaufmann Department Stores, Inc. 231,001, Aug. 9, 1927. Republished Feb. 8.
Cable, Electric. The Okonite Company. 506,494, Feb. 8; Serial No. 535,591, published Nov. 2, 1948.

Component parts of electrical and radio apparatus, Various. United-Carr Fastener Corporation. 441,997, Feb. 8; Serial No. 497,900, published Oct. 26, 1948.
Condensers, Non-ceramic electrical. Illinois Condenser Co. 442,081, Feb. 8; Serial No. 525,850, published Oct. 26, 1948.
Converter, Electric current. A. W. La Marche. 506,559, Feb. 8; Serial No. 545,377, published Nov. 2, 1948.
Converters, Electrical static frequency. Lorain Products Corporation. 506,508, Feb. 8; Serial No. 537,910, published Nov. 2, 1948.
Electric cord, Rubber-sheathed portable. Crescent Insulated Wire & Cable Co., Inc. 248,787, renewed Oct. 30, 1948. O. G. Feb. 8.
Electric device. Harvey-Whipple, Incorporated. 351,285, Oct. 26, 1937. Republished Feb. 8.
Electrical goods. Switchcraft, Inc. 506,591, Feb. 8; Serial No. 527,328.
Electrolytic water correction devices, Self-energising and/or power induced energizing. E. M. Butler. 442,035, Feb. 8; Serial No. 514,518, published Oct. 26, 1948.
Heated apparatus, Electrically. The Sta-Warm Electric Company. 506,516, Feb. 8; Serial No. 540,332, published Nov. 2.
Holders for retaining electron emission tubes. E. F. Staver. 506,476, Feb. 8; Serial No. 534,063, published Nov. 2, 1948.
Intercommunicating systems of telephonic type. C. P. Wilser. 506,603, Feb. 8; Serial No. 504,956.
Lamps, Electric bed. Electro Manufacturing Corporation. 506,445, Feb. 8; Serial No. 528,916, published Nov. 2, 1948.
Lamps, electric lighting fixtures, Electric. Lightolier, Incorporated. 506,472, Feb. 8; Serial No. 532,942, published Oct. 26, 1948.
Light fixtures and electric air heaters, Wall-attached and ceiling-attached electric. Markel Electric Products, Inc. 506,469, Feb. 8; Serial No. 532,617, published Nov. 2, 1948.
Magnets, Lifting. The Ohio Electric Mfg. Company. 506,530, Feb. 8; Serial No. 541,697, published Oct. 26, 1948.
Mixers, Electric food, juicers, and choppers. Dormeyer Corporation. 506,387, Feb. 8; Serial No. 490,107, published Oct. 19, 1948.
Motor controls, Magnetic. Westinghouse Electric Corporation. 506,440, Feb. 8; Serial No. 528,325, published Oct. 19, 1948.
Motors, Electric. The Globe Tool & Engineering Company. 506,453, Feb. 8; Serial No. 530,815, published Oct. 26, 1948.
Motors, Electric. The Hoover Company. 506,590, Feb. 8; Serial No. 527,121.
Package containing a galvanically active metal anode encased in an electrolytically conductive backfill composition. The Dow Chemical Company. 506,515, Feb. 8; Serial No. 540,055, published Oct. 26, 1948.
Phonographs, Electric. The London Gramophone Corporation. 506,400–01, Feb. 8; Serial Nos. 512,843–4, published Oct. 19, 1948.
Phonographs, Electric. The London Gramophone Corporation. 506,401, Feb. 8; Serial No. 512,844, published Oct. 19, 1948.
Radio controlled operators. Rador Company. 506,563, Feb. 8; Serial No. 546,325, published Oct. 26, 1948.
Rectifiers, Contact. Westinghouse Electric & Manufacturing Company. 249,615, renewed Nov. 20, 1948. O. G. Feb. 8.
Shields for use on electron emission tubes. E. F. Staver. 506,477, Feb. 8; Serial No. 534,064, published Nov. 2, 1948.
Television receivers. Dynamic Electronics-New York, Inc. 506,596, Feb. 8; Serial No. 535,943.
Television receivers. Dynamic Electronics-New York, Inc. 506,597, Feb. 8; Serial No. 535,944.
Toasters, Electric. Radiron Corporation. 442,057, Feb. 8; Serial No. 519,694, published Nov. 2, 1948.
Transformers, reactors, transmitters, etc., Fixed and variable. Standard Transformer Corporation. 506,500, Feb. 8; Serial No. 536,458, published Oct. 26, 1948.

CLASS 22

Accessories for miniature toy model airplanes. G. A. Henry. 506,412, Feb. 8; Serial No. 520,701, published Oct. 5, 1948.

Danielson, Paul F., San Marino. Combination saw and cleaver. 152,600, Feb. 8.

Dillon, Marian S., Youngstown, Ohio. Combination salt and pepper shaker. 152,601, Feb. 8.

Dimling, Edwin C., Flushing, assignor to Cluett, Peabody & Co., Inc., Troy, N. Y. Display fixture. 152,602, Feb. 8.

Dolan, George A.: *See*—
Smith, Harry B., and Dolan.

Donath, Ernest, Brookline, Mass. Plaited skirt. 152,603, Feb. 8.

Dooley, Isaac P.: *See*—
Marinack, Patrick T.

Fanelli, Pasquale W., Brooklyn, N. Y. Combined earring and perfume container. 152,604, Feb. 8.

Fletcher, Wendell S., South Pasadena, Calif. Instrument panel. 152,605, Feb. 8.

Foreman, Esther, Evansville, Ind. Baby panties. 152,606, Feb. 8.

Fox, Edward G., Sr.: *See*—
Campbell, Phillip, and Fox.

General Electric Company, assignee: *See*—
Banever, Gilbert.

Gerlinger, Louis, Salem, Oreg. Sanding blocks. 152,607, Feb. 8.

Gibson, Dorothy, assignor to Dorothy Gibson Perfumes Corp., New York, N. Y. Perfume bottle. 152,608, Feb. 8.

Gibson, Dorothy, Perfumes Corp., assignee: *See*—
Gibson, Dorothy.

Gogolick, Harry, Brooklyn, and E. Meyer, New York, N. Y. Lamp base. 152,609, Feb. 8.

Green, Edward H., Chicago, Ill. Toy airplane. 152,610, Feb. 8.

Guise, Arthur B., and T. W. Johnson, assignors to Ansul Chemical Company, Marinette, Wis. Combined nozzle and control handle for dry chemical fire extinguisher. 152,611, Feb. 8.

Guise, Arthur B., and T. W. Johnson, assignors to Ansul Chemical Company, Marinette, Wis. Portable hand fire extinguisher. 152,612, Feb. 8.

Haberman, James C.: *See*—
Nathan, Jerome, and Haberman.

Hanson, Eugene I., New York, N. Y. Textile fabric or similar article. 152,613, Feb. 8.

Hanson, Eugene I., New York, N. Y. Textile fabric or similar article. 152,614, Feb. 8.

Harbert, Otis D., Covina, Calif. Weather vane. 152,615, Feb. 8.

Harter Corporation, assignee: *See*—
Penchoen, Henry A.

Hartley, Emmett C., Euclid, assignor to The Sherwin-Williams Company, Cleveland, Ohio. Floor waxer. 152,616, Feb. 8.

Hedstrom-Union Company, assignee: *See*—
Regan, Frederick T.

Holt, William E., Oakland, Calif. Floor polishing machine. 152,617, Feb. 8.

Jacobs, F. L., Co., assignee: *See*—
Brundage, Alan D.

Jay Kel Inc., assignee: *See*—
Koppell, Arthur W.

Johnson, Theodore W.: *See*—
Guise, Arthur B., and Johnson.

Kibler, Everett L., Pittsburgh, Pa. Soap holder. 152,618, Feb. 8.

Kickernick, Inc., assignee: *See*—
Smith, Margot E.

Kimball, Charles N., Johnson County, Kans., W. R. Lewis, Clay County, Mo., and H. A. Strecker, Wyandotte County, Kans., assignors to C. J. Patterson Company, Kansas City, Mo. Moisture meter. 152,619, Feb. 8.

Kinsley, Felix P., St. Louis, Mo. Finger ring. 152,620, Feb. 8.

Kline, Herbert J., Jackson, Mich., assignor, by mesne assignments, to National Die Casting Company, Chicago, Ill. Appliance bracket. 152,621, Feb. 8.

Kobbe, Daniel D., assignor to Aluminum Arts, Inc., Houston, Tex. Awning. 152,622, Feb. 8.

Koppell, Arthur W., Upper Nyack, assignor to Jay Kel Inc., New York, N. Y. Expansible chain for a bracelet or similar article. 152,623, Feb. 8.
Krohnengold, Henry, Bronx, N. Y. Combined cigarette holder and ash receiver. 152,624, Feb. 8.
Kronman, Joel, Whitestone, N. Y., assignor to Victor Industries Corporation. Container cap. 152,625, Feb. 8.
Lauricella, John W., Passaic, N. J. Panel for an electronic timer or similar article. 152,626, Feb. 8.
Lent, Constantin P., New York, N. Y. Combination portable electric motion-picture camera and battery case. 152,627, Feb. 8.
Levich, Morris C., New York, N. Y. Toy animal figure. 152,628, Feb. 8.
Lewis, William R.: *See*—
Kimball, Charles N., Lewis, and Strecker.
Lindemann, Joseph S., assignee: *See*—
Mayfield, Jean B.
Louis, Henry W., Cleveland, Ohio. Pin-up ash receiver. 152,629, Feb. 8.
Marinack, Patrick T., Glendale, and I. P. Dooley, Burbank, Calif. Needle dispenser. 152,630, Feb. 8.
Massey, Augustine H., Stratford, Conn. Heater plug. 152,631, Feb. 8.
Masten, Neilson K., Seattle, Wash. Toy. 152,632, Feb. 8.
Maugham, Syrie, New York, N. Y. Knife. 152,633, Feb. 8.
Mayfield, Jean B., assignor to J. S. Lindemann, New York, N. Y. Bottle. 152,634, Feb. 8.
Mechur, Bert, and W. Riedler, New York, N. Y. Knee pad. 152,635, Feb. 8.
Messick, Thomas W., Mattoon, Ill. Fishing lure. 152,636, Feb. 8.
Meyer, Elliott: *See*—
Gogolick, Harry, and Meyer.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 152,637, Feb. 8.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 152,638, Feb. 8.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 152,639, Feb. 8.
Mitschke, Walter, assignor to Classic Weaving Corporation, North Bergen, N. J. Textile fabric. 152,640, Feb. 8.
Musselman, Henry E., and W. H. Buck, Kalamazoo, Mich. Condiment shaker. 152,641, Feb. 8.
Nathan, Jerome, New York, N. Y., and J. C. Haberman, Springfield, Mass. Lighting device. 152,642, Feb. 8.
National Die Casting Company, assignee: *See*—
Kline, Herbert J.
Nebel, William, Charlotte, N. C. Lady's stocking. 152,643, Feb. 8.
Nebel, William, Charlotte, N. C. Lady's stocking. 152,644, Feb. 8.
Noma Electric Corporation, assignee: *See*—
Castell, Junior K.
Nurkiewicz, Ignatius, Brooklyn, N. Y., assignor to Stop-Fire Inc. Fire extinguisher. 152,645, Feb. 8.
O'Brien, Howard T., assignee: *See*—
Rausch, Joseph J.
O'Brien Manufacturing Co., assignee: *See*—
Rausch, Joseph J.
Ohio Leather Company, The, assignee: *See*—
Becker, Fred H., and Peabody.
Orr, Thomas E., Lakewood, Ohio. Coin bank. 152,646, Feb. 8.
Patterson, C. J., Company, assignee: *See*—
Kimball, Charles N., Lewis, and Strecker.
Pavlinetz, George, Carteret, N. J. Mallet. 152,647, Feb. 8.
Peabody, Lester F.: *See*—
Becker, Fred H., and Peabody.
Pencheen, Henry A., assignor to Harter Corporation, Sturgis, Mich. Base or pedestal for chairs. 152,648, Feb. 8.
Perdew, Rodney W., Los Angeles, Calif. Rotary hedge clipper. 152,649, Feb. 8.
Phister, Albert B., Fort Thomas, Ky., assignor to The Phister Mfg. Co., Cincinnati, Ohio. Fire extinguisher. 152,650, Feb. 8.
Phister Mfg. Co., The, assignee: *See*—
Phister, Albert B.
Rausch, Joseph J., Berwyn, assignor to H. T. O'Brien, doing business as O'Brien Manufacturing Co., Chicago, Ill. Sewer cleaning machine. 152,651, Feb. 8.
Regan, Frederick T., Brookville, assignor to Hedstrom-Union Company, Fitchburg, Mass. Stroller body. 152,652, Feb. 8.
Riedler, Walter: *See*—
Mechur, Bert, and Riedler.
Rinehart, Nina D., Seattle, Wash. Lady's hat and shoe case. 152,653, Feb. 8.
Rodriques, Anthony, Westfield, Mass. Handle for a brush or similar article. 152,654, Feb. 8.
Rossell, Hubert S., Redwood City, Calif. Florist's wire holder. 152,655, Feb. 8.
Schwisow, Arnold J., Hopkins, Minn. Ash tray. 152,656, Feb. 8.
Sherwin-Williams Company, The, assignee: *See*—
Hartley, Emmett C.
Simon, Stephan J., Detroit, Mich. Fish lure. 152,657, Feb. 8.
Sklar, Morris, Brooklyn, N. Y. Wrist watch band. 152,658, Feb. 8.
Sloan, Abraham, Lynn, Mass. Baby's food tray or article of analogous nature. 152,659, Feb. 8.
Smith, Harry B., Westfield, and G. A. Dolan, East Orange, N. J. Electrical heating and welding transformer. 152,660, Feb. 8.
Smith, Margot E., assignor to Kickernick, Inc., Minneapolis, Minn. Bed jacket. 152,661, Feb. 8.
Smith, Ralph C., Valparaiso, Ind. Owl figurine. 152,662, Feb. 8.
Steigel, Mike, Rapides Parish, near Alexandria, La. Vehicle signal casing. 152,663, Feb. 8.
Stop-Fire Inc., assignee: *See*—
Nurkiewicz, Ignatius.
Strecker, Herman A.: *See*—
Kimball, Charles N., Lewis, and Strecker.
Tschirley, Norman K., Los Angeles, Calif. Ash tray. 152,664, Feb. 8.
Victor Industries Corporation, assignee: *See*—
Kronman, Joel.
Weiss, Alexander C. H., Chicago, Ill. Tissue sheet dispenser. 152,665, Feb. 8.
Williams, William E., Milwaukee, Wis. Bus cart or similar article. 152,666, Feb. 8.
Zeisel, Eva S., assignor to China & Glass Distributors, Inc., New York, N. Y. Hot-water plate. 152,667, Feb. 8.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 8TH DAY OF FEBRUARY, 1949

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Ackerman, Dolletta M., Los Angeles, Calif. Posture system. 2,461,102, Feb. 8.
Adair, Frank M., Berwyn, A. J. Brunner, Congress Park, and B. M. A. Trebes, Berwyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y. Apparatus for molding. 2,460,964, Feb. 8.
Adler, Robert, Chicago, Ill., assignor to Zenith Radio Corporation. Phase modulation system. 2,460,965, Feb. 8.
Adler, Robert, Chicago, Ill., assignor to Zenith Radio Corporation. Communication system. 2,460,966, Feb. 8.
Af Kleen, Nils E., Stockholm, Sweden, assignor to Kleen Refrigerator, Inc., Hoboken, N. J. Refrigeration. 2,461,262, Feb. 8.
Agency Electric Co., assignee: *See*—
Walsh, Philip J.
Agriculture, the United States of America as represented by the Secretary of, assignee: *See*—
Fraenkel-Conrat, Heinz L., and Olcott.
Leviton, Abraham.
McKinney, Leonard L.
Aktiebolaget Separator, assignee: *See*—
Lindgren, Hans O.
Aktiebolaget Separator-Nobel, assignee: *See*—
Holm, Curt F., and Engel.
Aktiengesellschaft Brown, Boveri & Cie, assignee: *See*—
Seippel, Claude.
Alco Valve Company, assignee: *See*—
Dube, John E.
Alexander, Peter P., assignor to Metal Hydrides Incorporated, Beverly, Mass. Production of titanium nitride. 2,461,018, Feb. 8.
Alexander, Peter P., assignor to Metal Hydrides Incorporated, Beverly, Mass. Production of zirconium nitride. 2,461,019, Feb. 8.
Alexander, Peter P., assignor to Metal Hydrides Incorporated, Beverly, Mass. Production of tantalum nitride. 2,461,020, Feb. 8.
Allen, John S., Montgomery, Ala. Collapsible handle for containers. 2,460,915, Feb. 8.
Allied Chemical & Dye Corporation, assignee: *See*—
Calfee, John D., and Pearson.
Allied Laboratories, Inc., assignee: *See*—
Winnek, Philip S., and Faith.
Allington, George H., assignor to The Weiman Company, Rockford, Ill. Engine shipping case. 2,460,797, Feb. 8.
Allmänna Svenska Elektriska Aktiebolaget, assignee: *See*—
Lamm, Uno.
Alloy Cast Steel Company, The, assignee: *See*—
Welch, Cline H.
American Anode Inc., assignee: *See*—
Miller, Donald J.
American Can Company, assignee: *See*—
Wobbe, Delbert E., and Pilinik.
American Chain & Cable Company, Inc., assignee: *See*—
Peterson, Vincent C. J., and Wilson.
American Chemical Paint Company, assignee: *See*—
Miles, Donald L.
American Cyanamid Company, assignee: *See*—
Carpenter, Erwin L., and Davis.
American Home Products Corporation, assignee: *See*—
Maynard, Ernest W., and Di Giacomo.
American Instrument Co., Inc., assignee: *See*—
Lovins, Gerald H.
American Pipe and Construction Co., assignee: *See*—
White, Harold L.
American Safety Razor Corporation, assignee: *See*—
Landwehr, Richard F.
American Steel Foundries, assignee: *See*—
Hess, Reiza J.
American Steel and Wire Company of New Jersey, The, assignee: *See*—
Bletso, Bruce N., and Thompson.
Brickman, Alan E.
American Telephone and Telegraph Company, assignee: *See*—
Jackman, Walter P.
American Viscose Corporation, assignee: *See*—
Eisen, John B.
Furness, William H.
Pearson, Frank G.
Smith, Robert A., and Chaya.
Taylor, Robert J.
Amis, Lewis A., Dallas, Tex. Label holder. 2,461,103, Feb. 8.
Amundson, Roald H., Milwaukee, assignor to Line Material Company, South Milwaukee, Wis. High-voltage circuit interrupter. 2,460,967, Feb. 8.
Anderson, Edwin J., Aurora, Ill. Vegetable peeling machine including travelling screw driven cutters. 2,461,249, Feb. 8.
Anlah, Alfred W., Vestal, assignor to General Aniline & Film Corporation, New York, N. Y. Toluenesulfonates. 2,461,463, Feb. 8.
Antalek, John J., assignor to The Rauland Corporation, Chicago, Ill. Oscillator-amplifier radio circuits. 2,461,306, Feb. 8.
Antalek, John J., assignor to The Rauland Corporation, Chicago, Ill. Modulating system. 2,461,307, Feb. 8.
Apco Mossberg Company, assignee: *See*—
Booth, Ralph E.
Appel, Andrew L., St. Louis, Mo. Tremolo producing device. 2,460,868, Feb. 8.
Appling, William L., Uvalde, Tex. Photographic film and screen holder. 2,461,405, Feb. 8.
Armco Steel Corporation, assignee: *See*—
Clingan, Irvine C.
Armour and Company, assignee: *See*—
Josh, George, Harriman, and Hopkins.
Laird, Elmer R.
Ralston, Anderson W., and Corley.
Arnold, Alex W., La Crosse, Wis. Apparatus for treating material with a gas. 2,461,154, Feb. 8.
Aronstein, Robert, Brooklyn, N. Y. Filter for fluorescent screens. 2,461,464, Feb. 8.
Arrow-Hart & Hegeman Electric Company, The, assignee: *See*—
Bentley, Robert H.
Atlas Powder Company, assignee: *See*—
Carl, Marvin H.
Attapulgus Clay Company, assignee: *See*—
La Lande, William A., Jr.
Atwell, Harold V., Beacon, assignor to The Texas Company, New York, N. Y. Manufacture of water gas. 2,461,021, Feb. 8.
Austenal Laboratories, Incorporated, assignee: *See*—
Erdle, Reiner W., and Schaar.
Babcock, Dale F., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Vacuum distillation of trimethylamine from dimethylamine. 2,461,191, Feb. 8.
Baca, Hugo H.: *See*—
Neumann, Charles A., and Baca.
Bailey, Francis M., Scotia, N. Y., assignor to General Electric Company. Electric discharge device and system. 2,461,250, Feb. 8.
Baker, Edward A., assignee: *See*—
Newman, Robert J., and Freund.
Ball, Charles O., Maumee, and F. D. Scott, Toledo, Ohio, assignors to Owens-Illinois Glass Company. Container. 2,461,251, Feb. 8.
Baltimore Paper Company, assignee: *See*—
Kilinski, Stanley.
Banbury, Fernley H., Woodmont, D. A. Comes, Woodbridge, and C. F. Schnuck, New Haven, Conn., assignors to Lancaster Processes, Inc., New York, N. Y. Reclaiming scrap vulcanized rubber. 2,461,192, Feb. 8.
Banbury, Fernley H., Woodmont, D. A. Comes, Woodbridge, and C. F. Schnuck, New Haven, Conn., assignors to Lancaster Processes, Inc., New York, N. Y. Treating waste material containing rubber. 2,461,193, Feb. 8.
Barbison Corporation, The, assignee: *See*—
Gourdon, Dorine.
Barnack, Henry C., West Springfield, Mass. Variable power and speed transmission. 2,461,022, Feb. 8.
Barnby, Herbert A.: *See*—
Hohl, John, Belnap, Jr., and Barnby.
Barnes, Carl E., Belvidere, N. J., and W. O. Ney, Jr., Easton, Pa., assignors to General Aniline & Film Corporation, New York, N. Y. Photographic silver halide emulsions. 2,461,023, Feb. 8.
Barnes, Walter C., Lake Bluff, and H. W. Keevil, Evanston, Ill. Method and apparatus for detecting flaws. 2,461,252, Feb. 8.
Barnes, Walter C., Lake Bluff, and H. W. Keevil, Evanston, Ill. Flaw detection apparatus. 2,461,253, Feb. 8.
Barry, Arthur J., assignor to The Dow Chemical Company, Midland, Mich. Production of organopolysiloxane resins with the aid of aluminum alkoxide. 2,460,799, Feb. 8.
Bascom, Frances: *See*—
Vanderbilt, Byron, and Bascom.
Bassett, Merton O., Schenectady, N. Y., assignor to General Electric Company. Radiation filter. 2,461,254, Feb. 8.
Batchelder, Laurence, Cambridge, assignor, by mesne assignments, to Submarine Signal Company, Boston, Mass. Fractional frequency generator. 2,460,800, Feb. 8.

Bates, John R., Swarthmore, assignor to Sun Oil Company, Philadelphia, Pa. Catalysis. 2,461,104, Feb. 8.

Baumeier, William L., Eggertsville, N. Y. Clothesline prop. 2,460,916, Feb. 8.

Baumgardner, Earl J., Marion, Iowa, assignor to H. A. Douglas Mfg. Co., Bronson, Mich. Coupling device. 2,461,024, Feb. 8.

Baxter, William C.: *See*—
De Puy, Charles T., and Baxter.

Beard, John H., Ruston, La. Animal poke. 2,461,255, Feb. 8.

Beattie, Horace S.: *See*—
Page, Ralph E., and Beattie.

Beck, Frederick R., Houston, Tex. Fixture accommodating and hanger stud. 2,461,025, Feb. 8.

Beckwith, Warren, assignee: *See*—
Eicholtz, Frank E.

Beetle, Walter K., Jr., Hewlett, N. Y., assignor to Dayton Aircraft Products Sales, Inc., Dayton, Ohio. Control unit for airplanes. 2,461,194, Feb. 8.

Bell Telephone Laboratories, Incorporated, assignee: *See*—
Dubuar, Arthur S.
Ellwood, Walter B.
Shann, Oscar A.
Southworth, George C.

Belnap, Robert K., Jr.: *See*—
Hohl, John, Belnap, Jr., and Barnby.

Bemis Bro. Bag Company, assignee: *See*—
Scruggs, Thomas M.

Bender, Lloyd F.: *See*—
Stanke, Frank W., and Bender.

Bendix Aviation Corporation, assignee: *See*—
Miller, Donald L.
Naylor, William E.
Weatherly, Morgan G.

Bennett, John G., D. B. Foster, C. D. Greaves, and G. C. Phillpotts, London, and M. Pirani and W. J. Kramers, Kingston-on-Thames, assignors to C. D. Patents Limited, London, England. Production of shaped and carbonized articles from coal. 2,461,365, Feb. 8.

Bentley, Robert H., assignor to The Arrow-Hart & Hegeman Electric Company, Hartford, Conn. Electric wire terminal. 2,461,135. Feb. 8.

Beretta, John W., San Antonio, Tex. Safety booth. 2,460,917, Feb. 8.

Berkman, Herbert A., Chicago, Ill., assignor to Zim Manufacturing Company. Cylinder ridge reamer. 2,461,490, Feb. 8.

Bernstein, Jack: *See*—
Lott, William A., Bernstein, and Sterns.

Bert, Léonce M. Procofieff, and V. Blinoff, Paris, assignors to Societe Anonyme dite: Societe d'Innovations Chimiques dite: Sinnova ou Sadic Meaux-Beauval, France. Obtainment of aliphatic sulfonic acids and esters thereof. 2,460,968, Feb. 8.

Bilyeu, Gerald J., assignor to The Foxboro Company, Foxboro, Mass. Differentiator. 2,461,026, Feb. 8.

Birk, Paul M., Kenmore, and F. I. Steele, Snyder, N. Y., assignors to Curtiss-Wright Corporation. Sway brace instalation. 2,461,406, Feb. 8.

Bitzer, Edmund C., Golden, assignor to Colorado Iron Works Company, Denver, Colo. Hindered settling classification. 2,460,801, Feb. 8.

Bitzer, Edmund C., Golden, assignor to Colorado Iron Works Company, Denver, Colo. Starting a fine heavy media separation plant. 2,460,802, Feb. 8.

Black, Samuel A., Chicago, Ill. Portable oarlock. 2,461,256, Feb. 8.

Blaw-Knox Company, assignee: *See*—
Feldmeier, Frank.

Bletso, Bruce N., East Cleveland, and W. Thompson, Cleveland Heights, Ohio, assignors to The American Steel and Wire Company of New Jersey. Rotary screening drum for nail cleaning apparatus. 2,461,366, Feb. 8.

Bliley Electric Company, assignee: *See*—
Wolfskill, John M.

Blinoff, Vsevolod: *See*—
Bert, Léonce, Procofieff, and Blinoff.

Blinoff, Vsevolod, Paris, assignor to Societe Anonyme d'Innovations Chimiques dite: Sinnova ou Sadic, Meaux-Beauval, France. Producing higher molecular alcohols. 2,460,969. Feb. 8.

Bloch, Rudolf, Jerusalem, K. Goldschmid, Tel Aviv, I. Schnerb, and P. Goldschmidt, Jerusalem, Palestine. Bleaching of cellulosic matter. 2,461,105, Feb. 8.

Blum, Hoemer L., assignor to Bowser, Inc., Fort Wayne, Ind. Remote-control apparatus 2,461,407, Feb. 8.

Bodger, Walter K., South Glastonbury, assignor to United Aircraft Corporation, East Hartford, Conn. Generator mounting. 2,461,195, Feb. 8.

Bodine, Albert G., Jr., Burbank, Calif. Method of and apparatus for cutting and the like. 2,460,918, Feb. 8.

Bodine, Albert G., Jr., Burbank, Calif. Method of and apparatus for cutting materials. 2,460,919, Feb. 8.

Bodmer, Ernest, Geneva, Switzerland. Change-speed transmission for automatic lathes. 2,461,027, Feb. 8.

Bolley, Herschel C., Clawson, assignor to H. A. Douglas Mfg. Co., Bronson, Mich. Electric switch. 2,461,028, Feb. 8.

Bombach, Paul H., assignee: *See*—
Kriz, Joseph J., Jr.

Bonk, Theodore H., Tampa, Fla. Collapsible or folding infant's auto seat. 2,461,367, Feb. 8.

Bonner, William A., H. Woods, and C. D. Hurd, Evanston, Ill., assignors to Corn Products Refining Company, New York, N. Y. Disubstituted desoxyalditols and their preparation. 2,460,803, Feb. 8.

Booth, Ralph E., Mansfield, Mass., assignor to Apco Mossberg Company. Torque tool. 2,461,491, Feb. 8.

Boots Pure Drug Company Limited, assignee: *See*—
Oxley, Peter, Robson, Koebner, and Short.

Bornquist, George W., Oak Park, Ill. Control valve. 2,461,136, Feb. 8.

Bostitch, Inc., assignee: *See*—
Lindstrom, Charles M.

Boucher, Charles P., Fostoria, Ohio, and F. A. Kuhl, Ridgewood, N. J., assignors, by mesne assignments, to National Inventions Corporation. Luminescent tube system and apparatus. 2,461,029, Feb. 8.

Bowser, Inc., assignee: *See*—
Blum, Hoemer L.

Braden, Rene A., Princeton, N. J., assignor to Radio Corporation of America. Antenna. 2,460,869, Feb. 8.

Bradley, William E., Swarthmore, assignor, by mesne assignments, to Philco Corporation, Philadelphia, Pa. Magnetic transducing apparatus utilising a helical sound trace. 2,461,368, Feb. 8.

Brandon, George M., Tallahasse, Fla. Cushion vehicle wheel. 2,461,257, Feb. 8.

Brandt, Henry E., North St. Paul, Minn. Plunger structure. 2,461,106, Feb. 8.

Brentnall, Samuel R., Washington, D. C. Anzillary control surface for high-speed aircraft. 2,460,804, Feb. 8.

Brickman, Alan E., New Haven, Conn., assignor to The American Steel and Wire Company of New Jersey. Making torpedo nets. 2,461,030, Feb. 8.

Brickman, Alan E., New Haven, Conn., assignor to The American Steel and Wire Company of New Jersey. Terminal fitting. 2,461,031, Feb. 8.

Bridges, John C., assignor to E. C. Eiselein, Dallas, Tex. Supporting device. 2,460,970, Feb. 8.

Bridges, John C., assignor to E. C. Eiselein, Dallas, Tex. Supporting device. 2,460,971, Feb. 8.

Brinker, Arthur J., Lexington, Nebr. Self-feeding conveyer. 2,460,920, Feb. 8.

Britton, Charles E.: *See*—
Young, David W., and Britton.

Britton, Edgar C., H. C. White, and C. L. Moyle, assignors to The Dow Chemical Company, Midland, Mich. Polymerization of organo-polysiloxanes with acid-activated bleaching earth. 2,460,805, Feb. 8.

Broido, Jacques J., Joinville-le-Pont, and J. Weissbrodt, Paris, France. Camera objective mounting. 2,461,357, Feb. 8.

Brooker, Leslie G. S., assignor to Eastman Kodak Company, Rochester, N. Y. Photographic emulsions sensitised with N,N-alkylenecyanine dyes. 2,461,137, Feb. 8.

Brooks, Cuyler W., Brooklyn, N. Y. Automatic transmission mechanism. 2,461,258, Feb. 8.

Brosseau, Ray, Kew Gardens, N. Y. Mechanical pencil. 2,461,406, Feb. 8.

Brown, Adrian A., Lake Geneva, Wis. Machine for assorting eggs according to weight. 2,461,308, Feb. 8.

Brown, William E., Anderson, Ind., assignor to General Motors Corporation, Detroit, Mich. Ignition system. 2,461,196, Feb. 8.

Bruckhauser, William K., Brookline, Mass., assignor to International Paper Company, New York, N. Y. Box. 2,460,870, Feb. 8.

Brunner, Anton J.: *See*—
Adair, Frank M., Brunner, and Trebes.

Buchanan, Frank, Guntersville, Ala. Lug strap hanger. 2,461,138, Feb. 8.

Bucyrus-Erie Company, assignee: *See*—
Davidson, Trevor O.

Bunce, Stanley C.: *See*—
Ximenes, Manuel R., Ferguson, and Bunce.

Bureau, Arthur A., Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Cable reel with adjustable drum port. 2,460,972, Feb. 8.

Busch Precision Camera Corporation, assignee: *See*—
Little, Alfred E.

Bush, Vannevar, East Jaffrey, N. H. Thermal apparatus for compressing gases. 2,461,032, Feb. 8.

Bush, William M.: *See*—
Stephenson, Richard G., and Bush.

C. D. Patents Limited, assignee: *See*—
Bennett, John G., Foster, Greaves, Phillpotts, Pirani, and Kramers.

Cahners, Norman L., assignee: *See*—
Moffat, Alexander W.

Calcarulo, Dominick L., Falls City, Nebr. Film supporting frame. 2,460,871, Feb. 8.

Caldwell, Carlyle G., Forest Hills, assignor to National Starch Products Inc., New York, N. Y. Starch ester derivatives and making same. 2,461,139, Feb. 8.

Calfee, John D., and J. H. Pearson, Manhasset, N. Y., assignors to Allied Chemical & Dye Corporation. Low-temperature, hydrogen fluoride catalyzed polymerization of conjugated diolefins. 2,460,973, Feb. 8.

California Research Corporation, assignee: *See*—
Hetherington, Charles R.
Smith, Vaughn R., and Stevens.

Cameron, Millard E., Allen Park, Mich. Polishing attachment for electric sweepers. 2,461,369, Feb. 8.

Camp, Elsa Q.: *See*—
Viles, Prentiss S., and Camp.

Camp, Ford E.: *See*—
Wagner, Arthur E., and Camp.

Canady, Don, assignor to Dayton Acme Company, Cincinnati, Ohio. Weight controlled reel drive. 2,461,033, Feb. 8.

Candy, Albert M., La Grange, assignor, by mesne assignments to National Cylinder Gas Company, Chicago, Ill. Magnetic control system. 2,460,921, Feb. 8.

Candy, Albert M., La Grange, assignor, by mesne assignments to National Cylinder Gas Company, Chicago, Ill. Magnetic core with variable air gap. 2,460,922, Feb. 8.

Capstaff, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Double shutter heat protection for motion-picture projectors. 2,461,140, Feb. 8.

Carbide and Carbon Chemicals Corporation, assignee: *See*—
Young, Frank G.

Carl, Marvin H., St. Louis, Mo., assignor to Atlas Powder Company, Wilmington, Del. Apparatus for the top separation of nitrotoluene. 2,461,141, Feb. 8.

Carosella, Michael C., Niagara Falls, N. Y., assignor to United States Vanadium Corporation. Preparation of molybdenum compounds. 2,460,974, Feb. 8.

Carosella, Michael C., Niagara Falls, N. Y., assignor to United States Vanadium Corporation. Recovery of molybdenum compounds. 2,460,975, Feb. 8.

Carpenter, Erwin L., Riverside, and H. S. Davis, Greenwich, Conn., assignors to American Cyanamid Company, New York, N. Y. Production of acrylonitrile. 2,461,492, Feb. 8.

Carpenter, Russell, Three Rivers, Quebec, Canada. Steam joint. 2,460,872, Feb. 8.

Carper, Stanley M., Sheffield County, Conn. Shears. 2,461,370, Feb. 8.

Carter, Herbert G., Dayton, Ohio. Direction finder. 2,460,806, Feb. 8.

Cass, Oliver W., Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Production of beta-trichlorethane. 2,461,142, Feb. 8.

Castle, James B., Oakland, assignor to Reconstruction Finance Corporation, San Francisco, Calif. Press brake drive. 2,461,034, Feb. 8.

Cedar, Julius, New York, N. Y. Bracelet clasp. 2,461,309, Feb. 8.

Celanese Corporation of America, assignee: *See*—
Croft, Cyril M., and Hindle.

Chain Belt Company, assignee: *See*—
Miller, Arthur E., Viall, and Lindow.

Chambers, Joseph A., Memphis, Tenn. Dispensing machine. 2,461,197, Feb. 8.

Chanowitz, Harry, Chicago, assignor to D. T. Siegel, Wheaton, Ill. Welding apparatus. 2,460,807, Feb. 8.

Chaya, John S.: *See*—
Smith, Robert A., and Chaya.

Chiger, Arthur, assignor to Times Facsimile Corporation, New York, N. Y. Clamping device for electron tubes and the like. 2,461,198, Feb. 8.

Christensen, Donald W., assignor to Young Radiator Company, Racine, Wis. Unit heater construction. 2,461,409, Feb. 8.

Christopherson, Raymond, assignor to National Cabinet Company, Long Beach, Calif. Progressive drawer support. 2,460,923, Feb. 8.

Chrysler Corporation, assignee: *See*—
Neeson, Charles R.

Chu, Helga M. and H F. Larchmont, N. Y. Frame construction for kites and like toys. 2,461,465, Feb. 8.

Chu, Eling F.: *See*—
Chu, Helga M., and Chu.

Church, John W., Mount Lebanon, assignor to Falk & Company, Carnegie, Pa. Making plastic polystyrene. 2,460,976, Feb. 8.

Church, Walter L., Houston, Tex. Safety joint. 2,461,107, Jan. 8.

Ciarfello, Anthony F., Albany, N. Y. Closure. 2,461,259, Feb. 8.

Ciba Pharmaceutical Products, Inc., assignee: *See*—
Hartmann, Max, and Isler.

Cilley, Putnam, Sharon, assignor to The Foxboro Company, Foxboro, Mass. Apparatus for measuring humidity. 2,461,310, Feb. 8.

Clark Equipment Company, assignee: *See*—
Lapsley, Robert.
Lapsley, Robert, and Mills.
Philip, William J., and Parmentier.

Clark, Richard U., Belmont, Mass., assignor to The Magnavox Company, Fort Wayne, Ind. Porous electrode for electrolytic cells. 2,461,410, Feb. 8.

Clentimack, George E., Plainville, assignor to Draper Corporation, Hopedale, Mass. Loom fork filling motion. 2,461,493, Feb. 8.

Cleveland Graphite Bronze Company, The, assignee: *See*—
Schaefer, Ralph A., and Mohler.

Clewell, Dayton H., and D. C. Pfeiffer, Dallas, Tex. Vacuum gauge. 2,460,873, Feb. 8.

Clifford, Harry W., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Gauging apparatus for checking the relative alignment of reference planes of spaced articles. 2,461,143, Feb. 8.

Clingan, Irvine C., Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation. Electrolytic stainless steel polishing. 2,461,035, Feb. 8.

Clingan, Irvine C., Baltimore, Md., assignor, by mesne assignments, to Armco Steel Corporation. Stainless steel polishing. 2,461,036, Feb. 8.

Cloutier, Davila, assignee: *See*—
Plante, Alfred J.

Coad, Frederic J., Des Moines, Iowa, G. Coad, administratrix of said F. J. Coad, deceased, assignor, by mesne assignments, to Swift & Company, Chicago, Ill. Spinning machine. 2,461,466, Feb. 8.

Coad, Gwendolyn, admistratrix: *See*—
Coad, Frederic J.

Coast Wire Company: *See*—
Schulze, Kurt E.

Coberly, Clarence J., Jr., San Marino, assignor, by mesne assignments, to Kobe, Inc., Huntington Park, Calif. Making tool handles. 2,460,874, Feb. 8.

Coffing, Frederick W., Danville, Ill. Combination tool and handle. 2,461,108, Feb. 8.

Coldwell, Thomas: *See*—
Flynn, Theodore P., and Coldwell.

Cole, Eldon B., Tulsa, Okla., assignor to Sinclair Refining Company, New York, N. Y. Distillation of aqueous alcohol extracts of mahogany sulfonates. 2,461,371, Feb. 8.

Coley, John R.: *See*—
Toettcher, Fred C., and Coley.

Collins, Fred V., Des Plaines, assignor to W. F. Stahl, Kenilworth, Ill. Tube forming device. 2,461,372, Feb. 8.

Colorado Iron Works Company, assignee: *See*—
Bitzer, Edmund C.

Comes, Donald A.: *See*—
Banbury, Fernley H., Comes and Schnuck.

Compagnie de Products Chimques et Electrometallurgiques Alais, Froges et Camargue, assignee: *See*—
Fréjacques, Jean L. M.

Continental Oil Company, assignee: *See*—
Sander, Hans C.

Convert, Henri, Lyon, France. Two-stroke motor. 2,461,199, Feb. 8.

Cook, Ernest E.: *See*—
Simer, Jerome, and Cook.

Cook, John C., Afton, Wyo., assignor, by mesne assignments, to the United States of America as represented by the Secretary of War. Electrical storage device. 2,461,144, Feb. 8.

Cooper, Benjamin, Netcong, and A. F. Hohmann, Teaneck, N. J.; said Hohmann, assignor to said Cooper. Torque amplifier and revolution accumulator. 2,460,808, Feb. 8.

Corley, Hoyt M.: *See*—
Ralston, Anderson W., and Corley.

Corn Products Refining Company, assignee: *See*—
Bonner, William A. and Hurd.

Courtaulds Limited, assignee: *See*—
Wormell, Robert L. and Millidge, and Knight.

Cox, Clarence M., Belgrade, Mont. One-man posthole digger. 2,461,373, Feb. 8.

Crabtree, Kay, Crabtree Mills, Quebec, Canada. Manufacture of paper. 2,461,109, Feb. 8.

Crane Co., assignee: *See*—
Stone, Carl R.

Craver, William C., Winston-Salem, N. C. Wall bracket hanger. 2,461,145, Feb. 8.

Cress, William C., Chicago, assignor to Whiting Corporation, Harvey, Ill. Refractory lining composition. 2,461,146, Feb. 8.

Croft, Cyril M., and W. H. Hindle, Cumberland, Md., assignors to Celanese Corporation of America. Combined dyeing and creping process for organic derivative of cellulose fabrics. 2,460,875, Feb. 8.

Crook Paper Box Company, assignee: *See*—
Lisle, Wade H.

Crumble, James H., Brooklyn, N. Y. Fluid power machine. 2,461,037, Feb. 8.

Cummings, Parker E., Sr., Honolulu, Territory of Hawaii. Carburetor. 2,461,411, Feb. 8.

Curtiss-Wright Corporation, assignee: *See*—
Birk, P. M., and Steele.
Donner, Verne P.
Jenny, Robert W.
Sheets, Jack H., and Cushman.
Wright, Ben W.

Cushing, Paul J., Piedmont, and P. M. Enright, assignors to Hydraulic Dredging Company, Ltd., Oakland, Calif. Control system for hydraulic dredges. 2,461,311, Feb. 8.

Cushman, Maurice E.: *See*—
Sheets, Jack H., and Cushman.

Cusic, John W., assignor to G. D. Searle & Co., Skokie, Ill. Chemical compositions and the preparation thereof. 2,461,038, Feb. 8.

Custer, Harry W., Center Line, Mich. Receptacle supporting rack. 2,461,374, Feb. 8.

Cutler-Hammer, Inc., assignee: *See*—
Elliot, William H.

Dager, Albert, assignor of one-half to E. Shaheen, Los Angeles, Calif. Sheet receiving and aligning bin. 2,460,876, Feb. 8.

Dahlem, J. Gordon, assignor to The Wayne Pump Company, Fort Wayne, Ind. Hose fitting mechanism. 2,461,312, Feb. 8.

Dally, Roy, Racine, Wis., assignor to R. H. Wendt, Chicago, Ill. Stock supported peasheater. 2,460,924, Feb. 8.

Damschroder, Rudolph E., and M. E. Kauffman, assignors to Eastman Kodak Company, Rochester, N. Y. Preparing gelatin. 2,460,909, Feb. 8.

Davidson, Emma T.: *See*—
Davis, Vesta K., and Davidson.

Davidson, Trevor O., Milwaukee, assignor to Bucyrus-Erie Company, South Milwaukee, Wis. Self-aligning conical roller. 2,460,810, Feb. 8.

Davies, Elwyn P., Alameda, and F. T. Eggertsen, Oakland, assignors to Shell Development Company, San Francisco, Calif. Preparing pelleted iron-oxide type catalysts. 2,460,811, Feb. 8.

Davies, Elwyn P., Alameda, and F. T. Eggertsen, Oakland, assignors to Shell Development Company, San Francisco, Calif. Dehydrogenation process. 2,461,147, Feb. 8.

Davis, Charles S., Pittsburgh, Pa. Valve operating mechanism. 2,461,313, Feb. 8.

Davis, Edward P., and H. Heltzer, assignors to Minnesota Mining & Manufacturing Company, St. Paul, Minn. Carbon powder method of making glass beads. 2,460,977, Feb. 8.

Davis, Harold S.: *See*—
Carpenter, Erwin L., and Davis.

Davis, Vesta K., and E. T. Davidson, Winona, Minn. Coin slide. 2,461,314, Feb. 8.

Davis, Walter J., assignee: *See*—
Zimmerman, Charles F.

Dawley, Henry A., Kansas City, Mo. Floating caliper gauge. 2,461,146, Feb. 8.

Dayton Acme Company, assignee: *See*—
Canady, Don.

Dayton Aircraft Products Sales, Inc., assignee: *See*—
Beetle, Walter K., Jr.

Deal, Carl H., Jr.: *See*—
Shiras, Russell N., Nixon and Deal, Jr.

Debrie, Andre V. L. C., Paris, France. Developing spool for films. 2,461,039, Feb. 8.

Decker, William H., Melrose Highlands, Mass., assignor, by mesne assignments, to Technical Specialties Company. White writing ink. 2,460,926, Feb. 8.

Deere & Company, assignee: *See*—
Stuetzel, Harold M.

De Forest, Taber, Chicago, Ill., assignor, by mesne assignments, to R. C. Switzer, South Euclid, Ohio, and J. L. Switzer. Method and composition for flaw detection. 2,461,494, Feb. 8.

Dehmel, Richard C., Summit, N. J. Control apparatus. 2,460,877, Feb. 8.

De Laval Separator Company, The, assignee: *See*—
Strezynski, George J.

De Martini, Ralph S., San Leandro, Calif. Semiautomatic jig. 2,460,812, Feb. 8.

De Puy, Charles T., Brighton, and W. C. Baxter, assignors to Trimble Nurseryland Furniture, Inc., Rochester, N. Y. Infant's folding bath stand and dressing table. 2,461,260, Feb. 8.

Derman, Harry, Great Neck, N. Y. Garment hanging screen. 2,460,978, Feb. 8.

Detroit Lubricator Company, assignee. *See*—
Landon, Walter S.

De Virgilis, Richard, Detroit, Mich. Illuminated mirror. 2,461,315, Feb. 8.

Dewey and Almy Chemical Company, assignee: *See*—
Habib, Bunie E., and Greenlie.

Dexter Folder Company, assignee: *See*—
Holms, Walter.

Di Battista, Bernard L.: *See*—
Di Battista, Charles and B. L.

Di Battista, Charles and B. L., Cranford, N. J. Coating composition. 2,460,878, Feb. 8.

Dickinson, Arthur H., Greenwich, Conn., assignor to International Business Machines Corporation, New York, N. Y. Accounting apparatus. 2,461,412, Feb. 8.

Di Geronimo, Armand, Ozone Park, N. Y. Bottle cap remover. 2,461,040, Feb. 8.

Di Giacomo, Louis P.: *See*—
Maynard, Ernest W., and Di Giacomo.

Di Lorenzo, John, assignor of three-tenths to L. Di Lorenzo, Jeannette, Pa. Window fixture. 2,461,316, Feb. 8.

Di Lorenzo, Louis, assignee: *See*—
Di Lorenzo, John.

Dirand, Louis J., New York, N. Y., assignor of one-half to I. F. Mills. Massaging roller. 2,461,413, Feb. 8.

Dohn, Charles W., Glendale, N. Y. Platenless typewriter. 2,460,813, Feb. 8.

Donaldson, John R., Ventura, Calif. Plug valve. 2,461,041, Feb. 8.

Donner, Verne P., East Aurora, N. Y., assignor to Curtiss-Wright Corporation. Fitting for transparent tubes. 2,461,414, Feb. 8.

Douglas, H. A., Mfg. Co., assignee: *See*—
Baumgardner, Earl J.
Bolley, Herschel C.

Dow Chemical Company, The, assignee: *See*—
Barry, Arthur J.
Britton, Edgar C., White, and Moyle.

Draper Corporation, assignee: *See*—
Clantimack, George E.

Dreher, Godfrey L., Minneapolis, Minn. Bottle carrier. 2,461,317, Feb. 8.

Dreisbach, Charles A., Yonkers, N. Y. Scouring apparatus. 2,460,926, Feb. 8.

Drisko, John W., Schenectady, N. Y., assignor to General Electric Company. Overload protection device for power transmission apparatus. 2,461,261, Feb. 8.

Dubuar, Arthur S., East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Automatic line voltage compensator and impulse repeater for signaling systems. 2,461,200, Feb. 8.

Dube, John E., St. Louis County, assignor to Alco Valve Company, Maplewood, Mo. Pressure-regulating valve. 2,461,415, Feb. 8.

Duerr, Carl F., Jr., Gates Mills, assignor, by mesne assignments of thirty one-hundredths to E. R. Roemer, thirty-five one-hundredths to L. E. Roemer, twenty-five one-hundredths to W. E. Kiefer, and ten one-hundredths to J. E. Tompkins, all of Cleveland, Ohio. Pump lubricating means. 2,460,814, Feb. 8.

Dunkel, Otto H., Detroit, Mich. Ski-scooter. 2,460,815, Feb. 8.

Du Pont, E. I., de Nemours & Company, assignee: *See*—
Babcock, Dale F.
Cass, Oliver W.
Mortensen, Carl W.
Vinton, William H.
Wilson, Charles E., Jr.

Eastman Kodak Company, assignee: *See*—
Brooker, Leslie G. S.
Capstaff, John G.
Damschroeder, Rudolph E., and Kauffman.
Gardner, Thomas S.
Hale, Thomas A.
Hutchison, Miller R., Jr.
Luboshez, Benjamin R.
Morey, Leon P.
Peterson, Charles W.
Schade, Willy.
Schubert, Alvin E., and Hints.
Wolff, Frederick J., Jr.

Easton, Russell P., Binghamton, assignor to General Aniline & Film Corporation, New York, N. Y. Gelatin subbing composition. 2,461,467, Feb. 8.

Edison, Thomas A., Incorporated, assignee: *See*—
Kelly, Frederick G.

Edwal Laboratories, Inc., The, assignee: *See*—
Krueger, John

Effiblos, Kosmas, New Orleans, La. Food refrigerating apparatus. 2,461,375, Feb. 8.

Eggertsen, Frank T.: *See*—
Davies, Elwyn P., and Eggertsen.

Eicholtz, Frank E., San Diego, Calif., assignor to Warren Beckwith. Bow drawing and releasing device. 2,461,042, Feb. 8.

Eiselein, Ellen C., assignee: *See*—
Bridges, John C.

Eisen, John B., Springfield, Pa., assignor to American Viscose Corporation, Wilmington, Del. Conditioning cellulose ester filaments. 2,461,042, Feb. 8.

Electric Storage Battery Company, The, assignee: *See*—
Riggs, Harold C.

Elliot, William H., Shorewood, assignor to Cutler-Hammer, Inc., Milwaukee, Wis. Speed control for electric motors. 2,460,927, Feb. 8.

Ellis, Robert P., York, Pa. Flexible and/or elastic self-locking band. 2,461,201, Feb. 8.

Ellström, Nils O., Aneby, Sweden, assignor, by mesne assignments, to Getram Company, Inc., New York, N. Y. Scouring pad. 2,461,468, Feb. 8.

Ellwood, Walter B., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y. Magnetic testing device. 2,461,202, Feb. 8.

Ely, Robert, San Diego, Calif. Mud or splash shield for vehicles. 2,461,044, Feb. 8.

Engel, Bruno K.: *See*—
Holm, Curt F., and Engel.

Enright, Paul M.: *See*—
Cushing, Paul J., and Enright.

Enthone, Inc., assignee: *See*—
Meyer, Walter R.

Erdle, Reimer W., and C. H. Schaar, assignors to Austenal Laboratories, Incorporated, Chicago, Ill., Pattern material, pattern, and method. 2,461,416, Feb. 8.

Ericson, Joseph E., Kensington, Conn. Garment hanger. 2,461,149, Feb. 8.

Esser, David, assignee: *See*—
Rostoker, Louis.

Eureka Williams Corporation, assignee: *See*—
Sheppard, William L.

Evans, Isaac A., Muncie, Ind. Slip cover for seat cushions. 2,460,928, Feb. 8.

Evans, Ralph C., Syracuse, N. Y. Hand truck. 2,461,208, Feb. 8.

Evans, Ralph L., assignee: *See*—
Winkel, Fred M.

Fairbairn, George C., Port Arthur, Tex., assignor to The Texas Company, New York, N. Y. Automatic sampling device. 2,461,045, Feb. 8.

Falth, Herman E.: *See*—
Wiunek, Philip S., and Falth.

Falk & Company, assignee: *See*—
Church, John W.

Fallone, Daniel, Astoria, N. Y. Curtain support. 2,461,417, Feb. 8.

Faulk, Donald P., Waltham, assignor to Raytheon Manufacturing Company, Newton, Mass. Electronic timing system. 2,460,816, Feb. 8.

Federal-Mogul Corporation, assignee: *See*—
Le Brasse, Gordon J., and Francis.

Feldmeier, Frank, assignor to Blaw-Knox Company, Pittsburgh, Pa. Sheet stretching mechanism. 2,461,376, Feb. 8.

Ferguson, John H.: *See*—
Ximenes, Manuel R., Ferguson, and Bunce.

Fischman, Martin, Brooklyn, N. Y., assignor, by mesne assignments, to Haseltine Research, Inc., Chicago, Ill. Pulse generator. 2,461,110, Feb. 8.

Fisher, Sidney O., Schenectady, N. Y., assignor to General Electric Company. Alloy suitable for use at high temperatures. 2,460,817, Feb. 8.

Fitz Gerald, Alan S., Wynnewood, Pa. Magnetic amplifier system. 2,461,046, Feb. 8.

Flinspach, John H.: *See*—
Flinspach, Mack L., and J. H.

Flinspach, Mack L. and J. H., Compton, Calif. Soil moisture indicator. 2,461,111, Feb. 8.

Flowers, Henry F., Findlay, Ohio. Braking mechanism for rail vehicles. 2,461,263, Feb. 8.

Floyd, Don E., Minneapolis, Minn., assignor to General Mills, Inc. Polyamides. 2,461,495, Feb. 8.

Flynn, Theodore F., Portland, Oreg., and T. Coldwell, Vancouver, Wash., dedicated to the free use of the People in the Territory of the United States. Endless track. 2,461,150, Feb. 8.

Foerste, William, Pelham Manor, N. Y. Controlling the operation of a plurality of gaseous discharge lamps. 2,460,979, Feb. 8.

Folli, Arthur J., Chicago, Ill. Electric clothes drier. 2,461,318, Feb. 8.

Fontaine, Jack, Cleveland, assignor of thirty-two one-half one-hundredths to L. Rapaport, Shaker Heights, Ohio. Cable stitch knitting. 2,461,204, Feb. 8.

Ford, Eugene A., Bedford, assignor to International Business Machines Corporation, New York, N. Y. Sorter pocket and chute blade construction. 2,461,418, Feb. 8.

Forgett, Valmore J., Ridgefield, N. J. Apparatus for developing photographic paper strips. 2,461,419, Feb. 8.

Forsythe, James A.: *See*—
Forsythe, William M., and J. A.

Forsythe, William M., and J. A. Forsythe, Dubach, La. Rope clamp. 2,461,206, Feb. 8.

Fortino, Frank A., Newark, N. J. Soap dabber. 2,461,319, Feb. 8.

Foster, David B.: *See*—
Bennett, John G., Foster, Greaves, Philpotts, Pirani, and Kramers.

Foster, Frank A., Melrose Park, assignor to The Goss Printing Press Company, Chicago, Ill. Stereotype plate casting box. 2,461,151, Feb. 8.

Foster, Thomas W. F., Temple City, assignor to The Permanente Metals Corporation, Oakland, Calif. Skimming device. 2,461,112, Feb. 8.

Foster Wheeler Corporation, assignee: *See*—
Rover, Richard H.

Fouse, Charles N., and W. H. A. Krieg, assignors to Kraftinator Products Limited, Preston, Ontario, Canada. Crankcase ventilator valve. 2,461,206, Feb. 8.

Fox, William P., Columbia, S. C. Pressing iron and stand. 2,461,264, Feb. 8.

Foxboro Company, The, assignee: *See*—
Bilyeu, Gerald L.
Cilley, Putnam.

Fraenkel-Conrat, Heinz L., and H. S. Olcott, Berkeley, Calif., assignors to the United States of America as represented by the Secretary of Agriculture. Preparation of isocyanate derivatives of proteins. 2,460,980, Feb. 8.

Francis, Harold E.: *See*—
Le Brasse, Gordon J., and Francis.

Francisco, William H.: *See*—
Hill, Henry C., and Francisco.

Francisco, William H., Jr., Bloomfield, N. J., E. C. Steiner, Dallas, Tex., and H. C. Hill, Pasadena, Calif., assignors to Wright Aeronautical Corporation. Pipe connection. 2,460,981, Feb. 8.

Frank, Frederick C.: *See*—
Marisic, Milton M., Schmitt, and Frank.

Free Sewing Machine Co., assignee: *See*—
Ivandick, Matthew G.

Freedman, Benjamin D., Winthrop, and S. Freedman, Brighton, Mass. Footpad. 2,461,047, Feb. 8.

Freedman, Samuel: *See*—
Freedman, Benjamin D., and Samuel.

Fréjacques, Jean L. M., assignor to Compagnie de Produits Chimiques et Electrometallurgiques Alais, Froges et Camarque, Paris, France. Separating aqueous azeotropic mixtures. 2,461,048, Feb. 8.

Frese, Joseph F., assignor to The Monitor Controller Company, Baltimore, Md. Electric switch. 2,460,818, Feb. 8.

Frese, Joseph F., assignor to The Monitor Controller Company, Baltimore, Md. Electric switch. 2,460,819, Feb. 8.

Freund, Dagobert S.: *See*—
Newman, Robert N., and Freund.

Friedman, Arthur H., assignor to Hanson-Van Winkle-Munning Company, Matawan, N. J. Fluid treatment equipment. 2,461,118, Feb. 8.

Frohring, Paul R.: *See*—
Tabor, Joseph M., Seibert, and Frohring.

Frowine, Von K., Kalamazoo, Mich. Mandibular cast positioner. 2,461,207, Feb. 8.

Fuller Manufacturing Company, assignee: *See*—
Trail, Herbert H.

Furness, William H, Haddonfield, N. J., assignor to American Viscose Corporation, Wilmington, Del. Drying and conditioning of yarns. 2,460,879, Feb. 8.

Gamble, Robert J., Milwaukee, Wis. Bicycle pedal. 2,461,049, Feb. 8.

Gardner, Thomas S., Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose esters of amino acids. 2,461,152, Feb. 8.

Gates, Herbert H., Shrewsbury, Mass. Protected transformer circuit for high-voltage tubes. 2,461,265, Feb. 8.

Gay, Godwin R. F., Marblehead, Mass. Timing device. 2,461,266, Feb. 8.

Gaylor, Peter J., assignee: *See*—
Givens, Melvin.

Geiser, Harvey E., Mentor, and J. C. Geiser, Jr., Cleveland, Ohio. Universal attachment stand. 2,460,880, Feb. 8.

Geiser, John C., Jr.: *See*—
Geiser, Harvey E. and J. C., Jr.

General Aniline & Film Corporation, assignee: *See*—
Anish, Alfred W.
Barnes, Carl E., and Ney, Jr.
Easton, Russell P.
Haff, Richard M.
